

U.S. Congress

Appendix

Television in Great Britain

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Friday, February 11, 1955

Mr. POTTER. Mr. President, recently Martin Codel, publisher of Television Digest, an authoritative news service specializing in the broadcast and electronics field, visited Great Britain and had an opportunity to look over the television and electronics developments in that country.

On his return to the United States, Mr. Codel wrote a number of articles on this subject for his publication. I ask unanimous consent to have printed in the Appendix of the RECORD several articles that appeared in the November 6, 1954, issue of Television Digest, which deal with television in England.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Television Digest of November 6, 1954]

BRITISH TO PROFIT BY UNITED STATES EXAMPLE

Booming Britain is currently enjoying a flourishing TV trade that's virtually certain to be stimulated even further by the introduction of commercial TV as an additional service, scheduled for September 1955.

First competition against British Broadcasting Co.'s one-channel service, more choices of programs, greater opportunities for talent and personnel, probably even an expanded program day from the present 3-10:30 p. m.—all this should, if the American experience means anything, bring about increased set sales and bigger audiences.

More license revenues, at £3 year (\$8.40) for a TV plus radio, might even permit the noncommercial BBC to undertake its own cherished plans for a second service, eventually giving Britons a choice of 3 programs.

It's our conviction, after many talks with many people in all walks of British life during a 5-week, 1,600-mile tour of England, Scotland, and Wales, that the citizenry and the business community preponderantly welcome a fair try for the new ITA (Independent Television Authority) recently authorized to set up TV stations and lease time segments to program contractors who in turn will sell commercials to sponsors.

They want it despite strong opposition by the Labor Party and high churchmen to legislation passed by Winston Churchill's Conservative government. They want it because they dislike monopoly no less than do their American cousins—and, any way you spell it, Government-chartered BBC is a monopoly often accused, fairly or unfairly, of giving the people what it thinks is good for them rather than what they may want. Moreover, the British are an ad-minded people—so much so that—

1. They watch film and slide commercials in theaters, big and little, into which they have paid admission—and they seem to like them. These are hardly different from the kind they will soon see on TV; indeed, piled

on top of one another, they're much more blatant in the theater than are most of our TV spots.

2. They're accustomed to commercial radio from Normandy and Luxembourg, with British advertising dominant. This audience is greater than seems apparent, for the European wavelength interference problem is so great, aggravated by Russia, that much of Britain gets poor AM signals—so much that 9 new FM transmitters have been projected by the BBC in the 88-95-megacycle band. The example of FM in Germany, with 94 stations, is said to apply much more realistically than that of the United States.

3. They've heard a lot about the achievements of competitive American TV; they like such American programs as they occasionally see on BBC; they enjoy American films and dote on our film personalities. Moreover, the Government is so determined upon a free-enterprise policy that it refuses to subsidize another BBC service, though BBC's 3 radio services aren't in any danger of going into private hands.

4. British industrialists and advertising folk, among the smartest in the world, know that commercial TV will be a powerful force for creating wants and moving goods. The director of one of England's biggest ad agencies told us:

"I shudder to think what this powerful advertising force is going to do to our distributive system. Some of our people don't realize it, but they're due for such a huge demand for their goods that neither the production nor distribution system at the outset will be geared for it. Our people have been starved for the good things of life so long, have known austerity so long, that demonstrations of modern products we will give them on TV are going to create vast changes in our economy."

His agency, incidentally, handles the British account of a popular American beverage which has long used TV and radio here with telling effect.

Even the newspapers aren't overtly fighting TV, in fact, seem to place more emphasis on it as a news subject, both as to progress of the industry itself and as to critiques of programs, than ours do. (Daily program listings, of course, take up only about a half-inch of agate type, and there's plenty of TV set advertising.)

And the intellectual aversionists and clergy, who testified in Parliament to their abhorrence of commercialism, seem to be looking forward tolerantly to the second service, now that the die is cast. One reason may be the high caliber of ITA and of the men chosen to run it.

The hope generally shared, though perhaps not by all within BBC, which has a payroll of some 12,000 and an inevitable quota of jealous bureaucrats, is that commercial TV in Britain will profit by the example of America while avoiding our excesses and borrowing from our best; moreover, that it will provide wider sway for the nation's own vast reservoir of entertainment talent and business ability.

It could be that TV can help cement the precious affinity with America that, thanks to common language and kindred heritage, has so long prevailed in literature, in all the arts, in government and in law.

While in Britain recently we talked with scores of people—from topkicks at BBC and ITA to industrialists, advertising folk, jour-

nalists, and man in the pub—and in the 10 days since our return we've compared notes with American confreres who also have had a look at British TV. Our conclusions are much the same:

The average Briton isn't much different from the average American and, once he tastes the sweet fruits of competition, not even the powerful BBC nor the politico-clerical opposition to commercial TV can stop it. That is, of course, unless the ITA, the sponsors and the ad men muffle the ball in the early stages of the game. Our guess is that they're much too shrewd for that.

You read occasionally of British visitors coming over to study our TV structure, and there will be a lot more of them. The big American ad agencies, with London branches, have been quietly swapping visitors and personnel and ideas ever since ITA was authorized, preparing for the advent of commercial TV.

ITA hasn't yet decided much more than that it will have its first stations in London, Birmingham, and Manchester; that there will be more than one program contractor, though whether there will be more than one on each station or more than one splitting time on the whole group is as yet undetermined; that the "magazine concept" will prevail, i. e., the contractors and not the sponsors shall own the programs and determine their order; that there will be no censorship of program content or commercials, but that there must be none of the horrendous "Yankee excesses" (not merely of distasteful advertising but of crime and horror stuff) which they've heard so much about.

Headquarters not unlike the usual temporary quarters for new Washington Government agencies has been set up at 16 Wood's Mews, in London's Mayfair district, with Sir Kenneth Clark as chairman and Sir Robert Fraser as administrative chief.

Sir Kenneth, 51, was in this country for the last few weeks, looking into TV but primarily to receive an honorary degree from Columbia University. The citation will give you some idea of the man: "Cultural counselor of the people; chairman of Great Britain's Art Council; England's custodian of priceless works in years past as keeper of the Department of Fine Arts in Oxford's Ashmolean Museum, as director of the National Gallery, and as surveyor of the King's pictures; Slade professor of fine art at Oxford; adviser to the Victoria and Albert Museum and Covent Garden Opera Trust; gifted scholar of our timeless treasures."

A long hair? Not really, say those who know him; essentially he's a fine administrator, they say, and he struck us as a knowledgeable and open-minded executive still rather puzzled by the strange new task set before him. He's expected to maintain the tone and prestige of the new agency while Sir Robert Brown Fraser, 50, a graduate of Fleet Street newspapers, recently chief of the government's information services, provides the practical know-how. Sir Robert talks like a Madison Avenue agency executive, seems as high strung as a network vice president, acts like he's rarin' to go. His philosophy of advertising, as enunciated before an agency conference in Birmingham last week:

"I can think of no subject about which there is more nonsense talked than advertising. The idea that advertising is inherently degrading has always seemed to be ludicrous. As a point of view for a great nation that lives or dies by selling goods—

or falling to sell them—it crosses the imbecile and verges on the suicidal. [Advertising] will be an asset, worn as a bright feather in the cap of free TV, not as a soiled choker round the throat."

About his editorial concept of commercial TV, Sir Robert Fraser had this to say last month before the Institute of Practitioners of Advertising:

"Free television should now evolve on principles that will place it beside our free press, our free books, and our free arts as a normal part of the equipment of our free society. For this was, in essence, the great decision—to rest the future of TV, as far as initial physical shortages of transmitting stations permit, on the same foundations as those of a free press; to give freedom to individuals to offer TV programs to the public, as newspapers and entertainment are offered; to give freedom to the public to see the TV programs of their choice."

Backgrounds of the other members of the ITA board would seem also to assure a realistic and at the same time an adequate cultural approach: Sir Charles Colston, manager of Hoover, Ltd. (vacuum cleaners), vice chairman; Miss Margaret Popham, ex-principal of Cheltenham Ladies College; Miss Dilys Powell, movie critic of the Sunday Times; Lord Aberdare of Duffryn, president of Welsh National School of Medicine; Lt. Col. Arthur Chichester, chairman of big Moygashel textile concern; Sir Henry Hinchcliffe, director of Barclays Bank; Dr. T. J. Honeyman, director, Glasgow Art Gallery; G. B. Thorneycroft, director of the British Travel & Holidays Association; Lord Layton, publisher, News Chronicle and London Star.

ITA will run the stations and any day now should announce program contractors, but it will not have studios of its own or put on shows. Sir Kenneth Clark actually expects to run ITA with a staff of not more than 60, except for engineers who actually come under the postoffice department. His budget is £750,000 (about \$2,100,000) and he is expected to put the agency on a self-supporting and even profitable basis with that sum as the pump primer.

Commercial TV could profit the Government more than it realizes right now, for the fact is that many advertisers are itching for a crack at TV. Often cited is one experience of BBC. Though it is ever careful to avoid trade plugs, the name of a toy was inadvertently mentioned in a program; within a few days, it couldn't be had, and the toyshops were clamoring for more stock. Also, recently, BBC carried a tear-jerker about a stray pup; within 48 hours, just about every day pound in the country was emptied.

Ad men told us—and Sir Robert Fraser verified—that there were plenty of seekers after the program contracts. Someone said there were at least 25 applicants, all willing to take the risk in the face of the political dangers inherent in a system eyed askance by the Laborites and requiring that the contractor secure his own program originating equipment—all, that is, save transmitters. He must contract for studios, cameras, crews, programs, talent, etc., always unsure what a new government may decree. The applicants include theater men, newspapers, ad agencies, program builders, et al.

(Editor's Note.—Since this article was written, ITA announced selection of the first 3 contractors: (1) Granada Theaters, operating a big chain of movie houses. (2) Broadcast Relay Services, operator of a widespread and vastly successful community antenna service, in association with Associated Newspapers, Ltd., publishing the Daily Mail and other papers. (3) Showman Maurice Winnick, in association with Kemsley Newspapers, Inc., publisher of the Sunday Times, Sunday Graphic, Sunday Chronicle and various other newspapers in England, Scotland, and Wales. They're all extremely well-heeled, but the fact that the newspaper

owners are Tories has already provoked criticism that's expected to reverberate in Parliament. Two other major applicants, also strong in program fields, are Associated Broadcasting Development Co., headed by ex-BBC Chief, Norman Collins, and the newly formed Incorporated Television Program Co., which includes such stockholders as Alan Towers (Towers of London) and other big names in British entertainment. They await further decisions of ITA, and everybody still awaits details of plans for dividing the hours of the day or days of the week among the program contractors on its stations.)

So many eyes and ears will focus on their offerings, so outspokenly critical as a matter of habit are the British people and their influential press, so far committed is the Labor Party to doing away with commercial TV if and when it returns to power, that the burden is on industry as well as on ITA to do an acceptable job. If they do, we were told, no party in power would dare attempt to do away with commercialism. If they don't, a simple fiat of Parliament could switch the whole structure overnight to BBC.

As a writer in the *News of the World* of London put it: "The politicians were much more interested than the public in the why and wherefore of commercial TV during the endless debates in both Houses, and the public breathed a sigh of relief when at long last it proved possible to hand the demoniacal babe over to the ITA. If the Cabinet now find the infant left on their doorstep overnight, I think we can expect a spot of bother."

Some 3,500,000 TV sets are in use in Britain today, most of them tunable only to 1 station. It's expected the total will be 4 million by end of this year, reach at least 5 million by end of 1955, then zoom to better than the current 1 million a year rate when the second service is under way. How much more, the set makers are reluctant to guess. One told us, "We should have 10 million sets in use by 1960"—covering most of nation's nearly 15 million family units.

The American industry's postfreeze experience—that second stations in a community have invariably zoomed the rate of receiver sales and installations immediately—seemed to interest the British manufacturers greatly. But their native inclination is to move cautiously, to underestimate their market, not to pressure things. There are some who (familiar folk) don't like all this talk about color, mostly emanating from America and played up heavily in the British press, because it might rouse false hopes in the breasts of prospective buyers.

(The British color situation is a story in itself, about which more later. Suffice to state now that the post office department's TV advisory committee, under the chairmanship of Adm. Sir George Daniel, has been conducting closed hearings on the subject, figures a year or more of work ahead of it, can be counted on to take advantage of all of the American experience—without the pressure of politics, such as we had here, to bring color to Britain in a hurry.)

There is a problem, of course, of converting existing sets to receive 2 channels in lieu of one—but plans are afoot to do it at small cost, maybe as low as \$10 or \$15 and the fact that the second service's signals will come from the same towers as BBC's should help simplify the installation jobs. Most sets being sold today are equipped for the second channel, a hot selling point.

Some 30 receiver manufacturers share the 1 million annual output. They sell direct to retail outlets, for the most part. "Hire purchase," or installment selling, has only lately come back on a big scale, having been prohibitively restricted until recently.

Standard size is 14-inch, with trend lately to 17-inch. Only one 21-inch model was shown in the whole National Radio Show in London's Earl's Court in early September.

There seems to be no push on to sell size, one manufacturer explaining that the extra cost isn't worth it for homes which mostly have small rooms.

We saw a scattering few TV shows while motor touring the country, but rarely did we find even the best-rated hotels TV-equipped, although in a space of 3 weeks we were in a different one nearly every night. They seldom had TV's or radios in their lounges, and they looked at you as though you were crazy if you asked if they might be rented. Very few pubs had TV's either, though radios were commonplace in them. Looks like the British TV industry is missing an extremely good marketing bet here.

Cost has been the major factor in set sales up to now—still is with most families, though the current high employment and prosperity wave, along with the vast publicity about TV in general and ITA and commercialism in particular, are making more and more people TV-minded. Receiver list prices have been brought down to an average of about \$150 for a 14-inch, \$200 for 17-inch, table models predominating. How can they priced that low in the face of a government exercise of 50 percent? The answer is much simpler for the British than for us, albeit we offer good 21-inch sets at \$200 and under. The girls on the assembly lines earn £5 a week (\$14) and the men at the parts-stamping machines very little more.

Workmanship is the finest. The 14-inch set we rented for our London hotel room gave us a picture (on British 405-line standard) that for clarity and contrast and all-around quality is vastly better than what we generally see in the United States (on 525 lines). Signals came from a multiplex antenna atop one of the tallest hotel structures (10 or 12 stories) in Mayfair. Receiver was a Kolster-Brandes; remember the brand names from our old radio days here?

The explanation for the good picture seems to lie also in superb transmission facilities and plenty of power. Great Britain has magnificent engineers, second to none, and some of the best are in the BBC.

The programs you see are something else again. By our lights, there's not only not enough choice but a lack of pace and a disregard for timing that seems queer to the American observer. The British people and press are quite outspoken in criticism, sometimes unfairly so—for the fact is that quality and craftsmanship stand out in everything the BBC-TV people do; their dramatics are finished products, their news films excellent, their "outside" (remote) pickups extremely well done, especially sports.

But the day's program more often than not seems unbalanced, aiming at the few rather than the many. Consider these program listings for two different days, presumably typical, exactly as clipped from the *London Times*:

"3 p.m., *Knights for a Day*, British comedy film. 5, children's television. 7:25, weather. 7:30, news. 7:45, public inquiry: The trade unions—too much power, too little responsibility. 8:30, *Music for You*. 9:30, amateur boxing: London ABA versus Paris. 10:30, news (sound only).

"3 p.m., *About the Home*. 4, *Watch With Mother*. 5, children's television. 7:30, news. 7:55, *Sportsview*. 8:15, *Down You Go*. 8:45, *Shakespeare's Troilus and Cressida*. 11:5, news (sound only)."

The home and children's shows weren't particularly exciting, the latter going in for American cowboy films as part of a potpourri intended to interest different juvenile levels. The Shakespearean production, running well over 2 hours, was a repeat of the identical show also carried in prime night time the preceding week. The news films and sports pickups were excellent. The news via sound only at 10:30 (or thereabouts, depending on whether the preceding program ended at

that time or a little earlier or later) seemed peculiar, to say the least.

Twice we viewed classical soloists, one a pianist, one an operatic singer—and in each case the camera was focused on the artist without shift for the entire 30 minutes. It was very dull viewing despite the excellence of the talent. One Sunday night we watched the British version of *What's My Line?*—very popular and as much fun as the CBS-TV show; 2 of its 4 panelists were American, and it offered no prize money.

NOTE.—The 5-6 p. m. Childrens' Hour is followed by a long gap until the weather at 7:25 and news at 7:30. We asked a top BBC official why. His reply: "So that the mothers may prepare dinner and put the children to bed without any distraction from TV. The children have had it, and if they know the screen is dark they make no fuss about staying up for more."

British Broadcasting Corporation, which gets the largest part of post office department's collection of £1 license fees on radios and £3 on TV-plus-radio, reports it spent £9,387,166 on sound services and £3,991,439 on TV in fiscal 1953-54. (The pound is currently around \$2.80.) It suggests that it will require more funds during the next 3-year period in annual report just released by Her Majesty's stationery office, London (cmd. 9269, price 4s. 6d., about 65 cents, 144 pp.).

Gross income from sale of licenses was £16,474,081, which, after deductions, left net payable to the corporation at £12,963,451 for BBC. Total revenue expenditure of £14,563,283 was £9,545 in excess of total income and reserves fell by £691,907. Grant-in-aid receipts for external (overseas) services totaled £4,905,000; total income for these services, £4,947,812; total expenditures, £4,914,695.

Report shows number of combined TV-radio licenses was 3,248,892 last March 31—up more than 1 million in a year; figure is deemed closer to 4 million now, counting licenses sold since then and the nonlicense payers, of whom the manufacturing industry knows there are many. Report says BBC plans to provide coverage of 97 percent of the United Kingdom with TV service by 1956-57.

Another BBC report, more up to date, notes that the diminution of adult audiences for sound radio continued last summer. For July-September quarter it's estimated the adult radio audience averaged 26 million against 28 million in the same 1953 quarter. Drop is explained in report as due to fact some 1 million families bought TV sets during the year. Average TV audience for July-September was 10 million versus 8 million in 1953.

NOTE.—Phenomenal circulation of BBC's *Radio Times*, which lists all TV-radio programs in advance along with feature articles, is revealed in annual report showing average net sales of 7,903,969 in 1953—believed to be even larger now. The *Listener*, companion BBC weekly, featuring texts of broadcast material, had 133,105 average.

Our National Water Resources

EXTENSION OF REMARKS OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. BROOKS of Louisiana. Mr. Speaker, under the privilege granted me to extend my remarks, I present a most able address presented by Brig. Gen.

E. C. Itschner, Assistant Chief of Engineers for Civil Works, on February 7, 1955, before the Mississippi Valley Association in St. Louis, Mo. I believe everyone will be interested in this able address.

The address follows:

REMARKS BY BRIG. GEN. E. T. ITSCHNER, ASSISTANT CHIEF OF ENGINEERS FOR CIVIL WORKS, BEFORE THE MISSISSIPPI VALLEY ASSOCIATION, IN ST. LOUIS, MO., FEBRUARY 7, 1955

It is a pleasure and an honor to appear before this association, which is devoted to development of the water resources of the great valley of the Mississippi River. Since the Mississippi Basin is the very heartland of our country and the great river drains some 40 percent of its expanse, it follows that your interests are national as well as regional in scope. I would like, therefore, to present to you something of the current national water resources picture, as well as discuss certain problems of more direct concern to you.

In thinking of the relationship of the Mississippi Basin to water-resource development in this country, I am reminded of a horse race at a county fair where an old farmer had approached a rather disreputable looking bookie and offered to bet several hundred dollars on "Old Sam" in the fourth race. Strangely enough the bookie objected, saying, "Listen old man, you are not rich and I just don't think you ought to bet so much money." After some argument back and forth in which the old farmer insisted on betting, the bookie said, "Now, I'll tell you why I don't want you to bet. I own Old Sam and he is not supposed to win today." The farmer replied, "Well, then, it's sure going to be a mighty slow race, because I own the other four horses in it." So you can see that the Mississippi Basin is much in the position of the old farmer who owned most of the horses. Water resources development can lag or race ahead depending upon the interest and initiative shown by its people, since much of our water resources are in the Mississippi Basin.

From a national viewpoint, the year 1954 was one characterized by a tremendous increase in interest in water resources problems—and for good reason.

Above all of its other characteristics, it was a year of low water. Severe droughts ravaged much of the country, resulting in loss of crops in the 5-State area in the vicinity of the Texas Panhandle, reduction in crops elsewhere and depletion of water supply and hydropower reservoirs. Pollution problems were aggravated by low flows. Fish and wildlife suffered. Expanding industry selected sites for new factories with the availability of water more than ever before one of the most important considerations. You and your neighbors saw many streams dry up.

At the other extreme, the year saw a series of devastating floods higher than ever recorded on a number of rivers. In the center of the country the Iowa River, whose waters originate in rich farmlands where land conservation measures have been intensively practiced for years, reached stages well above the previous flood of record; in the Pacific Northwest the Kootenai River, swollen by rapidly melting snowbanks many feet deep in the mountains of the United States and Canada burst levees in attaining its record crest; in Pennsylvania and West Virginia a number of rivers reached stages 4 to 6 feet above the highest previously recorded. But possibly the most astonishing flood of all was the Rio Grande flood, which reached a stage of 62.2 feet at Laredo, Tex., on a gage where the past record was 49.6 feet. At least 62 lives fell victim to the sudden deluge. Terrific damage was inflicted, which would have been much worse had the country through which it passed been more highly developed. Fortunately, waiting to receive

this flood was Falcon Reservoir, with little water in it, and thus the flood was changed in this man-made reservoir from a potent and sinister force to a life-supporting commodity for use in the widespread, intensely cultivated irrigated area downstream.

In the field of navigable waterways, too, 1954 was a memorable year. Waterborne commerce reached new peaks on many of the waterways of the Nation, and the notable trend of increase in tonnage on our inland channels continued. The Congress authorized the important deep-sea channel on the Delaware River from Philadelphia to Trenton, which will permit the largest ore carriers to transport Venezuelan iron ore to huge steel mills already in operation. The move toward deeper-draft, larger, deep-sea supertankers and ore carriers and the outlook for increased importation of the commodities they carry has created a pressing demand for correspondingly deeper and improved channels in our major seaports. But probably the most important navigation event of the decade was the passage of the St. Lawrence Seaway Act, and before the year was out the initial large construction contract for this project had been awarded.

In the field of hydro-power generation, also, did 1954 focus attention on deficiencies in the supply of electrical energy from hydro plants now in operation, which were accentuated during the drought and emphasized by an unprecedented rise in the consumption of electrical energy. There was an increased awareness of the rapidly approaching period when further development of our hydro resources for power will be economically infeasible. Nevertheless, during the year 1954 the corps brought 803,000 kilowatts of new installed hydro capacity on the line as a bonus in projects designed primarily for navigation or flood control purposes.

All of these events caused an awakened public interest such as we have never experienced before in the problem of optimum development of our water resources. It was evidenced in many ways. The Bureau of the Budget remarked that it never had had so many delegations pressing for appropriations for particularly favored projects, or, in at least one important instance, for navigation and flood control projects in general. All over the country individuals and local organizations urged their Congressmen and the corps to construct or adequately maintain projects which meant very much to them in their business and personal activities. Also, for the first time in several years, an improving short range international situation permitted the start of a limited number of new projects. But above all there appeared to be a widespread crystallization of a conviction that our best preparation for extreme national emergency is the development of our resources so they will be immediately available in the critical days or even hours that might come.

While the increased interest in water resources development during the past year is encouraging, recent construction progress has not been sufficient to keep abreast of the country's evergrowing water resources requirements. I shall furnish some figures to illustrate this retrogression. Eight years ago, after the Nation had had time to recover from World War II, we had a backlog of \$7,400 million of needed, economically sound, congressionally authorized rivers and harbors and flood control projects. During these 8 years \$1,300 million of work was authorized, as compared to an appropriation of \$3,400 million. In the meantime the value of the dollar shrank, so that today we have a backlog totalling \$8,800 million, which is about 20 percent more than we had 8 years ago. Obviously the tempo of our program must be increased. We estimate that a well balanced annual program of \$650 million for rivers and harbors and flood control projects is the minimum which will permit the

corps to perform its civil works mission to your satisfaction. We have a specific program formulated to utilize that entire amount, including \$50 million annually for new starts. The \$650 million proposed compares with \$442 million actually appropriated for the current year—an increase of 47 percent.

All of us recognize, of course, the difficult problem involved in obtaining larger appropriations for our water resources development work. The cost of national security, added to the sum total of all the other costs of operating our Government, poses a most difficult budgetary problem for our lawmakers and the administration, who jointly bear the tremendous responsibility for safeguarding the interests of our Nation. We must face the fact that these budgetary problems have been, and will continue to be for the foreseeable future, a prime factor to be reckoned with in planning for the development of our water resources.

Of equally great importance is the need for the establishment by Federal legislation of a national water-resources policy. Recognizing this need, the President appointed a committee known as the Cabinet Committee on Water Resources Policy, composed of the Secretaries of the several Federal departments interested in this activity. This committee has the principal mission of recommending to the President a comprehensive and specific national water-resources policy. It is planned that the committee will dissolve when this work has been accomplished.

The President also appointed a companion committee called the Cabinet Committee on Transportation Policy, which has the Secretaries of Commerce, Defense, and the Treasury, and the Director of the Office of Defense Mobilization as its principal members. The corps has not been privileged to participate in the activities of this committee, as we have in the Water Resources Policy Committee. The recommendations of this committee may have a major effect upon water transportation interests.

The President has also reorganized and revitalized the Committee of Federal Agencies interested in water resources now known as Icewater (ICWR) (Inter-Agency Committee on Water Resources). Generally the agencies are represented by assistant secretaries. This committee is a permanent one, having as its mission the coordination of water resources matters among the agencies.

And finally, the last Congress established the Commission on Organization of the Executive Branch of the Government, referred to as the Hoover Commission, for the purpose of recommending to Congress certain broad policies, and organization for effectuating these policies, among the principal subjects being water resources development. The report of this Commission is due in March. We have no information as to what this report will contain. However, it is indicated from the questions asked by the Commission Task Force on Water Resources and Power at several hearings, that reaching a decision as to policies to be recommended has occupied much more of the task force's attention than determining whether a change in organization involving the realignment of functions among the Federal agencies is necessary.

It would be presumptuous and conjectural to attempt at this time to predict the outcome of all these studies. However, the reports of similar committees submitted in the past few years and the questions that have been asked during recent committee hearings indicate some subjects that are being considered. The more important of these from your viewpoint are:

1. That a review board, composed of non-Federal consultants, be established for the purpose of reviewing all projects recommended by any Federal agency prior to sub-

mitting them for congressional authorization. The corps would not object to such a board, providing its functions were limited to review and not broadened to include the selection of projects and establishment of priorities for planning and construction. We firmly believe that the individuals on such a board must be qualified as engineers and economists, impartial, and without political obligations. And regardless of the functions that might be assigned to the review board, present review procedures within the corps must be retained.

2. That tolls be charged on existing waterways at least sufficient to pay for the cost of maintenance and operation, and on new or improved waterways to reimburse the Government over an appropriate period of years, for the original cost plus the expense of maintenance and operation. The proposal for imposition of tolls on waterways would reverse a long-standing statutory policy that our waterways shall be public highways, forever free. National policy on this subject stems from one of the first acts of the first Congress of the United States, and has been reaffirmed on numerous occasions. The Corps of Engineers, as the Federal agency entrusted with the Nation's navigable waterway-construction program has studied this question thoroughly in order to determine the possible effect of the imposition of user charges on navigation facilities. Our conclusions, based on months of intensive study by economists and engineers skilled in waterway development, is that if tolls are to be imposed, and the corps has been traditionally opposed to them—they should be imposed upon all of our water-transportation facilities alike; they should be charged by some method which would control the rate structure for all modes of transportation so that the advantages of each are preserved and unfair competitive practices are avoided, and they should be made uniform by regions for ports and by integrated systems for inland waterways in some arrangement that would result in a minimum of adverse competitive effect as a result of tolls. Finally, we are convinced that the possibility of achieving these requirements is doubtful, to say the least, and that in any event the results would not be worth the immense readjustments and costs that would be involved.

3. That legislation should be enacted by Congress which would, in many instances, decrease bridge clearance requirements and reduce the operating hours of movable bridges. It would also require substantial Federal contribution to the cost of bridges across waterways important to foreign commerce or used by defense vessels. Under present law the Corps of Engineers is charged with the responsibility for determining whether a proposed bridge would be an unreasonable obstruction to navigation, and in making this determination we consider the economic effect of the structure upon both navigation and land traffic. You are well aware of the conflicting opinions of bridge owners and navigation interests with respect to clearances for fixed bridges and operating regulations for movable bridges. The great expansion of both highway and waterway traffic in recent years has focused greater attention on this conflict of interests which necessarily arises wherever the rights-of-way of the two types of transportation intersect. In an effort to find a reasonable and practicable solution to the problem, the corps has adopted the policy that an economic analysis of comparative costs and benefits be made in bridge clearance cases. This analysis is utilized as one part of the study leading to the final decision as to what constitutes an unreasonable obstruction to navigation. Some of the data for the analysis originates with the navigational interests, who must analyze the characteristics of waterway commerce passing the intersection in question and determine the

resultant damages or losses if certain restrictive clearances are provided.

Conversely, navigational interests must demonstrate the resulting benefits in terms of dollars to be realized by the provision of clearances proposed by them. The problem resolves itself into one where both land and water transportation interests must fully consider the economic effects of the final decision on the overall economy of the region. There is no reason why there cannot be achieved an equitable balance of interests under existing law between waterway and highway traffic through the coordinated study of the requirements of both modes of transportation and their relative impact upon the general economy. Compromises on both sides are inevitable, but I can assure you that the Corps of Engineers will not be a party to an approval in any instance of an unreasonable obstruction to navigation.

But regardless of the recommendations of any committee or commission, there is in being only one organization best able to undertake the navigation and flood control and related phases of Federal activity in water resources development—the Corps of Engineers. With 12 divisions and 45 districts, the corps covers the entire United States and some important overseas areas. It has 25,000 employees, mostly civilian. The corps' civilian engineer force is the largest, most capable body of engineers in the world today, and to them goes much of the credit for the success that the corps has had throughout its many years. I need not remind you that civil works and military construction are accomplished by the same organizations, with resulting greater efficiency in each, and, of course, the existence of such an organization is of extreme importance at the outset of war in order to get the military construction program underway.

So much for the national picture and interest. I would next like to discuss briefly a few points which I believe are of more immediate concern to the people of the Mississippi Valley and to this association.

I am sure that you, who have been so alert to the problems relating to the economy of the Mississippi Valley and to the Nation generally, fully recognize the large part the Mississippi River system has played in the development of the Nation. Though the benefits thus far realized have been enormous, further accomplishment is necessary if the people of the valley are to maintain their high national position, and correspondingly, if the Nation is to meet its ever-expanding economic goals.

The alluvial valley project is now about two-thirds complete and is the farthest advanced of the Federal programs for the Mississippi River system. The major development programs upstreams are in a lesser stage of completion—the upper Mississippi being 46 percent complete, the Missouri 43 percent, and the Ohio 29 percent. Even in this incomplete state, several major floods have been passed to the Gulf without mishap, and there has been no general overflow of the alluvial valley since the project was initiated. We have, indeed, been fortunate. Some areas of the valley are still vulnerable to flooding and will continue to be so until the entire comprehensive plan is complete.

Control of floods in a major river basin must be approached on the basis of planning for flood control in combination with other water uses and problems, with the objective to make the best possible use of land and water resources from an overall public viewpoint. Disastrous floods can be prevented by the execution of carefully prepared plans which utilize all flood-control measures and structures in their proper place. These measures can be accomplished most economically when they provide for complete development and use of our water resources; for example, by providing for beneficial use of floodwaters as well as control of them.

In carrying out such comprehensive plans of improvement it is entirely logical to take first things first and provide protection against the disaster flood as the first step. It is, however, wasteful to emphasize one phase of river-basin development and ignore others.

I feel we have followed a prudent course in the selection and accomplishment of the water-resource-development program for the Mississippi River system. We have already reaped tremendous benefits far in excess of the investment made. Yet, certain people have attacked the basic principle of river-basin development, contending that watershed-treatment programs—soil conservation and small dams—are effective substitutes for major flood-control structures. While it is recognized that measures and practices which conserve the soil and improve the vegetative cover on watersheds will contribute to flood control and definitely reduce flood flows, it is dangerous to claim for such measures the ability to control or materially reduce large floods when all history and experience point to the contrary. The Corps of Engineers believes that watershed-treatment programs, small dams, large dams, channel improvements, levees, and all feasible and economical measures must be utilized in appropriate cases if the flood problem is to be solved. There is no single panacea for flood control.

Biased articles on the subject of watershed treatment attacking the principle of large dam construction are dangerous because they build up in the public's mind a belief that soil conservation and small dam programs will accomplish far more than can be expected of them, and because they tend to undermine public confidence in programs and structures which sound engineering and scientific experience have found to be necessary if floods are to be controlled.

You of the Mississippi Valley Association are well aware, I am sure, that the critics of large dam construction, either through lack of knowledge of the subject or for other reasons, choose to ignore the fact that the best watershed treatment practices that can be devised by man are ineffective in preventing disastrous floods resulting from heavy widespread downpours on land already saturated by prolonged rainfall—as occurred in the Kansas River Basin in 1951.

The more radical elements of the proponents of soil-conservation measures—I speak of the prolific writers of deliberately misleading books and articles rather than the more conservative responsible Federal officials—would have you believe that soil-conservation and land-treatment practices constitute a new science just recently come to light. How strange that some of the most backward nations in the world today have practiced watershed treatment for centuries to a much higher degree than we may ever hope to attain in the United States. Korea is an example. Except in rugged mountain areas, every acre of land in that country is completely terraced for the culture of rice. During the growing season the paddies are kept full of water so that a bucketful of water poured into the top terrace results in the same amount of water leaving the lowest terrace and entering the sea. It fell to my lot to be a worried spectator at a demonstration of what happens when a heavy rain falls with the stage thus set. Four to seven inches fell in a few hours, causing the Imjim River, 600 feet wide at a bridge site, to rise 32 feet in 21 hours, becoming a river 1,800 feet wide as it surged over its banks. I do not suggest that land-treatment measures be discontinued in Korea or in the United States, for that matter, but I do submit that they are by no means a complete answer to the flood-control problem. A similar ineffectiveness of land treatment in preventing floods occurs when rapid snowmelt, accompanied by rainfall, occurs in drainage areas where the ground is still

frozen in the early spring—a situation that existed in the upper Missouri River Basin in 1952. Critics of comprehensive flood-control measures ignore historic evidence that great floods occurred in this country prior to its settlement by the white man. Such critics also fail to give proper credit to the collateral benefits that are realized from a balanced program which includes large reservoir units. Economical power is provided to serve existing needs and encourage the further development of industry in the region and floodwaters are conserved to serve such needs as navigation, irrigation, domestic and industrial water supply, and pollution abatement. The water-conservation benefits realized from the Fort Peck and other reservoirs in the Missouri River Basin last year in aiding navigation, alleviating salt-water intrusion at New Orleans, and similar functions are still fresh in our minds; neither have we forgotten that operation of Fort Peck during the flood of 1952 made the difference between success and failure in the tremendous efforts that saved the levees at such critical locations as Omaha and Council Bluffs.

I began this talk with a glance backward to the year just past—an eventful, important year in water-resource development. Let me conclude with a look into the year ahead. First, I would like to suggest that you and your association be optimistic about the outcome of the widespread interest now being shown to the matter of water-resources development, but that you be alert with a view to guarding against any move to discard the experience and gains of the past and substitute some new untried schemes—however plausible they may appear on the surface. I believe that the year to come will require great unanimity, courage, and a fighting spirit among all those interested in sane water resources development, in view of the tolls and bridge clearance problems, and the misleading propaganda by opponents of scientific and complete flood control. That your organization is experienced in bringing a fight to a victorious conclusion was demonstrated last year in connection with the Old River control problem. Your executive vice president, for whom we in the Corps have the highest regard and respect, appeared before the House Public Works Committee in behalf of this project and clearly set forth by convincing words and illustrations the widespread adverse effect the forecasted events would have upon the entire Mississippi Valley. It is significant that the budget and the President in his budget message recognized the necessity for this control and have recommended funds to initiate construction in fiscal year 1956. General Hardin, the president of the Mississippi River Commission, will perhaps discuss this project in his talk tomorrow, but since the Chief of Engineers had a deep personal interest in this subject and visited the area last fall with Assistant Secretary of the Army Roderick, I thought I should mention it.

It appears to me that the association, and other navigation and flood-control associations throughout the Nation, must gather forces for what might well go down in history as your greatest fight—and I am sure it will be a successful one. I believe it would be appropriate, in the difficult but rewarding times ahead, to remember the words of a great President, Theodore Roosevelt, who said:

"It is not the critic who counts—not the man who points out how the strong man stumbled or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena—whose face is marred by dust, and sweat, and blood—who strives valiantly—who errs and comes short again and again—who knows the great enthusiasms, the great devotions, and spends himself in a worthy cause—who, at the best, knows in the end the triumph of high achievement, and who, at the worst, if

he falls, at least falls while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory nor defeat."

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to an informative series of articles written by one of the Nation's outstanding journalists, Mr. Phil Goulding, of the Cleveland Plain Dealer.

Mr. Goulding has ably outlined in this series the pros and cons of the argument over foreign-trade agreements and how the latest Reciprocal Trade Agreements Act proposals affect Ohio's stake in the huge annual import-export business.

This series merits the attention of every Member of Congress.

The first article of the series follows:

OHIO EYEING BIG STAKE IN TRADE GOALS—
SOME SAY IKE'S PROGRAM WILL BRING BILLION DOLLARS, OTHERS RUIN

(By Phil G. Goulding)

WASHINGTON, January 29.—Government experts claim Ohio has a billion-dollar annual stake in the administration's foreign-trade program.

Perhaps so, answer some Ohioans, but it still means ruin to us.

Each day a dozen witnesses appear before a congressional committee to describe why it is vital to the free world that the Reciprocal Trade Agreements Act be extended and foreign trade expanded—

Or to testify that the lowering of tariffs will wash their business down the drain.

The hassle has been going on since something called the tariff of abominations threw the South into one of its periodic fits in 1828. Up and down went duties on goods from overseas until they were pegged at an all-time peak by the Smoot-Hawley Act of 1930.

DEMOCRATS CUT RATES

President Hoover and the Republicans were retired. From Franklin D. Roosevelt, Cordell Hull, and the Democratic Congress of 1934 came the original Reciprocal Trade Agreements Act. It authorized cuts up to 50 percent in rates prescribed by the Smoot-Hawley bill.

It has regularly been extended for 3 years or less.

Extension time is up again on June 12. The administration wants lower tariffs. The current legislation permits the President to reduce rates up to 50 percent of those prevailing in 1945, but most of this authority has been used.

Foreign nations selling to the United States pay the Treasury Department in three ways on the goods they send in. Some items carry a duty figured on a certain percent of the value of the product. Some tariffs are a set rate—so much a pound. Some are a mixture.

Congress does not set specific rates, but gives the President power to establish them, within certain ranges. He is advised by a tariff commission, before which industries may plead their case.

Mr. Eisenhower has requested authority to reduce rates by as much as 5 percent

below levels of next July 1 in each of the next 3 years as reciprocal agreements are made with other countries. He wants power also to cut any rates now in excess of 50 percent of the product's value to that level. And he wants to halve 1945 rates on items being imported in negligible quantity.

Some rates, cut 50 percent by the 1934 authority and 50 percent of that figure by 1945, are now 75 percent lower than the level fixed by the Smoot-Hawley legislation.

Ohio legislators, both rookies and veterans, are once again asking questions. What do tariff rates mean to the people of Ohio? What industries are affected? Which manufacturers in the State favor the bill now before the Ways and Means Committee of the House, and why? Who opposes lower tariffs? What is their case?

Proponents of the act give two chief reasons for their support. They say our friends in the free world must be kept economically strong. And they cite the advantages the United States secures from its export trade.

United States foreign trade in 1953 amounted to \$37 trillion in imports and \$21 billion in exports.

What is Ohio's share of this foreign business?

Commerce Department experts say if the sale of the State's products manufactured for export was suddenly cut off, Ohio's business loss would be an estimated \$980 million a year.

Their latest figures show 100,000 Ohioans employed in making goods that are sent out of this country. More than 800,000 worked in industries turning out goods which are shipped out of the United States in greater quantity than brought in.

OHIO INDUSTRIES SPREAD OUT

Ohio industries with substantial foreign business transactions are spread throughout the State.

Blast-furnace and steel-mill operations exported some \$90 million worth of products in 1953. Sixty-five plants were operating. Nearly 50,000 worked in the Youngstown area alone. Others were employed chiefly in Cleveland, Portsmouth, Cincinnati, Canton, Massillon, and Mansfield.

Trade-agreement concessions on these products have been made with Canada, the United Kingdom, Chile, the Union of South Africa, Cuba, and Sweden.

Another Ohio export lion was the machine industry. An estimated \$309 million in equipment was shipped abroad, including some \$73 million in construction and mining machinery, and \$34 million in metal working equipment.

More than 500 plants turned out the metalworking gear, employing some 17,000 in the Cleveland area, 11,600 around Cincinnati, and others in Toledo, Springfield, Hamilton, and Kent. Among nations with which trade concessions have been negotiated are the United Kingdom, Canada, France, Switzerland, India, Pakistan, and Chile.

CLEVELAND HAS BIG SHARE

Service—industry and household machines were exported in quantity. Ohio's share was an estimated \$35 million. Two-thirds of the workers were in refrigeration machinery, one-fifth in vacuum cleaners. More than 7,000 were employed in Cleveland, others in 87 plants there and in Canton, Dayton, Cincinnati, Mansfield, and Fremont.

Ohio exported \$138 million of motor vehicles and equipment, made by 69,000 workers in 171 establishments in Cleveland, Cincinnati, Toledo, Greenville, Lima, and Loudonville.

Trade agreement concessions have been made on electrical machinery with Switzerland, Belgium, Netherlands, Luxembourg, the United Kingdom, Italy, and other countries. The State's estimated contribution to the national export was \$66 million. Eighty thousand were employed in 302 fac-

ories across the State—Cleveland, Dayton, Cincinnati, Elyria, Toledo, Alliance, Lima, and Troy among them.

Ohio employs more than one-third of the rubber workers in the United States. Goods worth \$44 million were shipped out. More than 61 thousand persons drew wages in Akron alone; another 23,000 in Cleveland and other cities.

The department experts say all these industries have benefited from trade agreements. Foreign nations have reduced their tariffs and relaxed other trade barriers, they add.

OTHER OHIO LEADERS

Other leading Ohio industries and their estimated exports are these:

Fabricated metal products (from cutlery to bolts and nuts) \$36 million, chemicals and allied products \$27 million, ceramic and glass products \$18,200,000, paper and allied products \$9,900,000, miscellaneous (toys, plastics, and others) \$6,100,000, furniture and fixtures \$3,900,000.

These dreary statistics are quoted to support the fundamental position that industrial Ohio does have a tremendous stake in international trade. It does not follow that the industries mentioned are all in favor of the administration's program. Some of their views will be presented in other stories.

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I include the second in a series of articles written by Mr. Phil Goulding of the Cleveland Plain Dealer:

IMPORTS ESSENTIAL TO OHIO'S INDUSTRY

(By Phil G. Goulding)

WASHINGTON, January 30.—A major Akron tire company imports crude rubber from 10 countries.

It exports to all free nations. It needs trade. Its officials are in favor of an extension of the Reciprocal Trade Agreements Act now before Congress.

Commerce Department economists contend that Ohio imports are just as important to the State's economy as its exports. Almost all Ohio plants, they say, are dependent in some degree upon raw materials from abroad or the product of another United States industry which is dependent.

More than 36 percent of American rubber stocks must be imported. Ninety percent of the asbestos used in Ohio industry is imported, 85 percent of the tin, 91 percent of cobalt, 75 percent of tungsten ore, 75 percent of aluminum.

Ohio's machine tools need industrial diamonds, all of which are imported. Manganese and chrome put the starch in steel. The ferroalloy industry of the State draws on foreign sources for ferromanganese, ferrochrome, and other alloys.

Even such unlikely products as wattle bark and quebracho extract are needed for Ohio's leather industry, which employs some 18,000 workers.

The State Department concludes that Ohio industries employing nearly a million persons and paying nearly \$3 billion in wages could not operate without imports.

Ohio's manufacturing payrolls are five times its income from agriculture, but Government proponents of lower tariffs say trade agreement concessions have aided the Ohio farmer as well as the average factory worker.

Dairy exports, mainly from the northeastern quarter of Ohio, were from Wayne, Ash-tabula, Medina and Stark Counties, plus Darke, Portage, Lorain and Trumbull. Shipments were an estimated \$3,670,000 in 1953.

The trade agreements on these and industrial products began in 1934. Between then and 1946, bilateral agreements were concluded with 29 nations. The next year the program was greatly broadened by shifting negotiations from a bilateral to a multilateral basis.

Twenty-two countries met with the United States at Geneva to sign the general agreement on tariffs and trade—GATT. Concession on 45,000 items were made. Further concessions were made in 1949 and 1950-51; the group grew to include 34 nations.

No one comes up with the same answer on how much these agreements have lowered tariffs since 1934, on products coming into Ohio or into the rest of the United States.

A report by the Tariff Commission put out in mid-1953 attempted to compensate for price fluctuations and other factors in deciphering the complex tariff schedules. It concluded that the tariff level averaged a 25 percent drop until more authority to cut was voted in 1945, and an additional 25 percent reduction since, for a total slash of about one-half over the 20-year period.

But the American Tariff League, Inc., a high-tariff association, says flatly that the level has fallen 70 percent since 1934.

RECIPROCALITY DISPUTED

There is also violent debate over how reciprocal the reciprocal agreements have been. An official of the committee for a national trade policy says that over 50,000 items of more than 40 countries have been reduced or prevented from increasing under the program.

A spokesman for the American Tariff League replies there are more restrictions against the United States abroad now than when the original act was passed in 1934.

A Cleveland industrialist, head of a large drill concern, points out that England has low duties—but 100 percent embargo on the importation of any goods manufactured in sufficient quantities within the commonwealth.

GROUPED IN NORTHWEST

The State's share of national farm exports was estimated at about \$100 million at last reckoning. Twenty-three counties produce most of this, although many others contribute. Except for the dairy industry, the exporters are concentrated in the northwestern quarter of the State.

Wheat is grown on some 110,000 farms, nearly 50 percent of those in Ohio. Wood and Seneca Counties lead. Important production also comes from Wayne, Pickaway, Henry, Hancock, Darke, Huron, and Sandusky. The Department of Commerce estimates that \$32 million worth was exported in 1953.

Chief producers of some \$15 million in corn sent abroad were Darke and Wood Counties. Madison, Pickaway, Putnam, Preble, Green, and Henry exported nearly as much.

Canada, Finland, Cuba, and Denmark are among nations which have made trade-agreement concessions on corn; the United Kingdom, Denmark, Switzerland, Norway, Italy, the Dominican Republic, Cuba, and Nicaragua on wheat.

Wood County also heads soybean production in the State, followed by Van Wert, Putnam, and Paulding. One-quarter of Ohio farms grow soybeans. Their share of overseas business amounted to \$10 million. Denmark, Finland, the United Kingdom,

Italy, and Cuba have made trade concessions. The State's export of oats was an estimated \$265,000, from Wood, Henry, Mercer, Seneca, and Wayne Counties. Hog products valued at \$4,800,000 were exported from Fayette, Clinton, Preble, Pickaway, Darke, and Madison Counties.

Conscientious Ohio legislators, whose duty is to consider their own districts as well as the welfare of the Nation, are understandably perplexed by the conflicting testimony.

The files of some, including the two Senators, JOHN W. BRICKER, Republican, of Columbus, and GEORGE H. BENDER, Republican, of Cleveland, are filled with correspondence from constituents. Representative FRANCES P. BOLTON, Republican, of Cleveland, sent letters by the hundreds to persons within Ohio and in other States requesting their views and advice.

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I include the third in a series of articles written by Mr. Phil Goulding, of the Cleveland Plain Dealer:

OHIO INDUSTRY IS SPLIT ON BID FOR TARIFF CUT

(By Phil G. Goulding)

WASHINGTON, January 31.—Big Ohio industry differs on tariff protection.

Some major concerns go right down the line with the administration position. One is a Cleveland stove producer.

"We are for free trade," it says. "We want exports. High duties mean less income in foreign countries. That means fewer dollars and fewer exports."

A large Cleveland chemical company feels the same way. High tariffs were necessary before World War I, it believes, but not today. An official thinks 80 percent of chemical products are not affected by foreign competition.

This is an unusual position for the chemical manufacturers. Most industry spokesmen oppose the legislation now before Congress to extend the reciprocal Trade Agreements Act and broaden the President's authority to lower rates.

Take the American Cyanamid Co., with 33 plants and 15,000 workers. It has a plant in Hamilton, another in Marietta.

Despite a provision in the 1954 act that there would be no reductions which threatened domestic production necessary for national defense requirements, nearly all organic intermediates are on the proposed list in a Japanese trade agreement.

"The congressional mandate," says the company, "was ignored."

An American Cyanamid officer points out that the industry is about 7 billion pounds shy of required mobilization capacity. Displacement of American production by increased exports would discourage the installation to meet such requirements, he says:

CITES DWINDLING MARKET

Westinghouse Electric has plants in Mansfield, Cleveland, Bellefontaine, Columbus, Newark, and Lima. Its president says there has been no liberalization of trade by other nations in return for United States concessions.

He declares that it is harder to sell American-made electrical equipment in foreign nations today than it was in the 1930's or before the war. Yet with a few minor exceptions, all rates on this apparatus have been cut 50 percent or more by the United States since 1930.

Under the Smoot-Hawley Act, they ranged from 20 to 35 percent; now they scale from 8½ to 17½ percent.

SAYS PROTECTION NEEDED

"Completely inadequate" to protect United States workers from foreign competition, the Westinghouse official says.

"Any foreign producer can undersell us in this country by up to 30 percent, even after paying shipping cost and duties."

He points out that Germany, England, and Switzerland all bar electrical power equipment imports—yet England and Switzerland are the largest exporters of this gear to the United States.

"The State Department has obtained very little reciprocity in return for the economic concessions it has made," he asserts.

CALLS IMPLICATIONS SERIOUS

Ohio opinion is also split on machine tools, of which it is the Nation's largest producer.

One giant Cleveland concern strongly favors low tariffs, on the theory that only then can overseas nations sell enough here to get dollars to buy American products.

But Frederick V. Geier, president of the Cincinnati Milling Machine Co., biggest in the world, said in an interview published in U. S. News & World Report last March that the tariff policy was the most important thing facing the industry today.

"The Randall Commission proposal to reduce tariffs across the board has serious implications for our technical industries," said Geier. "Foreign competition is increasingly serious."

CITES HUGE INCREASE

Chemical imports are up 500 percent since 1948, a Dow Chemical Co. executive adds.

Other industry spokesmen are not against extension of the act, but oppose certain sections—particularly President Eisenhower's request for authority to cut all rates over 50 percent ad valorem (of the value of the product) to that level.

Ohio has some 13,000 workers in organic and inorganic industrial chemicals.

There are more than 80,000 in electrical machinery.

EXECUTIVES DIFFER

Company presidents in this field differ, too. One Cleveland producer of electric motors says that imports of heavy power equipment, while still accounting for a small percentage of sales in the United States, are increasing more rapidly than total demand for the products.

At the same time, he adds, exports have gone down. They were 9.1 percent of sales in 1920, 5.2 during the 1930's, 4 percent today.

Another Cleveland, head of an electric company, says this:

"People who are hurt are not as efficient as they should be. Mr. Eisenhower's program would open a tremendous market."

So there you are.

FOREIGN WAGES LOW

Two more Clevelanders in the same business take conflicting positions. One thinks trade should be more free, the other tariffs should be increased.

The industry formerly depended on Europe for 22 percent of its sales, the latter adds. Now exporting has fallen below 10 percent. Foreign import restrictions are impossible to beat. Their wages are one-fourth of ours and their prices 50 to 100 percent cheaper.

One Cleveland industrialist, whose firm turns out huge equipment, notes that his hourly rate, with fringe benefits, is \$2.83, the Japanese and German 50 cents. German

plants, built with Marshall plan money, are producing equipment equal to American machinery and underselling us here, duty paid, by 25 percent, he says.

A German firm representative told him in New York that the German concern could beat his price on a piece of boat-unloading equipment by \$250,000.

SIMPLIFICATION IS URGED

Akron rubber companies are generally for an extension of the act. One president said he was not in the least worried about elimination of all tariffs on rubber tires. These outfits appear more concerned with simplification of customs procedures.

On office-equipment producer in Cleveland favors extension for at least 3 years, longer if possible. He would also like to see customs simplification, tax relief on earnings abroad, and an easing of export-import bank restrictions.

The head of one of the large steel companies believes there should be tariffs recognizing the labor rate differentials, plus import quotas by general characteristics—pig iron, carbon and alloy bars, sheets, structural steel, rails, and wire products.

ARGUMENTS GIVEN

In general, the reasoning of Ohioans is similar to that of the rest of the Nation. A summary:

Pro: The legislation must be passed to keep the free world economically strong. Military and political ties must be backed up by economic substance. The bill is so moderate it would hurt no one. It is consistent with free enterprise and free competition. It is toward gradual and reciprocal elimination of world trade barriers.

Where the United States leaves a trade opening the Soviet moves in. The United States cannot sacrifice its export industry to protect a sheltered minority.

Con: There is no guaranty the act would promote exports, only that United States tariffs will be cut. The escape clause allowing contracting parties to withdraw or modify concessions that injure domestic producers, has been invoked only 5 times in 12 years.

The peril-point provision, which requires the Tariff Commission to fix limits below which rates cannot be cut without causing or threatening serious injury to domestic interests, has never been tested in multilateral negotiations, only bilateral.

SPLIT ON CUT BASIS

Congress should set tariffs on an item-by-item basis, not delegate authority to the executive branch.

The authority is too broad. The damage to essential industries—coal, hurt by residual oil imports—cannot be reckoned as injurious only to those industries but to millions depending on them. The United States must play its part in strengthening the free world—but our rates are already low, among the world's lowest.

Another story will deal with the specific Ohio industries which claim that continuation of present legislation, let alone additional tariff cuts, will mean ruination.

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I include

the fourth in a series of articles written by Mr. Phil Goulding, of the Cleveland Plain Dealer:

OHIO POTTERY WORKER SEES HIMSELF AS "GOAT"

(By Phil G. Goulding)

WASHINGTON, February 1.—The East Liverpool pottery worker is not impressed with the theory that his job is less important than improved living conditions in Japan.

His average age is 50. "Adjustment" as a casualty of freer trade would be difficult. He does not see surrounding industries hiring men his age in vast quantities. As he looks south to Steubenville and north to Youngstown, he does not see surrounding industries hiring anyone in vast quantities.

He is one of some 6,000 chinaware workers in the immediate area. Within 100 miles of the city, there are 10,000. Some are across the State line. In Ohio, they are found in Sebring, Minerva, Crooksville, East Palestine, Coshocton, Salem, Steubenville, Wellsville, Cambridge, and Bedford.

PAID FOR PRODUCTION

If he is familiar with the arguments of the International Brotherhood of Operative Potters (A. F. of L.), or of his employer, he has accumulated quite a batch of statistics.

He has learned that his wages and those of his colleagues are about two-thirds the total cost of dinnerware production.

The average wage in his industry is \$1.68 an hour—compared to 41 cents in England, 34 in West Germany and Paris, 30 in Italy, and 22 in Japan.

He is a pieceworker and is paid chiefly for what he produces. He has heard that United States production dropped 10.3 percent between 1949 and 1952, another estimated 10.1 percent to 1954.

While his company and others in the United States supplied 29.7 percent of the domestic market in 1948, they supplied only 15.9 percent of it in 1952.

Spokesmen for him say that imports of decorated household chinaware have increased 138 percent since 1948; from 2,070,000 dozen to 4,940,000. Dinnerware brought in from overseas competition 12 years ago totaled \$7 million. Imports in 1953 were \$29 million.

Vicious disaster will be the end result of the enactment of President Eisenhower's reciprocal trade agreements program, his union tells him. His boss says the same thing.

LOSSES IN 1954

Congress has been told that four large vitrified china plants had a profit of 13.7 percent before taxes in 1948 and a loss of 1.4 percent in 1954. During the same years, four other concerns were liquidated. Three of them had been in business a total of 184 years.

The pottery people do not ask a tariff sufficiently high to make up for the wage differential. The current rate is about 70 percent of the value of the import, plus 10 cents per dozen pieces. To equalize a duty of 248 percent plus 15 cents per dozen would be required. The industry recognizes this as quite impossible.

But they would like to see an import quota established, which, they say, would dissipate the fears that low-priced imports will take over the market completely. The argument is that these fears retard production and depress the market.

They recognize that the dollar shortage in foreign nations must be overcome.

SACRIFICE UNITED STATES INDUSTRIES?

"But we do not accept the concept that American industries should be sacrificed on the altar of economic appeasement," they say.

Frank Hull, president of the International Brotherhood of Potters, East Liverpool, would like to have dinnerware and chinaware elim-

inated from the list to be negotiated with Japan on a multilateral basis under GATT.

If pottery remains on the list, he feels import quotas should be applied and the treaty made bilateral with Japan only.

The chairman of the foreign trade committee of the Vitrified China Association, E. L. Tolbert, believes that Congress should return to itself the right to set tariff rates specifically.

He does not deny that logrolling might result, but better the logs should be rolled within Congress, he says, than by 30 or 40 foreign nations within GATT.

FIGURES TELL TALE

Twenty-three United States plants manufacture 85 percent of all earthenware tableware produced in this country. Their sales in 1953 amounted to \$53 million. Some \$45 million of the total was from the East Liverpool area.

The national sales figure in 1947 was \$56,620,000. Earnings before taxes were \$6,688,000 then, \$1,026,227 in 1953. Earnings after taxes dropped from \$4 million to \$255,000, total dozens shipped from 27 million to 19 million, wages from \$32,896,000 to \$31,744,000, total manhours worked from 25,681,000 to 16,703,000.

During these same years, imports of earthenware increased nearly 300 percent, while American production dropped 30 percent; imports of chinaware went up 700 percent, while chinaware held even.

Practically all of the increased imports have come from Japan.

"Yet," says the United States Potters Association, "we are told by the State Department they are now ready to negotiate a treaty with Japan in which it is contemplated that duties will be reduced on both china and earthenware."

SUFFERING ACTUAL INJURY

"It is painfully evident we are far past the 'threatened with injury' stage and for at least 3 years have been suffering actual and serious injury. It is just as evident in comparing imports and domestic production figures that a major portion of that injury is due to imports under present tariff rates."

The potter industry, spokesmen point out, does not have the advantages of some American industries which thrive on international markets—including the patent advantage.

People making automobiles, typewriters, washing machines, business machines, and other goods do not need tariff protection, they say, because the Government gives them a monopoly through their patents that protects them from foreign competition.

When proponents of lower duties point out that relief is available through the escape clause of the Reciprocal Trade Agreements Act, they reply that Americans have sought such relief 53 times and been granted it in 5 cases—women's felt hats, watches, clover seed, dried figs, and hatters' furs.

The next story will give the cases of some other Ohio industries protesting the current legislation and the executive trade agreements.

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I include the fifth in a series of articles written

by Mr. Phil Goulding of the Cleveland Plain Dealer:

LOW-TARIFF FOES CITE OHIO LOSSES

(By Phil G. Goulding)

WASHINGTON, February 2.—Four out of five Cleveland industries favor the administration bill to lower tariffs.

That was the testimony before Congress of N. C. Rubin, president of the Cleveland World Trade Association.

The White Sewing Machine Corp., is one of the 20 percent opposed. It contends that any further reduction in duties would result in serious harm and it cites these figures to prove its case:

Net earnings after taxes were \$4,126,000 in 1949, only \$207,000 in 1953. The rate of return on invested capital was 28.4 5 years ago, 1.0 in 1953. It sold 342,500 units in 1949, 179,363 in 1953.

QUOTES FIGURES

Hourly workers on the production line numbered 1,650 in 1950. Last year there were but 500.

The white people say they retooled their works during the war and engaged 100 percent in war activity. Not until 1946 was the reconversion completed. During this 4-year suspension a great consumer demand built up. Importers found the market.

Before Pearl Harbor, foreign manufacturers sold only \$186,000 in sewing machines to the United States and the white business was \$11 million. By 1949, imports were nearly \$9 million and white sales \$31 million. Year before last, buyers paid \$24,500,000 for machines made overseas and \$19 million for white products.

Foreign manufacturers have taken over nearly half of the market, White spokesmen say, with the Japanese alone having carved out some 30 percent.

COMPARE WAGES

Wage differentials show why. The White rate is \$1.85 an hour, plus fringe benefits worth 30 cents. Average European pay in sewing machine plants is 60 to 70 cents. The Japanese get 20 to 40 cents.

Exports of the Cleveland company have declined. Excluding Canada, in 1950 shipments to other nations were worth \$232,000; in 1953 only \$53,000.

Another Ohio industry which claims to be in trouble is glass. The latest census of manufacturers showed there were 12,610 Ohio workers in pressed and blown glassware, 7,000 in other glass products. That was a 1947 count.

No figures are available in Ohio glass employees today, but here is an illustration of what has taken place. A handmade glass factory in Morgantown, W. Va., was started before the turn of the century. Five years ago the plant had 300 employees shipping \$1,125,000 of ware. Today it has 150, working 7 days a week. Shipments have fallen to approximately \$750,000 a year.

MANY OHIO PLANTS

Among Ohio hand glass manufacturers are plants along the eastern edge of the State in Toronto, East Palestine, and Bellair, others in central Ohio in Newark, Bremen, and Lancaster and one in Tiffin.

The handmade pressed and blown glassware industry produced \$31,835,000 of ware in 1953. Ohio's share was an estimated 14 percent. About half was hand blown, half handpressed. The hand blown sales in 1953 were some \$15 million, which is less than 1 percent of the entire glass industry. Yet it has felt the impact of 17 percent of all imports of the entire industry. Handmade blown imports went up \$400,000 in 1953 over 1952—from \$4,200,000 to \$4,600,000.

Hardware table service glassware consumption in the United States was 43.7 percent imported in 1953. Pressed-ware importation was 10.7. Both have increased substantially

since 1948, when the former was 22.3 percent and the latter 3.5 percent.

And from Tariff Commission reports for 1954, an increase of 20 percent in imports is indicated. In addition, the American Glassware Association predicts a 1954 sales decrease of 12.5 percent.

"If this rate of increase for imports and decrease of domestic production continues," says an association spokesman, "it is but a short time before American production of these wares must be abandoned and our workmen will have to seek less lucrative employment in other industries in which they are not trained."

The industry denies that foreign manufacturers have superior knowledge of manufacturing, designing, or merchandising. It blames wage rates. United States workmen average \$1.72 an hour. Swedes average 69 cents, Britons 53, Parisians from 49 for skilled males to 35 for unskilled women, Belgian men 46 and women 25, Italians and West Germans 37 and Japanese 22.8.

OPPOSES BILL

The industry opposes the administration bill. It contends the President would be given the widest latitude he has ever had in lowering tariffs and determining trade regulations. It says the legislation means surrender of congressional approval for 3 years. It believes the bill urges reckless, uniform slashing of rates, without item by item scrutiny.

William A. Daugherty, of Newark, a glassworker and president of the Ohio Glass and Pottery Workers' Protective League, adds a footnote. His plant has three giant furnaces. Only one is in operation.

Makers of rubber sundries in the State do not take the same favorable position toward lower tariffs as the large Akron tire and rubber companies with big export markets.

Ninety percent of all toy inflated balls in the country are produced by two Ohio concerns, one in Ashland and another in Sandusky. In the last decade nine other makers have gone out of business or ceased production of the balls. Four were in Ohio—in Ashland, Akron, Barberton, and Mansfield.

These outfits are protesting proposed reductions by the United States Tariff Commission and the committee for reciprocity information. They are unhappy over forthcoming negotiations with Japan. They say the proposed cut hits 90 percent of their products.

European wages are one-third of those paid in Ohio and Japanese one-tenth. The present tariff rates—50 percent on rubber playballs, 70 percent on toy balloons and 50 percent on "other rubber toys"—do not eliminate imports. Further reduction would be ruinous, they contend.

The Ashland company employs 350 to 500, or about 7 percent of the local labor market, the Sandusky concern 300. The latter firm notes that Sandusky is already a surplus labor area.

Both companies turned out vital military goods during World War II—liferafts, lifebelts, Mae West jackets, and similar products. One produced \$6,500,000 of items for the armed services.

One figures it indirectly employs 411 persons in southeast Asia, an area critical for the free world. The other uses crude rubber produced by 329 Asiatics.

Northern Ohio also turns out about half of the toy balloons made in the United States. Plants are operating in Willard, Akron, Ashland, Sandusky, and Ravenna. There are nine in all. A Ravenna concern employs 8 to 10 percent of the local labor force.

It points out that Japanese pay \$7.60 for a 40-hour week, whereas 5 local employees, picked at random, drew from \$262 to \$275 for a 2-week wage. It notes further that the Japanese pay for latex with cheap manu-

factured products, while United States companies pay in needed American dollars.

QUESTIONS SANITATION

And it questions the sanitary conditions of the Japanese home labor.

The case of the bicycle industry has been one of the most publicized. Bicycle manufacturers in Ohio include the Cleveland Welding Co., the Murray Ohio Manufacturing Co., in Cleveland, the Colson Corp., in Elyria, the Shelby Cycle Co., in Shelby, and the Huffman Manufacturing Co. of Dayton.

Frank W. Hannon, head of the Murray Ohio concern, says foreign competition has increased from 1½ percent of total sales before 1948 to 22.8 percent in 1953. He estimates that 1954 foreign sales will be 50 percent when the figures are in.

His company was forced to lay off 220 employees in the last year. Production was down from 300,000 in 1953 to 215,000 in 1954. Payroll reduction the first 6 months of 1954 was \$526,000.

American bicycles sell for \$20 to \$30 more than those made by foreign competitors.

Like many others, Murray wants an import quota, of 15 to 20 percent. He says the maximum allowance increase in tariffs up to 22.5 percent would not do him any good.

The examples in this story do not cover the field. The Ohio coal industry's plight has been aggravated by imports of residual oil from Venezuela. The western Ohio woolen industry, with mills in West Unity, Lima, New Bremen, Jackson Center, Piqua, Hamilton, and St. Mary's, says that 1953 imports of blankets were 250 percent higher than in 1946.

OTHERS PROTEST

Ceramic tile companies, plate glass outfits, a Coshocton rubber bathing cap concern, an Xenia cordage industry, a Lisbon maker of electrical porcelain insulators are all protesting. Cutlery people, including several concerns in Fremont, are asking protection. One noted that the R. H. Macy Co., of New York, purchased \$8,700 of merchandise from them and \$100,000 from Europe in one period.

The European shears were selling for \$1.88; the old Ohio firm's for \$2.25 to \$2.90. United States wages are four times those of Germany. The tariff on shears has twice been cut and now is at the maximum allowable minimum.

A final story will give a rebuttal to the bicycle case and describe proposals to alleviate distress for some of the minority damaged industries.

Pros and Cons of the Reciprocal Trade Agreements Act

EXTENSION OF REMARKS OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MINSHALL. Mr. Speaker, under leave to extend my remarks, I include the sixth and last in a series of articles written by Mr. Phil Goulding, of the Cleveland Plain Dealer, relative to the argument over foreign-trade agreements:

MORE JOBS THAN JOBLESS SEEN IN TARIFF ABOLITION (By Phil G. Goulding)

WASHINGTON, February 3.—Abolition of all tariffs would jeopardize the jobs of 200,000 to 400,000 Americans.

But some 4,500,000 owe their employment directly or indirectly to imports and exports.

Those are the contentions of supporters of President Eisenhower's foreign-trade program and the believers in reduced duties. They build part of their case on the simple "greatest good for the greatest number" base. They point out further that the cuts which Mr. Eisenhower would be authorized to make under the legislation being considered would endanger only 100,000 to 200,000 jobs.

Clarence B. Randall, the President's special consultant on foreign economic policy, notes that the program is a gradual one, directed toward moderation. He submits that there is "hardly any industry in the United States that can't face a change of 5 percent in its competition."

REPLIES TO BIKE INDUSTRY

Another approach of the program's advocates is to tear down the position of the protectionists. Charles P. Taft, of Cincinnati, president of the Committee for a National Trade Policy, uses these tactics in replying to the bicycle industry.

Bicycle makers use one set of figures to plead for higher tariff rates. Taft uses another. He asks how serious the damage really is, asserting that American manufacturers turned out 1,250,000 bicycles in 1939, 1,470,000 in 1949, and up to 2,000,000 in 1953.

Taft concedes a recession in the industry in 1954, but says a recession affected substantially every United States industry and was not due to imports. Only one of the top 10 bicycle makers is in a labor distress area, he says.

ASSAILS BICYCLE MAKERS

The Ohioan argues that bicycle manufacturing is centered in Ohio, Indiana, and Michigan, where metal fabrication is general in many lines and opportunities for shifts to other products are obvious.

He assails the industry for paying no attention to expanding its market until it was forced into it. Then lightweight bikes went up from 37,000 in 1951 to 88,000 in 1952 and 127,000 in 1953, he says, adding:

"How could this happen if there were anything at all in talk about slave wages in England?"

Taft points out that there are bicycle paths everywhere abroad and he asks why the big 10 manufacturers have not worked to push such a program here. In times of recession, when transportation costs are important, bicycle sales should go up, not down, he asserts.

CUTS WOULD BE SELECTED

"There are 70 million families or more in this country," he points out. "Two million bicycles a year, compared with 5 or 6 million automobiles, is not much of a showing."

Randall, who fathered the administration program, denies the claims of some industries that reductions would be across the board. He says they would be made on selected commodities, with careful screening before any cut is put into effect.

The Presidential adviser, who is board chairman of the Inland Steel Co., also feels an incorrect inference has been drawn from the testimony of some cabinet officers on the Trade Extensions Act.

Some proponents have oversold their case by harping on the advantages to other nations of the free world. This has aroused the resentment of United States workers who might be injured. Randall agrees that it is important to have allies who are economically strong. But far underlying that is the future economic welfare of our own Nation, he says.

STRANGE BEDFELLOWS

Support for lower tariffs comes from many directions. The labor unions, Americans for Democratic Action, the chamber of com-

merce, and the American Farm Bureau Federation are among the strange bedfellows.

James B. Carey, secretary-treasurer of the CIO, concedes there are some "short-run problems" to be handled. He thinks it is possible to lessen the hardship that may befall individual workers, industries, and communities by enacting additional legislation, based on the premise that the Government must assume some responsibilities in this direction.

David J. McDonald, president of the United Steelworkers of America, recommended a readjustment program when he served on the Randall Commission a year ago. Bills to carry it out have been introduced by Representatives HARRISON WILLIAMS, Democrat, New Jersey, HAROLD DONAHUE, Democrat, Massachusetts, and HERMAN P. EBERHARTER, Democrat, Pennsylvania, in the House, and Senators JOHN F. KENNEDY, Democrat, Massachusetts, and HUBERT HUMPHREY, Democrat, Minnesota, in the Senate.

UNITED STATES AGENCIES WOULD HELP

Under present law, the President must accept or reject recommendations of the Tariff Commission for duty adjustments based on the escape clause or peril point provisions of the Trade Agreements Act.

The Kennedy bill would authorize him to make the facilities and resources of various Federal agencies available to individuals, communities, and industries suffering injury when he turns down tariff relief for them because of the overriding national interest.

Individuals might be given supplemental unemployment compensation benefits, a lower social security retirement age, vocational education, and retraining programs, and in certain cases financial assistance for relocation in a different labor market.

For injured companies, technical information and advice, rapid tax amortization, and special small-business administration loans to aid modernization and diversification would be available.

Communities could also obtain technical information in establishing an adjustment program and loans to themselves or industrial development corporations for implementing the adjustment proposals.

KENNEDY points out that no real relief has been granted under the existing law. Consequently, he says, industries legitimately in need of relief from imports are reluctant to go through the time-consuming, expensive procedures of the tariff commission.

The Massachusetts Senator says it is clear that the trend is toward lower tariff barriers and increased international trade. Even without that trend, the existing situation calls for assistance to those who are injured by the current tariff structure, he adds.

PRODUCERS BOOSTED

Another bill introduced would enable any domestic producer found by the Tariff Commission to be in danger from foreign imports to receive a certificate entitling it to a percentage advantage up to 25 percent in its bids for Government contracts.

Meanwhile, the hearings on H. R. 1, to extend for 3 years a Reciprocal Trade Agreements Act and to broaden the President's rate-cutting authority, continue. And Ohio legislators continue looking for the answer.

At a recent party at the home of Representative OLIVER P. BOLTON, Republican, Mentor, five Ohio Republicans spent several hours discussing the law. This reporter was an interested bystander.

Two were strongly in favor of the program, two were dead against it. One, a freshman, had no opinion and was trying to learn.

Textile Industry and Foreign Competition

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very truthful and interesting article from the Washington Sunday Star, February 13, 1955, by Joseph A. Fox:

NEW ENGLAND TEXTILE INDUSTRY SEES DISASTER IN TRADE PACTS—MILL OWNERS AGREE ON LAST DITCH FIGHT TO BLOCK MORE FOREIGN COMPETITION

(By Joseph A. Fox)

BOSTON, February 12.—President Eisenhower's trade-agreement program, which last week got the warm support of the powerful House Ways and Means Committee, is drawing frigid reception in New England, where the long-suffering textile industry regards it as the last straw.

As though things were not tough enough already, because of ruinous competition from the South, harassed mill owners see more disaster creeping up in the new assault on trade barriers.

To them, it's like waiting for the other shoe to drop. There is fear for the economic future of the six-State area from Connecticut to the Canadian border.

SEES INDUSTRY FUNERAL

Striding about his plainly furnished headquarters here, William F. Sullivan, president of the National Association of Cotton Manufacturers and the Northern Textile Association, employs a macabre figure of speech as he talks about the troubles of the industry:

"You're in a funeral parlor," he tells a visitor.

"This is one fight we just can't lose," seconds Seabury Stanton, rugged chief of the famed old Hathaway Co., of New Bedford. He still sees hope for New England's biggest business unless Government policies knock out the shaky props remaining by giving foreign importers easier access to home markets.

In nearby Lawrence, once the wool and worsted capital, where employment had dropped from 28,000 to 4,000 because of plant liquidation and migration—Arthur Brown, CIO spokesman for the area, looks from his desk at rows of deserted factory buildings and asks rhetorically:

"Do the people in Washington who talk about encouraging trade to check communism abroad ever stop to figure what putting men and women out of their jobs could do toward spreading communism in this country?"

The story is the same everywhere—Fall River, Woonsocket, Lowell, Manchester—wherever bread and butter depend on the clatter of spindle and loom. And while booster organizations such as the New England Council put up a brave front and talk about a new prosperity, the fact remains that the fate of the region today is bound up in textiles. With things as they are, that's a shaky reed.

QUESTION OF COSTS

Labor knows it.

The textile industry is a sensitive one. It is a business where an eighth of a cent a yard in production cost may mean the

difference between getting or losing a contract involving thousands of dollars. And workers have come to realize that no possible avenue of savings can be overlooked by prudent management.

Increasingly heavy workloads are assumed without the interminable discussion that used to accompany every effort to effect the operating changes made possible by modern machinery. There are other evidences, too, of a new spirit of cooperation in the production lines.

The average textile worker ordinarily pays little attention to economics, but he can understand the drains of southern competition and has a natural fear of weakened trade barriers.

At Hathaway, where cartoon posters keep the workers aware of what more foreign competition could mean, a union boss started a petition to let Congress know how his membership felt.

The textile industry of the South, it should be added, is making common cause with the North in bucking tariff cuts.

There's nothing new about the decline in New England textiles. The industry has been drying up since the twenties, when low wages, nonunionization and tax concessions began to lure cotton southward. Woolen and worsted followed, and as synthetics moved into the manufacturing picture and started to cut in on cotton goods production, the same thing happened.

Today, the same people turn out cotton and synthetics, and synthetic blends are appearing in woolen-worsted.

STATISTICS WILL STARTLE

But while the story is old, some of the statistics still are startling.

New England textiles once employed 400,000 men and women. Today they support less than half that number—approximately 171,000. About 20 percent are in the cotton-synthetic business and about half the woolen-worsted. The remainder, for the most part, has gone South to enjoy a wage differential of approximately 27 cents an hour.

The jobless in the textile centers are counted in the thousands.

In mid-January, according to Labor Department figures, there were more than 60,000 persons drawing unemployment compensation in the Lawrence, Providence, New Bedford, and Fall River areas. Nobody would guess how many other thousands had exhausted their compensation credits and no longer were part of the statistical array, and, of course, there are lesser textile communities in the region where idleness has hit.

PLANT ATTRITION BAD

Plant attrition has been correspondingly bad. The latest figures show 236 liquidations involving 92,000 employees since World War II boom days. This includes both closings and site transfers and is indicative of what was happening before war demands gave the industry a shot of oxygen.

There also have been some casualties in the South, for dry rot and competition play no favorites.

This is the cumulative picture that causes New England textile leaders to question the logic of encouraging more imports, particularly since at least part of the decline is due to foreign goods, with Japan getting a nice slice of the business.

Ironically, these foreign competitors are profiting by American ingenuity, for there already is a good market for American-made textile machinery reported in Japan, India, and Egypt.

TARIFF WORKS BOTH WAYS

Foreign countries which seek to build up their own textile industries are not backward either in applying tariff rates calculated to do just that. Where the United States has a rate of 10 to 25 percent on cotton-goods imports, depending on fineness, and an average rate of 22 percent, Pakistan imposes a 60-percent levy; India, 100; and South America, anywhere from 60 to 300.

Significantly, the New England textile decline has gone far toward exploding a pet theory of free traders—that men and women displaced in industrial shifts can be channeled into new lines of activity without too much trouble.

That just doesn't happen, according to a recently completed study by Dr. William H. Mierny, director of Northeastern University's Bureau of Business and Economic Research.

CASE HISTORY OF 1,700

Tracing the case history of 1,700 workers who lost out in 6 mill areas, Dr. Mierny learned that one-half still were unemployed more than a year after their textile jobs folded.

More than 35 percent found other textile work through plant turnover.

The so-called growth industries—electronics and apparel—took on only a few of the idle, and 64 percent of those in new employment were getting wages lower than the textile rate of about \$14.2 hourly.

AGE IS BIG BARRIER

The study demonstrated plainly that age is the great barrier to reemployment. Seventy percent of the jobless were over 45.

"Too old to work—too young for social security," says CIO's Brown, who lives daily with this problem.

"It is a saddening commentary when men and women literally wish away their lives, looking to the time when they are 65 and can qualify for old-age pensions. But that is what is happening."

That particular situation has gotten so bad that Rhode Island is attempting to correct it by legislation. Pending in the legislature there is a sort of fair employment practices bill to penalize employers who refuse to hire the overage workers.

Whether that move will get any place is questionable.

Max Abelman

EXTENSION OF REMARKS
OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. LONG. Mr. Speaker, I cannot let go unnoticed the fine tribute paid by my colleagues, the Honorable EUGENE J. KEOGH, Democrat, of Brooklyn, and the Honorable FRANCES BOLTON, Republican, of Ohio, in the CONGRESSIONAL RECORD of January 11 and January 13, 1955, to Max Abelman on his retirement as secretary to the president and director of public relations of the Brooklyn Jewish Hospital.

Inasmuch as Mr. Abelman is a particularly good friend of mine, I am placing in today's RECORD some letters from distinguished people with regard to these articles.

The letters follow:

OFFICE OF THE VICE PRESIDENT,

Washington, February 5, 1955.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: This is just a note on the eve of our departure on our goodwill trip to Latin America to thank you for your letter of January 24.

It is a pleasure to send you under separate cover copies of the CONGRESSIONAL RECORD for January 11 and January 13 in which the tributes you received at the time of your retirement were inserted.

They certainly are well-deserved tributes, and I join with others in extending congratulations and continued good wishes.

Sincerely,

RICHARD NIXON.

FARVUE FARM,

South Salem, N. Y., January 27, 1955.

DEAR MAX: I am so glad you had such a fine Republican Congresswoman as FRANCES BOLTON, make such fine remarks about you. I have never met her but from all I hear she is a truly unique woman—not merely wealthy but intensely anxious to make her wealth serve the highest ends.

We are both very well and trust that you and your wife are enjoying life.

I learned a lot about your career I never knew before. You have certainly come a long way and learned a lot and warmed many hearts.

Our heartiest regards to you my dear friend,

H. A. WALLACE.

McGILL UNIVERSITY,

Montreal, January 25, 1955.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Thank you very much for your letter of January 20 and for your kindness in sending me the relevant pages from the CONGRESSIONAL RECORD. I think that this is the first occasion on which I have appeared in the CONGRESSIONAL RECORD since I left the United States in 1939, but I certainly enjoyed reading all the rest of the extension of the remarks of Hon. FRANCES P. BOLTON.

Best personal wishes to you, as always, from,

Yours cordially,

Cyril

F. CYRIL JAMES,

Principal and Vice Chancellor.

COMMANDANT, THIRD NAVAL DISTRICT,
New York, February 1, 1955.Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Thank you very much for sending me the clippings from the Brooklyn Eagle and the CONGRESSIONAL RECORD. I read them with a great deal of pleasure, and you certainly are to be congratulated. Of course, the clippings, praiseworthy as they are, only tell the truth about your good work, but it is a great thing to have such good work recognized.

Please let me add my congratulations to those of your other friends.

With best wishes, believe me.

Very sincerely yours,

R. H. HILLENKOETTER,

Rear Admiral, United States Navy.

BROOKLYN, N. Y., October 1, 1954.

Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MAX: Cele joins me in wishing you and all your dear ones a very happy New Year.

Last night's tribute to you was a well merited one. It was indeed a memorable occasion and it will be long remembered by

everyone who had the privilege of attending it. The cross section of those fine people who were there is indicative of the esteem with which many hold you. I am sure that the authorities of the Jewish Hospital must have been impressed by this tribute paid to you. I am glad that the present leadership of the Jewish Hospital medical board saw fit to give you that dinner. I know of no one connected with the Jewish Hospital who had a similar tribute paid to them.

With best wishes for continued good health and happiness, I am, as ever,

Cordially yours,

IRVING J. SANDS, M. D.

DEPARTMENT OF THE NAVY,
BUREAU OF MEDICINE AND SURGERY,
Washington, D. C., February 3, 1955.
Mr. MAX ABELMAN,
Brooklyn, N. Y.

DEAR MR. ABELMAN: Thank you for sending me the pages from the CONGRESSIONAL RECORD, which I have read with avid interest. Such a tribute, I know, is well deserved and the praise and admiration of such outstanding people is an attestation of the tremendous amount of work that you have done for the population of Brooklyn and particularly for the Jewish Hospital in that city.

With kindest regards and best wishes,

Sincerely,

J. Q. OWSLEY,

Rear Admiral (MC), United States
Navy, Assistant Chief for Personnel and Professional Operations.

Opposition to H. R. 1

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, must our livestock men be sacrificed on the free-trade block as they were under the low Tariff Act of 1913?

Under leave to extend, I am inserting in the RECORD the following statement of L. Blaine Liljenquist on behalf of the Western States Meat Packers Association, Inc., before the Committee on Ways and Means in opposition to H. R. 1, the trade-agreements extension bill:

Mr. Chairman, and members of the committee, my name is L. Blaine Liljenquist. I have been the Washington representative of the Western States Meat Packers Association, Inc., since 1946. The association has several hundred member companies. Most of them are located in the Rocky Mountain and Pacific coast States. Our members are known as independent packers. They are engaged in slaughtering livestock. They process about 70 percent of the meat in the States in which they do business. Our president and general manager is Mr. E. F. Forbes, of San Francisco.

Meat packing is an essential service in the American economy. Our members are making use of the latest methods of doing business to increase their efficiency. Their constant goal is to provide better meat and meat products to the public at reduced cost. Livestock producers, consumers, and the Federal Government are the beneficiaries of the faithful efforts of the packers to do a better job.

Our members are progressive businessmen. They are also alert and responsible citizens. They are interested in world trade and want to see the maximum volume of export and import business that is consistent with the national welfare, and in the interest of world peace.

After several years of consideration to tariff problems, backed by their experience in world trade, the independent meat packers reach a much different conclusion than that expressed by the administration in H. R. 1. We believe the major provisions of this bill are unwarranted, improper, and against the best interests of the United States.

H. R. 1 as we view it, has three major purposes: First, it would extend the authority of the President to enter into new trade agreements with foreign countries for a 3-year period or, more precisely, from June 12, 1955, through June 30, 1958. Second, it would go far to deprive Congress of its authority and responsibility to regulate our foreign commerce by lodging this power in the hands of the executive branch. And third, it would give to the President the arbitrary power to slash back to 50 percent all tariffs that are over 50 percent of the value of the imported goods, and to cut all other tariffs by 15 percent over the next 3 years.

In the few minutes allotted to us today we will call to your attention our reasons for believing that each one of these objectives as defined in H. R. 1 are contrary to the best interests of the United States.

For several years the State Department, with the approval of the President, has sought to take control of the tariffmaking authority, which, under the Constitution of the United States, is the responsibility of the Congress. Industry and business depending on tariff protection does not, in general, have confidence in the State Department to administer tariffmaking responsibility for the following reasons: First, the State Department officials are not elected, but are appointed and are not responsive to the public. It is doubtful that few if any of these officials could even be fired due to the job protection they receive from the administration. Second, career employees in the Department of State tend to be over-nationally minded. Indeed, it is our observation that some of these officials appear to feel that any amount of suffering by American producers from import competition should be cheerfully borne if it contributes to the advancement of the international policies of the Department of State. As a result, the businessman usually thinks that tariff levels under domination of the State Department are decided on the basis of international politics rather than on economic considerations. Third, not only does the State Department seek to take the control of the tariffs away from Congress, but it is trying to turn these powers over to an international trade organization in which the United States will have but one vote. This is exceedingly dangerous. It is an important first step in losing some freedoms and rights which we have heretofore regarded as adequately protected by our Constitution.

Our members are not unmindful of the need for world cooperation, but we cannot subscribe to an international agency such as GATT that could bind the United States from using quotas to control imports or could prevent our Government from raising tariffs when foreign goods produced with cheap labor enter American markets in quantities large enough to put American producers out of business.

We believe the freedom of the American people is a priceless possession. This freedom has made us a strong nation, fully capable of protecting ourselves from those who would destroy us. But how can we safeguard our own liberty or prevent friendly nations from being overrun if we willingly

yield our freedom to international organizations such as GATT?

We feel it would be a mistake to further strengthen GATT. Indeed, we believe that for the benefit of this Nation and for the benefit of those people in other countries that love freedom, there should be a forthright abolishment of GATT as a tariffmaking organization. However, we would have no objection to GATT as an agency to study tariff matters as long as its authority is limited to gathering information and making recommendations.

The Constitution (art. 1, sec. 8) charges Congress with the sole authority to set tariffs. Congress delegates, but does not yield, some of that authority when it gives the United States Tariff Commission a share in tariff setting.

In the Trade Agreements Act of 1934, Congress delegated part of its authority to the President to change rates of duty within 50 percent of the current rate by entering into trade agreements with other countries. However, to show it did not delegate the power forever, Congress limited the President's right to enter into trade agreements to 3 years, but put no limitation on his power to proclaim duty modifications to carry out or to terminate agreements already entered into.

His authority to enter into new agreements has been extended for varying periods ever since, but never for more than 3 years at a time.

H. R. 1 is a broad authorization to the executive branch. If it is passed without modification, we may find that the State Department will center the tariffmaking authority in an international body. Many feel that H. R. 1 is a preratification of just such a move. By executive authority based on H. R. 1, we could wake up sometime to learn that we had granted our control over tariffs to an international organization.

It would be much safer and more practical to declare by law that the present tariffs shall be the prevailing tariffs of the United States. That they may be modified up or down by a showing of just cause for such action.

If this course were followed, other countries would know our tariff intentions. Uncertainty that now exists would be largely eliminated. American producers that must depend upon tariffs to remain in business should be assured that tariffs would not be lowered below the peril point. The escape clause, which has been little more than a mockery in recent years, should be used as intended by Congress.

In addition, we suggest that the recommendations of the United States Tariff Commission, as the fact-finding agency of the Congress, should be made mandatory upon the executive branch, and that the veto over the Tariff Commission should be exercised only by the Congress.

We think world conditions require a change in United States trade policy. Greater emphasis should be placed on preserving American wage levels and living standards against unfair competition from low-wage subsidized imports. This must be done not only to avoid the unemployment of many thousands of employees in this country, but also to maintain the productive capacity and worker skills essential to national defense.

The United States is already a low-tariff Nation. Approximately 58 percent of goods entering the United States are duty free. The United States American Tariff League, in a study of 1951 world trade, came up with the conclusion that 35 out of 43 leading trading countries had higher tariffs than the United States. This study reported that of the five leading trading countries (the United Kingdom, France, Canada, Germany, and the United States), the United States had the lowest average tariffs. The league

found that average United States tariffs were only 5.1 percent of the value of the imported goods.

In 1930 Congress established a tariff of 6 cents a pound on meat and 3 cents a pound on livestock. On October 30, 1947, tariff concessions on fresh and frozen beef and veal were granted through United States participation in GATT at the Geneva Conference. This concession, which became effective January 1, 1948, reduced the import duty on beef and veal, fresh, chilled, or frozen, from 6 cents to 3 cents, a reduction of 50 percent. Let me give you an example of the extreme harmfulness of this ill-advised action.

Prior to 1948, beef and veal imports from Canada had averaged less than half a million pounds a year. Up to that time we had received the surplus livestock production in Canada in the form of live animals that were slaughtered in American plants. When the concession became effective in 1948, beef and veal imports from Canada that year jumped to 71,634,243 pounds or an increase of 14,000 percent. In 1949 imports from Canada increased to 74,534,016 pounds.

Canadian meatpackers were quick to recognize that the reduction in the tariff made it possible for them, with their lower labor costs, lower taxes, and other economic advantages, to ship beef and veal to the United States and sell it at prices below the cost of production of American packers.

The injury suffered by our members in areas close to Canada, such as Seattle, was outlined in our petition for relief under the escape clause in March 1950. But the administration, intent in its drive to establish free trade, saw to it that we were given no relief.

Let me call to your attention the increase in imports of canned hams and other pork from Europe in 1954. Pork imports from Europe, according to official figures of the United States Department of Agriculture, reached a record total of 99,163,000 pounds last year, against 77,707,000 pounds in 1953. This is an increase of 28 percent.

The canned hams received from these countries were equivalent to the hams from about 5,500,000 hogs. Included in the totals were 19,717,000 pounds from Communist Poland. Although Poland can send meat products into the United States without restriction, Poland is not a market for American pork or other products, such as lard, hides, or tallow. There is reason to believe that Poland is using the dollars she receives from pork sales in the United States to purchase in dollar-hungry third countries strategic materials, which under current regulations are not permitted to be exported from the United States to areas behind the Iron Curtain.

Tariffs protecting the meat and livestock industries are already dangerously low. It would be a tragic mistake to authorize the President to reduce them further as a tool to trade for concessions from other countries.

Consider for a moment the cost of producing beef in the United States. A good cowhand, for instance, will cost the rancher as much as \$150 a month or more. In addition, the food consumed by the hired hand may cost the rancher as much as \$90 a month. Compare this to the Argentine cow-boy who receives the equivalent of about \$8 to \$10 a month in our money, and a bag of chili beans and some jerked beef to sustain his life.

Higher wages, higher taxes, and higher costs of doing business certainly justify the small tariffs which still exist on livestock and meat.

Again may I emphasize that we are looking for an expansion of world trade. It is quite possible that some tariffs now in effect could be reduced without serious jeopardy to the particular industry concerned, but such reductions should be made only after careful

examination of economic facts and not by the arbitrary action that could result through the authority of H. R. 1 in its present form.

All of us have a common objective in keeping America strong and in securing the peace. Just as surely we must be concerned with import competition that derives its advantages from lower wages than those our own producers pay. As we all know, competing goods are being produced in many parts of the world with labor receiving much less than half the rates being paid in the United States. Obviously tariffs or quotas are the only means of equalizing situations of this kind.

One of the reasons for establishing minimum wage laws in this country was to prevent low-wage employers from gaining a competitive advantage over those who pay higher wages. The same principle should apply internationally by means of the tariff. American producers of cotton, wheat, peanuts, and sugar are protected by import quotas. Domestic prices for these commodities would tumble drastically if this protection were removed. In fairness to all American producers and workers tariffs or quotas will continue to be needed until wages and living standards in other countries rise to levels more nearly in line with our own.

We are asking that the Congress accept the simple fact that it is not fair for our Government to place cost-raising burdens upon our producers on the one hand, no matter how desirable the objective, and on the other to allow them to be put out of business by foreign goods that derive their advantage through wages that are only a fraction of those in the United States.

In conclusion may I say that H. R. 1 in its present form would give the President of the United States more power than a good man should want, and more than a bad man should have. It would give him the power to destroy American industries.

The Unlimited Importation of Foreign Residual Oil Is Ruining the Jobs of American Coal Miners and Railroaders

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. VAN ZANDT. Mr. Speaker, the adverse effect on the coal and railroad industries by the unlimited importation of foreign residual oil is effectively portrayed in the following statement delivered by J. M. Symes, president of the Pennsylvania Railroad Co., before the House Ways and Means Committee, January 31, 1955, in connection with the so-called Cooper bill, H. R. 1, providing for the extension of reciprocal trade agreements:

STATEMENT OF J. M. SYMES, PRESIDENT, THE PENNSYLVANIA RAILROAD CO., BEFORE THE WAYS AND MEANS COMMITTEE, HOUSE OF REPRESENTATIVES, IN CONNECTION WITH H. R. 1, JANUARY 31, 1955

My name is James M. Symes. I am president of the Pennsylvania Railroad; also a director of the company. I have had 39 years experience in the railway industry. Witnesses for the coal industry have explained to you the effect of the unrestricted importation of residual fuel oil upon that industry.

It is my purpose to inform you of the effect of that importation upon the large coal-carrying railroads in this country.

Coal has been the most important item of traffic in the development of these enormous transportation systems. Their whole economy has been built around the coal business which has furnished the major economic justification for such roads as the Pennsylvania, New York Central, Baltimore & Ohio, Chesapeake & Ohio, Norfolk & Western, Louisville & Nashville, and many others.

As an example, in 1953—the last full year for which figures are available—bituminous coal traffic provided 59.9 percent of the carload freight revenue of the Norfolk & Western Railroad; 51.8 percent for the Chesapeake & Ohio; 26.5 percent for the Louisville & Nashville; 25.6 percent for the Baltimore & Ohio; 19.3 percent for the New York Central; and 18.5 percent for the Pennsylvania. In 1953 the railroad industry consumed 23 million tons of coal and transported an additional 347 million tons. For all class I railroads, coal provided 13.7 percent of their entire carload freight revenue—approximately \$1,277,060,000. No other commodity approached this.

If the coal business were taken away from these carriers their survival as free enterprises would be seriously jeopardized if not impossible. The catastrophic economic effect upon this country of any governmental policy producing such a result, in whole or substantial part, is obvious.

The importation of large quantities of this fuel from foreign countries, which displaces our own coal production, is a very serious blow to the railroad industry—and more particularly to those carriers serving eastern seaboard territory. The direct effect of this importation of residual-fuel oil upon the railroad industry may be illustrated by the loss in freight revenue caused thereby, the resultant decline in railroad employment and the decreased need for rail facilities for handling coal, with consequent eventual abandonment and retirement of facilities and equipment.

According to the records of the United States Bureau of Census practically all residual oil that is imported into the United States moves through Atlantic coast ports.

In 1953, 136 million barrels were imported. On the basis of equivalent British thermal units, it takes 4.167 barrels of average residual fuel oil to equal 1 net ton of average bituminous coal. Thus, the 136 million barrels of residual oil which were imported in 1953 were the equivalent of 33 million tons of bituminous coal which the railroads carrying eastbound coal could have transported.

Sales of residual oil in the northeast coastal States alone have increased from 120 million barrels in 1939 to 245 million barrels in 1953 or an increase of 125 million barrels. During this same period, imports in this 1 area increased from 14 million barrels to 123 million—an increase of 109 million. Thus 87 percent of the total increase in sales of residual oil in this natural market area for coal was the result of this flood of foreign residual oil.

The average rail freight revenue on coal moving from production areas to the Atlantic seaboard where import residual fuel oil is consumed is about \$4 per net ton. The importation of residual fuel oil during 1953 represents almost \$131 million of revenue which could have accrued to our large coal carrying railroads if coal had been used.

This tremendous loss of revenue does not tell the whole story. Such loss of coal traffic greatly reduces railway wage payments. With about 50 percent of 1953 gross revenues going to labor, averaging \$4,347 per employee, this coal traffic loss represents about \$66 million in wages, the equivalent of approximately 15,000 full-time jobs for American railroad men throughout that year.

The effect on the Pennsylvania Railroad of this loss of business is substantial. About 30 percent of the eastbound domestic bituminous coal traffic is normally handled by the Pennsylvania. It would thus have carried about 10 million tons of the coal displaced by import residual fuel oil. With average revenue to the Pennsylvania for eastbound bituminous coal of \$3.25 per net ton, its gross revenue was reduced \$32½ million or almost double the entire net income earned by this one railroad last year. This loss of revenue represents an equivalent of 4100 full-time jobs. The loss of railroad employment is particularly serious in those communities which rely primarily upon railroad work to support the populace.

These figures represent only the year 1953. As the coal industry witnesses have stated, there has been a tremendous increase in the importation of residual fuel oil since 1945. In that year less than 46 million barrels were imported. This increased steadily to 136 million barrels in 1953. In the 8-year period, 731 million barrels were imported, equivalent to 175 million tons of coal. This represents a \$700 million loss in gross rail revenue, and a decrease in wage payments to railroad employees of \$350 million.

Certainly, the use of this country's resources should be preserved and promoted—particularly where there is an abundance, which is the situation with both coal and rail transportation. Both industries are operating substantially below capacity. That means higher unit costs which must be passed along to the coal consumer and, through him, to his customer. With over 50 percent of coal production going to the steel mills and utilities, these added costs reach practically every person in the country.

Neither industry can be expected to own and maintain surplus facilities to protect emergency conditions. The railroad industry simply cannot afford to hold and maintain coal carrying cars, locomotives, and other railroad facilities to meet the possible transportation requirements of some future emergency.

To illustrate this situation—during the winter of 1954, the railroads had stored, in serviceable condition, an average of 36,600 coal cars. These cars were lying on side tracks, not being used. At today's cost this represents an idle investment of some \$220 million. Many locomotives were in the same category. The importation of residual oil was responsible for a large part of this equipment being idle. Excess equipment logically will be scrapped as it becomes due for repair, reducing total ownership to actual normal requirements.

It is estimated that the railroads as a whole have a net investment of \$2,244,000,000 in facilities and equipment for the handling of coal traffic, or about \$6.25 per ton of coal originated in 1953. The Pennsylvania Railroad alone has a net investment of \$330 million in equipment and facilities for handling coal.

According to figures furnished by the National Coal Association, approximately two-thirds of all residual fuel oil consumed in this country competes with coal. In other words, about 90 million tons of annual coal production are displaced by oil. Of this tonnage, the equivalent (in residual oil) of about 33 million tons of coal came from overseas in 1953.

What would happen in the event of a national emergency?

Truly, the railroads are our first line of defense when it comes to carrying the burden of wartime transportation. Basically, this is because only the railroads have possessed the elasticity and reserve capacity necessary to take up the tremendous increase in transportation requirements generated by a world war. In addition, the railroads can handle traffic with less strategic materials and less manpower than other forms of

transportation. According to reports by the class 1 motor carriers to the Interstate Commerce Commission, the average load handled by such carriers on the highway is just under 9 tons. It takes one man to handle that. On the other hand, the average freight train load, in 1953, was 1,301 tons. It takes only a 5-man crew to handle that—or 260 tons per man.

In producing a revenue ton-mile of transportation, the railroads use far less fuel than their competitors—with 1 gallon of diesel fuel the railroads produce 215 revenue ton-miles of transportation, while the trucks produce only 64. Most highway transport uses gasoline—a much more critical fuel in a national emergency than diesel fuel oil. Finally, in the heavy traffic eastern territory, the Pennsylvania Railroad depends on electricity, produced by waterpower or the burning of bituminous coal, for power.

While just as vulnerable to enemy action through air bombing, guided missile, or sabotage, the railroads are peculiarly adaptable to repairing such damage. Experience during World War II, on both sides, proved this.

On the other hand, when the locks and dams which make inland waterways possible are blown up or severely damaged, it takes a very considerable time to restore them to service. Heavy highway transportation requires good hard surfaced roads. A damaged railroad can be restored to service much faster than either an inland waterway or a highway.

A national wartime emergency would certainly call for a tremendous increase in power output while oil imports would cease or be substantially reduced. Coal would have to replace immediately not only the foreign residual—equivalent to 33 million tons of coal—but also meet the major part of the energy demands now supplied by imported crude and its products. The demand for refined oils and gasoline would increase so greatly that it would necessitate cracking down nearly all the remaining domestic residual oil, and coal would have to fuel most of this 90-million-ton market. This is 1,520,000 carloads requiring 63,000 cars to move within 1 calendar year, based upon the average turnaround time of freight cars. Can we safely assume that a depressed coal industry and the railroads could immediately expand sufficiently to provide and handle this added tonnage plus the increased coal that a war economy would require?

Even though the coal companies could produce the coal the railroads would not be in a position to transport it, because of lack of equipment, facilities, and trained employees to do so.

As stated above, the railroad industry cannot afford to maintain its great investment in facilities for carrying and handling coal unless there is current use for them—in today's economy they cannot be maintained for standby emergency service.

Residual fuel oil, unless further refined, can properly be called a byproduct of the refining process. Its price has historically fluctuated widely based on available supplies and competitive fuel prices. As a result, even if it were economically possible, any downward revision in the delivered price of coal would no doubt be met by corresponding reduction in the fuel-oil prices when such oil is in surplus.

Statements have been made as to the inability to keep the cost of coal down so that it can meet competition from other fuels. The coal industry has repeatedly explained the various methods it has adopted to reduce costs. The railroads are also making a large contribution to this cause. Rail freight charges on coal have been held down, in an effort to help the coal industry solve its marketing problems against competing fuels. Average railroad revenue per ton on commodities other than bituminous coal

has increased 85 percent since 1939, against only 49 percent on bituminous coal. Yet average prices for railroad materials and supplies have gone up 135 percent, and average hourly railroad wages 155 percent. Further comparisons emphasize this point—such as the increase since 1939 in wholesale commodity prices of 120 percent; average hourly earnings of coal miners—159 percent; and the average price of bituminous coal at the mines—up 167 percent.

The unlimited importation of residual fuel oil—a byproduct of foreign oil refining—depriving our own transport system of handling very sorely needed coal traffic, is diametrically opposed to the declared national transportation policy as announced by Congress in 1940, particularly insofar as it relates to national defense.

In this connection it is highly significant to note that certain European countries which are now producing substantial quantities of refined oil products are exporting the residual oil to this country. Newspaper articles have indicated that those countries have imposed a heavy tax on the use of that residual oil at home in order to protect their own coal industry. An article by J. H. Carmichael, a recognized and impartial authority, in the New York Times of July 5, 1953, so stated.

To permit foreign countries to ship unlimited quantities of residual oil to this country and dispose of it at dump prices to the serious detriment of the American coal and railroad industries, at the same time that those foreign countries effectively prohibit the domestic consumption of that oil in order to protect their own industries, cannot possibly be justified on any free trade or other basis.

We submit that no matter what general foreign trade policy Congress may adopt, this situation is one which demands specific treatment in order that the coal and railroad industries may not be further weakened by a dumping of this foreign byproduct with which they cannot possibly compete and which will inevitably cause them to be less able to supply the energy and transportation needed in a national emergency.

What Was It Like?

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert an excellent descriptive article written by Mr. Harlan Trott, of the Christian Science Monitor, concerning the flight from Los Angeles, Calif., northward over the polar regions to Europe.

Mr. Trott has captured the true feel of polar flight and recalls the pioneers in polar travel. His article expresses the new age of polar travel so that the reader imagines that he is actually along on the trip.

And, as one reads, he is struck with a thought as chilling as the polar regions Mr. Trott describes. These same airways over the polar ice traveled so swiftly and so safely by peaceable passenger stratoliners are open to the angry whine of military bombers intent on invading our boundaries across the icecaps and into the very heart of our Nation.

Because this article presents this fact so clearly as well as for its splendid descriptive nature, I commend it to my colleagues.

The article follows:

WHAT WAS IT LIKE?

(By Harlan Trott)

GENEVA, SWITZERLAND.—From Copenhagen to Zurich, from Rome to Paris, the inaugural transpolar flight from Los Angeles to Europe has excited lively interest.

Nearly everyone I have met from the Oberburgomeister of Frankfurt to the night porter here at the Regina, the little hotel where I am stopping close by the Pone de Mont Blanc on the magnificent lake front at Geneva, have asked: "What was it like to fly over the North Pole?"

Invariably, too, they seem a little disappointed when told that flying across the Arctic region is just like flying from Stockholm to London.

"Well, what did you see?" they persist, and then they are in for it. Here is one pioneer polar router who will be reliving this epic Arctic journey for some time.

To say that the inaugural flight over this great white trade route was uneventful is the best kind of praise for the Scandinavian Airlines System whose direct Arctic service opens a new era in air travel that makes the peoples of the Pacific west and the whole of Europe overnight neighbors.

The winged vikings who man SAS's big white Douglas airliners only confirm the theory of the Friendly Arctic propounded by explorer Vilhjalmur Stefansson, who contended that "adventures" were a sign of inefficiency. His uneventful journeys of the sledge-dog era projected into Arctic travel the philosophy that there is nothing so spectacular as a safe and normal "arrival."

That is the star these SAS pilots steer by in these twice-weekly both-way flights between California and Europe.

Flying at 20,000 feet over the white wilderness that stretches from the Canadian coast of Hudson Bay to Denmark Strait on the east coast of Greenland, we did not feel a single dip, much less a jolt such as air travelers sometimes feel in the air turbulence of lower altitudes and lower latitudes. We literally flew above the weather. And we made our touchdowns at Winnipeg, Sondre Stromfjord, and Copenhagen right on time. Sondre Stromfjord is the landing field at Bluie West 8 about halfway up the Greenland side of Davis Strait.

I still cannot open my passport without a thrill from the very first entry stamped on my visas: "Transit Gronland 16 November 1954"—signifying the first time, I am told, that travelers have passed through customs north of the Arctic Circle on a regular polar trade route.

In the brief span of daylight beyond 67 north, we saw contrasting scenes of stark and silent grandeur in the white desolation around us. And once when the sun was near its low southerly zenith—what navigators call noon at the ship—our great winged shadow sped over a fluffy white ocean of clouds framed within an east-racing rainbow circle. The passengers all peered down speechless, but no one seemed to know what cast this rainbow diadem around our east-going shadow. One may only paraphrase the poet Masfield, perhaps at such a moment, for—

"I cannot tell its wonder nor make known Magic that once thrilled me to the bone."

From time to time, the captain's voice was heard over the cabin loudspeaker pointing down to historic waymarks along our polar pathway. "We are approaching the southern end of Baffin Island. It was here that Roald Amundsen entered the pack ice in his search for the Northwest Passage." The stout Nordic accents had an authentic

ring. Naturally the Scandinavians are proud of their polar heritage and the part Nordic navigators have played in helping to unlock the Arctic's silent centuries.

It was midafternoon. Already the Arctic night was closing in around us as we gazed down upon the ice-strewn gray water. At this time 51 years before, the Gjo was snuggled down in winter quarters, Amundsen's little company was away from the ship with their sled dogs and rifles laying in a store of walrus meat to last them through the 6 months' Arctic night.

What would that hawk-beaked old viking have said to see us blazing this new north-west air passage dressed in business clothes, sitting down to the captain's dinner of caviar and roast wood grouse, cruising at a comfortable 300 miles an hour across the vast and frozen stillness?

What was it like to fly the polar route? People are asking. I wish I were a poet with a poet's art of brevity.

How else can one impart the spell of the Arctic—when reluctant-going twilights turn the Greenland glaciers into a tumbled world of crimson-tinted crystal, of Arctic midnights when the Great Dipper wheels low on the polar snowline just an arm's length out of reach, and the luminous, lemon-hued fingers of the aurora borealis dart and flash across the northern night? Or say what it was really like to make this epic journey which by its uneventful ease only proves why these 20th-century vikings who fly the new polar trade route are the masters of the Arctic air?

Increase in Congressional Salaries

EXTENSION OF REMARKS

OF

HON. JOHN F. BALDWIN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. BALDWIN. Mr. Speaker, I am opposed to and intend to vote against H. R. 3828, which is scheduled to come before the House of Representatives this week. This bill in its present form would provide for a \$10,000 increase in the annual salary of the Members of Congress. This is a 66 2/3 percent increase. Even if it is amended to provide for an annual salary of \$22,500 instead of the \$25,000 figure, which it now provides, this would still be an increase of \$7,500, or 50 percent over the present salary of \$15,000. It seems to me highly inappropriate that a new Member of Congress such as myself, having been here less than 2 months, should vote for a pay increase of this magnitude.

There are so many Federal employees, postal workers, industrial employees, and farm workers in my district who would be delighted just to receive a 10-percent increase, or in some cases even a lesser increase, in their pay, that I think I would not properly be representing them if I voted for an increase of congressional salaries of so much greater proportion.

The Gallup poll shows that approximately two-thirds of the people of the United States are opposed to an increase of \$10,000 per year in congressional salaries. For these reasons, I feel that I must oppose and vote against this measure.

The summary of the Gallup poll, as reported in the Washington Post and Times Herald on Sunday, February 6, 1955, is as follows:

THE GALLUP POLL—SIXTY-THREE PERCENT GRUDGE CONGRESS PAY RISE

(By George Gallup, director, American Institute of Public Opinion)

As Congress plans to ease through a pay raise for its own Members and Federal judges, a survey by the Institute finds that the people back home still tend to resist the idea of hiking congressional pay.

Sentiment today is more than 2-to-1 against it.

However, the Nation's taxpayers are slightly more receptive to a \$10,000 pay boost than they were a year ago.

Typical voters across the country were asked:

At present, United States Congressmen receive \$15,000 a year in salary and expenses. Would you approve or disapprove of raising this to \$25,000?

The vote today and 1 year ago:

	Today	1954
	Percent	Percent
Approve.....	26	22
Disapprove.....	63	68
No opinion.....	11	10

Today's survey finds wide differences of opinion by degree of education and by occupation.

A considerably larger number of persons who have attended college are sympathetic to a pay hike than are those whose schooling was limited, as the following table shows:

	College	High school	Grade school
	Percent	Percent	Percent
Approve.....	42	25	14
Disapprove.....	52	62	75
No opinion.....	6	13	11

Voters in all parties hold about the same attitude toward the subject. Republicans and Democrats, as well as persons who regard themselves as independents politically voted more than 2 to 1 against the boost.

The main opposition comes from farmers and workers in the skilled, unskilled, and semiskilled groups, the survey finds. Considerably less opposition is found among white-collar workers and people in the business and professional classes.

The problem for congressional leaders is essentially one of public relations. Public support for salary jumps perhaps would follow if they were to explain the situation and give convincing reasons to those segments of the population where the present \$15,000 seems like a bountiful sum.

Each voter was asked to give his reasons for voting in favor of the proposal or against it.

Major reasons cited by those who approve of the pay boost: More money will attract a better type of Congressmen; the raise is needed to cover expenses of living in Washington, and the responsibilities and duties of the job today are worth more.

Voters who expressed disapproval listed these principal reasons: Present salary is adequate, a pay boost means more taxes, and the proposed pay boost is too great.

In 1945, when President Truman proposed a plan for increasing congressional salaries from \$10,000 a year to \$15,000 after wartime wage ceilings were removed, the public vetoed the idea with 50 percent disapproving, 31 percent approving, and 19 percent expressing no opinion.

The British public likewise is cool to the idea of giving a raise to the hard-working civil servant.

Last year the affiliated British Gallup poll found 50 percent disapproving an increase of 500 pounds (\$1,400) in the salary of members of Parliament, 25 percent approving, and 16 percent expressing no opinion.

Members of Congress now receive \$12,500 base pay, plus a nontaxable \$2,500 expense allowance. An income-tax deduction of \$3,000 is permitted to cover the cost of living in Washington.

Our Veterans

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent editorial that appeared prior to Veterans' Day, November 11, 1954, in the columns of the Lawrence Sunday Sun, Lawrence, Mass.:

THEY CARRY THE TORCH

Long years ago, in the era of World War I, a poet named John McCrae produced a masterpiece in verse which carried an inspiring message. John McCrae passed away in 1918. Year after year, the import and impact of his metered gospel of patriotism have grown more pronounced, and it strikes us with full force today as we look ahead to the observance of Veterans' Day on November 11.

Wrote he of the dead in Flanders Fields:

"We are the dead.

Short days ago we lived, felt dawn, saw sunset glow.

To you from falling hands we throw the torch.

Be yours to hold it high.

If ye break faith with those who die, we shall not sleep."

Those who have fallen in battle to protect our Nation still fight on. They fight on in the inspiration they have given us by their sacrifice. From their falling hands they have passed us the torch. Too many of us have refused to accept it; or having taken it, have buried its light in the vacuum of carelessness, in the dark cowardice of refusal to accept responsibility, in the cavern of infidelity.

Those who did not die on the battlefield we know today as the veterans. It is they who have accepted the torch and have held it high so that all of us might be inspired by the light of their buddies whose lifeblood has been spilled over all of the world's continents.

It is the veterans who raise their voice loudest in their united insistence that we must preserve the heritages which have been bequeathed to us by those who never came back, or who, having come home, arrived in the dignity of death in a flag-draped casket.

It is the veterans who fight the cause of the widows of these heroes, who stand between distress and the children of these who did not come home.

It is the veterans who insist with unrelenting vigor that the hasty promises of wartime be kept, and that those who by the grace of God did not pay with their lives for their devotion to duty be considered first in the distribution of the bountiful good things of our society to which they are justly entitled.

It is the veterans who cry out against the disarming plights of the pacifist and demand that our Nation be kept strong as the best guaranty of safety in a brutal world.

We owe our veterans more than we can estimate. About all, we owe them the sanctity and the sovereignty of our land. For us, they kept freedom intact. And freedom to us is everything.

The veterans are the reincarnated spirit of those heroes who people the graves which are marked by thousands upon thousands of crosses in lands across the wide seas.

The veterans are the voice of those people. They are carrying on the work which those who perished started to do and fell in the gallantry of their effort. Now they lie in the shadow of "the crosses, row on row, that mark our place."

First, it was the veterans of World War I who took up the torch. To their warnings that we must remain strong, a deaf ear was turned, and we found ourselves pitched into World War II almost unprepared. After the second global conflict, millions more of veterans lent their strength to the task of holding the light high and keeping faith with those who died in both wars. Then came Korea, bitter casualty lists, and millions more of veterans.

Although few of us stop to realize it, the ranks of the men who fought in 1917-18 are thinning rapidly. But they, with those who returned from World War II and Korea, will march again on November 11, to remind us that we still have a great mission to carry out—to protect our Nation by remaining strong, and to heed forever the warning that "if ye break faith with those who die, we shall not sleep."

If there are public exercises in your home community next Thursday in observance of Veterans' Day, show these men who once bore arms in your cause that you have not forgotten what they did and what they are doing. They do it for you the year around. Do something for them on this one day.

Lincoln and Kosciusko

EXTENSION OF REMARKS OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. ZABLOCKI. Mr. Speaker, last Saturday, February 12, our Nation observed the anniversary of the birth of two great men—Abraham Lincoln, one of our greatest presidents, and Gen. Thaddeus Kosciusko, hero of the Revolutionary War.

The names of these two men shall always remain engraved in the hearts of lovers of liberty and democracy. Both men have fought courageously, in their own ways and in their own times, for the liberty of man and for each nation's right to self-determination. Their nobility of character, devotion to principle, and love of justice shall continue to inspire men of all ages, creeds, and nationalities.

The world is reminded by patriots like Kosciusko—who fought for the independence of the United States and of his native Poland—that the struggle for liberty is endless and that ours is not the only generation that has fought for it and sacrificed in its name. It seems that each period in history has its chal-

lenges, its own dictators, and its own despot.

This should not discourage us or lead us to despair. Instead, we should draw courage and inspiration from the example of valiant men like Kosciusko, who defied overwhelming odds and spared no sacrifice where principles in which they believed were involved. Our task, as great as it is, is no more difficult than theirs.

Let us, therefore, rededicate ourselves to the unfinished task to which they devoted their lives.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting the following statement in the RECORD:

My name is John G. Lerch, of the firm of Lamb & Lerch, 25 Broadway, New York City. I am an attorney specializing in the practice of customs law.

I am appearing today in opposition to enactment of H. R. 1, just as I did in opposition to the initial Trade Agreements Act of 1934, and all recurring extensions of that law.

Today I am representing the following domestic interests:

American Manufacturers of Thermostatic Containers.

The Candle Manufacturers Association.

Collapsible Tube Manufacturers Association.

The Industrial Wire Cloth Institute.

The National Building Granite Quarries Association.

The Rubber footwear division of the Rubber Manufacturers Association.

The Toy Manufacturers of the United States of America, Inc.

The Twisted Jute Packing and "Oakum" Institute.

United States Potters Association.

The American Manufacturers of Toy Balloons.

When, in 1934 the first Trade Agreements Act was introduced, I, along with the Honorable James M. Beck, former Solicitor General of the United States, but at that time a Member of the House of Representatives from Pennsylvania, urged the Ways and Means Committee to give careful consideration to its constitutionality. On May 1, 1953, at a hearing on the extension of the Trade Agreements Act of 1934, I was granted permission to incorporate as part of my remarks a speech the Honorable James M. Beck made on the floor of the House in opposition to the enactment of the Trade Agreements Act of 1934. This appears on page 482 in the record of hearings on the Trade Agreements Extension Act of 1953. I have studied the reports of the Ways and Means Committee on the original bill of 1934, and each successive extension of that act, and I find no intimation that consideration has ever been given to the constitutional phase of the legislation. As evidence of the fact that the sponsors of the original bill had doubts about its constitutionality, however, it is a matter of record that they suspended the operation of section 516 (b) and section 336 of the Tariff Act of 1930, on

any article reduced under the 1934 Trade Agreements Act. Section 516 (b) of the Tariff Act of 1930 gave American producers of competitive merchandise the right to litigate in our customs courts the proper classification of imported merchandise, together with its constitutionality. It was not until 1951, when extension of the Trade Agreements Act of 1934 was in doubt, that Congress grudgingly restored this privilege to American manufacturers (sec. 9 (a), act of 1951). Previous extensions of trade agreements acts have attempted to placate domestic producers for the loss of protection by providing for peril points, escape clauses, etc., but now H. R. 1 goes far beyond any previous act in delegating power that has been attempted in the past 2 decades.

It might interest you to know that a client of mine, Star-Kist Foods, Inc., Terminal Island, Calif., is litigating this question of the constitutionality of the Trade Agreements Act, and we are now in the process of unwinding the redtape surrounding such an action. It is hoped that we soon will be in the United States Customs Court with this case, where it will be litigated.

In *Hampton & Co. v. United States* (276 U. S. 394), the United States Supreme Court held that section 336 (the flexible-tariff provisions) of the Tariff Act of 1932 was constitutional because it erected a yardstick to govern the Tariff Commission and the President, and was based upon an investigation of comparative costs. Nothing like that has governed the negotiators of agreements with any foreign nation under the provisions of the Trade Agreements Act. Reductions have been granted on items which the treaty country had never produced, and never could produce the product, yet wholly regardless of what comparative costs in any foreign nation might have been, those reductions were made effective to foreign nations, in many of which the item in question was being produced at a very low labor cost. (See Japanese imports with respect to the Icelandic treaty reduction on tunafish.)

Last year, when extension of the Trade Agreements Act of 1934 was before Congress, we were told that the administration had only one more treaty to negotiate, a trade agreement with Japan, and that the administration would accept a 1-year extension of the act in order to perfect that one treaty. Now the administration comes up with a request for a 3-year extension, with arbitrary powers to further reduce tariff rates to foreign nations, regardless of comparative costs of production here and anywhere abroad.

This bill sets as the maximum protection to be afforded any industry a rate of 50 percent ad valorem. In the exercise of its jurisdiction, under section 336 of the Tariff Act of 1930, the United States Tariff Commission has made reports of comparative cost investigations. Some of these have shown that a rate far in excess of 50 percent was necessary to equalize the cost of production abroad and here.

Congress in the past has recognized the fact that in some instances no rate expressed in terms of percentage was adequate to protect a given industry, and in such instances has legislated quotas and even imposed embargoes. Wherein is the charm of the 50 percent rate proposed in H. R. 1? Is it to serve notice on American industries that if they cannot operate with a maximum duty of 50 percent, their domestic markets will be turned over to their foreign low-labor-cost competitors? The criteria in H. R. 1 for reducing a rate to 50 percent is the fact that there are no imports, or that the imports are negligible. Could it not be that imports are negligible because American industry is operating so close to cost that it makes importing unprofitable with the existing rate of duty? It could well be that

a cut to 50 percent would throw some American industries into the red, or drive them completely out of business.

With the enactment of the Trade Agreement Act of 1934, Congress suspended operation of sections 336 and 516 (b) of the Tariff Act of 1930 as to any rate negotiated under a trade agreement.

In 1951 in an act extending the operation of the Trade Agreement Act of 1934, Congress restored the provisions of 516 (b). The provisions of section 336 are still inoperative as to any rate adjusted under the Trade Agreement Act.

In the President's message on the state of the Union, he intimated that our expansion of foreign trade was to be accomplished without injury to our domestic industries. Certainly, if foreign made merchandise can be sold in this market at less than the cost of production of its American competitive product, industry has to be injured.

It was against this kind of competition that section 336 operated.

If the administration really intends to administer the Trade Agreement Act so that it will not endanger domestic industries, a very simple means of insuring this would be to reinstate the operation of the provisions of section 336 of the Tariff Act of 1930.

Many of the industries which I represent have spent millions of dollars on research and the equipment of their plants with the most modern and efficient machinery, yet the proponents of H. R. 1 would have us believe that American industry is operating in the horse and buggy era, and that if American industries cannot increase their productivity to a point where they can compete with cheap foreign labor, they should shift into other fields of endeavor. Does the administration propose that if an American industry cannot operate with a 50 percent tariff, it should junk its equipment and years of know-how and investment, and start over in some other field of activity? What fields? The chosen fields of some of those foremost American industries which are frequently spoken of as prospering in international markets? It is true that some of our foremost American industries do thrive in international markets, but that may not altogether be so because of efficiency in operation, as it is to the fact that some members of those foremost industries hold American-owned patents which afford them protection from any competition the world around. That, it would appear might apply to the automotive, typewriter, washing machine and business machine industries. Few of these industries need tariff protection; our Government gives them a monopoly through their patents, and by that means protects them from foreign competition.

Furthermore, the administration now proposes to subsidize the establishment of foreign low-labor-cost plants by United States capitalists through giving them a reduction of 14 percent in their taxes on profits derived from such plants. If that is done, how long will it be before many small United States producers will find themselves competing with their own countrymen who are producing abroad, at low labor costs, and an income-tax subsidy of 14 percent; products which they are able to ship back into the United States under the mere token rates of duty proposed in H. R. 1? Why, under such conditions, would any United States manufacturer, who has the capital with which to establish a plant abroad, continue to operate his plant, and employ high-cost labor in this country?

The Trade Agreements Extension Act of 1954, approved July 1, 1954, section 2, reads: "Sec. 2. No action shall be taken pursuant to such section 350 to decrease the duty on any article if the President finds that such reduction would threaten domestic production needed for projected national defense requirements."

It will be seen that under this provision it leaves with the President the obligation to find that a reduction would threaten domestic production and national defense requirements. This has been construed to mean that only the President may make such a finding.

This would seem to be one of the facts inherent to a finding by the Tariff Commission under the escape clause provision of existing law, which would place the jurisdiction within the Tariff Commission, to make a factual finding in this respect and to receive evidence leading to such a finding.

As this provision is now administered, it permits of an arbitrary finding on the part of the defense administration, without a factual finding, or an opportunity on the part of domestic industries to offer testimony as to defense necessities.

Certainly, the Congress does not intend to abolish an industry necessary to national defense. To insure this, it should include in H. R. 1 a provision requiring the United States Tariff Commission to make a finding in its recommendation to the President upon this fact.

The administration has repeatedly urged privately sponsored research into the production and consumption of many of our domestically produced materials and articles of commerce. H. R. 1, I feel, would have the effect, intentionally or otherwise, of reversing that policy, as it bids fair to turn over to foreign producers a very material share of the United States market to the marked detriment of American industry and labor.

To digress for a moment from the foregoing line of thought, it is difficult to understand why the 84th Congress would be willing to go to the extremes of H. R. 1 to placate GATT, when prior sessions of Congress have repeatedly refused to ratify GATT in their trade-agreement extensions.

My closing observation is that our present United States economy is geared to mass production and increasing consumption. If this bill is enacted into law, and the contemplated reductions are put into effect, what is to become of those domestic industries with factories in towns of 50,000 population or less, where that is the only source of steady employment in those towns? Are the displaced workers to be subsidized or pensioned by our Government? If that is contemplated, with a consequent shrinkage in tax receipts, from what source will the income with which we accomplish that objective be obtained? My clients and I feel that if this bill is enacted into law, and the contemplated reductions are made, it will have a grave effect upon our economy. For this, and the other reasons I have given here, we earnestly urge that H. R. 1 be not enacted into law.

Forward With Faith

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. TEAGUE of Texas. Mr. Speaker, on Sunday, January 30, I turned on my radio and heard a sermon given by Rabbi Ariel L. Goldberg, of Richmond, Va., which he called Forward With Faith.

I was so stirred by this sermon that I wrote to Rabbi Goldberg and asked that he send me a copy of it. Under leave to extend my remarks in the RECORD, I am including this sermon, and I commend it to the Members of this body:

FORWARD WITH FAITH

(Based on Exodus 14: 8-15)

My friends, I am delighted to be in Washington with my good friend and colleague, Dr. Norman Gerstenfeld, who has given me the opportunity to speak in his pulpit and to share in this radio program. I am going to speak to you this morning on a subject that expresses deep confidence and bright optimism. I call it Forward With Faith, and I base it upon two things: First, a verse in the book of Exodus, when the people of Israel were stopped in their journey to freedom by the Red Sea. "And the Lord said unto Moses, Wherefore criest thou unto me? Speak unto the children of Israel, that they go forward;" secondly, the stirring conviction expressed by the poet Bernard Clausen in these never-to-be-forgotten words:

"Lord, I believe in man:

In his strength thru the terrible struggle
Out of the darkness which once engulfed him;

In his patience to try again and again to rise
When the forces of Nature seemed to overpower him;

In his yearning for the better
Which has led him toward kindness and peace.

"Lord, I believe in man:

In the tear-stained courage with which he now seeks

To maintain his honor and his dreams in these black days;

In the traces of selfless sacrifices with which he builds,

Out of the wreckage of his day, a better tomorrow;

In that consecration to the destiny of his children

Which will be content with nothing less
Than a new world for them.

Lord, I believe in man."

Understood correctly, the Biblical verse is an exhortation to move forward courageously into the unknown and the untold. The hour of deliverance had come to the children of Israel, just as it came a few years ago to England, to France, to the allied nations. Our ancestors were celebrating an original V Day. Their hearts were filled with gratitude. Where are the words that can describe the mood of these people—harried, hounded, oppressed—at just the thrilling moment when the chains that bind them are broken and the loving light of liberty is reflected in their faces?

But, hark. There is a distant rumble, a sound still feeble, but ominous. It is coming nearer. Suddenly, someone points to what appears to be a cloud of dust way back on the road. "Look," he cries, and every eye turns toward the new danger. No one has to be told what is happening. They know that their lives are again in jeopardy. The tramp, tramp, tramp, of marching feet draws nearer and nearer. It is their old master, the tyrant Pharaoh, and his army in hot pursuit after them. What are they to do? Where can they turn? Before them are the cold waters of the Red Sea. Behind them are the trained charioteers, the husky, brutal soldiers of Egypt.

Here is the classic example of the old adage, "between the devil and the deep blue sea." All seems lost, and the people in typical manner, acting like frustrated mobs have acted throughout the centuries, berate their leader. They heap scorn and invective upon Moses. They cry out against him. He urges them to keep quiet. He counsels silence. And then it occurs—the unpredictable, the unforeseen, the unreal, the miracle. The Red Sea opens, and the children of Israel are saved.

This is the story. It has been heard and read by millions. The vast majority of people accept it literally. They like the way it ends, just like they enjoy the "and they lived

happily ever after" ending in motion pictures, fairy tales, and in most best sellers in modern literature. Talk about escapism, wishful thinking, and daydreaming, we have been fed on a steady diet of it from ancient times until this year. In Europe, in the Pacific, and in Korea, our soldiers and sailors had to learn through their own agony and hardship that they could not depend upon the unreal, upon some last-minute intervention to save them from destruction. Amid dangers beyond description, they learned to place their faith in their own weapons and in the courage of their own hearts.

Take this Bible story literally, and you have a miracle—a handful of gossamer threads. But why must it be taken that way? The author was not interested in weaving a fanciful tale that would evoke the "oh's" and "ah's" of the people. He was not a romanticist at all. He was a stern and hard realist. He was a preacher bringing out a moral and a lesson for his day and for all the days to come. He pictured an event. He described a touching scene. He gave word to the fear that grips people at the most crucial moments of their lives—when they stand at the gate of freedom, even as that gate seems closed to them. In one sentence, he gives the crux of the problem and offers the only solution possible: "Wherefore criest thou unto Me? Speak unto the children of Israel and tell them to go forward." Do you see how clearly and forcefully he puts it, so that the people would not look for outside aid, for a miracle, but to themselves?

This is not the time to curse the leader. This is not the time for tears and sighs and lamentations. This is not even the time for prayer. Don't cry and entreat in this moment of anguish. The call is for action to do something. Go forward. "God helps those who help themselves" is another way of saying what this Bible author taught thousands of years ago. We must not give up hope. We must not despair. We must not curse our lot. We must not retreat. We must not compromise. We must achieve—advance—push on.

Who among us has not been doomed at times to the Red Sea of failure or discouragement? Who has not felt the turbulent waters rising up to his neck, and at the moment when all seemed lost, made one last desperate effort that brought him to a haven of safety? There are many people who do nothing but pray when trouble comes. Of course I believe in the efficacy of prayer. I would not be a minister if I did not so believe. Prayer is an important part of life. Everyone should offer prayers in one form or another. Let me not be misunderstood. There must be more than prayer. If prayer is naught but the repetition of words, it cannot be effective—it can gain no end—it can accomplish no beneficial purposes.

For example, we pray, and our Christian neighbors pray, that poverty and disease shall cease to exist in the world. But unless we dig deep into our pockets and help those who are in need—unless we support wholeheartedly and completely, for example, the March of Dimes campaign which is now in progress—we are not doing our duty. We pray that better working and housing conditions shall exist for the man who earns his bread by the sweat of his brow; but unless we pass legislation to meet this need and replace crowded slums with respectable living quarters, we are not accomplishing what we pray for. We pray that man will give up his prejudices and his hatred for his fellow men, that he may become more considerate and more humane; but unless we ourselves practice loving kindness—unless we are just and tolerant and friendly—our prayers are empty forms.

Remember how we prayed for victory when our sons and daughters were on the firing line? That was the thing to do. But if we hadn't made sacrifices, if we hadn't

offered our blood for the healing of the wounded, if we hadn't put our shoulders to the wheels of industry, our prayers would have been valueless. Prayer with action is the lesson of our Scriptures.

The rabbis of old commented upon this scene when the people stood terrified between the lashing waters and the rapidly approaching Egyptian horde. They related that in the hour of panic there were four groups among the Hebrews, each group with its own plan of action. The first group counseled, "Let's jump into the sea." The second group advised, "Let's turn and fight Pharaoh." The third group, the timid one, said, "Let's go back to Egypt." The fourth group naively suggested, "Let's just make a big noise perhaps we can frighten Pharaoh." Suddenly, out of this welter of confusion, out of this conflicting mumbo-jumbo, of stupid counsel, there was heard the voice of God, "Why criest thou unto Me? Speak unto the children of Israel that they go forward."

The commentary says that when God made this statement, he also added to Moses: "There are times when one must be brief and times when one can be lengthy. My children are in great danger. The Red Sea is closed. The enemy is coming, and you stand there praying a long prayer to me. Speak at once, 'Forward.'" The Bible text looms up large before our eyes in our present crisis. We fought a war, a terrific war, a world shattering war, and we won the victory. How we used to look forward to the time when the last bomb would fall. We would picture a world with new gadgets and new conveniences—a world of peace, plenty, and prosperity—a world of fellowship and brotherhood. We looked for the promised land, and we have found instead a self-made Red Sea. Less than 5 years after our victory, we had Korea. Now we have an uneasy armistice and a cold war—a war of nerves. How are we going to get out of this new predicament? What will happen? A miracle? Are we looking for that? No. Out of the very air we breathe comes the answer, which, thank God, men of principle have always heard and heeded: "Speak to the children of Israel, and tell them to go forward."

There is an inevitable rule about crossing the Red Sea that we must not lose sight of. It is like the law of progress. After crossing one sea, there is no rest. It is not long before you have to cross another. There is always some force to impede your way. There is always an obstacle placed in your path. Look at the Red Seas of the past few years—the Atlantic Ocean and the Pacific. They had to be crossed—the Channel to Normandy, the Siegfried Line, the airlift over Berlin, the atom bomb route to Nagasaki and Hiroshima, the mud and filth and slime of Korea. Now that these are but unpleasant memories, we find that there is still the Red Sea to the new and peaceful world to be crossed—and what a time we are having to cross it.

There are those whom we call reactionaries, standpatters, and defenders of the status quo who seem fearfully agitated at the prospect of crossing this last Red sea. They fear and hate a new world even more than they feared and hated their enemies. They are afraid of change—afraid of the unknown and the untold. They want to go back to the past—back to their special prerogatives and privileges; back to empire grabbing and exploitation; back to the white man's supremacy; back to the secret contracts with cartels and giant combines; back to armament races, the big fist, and power politics; back to the very factors, causes, agreements, and combinations that gave birth to the last World War. They literally tremble at the thought of democracy being made real—to include not only the right to vote but the right to eat, the right to learn, and the right to worship God according to the dictates of one's own conscience. They are afraid of racial and religious equality; afraid of extending educational and democratic oppor-

tunities to all; afraid of expansion in production and consumption; afraid of abolishing tariff barriers; afraid of high ethical concepts; afraid of the United Nations Organization; afraid of international control; afraid of every sign and token of progress. They cry out in their rage and in their distress when the Red sea is before them; they squirm and curse and bellow; they refuse to plunge in; they refuse to cross. But the Red sea is there. You can't hide from it; you can't deny its presence. Denunciation will not solve the problem.

In this fast-moving age you cannot post a long delay; you cannot appease; you cannot stand still; you cannot retreat. That sea has to be crossed now—today. No miracle will solve our dilemma; no outside force will make possible our peace, our safety, and our well-being; no bolt will suddenly come forth out of the blue to guarantee happiness and security. With us and within us alone must be the initiative, the determination, and the courage to cross that sea. Will we go forward to understanding, to sympathy, to fellowship, to brotherhood, and to peace; or will we stand still with our prejudices, our lusts, and our hates—stand still until chaos engulfs us? The question is not merely communism or capitalism. It is our world or their world. Who will create it—the madmen of Malenkov or the wise advocates of freedom and liberty for all?

The poet said, "Lord, I believe in man." Phyllis Bottome, the novelist, said, "There is no mine that can permanently explode the heart of man; nor yet a poison gas that can stop the breath of God that has created the spirit of man." We have to hold on to that conviction. These are trying days for all of us. It is a terrible ordeal through which we and our brethren are passing. Will we survive the calamitous conditions that we face? We must survive.

We have become the active trustees of the classic tradition of civilization. We and all other men of good will are challenged by a force before which we dare not bow or bend. The insolence and the naked impudence of raging heathens must not deter us from our course. In this great hour of testing we must be found worthy. The text from the Bible speaks to us—speaks to us as a people and to each of us as individuals. It bids us to take heart in our march and our climb. It tells us that a thousand Pharaohs, a hundred Red Seas, and the most scorching wilderness cannot stop us if we are willing to take the risk and pay the price for progress. It is the way of the strong, the resolute, and the man who fights with heart and soul.

Let us not give in to our fears. Let us not bemoan our fate or curse our lot. There is work to be done. There are never-ending tasks for all of us. Let us not sit idly and dejectedly by the rivers of Babylon, moping and sighing, and remembering what once we were and what we might have been. Let us be in the vanguard to fulfill our Godlike mission—the mission Moses and the prophets commanded us—the mission the poet restated in such inspiring words:

"Build me a house, a home,
In the hearts of hungering men—
Hungering for the bread of hope,
Thirsting for faith, yearning for love,
In a world of grief and pain.
Build me a house.
Build me a world, said God,
Out of man's fairest dreams;
Heaven must be its dome,
Lighted by prophet-gleams;
Justice shall be the stones
On which my world shall rise;
Truth and love its arches,
Gripping my ageless skies.
Out of dreams, on the earthly sod,
Build me a world, said God."

Build Me a House,
—By Thomas Curtis Clark.

Such a world we must have, my friends, for happiness and security. Such a world we will have if the builders thereof have vision and ideals and faith—if they have courage and hope—if they are ready and willing to make the necessary sacrifices to achieve it—if they walk forward toward distant goals. May God in His wisdom grant us the strength of will, the tenacity of purpose, and the depth of character to keep on building the divine structure that will lead all mankind to justice, to righteousness, and to peace. Amen.

A Warrior Talks of Peace

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REES of Kansas. Mr. Speaker, I am including herewith as a part of my remarks an editorial that recently appeared in the Topeka (Kans.) Daily Capital. It is entitled "A Warrior Talks of Peace." It concerns General MacArthur's statement on his 75th birthday anniversary.

The editorial follows:

A WARRIOR TALKS OF PEACE

General MacArthur's call for an end to all wars was almost drowned out by the preparations for defense of Formosa, and the wrangling between the United States and Communist China. Almost simultaneously, Red Russia tried to muddy the European defense waters with a proposal that could not be accepted by any of the NATO nations. Congress was putting finishing touches to President Eisenhower's request for authority to defend Formosa, even to the possible extent of action on the China mainland.

There is no question but that the famous old warrior, hero of the war against Japan, and in Korea, is right in his assertion that abolition of war would be a blessing to mankind beyond the wildest imagination of mankind. He probably was correct in his analysis of the antiwar sentiment among the people on both sides of the Iron Curtain. No sensible people want war, and have not since the dawn of written history. But they have been led into the conflict by selfish leaders, who themselves rarely had to fight.

With the present nuclear weapons as a threat of total destruction, it is foreseeable that in time mankind must either forgo warfare or face extinction. The blundering politicians, diplomats, and greedy profiteers who grow fat on human misery must in time evolve peaceful means of settling international disputes. This may entail an almost complete change in human nature, for the rank and file of the people always have arisen to defense of their countries, or to attack other nations, when emotionally aroused by demagogues of the type that have started wars since time immemorial.

General MacArthur said that strong leaders are needed to bring about an end to war. He is right, of course, but the Communist conspiracy must be coped with before peace is established. If the Reds succeed in dominating the world, as they confidently expect to do, the ensuing slavery would be worse than the peace they would impose. But call to start leaders in the free nations to thinking more about peace than of war. He may be the "John the Baptist" who points the way to outlawing war for all time.

Gen. Thaddeus Kosciusko

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the Record, I wish to insert an address I delivered at the ceremonies commemorating the birthday of Thaddeus Kosciusko, held Sunday afternoon, February 13, before the statue of General Kosciusko in Lafayette Park, Washington, D. C.

The address follows:

I am proud to join in these ceremonies commemorating the birthday of Thaddeus Kosciusko. The name Kosciusko stands as one of the solid blocks forming the foundation of our great American democracy. It was General Kosciusko, a skilled military leader and great fighter for human freedom and individual liberty, who joined with the American patriots of 1776 in support of the great moral and political principles set forth in the American Declaration of Independence. Gen. George Washington, commander in chief of our Army, recognized in Kosciusko that great spark of unwavering devotion for the cause of human freedom and accordingly made a place for the use of his great military talents and inspiring leadership in our struggle for national independence.

You and I know the tremendous contribution made by Kosciusko to the American way of life with all its wonderful benefits which we today enjoy. We also know that the name Kosciusko is close to the hearts of the Polish people everywhere in the world because he has stood as one of the great symbols of Poland's historic struggles for freedom and national independence. Indeed, the name Kosciusko has earned a place in the hearts of all freedom-loving people.

We Americans have always revered the name of Kosciusko and have each year on the occasion of his birthday, held appropriate ceremonies in order to reemphasize the great principles for which he fought and died. It is sad to recall how the revered name of Kosciusko has been used for evil and treasonous purposes. During World War II the Russians established a propaganda organ called Kosciusko station. This radio station, using the Polish language, beamed programs into occupied Poland. As the Russian Army reached the gates of Warsaw and was encamped on the opposite side of the Vistula River, this so-called Kosciusko station beamed this appeal to the Polish people:

"People of Warsaw, to arms. The whole population should gather round the national council and the underground army. Attack the Germans * * * assist the Red army in crossing the Vistula. Give information and show the best roads. The more than a million inhabitants ought to become an army of a million men fighting for liberation and destroying the German invaders."

The Polish people, led by the home army, rose to a man and although poorly equipped and in short supply, openly attacked the Nazi occupier of Warsaw. The valiant Poles drove the Nazi occupier out of Warsaw and set up a Polish administration, but strangely, as soon as the Poles had this military victory, the Red army withdrew from the outskirts of the city, retreated to the opposite side of the Vistula River. The Russians invited the well-equipped Nazis to return and destroy the backbone of the Polish Army and its heroic resistance forces. The struggle for

Warsaw lasted for 63 days, until on October 2 there was not a drop of water left to drink in Warsaw, nothing to eat and no ammunition for the patriotic fighters. Over 250,000 Poles died in this struggle. By this device the Russians used the well-equipped Nazis to destroy large numbers of the Polish intelligentsia, the leaders, and the patriots.

The people of the free world will never forget the manner in which the Russians have desecrated the name of Kosciusko. We, the American people, will surely never forget the manner in which the Russians used the name of a great American patriot, Kosciusko, in order to bring about the destruction of over 250,000 freedom-loving Poles.

There can be no peace until Poland is once again a free and independent nation.

Questionnaire on Issues Facing the Congress

EXTENSION OF REMARKS OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the Record my own remarks in the form of a letter-questionnaire, which I am sending to the folks in my district. These questionnaires are helpful in determining the views of my constituents on various problems facing Congress.

DEAR FRIENDS: This is the fifth time I have sent a questionnaire to every boxholder in the Fourth Congressional District of Nebraska. I am seeking your opinion on issues facing the Congress. While I must make my own independent decision as to how I will finally vote on national issues, I do want to say that your answers to the questions listed below will assist me in understanding your views on these national problems.

You will remember that in the off-election years it is my custom to hold government clinics in each of the 38 courthouses in the Fourth District. The first hour is devoted to Youth Wants To Know. I hope to continue that practice this late summer and fall. Here again, I will have an opportunity to meet you personally and to have you ask questions in an open forum. These question-and-answer sessions are interesting and informative.

I trust you will return the questionnaire. You will be taking part in your Government. Your answers will assist me, as a Member of Congress, to do a better job.

Yours truly,

A. L. MILLER,
Member of Congress, Fourth District
of Nebraska.

QUESTIONNAIRE

1. What type of farm program do you favor? Flexible ☐ 90 percent ☐ 100 percent ☐.
2. Would you favor a bushel quota on wheat? Yes ☐ no ☐.
3. Would you favor a two-price system on marketing wheat? Yes ☐ no ☐.
4. Should 18-year-olds vote? Yes ☐ no ☐.
5. Do you favor present social security for farmers? Yes ☐ no ☐.
6. Your choice for President in 1956—Eisenhower ☐ Stevenson ☐ others ☐.

7. Should tariffs be lowered ☐ raised ☐ or kept as they are ☐?
 8. Do you favor the present foreign policy? Yes ☐ no ☐.
9. Should we grant more foreign aid ☐ or less ☐?
 10. Should there be Federal aid to education? Yes ☐ no ☐.
11. Should there be Federal aid for school construction? Yes ☐ no ☐.
12. Do you favor universal military training? Yes ☐ no ☐.
13. Do you prefer the present Selective Service System? Yes ☐ no ☐.
14. Do you favor raising postal rates to meet the cost of service? Yes ☐ no ☐.
15. Should Communist China be admitted to the United Nations? Yes ☐ no ☐.
16. Should Alaska be made a new State? Yes ☐ no ☐.
17. Should Hawaii be made a new State? Yes ☐ no ☐.
18. Do you favor a State sales tax? Yes ☐ no ☐.

Now and Then

* EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John G. Bragaw from the Washington Daily News of Washington, N. C., of Friday, February 11, 1955:

Now AND THEN

(By John G. Bragaw)

A man whose writings I like to follow was expressing himself the other day on the great American habit of blaming the other fellow for our own shortcomings—in business, in society, in government, and in the church. He quoted Will Rogers' assertion that there have been three periods of American history—the passing of the Indian, the passing of the buffalo, and the passing of the buck. Rogers added that we are living in the third period.

We can see evidences of the truth of the statement all around us. Probably 1 out of 5 people who discuss the country's affairs will say at some point in the conversation that there are too many crooks in Government positions and find other fault with everything done. Yet the likelihood is that 2, maybe 3, out of those 4 do not take the trouble to vote when there is an election.

All along the route we find the same thing. If a basketball or football team is winning, we will say, "We are playing great ball." But if they are losing "we" isn't the word used: "They just don't know how to play." It's "they," not "we."

This man I was reading says, "Certainly there is too much buck-passing among those in the church." And he doesn't mean any one church; he means all of them. "A considerable number of people try to shift their responsibility as Christians to other members of their own families. Parents who never attend church excuse themselves by explaining, 'We send our children to Sunday school.' They seem to think that this settles the whole matter. Husbands try to work their religion through their wives: 'I never go, but my wife is generally there.' A considerable number of young married people try to make their parents proxy for them: 'We don't go, but I think you'll find mother and father always in their places.'"

"Other members of the church try to shift their responsibilities to their neighbors. If they stay away from church today, they reason that they will not be missed because there will be so many others present. They need not take part in the men's club, because there are plenty of other men to do that job. They need not make a definite pledge to the church because there will be plenty of other pledges to take care of the budget."

A great orchestra director once stopped a concert before a large audience because one of his musicians was not performing. "As the music swept through the hall, with scores of instruments playing in perfect harmony, amid the sound of the flute, cello, cornet, and drum, the man playing the piccolo, away over in the corner, said to himself, 'With all these instruments playing, my one little piccolo will not be missed,' and so he stopped. Immediately the conductor lifted his hand signalled for quiet. When all was silent he called out, 'Where is the piccolo?' The whole performance was marred by the absence of the piccolo. The great Director of the universe has commissioned His church, like a large orchestra, to produce music for the healing of the world. If the work is to be done effectively, every individual must be in his place, playing his part."

School Construction by the Federal Government

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MASON. Mr. Speaker, the following editorials pertaining to President Eisenhower's message on the need for the Federal Government's granting aid to the States and local communities for school construction contain a great deal of sound commonsense, and they should receive careful attention on the part of my colleagues on both sides of the aisle:

[From the Stanton News-Leader]

LET UNCLE STAY OUT

What Mr. Eisenhower proposes is essentially another billion-plus spending program, in an era of deficit spending which threatens the fiscal soundness of the Nation. The place to meet school construction needs is at the local level, and with rare exceptions, the localities are capable of meeting such needs. Where they are not, or where they refuse to do so, the State and not the Federal Government should step in.

The best way for the Federal Government to help the schools is to ease the burden of taxation so as to encourage the localities to discharge their own responsibilities. This involves a curtailment of spending, which is possible both as to foreign aid and costly public works which could well be deferred. It would be unsafe to cut defense spending at this time, but the objective of economy in this field should always be kept in sight.

Experience has shown that every scheme of the Federal Government for dispensing aid to the States is extravagant, creates a new bureaucracy, and causes new demands on the taxpayers. The people pay in the end, so why look to Washington for aid which spells higher costs and more Federal taxation, and opens the door to Federal control of public education, with all the evils that could bring?

[From the Norfolk Ledger-Dispatch]

A DANGEROUS VENTURE

It is a delusion to believe that the Federal Government has some magical superiority over the States in producing money for these big undertakings. In those fields where State authority is supreme the States can raise the funds if they deem the need great enough and if the taxpayers are capable of assuming the new burden. Obtaining the money from the Federal Government is a roundabout, costly and possibly disastrous way of extracting money from the same taxpayers.

Although the President insists that the program would be carried forward without interference with the responsibility of State and local school systems, the tendency of Federal influence to follow Federal money is virtually indestructible. Despite the urgency of the classroom need and despite the appeal which this program may have for some hard-pressed communities, it would be a dangerous venture into a field which should remain the exclusive concern of the States.

Rob Peter To Pay Paul?

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. GROSS. Mr. Speaker, the President has called for a \$7 billion Federal-State emergency school-construction program. Several bills to provide aid in one form or another are present before the Congress. In connection with these proposals for Federal aid to school construction, I call attention to the following editorial from the January 25, 1955, edition of the Waterloo (Iowa) Daily Courier:

Tremendous pressure is building up in Congress to provide Federal aid for school construction. President Eisenhower has endorsed some kind of aid; and constituents whose children are going to school half days or attending classes in dark basements or firetraps are putting pressure on their Representatives.

Such Federal aid, however, presents a tremendous problem of fair distribution of funds. Communities like Waterloo have already bonded themselves heavily to meet their classroom needs and are paying heavy local taxes already. Why should Waterloo people pay Federal taxes to help a comparable community build its schools when that community has voted down school bond issues?

True, many school districts do not have the assessed valuation behind them to pay for new schools. In many, probably the majority of instances, however, this is because the school district involved is too small to be efficient. Many a school district with a high school of less than 100 students should receive no State or Federal aid because such help would be merely a subsidy for inefficiency.

We feel confident that the great majority of Iowans oppose Federal aid for school construction. Such aid means only that Iowans send their money to Washington, a portion is subtracted for administration expense and a lesser amount is then returned to us under conditions that limit our freedom of choice.

The one semivalid argument for Federal aid is the equalization plea, tax the wealthy areas to provide school facilities in the poor

areas. If this principle is adopted, however, the whole foundation of local government everywhere is undermined. Once Federal funds are provided for local government, local policies will inevitably be set in Washington rather than at home. Those who demand Federal aid today apparently have no conception of the vicious consequences of their acts.

Opposition to H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting the following statement in opposition to H. R. 1 by Richard H. Anthony, executive secretary of the American Tariff League, Inc., before the House Ways and Means Committee on January 26, 1955:

Congress is being urged to pass H. R. 1 as an instrument of United States foreign policy. According to the Secretary of State, H. R. 1 "will promote the security and welfare of the United States," which "cannot be achieved without cooperative relations with other nations."

The passage of H. R. 1 is also being urged as a means of obtaining commercial advantage for certain segments of the United States economy. The Secretary of Commerce told your committee that "we should continue the trade-agreements legislation for the same reason as it was started, in the first place—as an important export-promotion measure."

Of course, there is no guaranty that the enactment of H. R. 1 would accomplish either of these cross purposes. It is not a direct, positive approach to the underlying economic problems of other countries, and it would not, of itself, promote our exports. It permits the further lowering of our tariffs on the theory that other countries will take advantage of our markets and will ease their manifold restrictions against our goods. The theory cannot be proved to have worked that way before. Our tariff level has fallen 70 percent since 1934, and there are now more restrictions raised against us abroad than when the trade-agreements program started.

The only certainty ahead if H. R. 1 is enacted is that United States tariffs will be cut. The American Tariff League represents industrial and agricultural producers some of whom are claiming injury due to past reductions, many of whom are extremely apprehensive over the effect on them of the contemplated trade agreement with and for the benefit of Japan, and all of whom see potential danger to them in the provisions of H. R. 1.

Their fears are justified by the earlier testimony on this bill. The Secretary of State said "the bill is drafted so as to cushion our economy against undue shock by reason of competitive imports." But, apparently, shock is due in some degree. Most witnesses who minimized the danger of injury from further tariff cutting pointed out that the trade-agreements and escape-clause provisions of the trade-agreements laws were not repealed by H. R. 1. They neglected to say that the peril-point provision has yet to be tested in multilateral tariff negotiations and that the escape clause has been invoked only five times since it was first included in the 1943 agreement with Mexico.

In view of the doubtful advantages to be gained abroad from the bill and the prospect of disadvantages to producers at home, the league opposes the enactment of H. R. 1.

In outlining our specific objections we must point out that H. R. 1 is so complicated that it is difficult to envision all its ramifications. We have yet to see an official analysis of its provisions and their relationship to present law.

The bill appears to extend and enlarge the President's authority to enter into executive agreements which would become law without being referred to Congress for ratification, and to permit the President to cut certain tariffs on his own, regardless of any trade agreement, an entirely new grant of power.

H. R. 1 also provides authority for a new type of trade agreement, that is, the one about to be negotiated with Japan and other countries not yet named. Heretofore our agreements, bilateral or multilateral, have been negotiated on the basis that other countries would make tariff concessions for the benefit of the United States in return for tariff concessions we made to them. That was the kind of quid pro quo intended under the trade-agreements program, although in practice we often gave more than we received.

Under the contemplated agreement with Japan and third countries the announced objective is to provide export markets for Japan. That is, it is proposed that we reduce our tariffs on items of interest to Japan and to third countries, in return for which those third countries would reduce their tariffs on items of interest to Japan.

H. R. 1 expressly provides authority for the President to enter into this wholly new type of agreement after June 12, 1955.

The league has always maintained that the executive trade agreement method of setting tariffs is potentially irresponsible and undesirable. The new form of agreement with Japan and third countries is even more irresponsible and undesirable than earlier agreements because by design we intend to trade away our tariffs, and hence our bargaining power, without getting any comparable advantages for our exports in return.

While we do not favor the executive agreement method, if Congress should determine to extend the President's basic authority to enter into trade agreements we urge that it do so within the terms of the current 1954 extension and not embark upon these wholly new concepts of delegated powers.

The Secretary of State said the bill "will enable the United States to make a new start in promoting freer trade policies on the part of other nations," but he did not say just what program was contemplated. It seems to us that Congress ought to know what the executive branch intends to do with these broader powers before enacting them.

The Secretary also said, in answer to questioning, that it was hoped the current revision of the General Agreement on Tariffs and Trade would be completed in February, and that it would be sent to Congress. It seems to us that Congress ought to have a look at that revision before considering those provisions of H. R. 1 which appear to give the President authority to commit the United States to a revised GATT to a degree not entirely clear.

We refer to the language appearing on page 2, lines 21 to 25 and page 3, lines 1 to 8, which H. R. 1 would add to the President's current basic authority "to enter into foreign trade agreements with foreign governments or instrumentalities thereof." The new language would cover agreements "containing provisions with respect to international trade, including provisions relating to tariffs, to most-favored-nation standards and other standards of nondiscriminatory treatment affecting such trade, to quantitative import and export restrictions, to customs formalities, and to other matters relating to such

trade designed to promote the purpose of this section similar to any of the foregoing: *Provided*, That, except as authorized by subparagraph (B) of this paragraph, no such provision shall be given effect in the United States in a manner inconsistent with existing legislation of the United States."

The earlier part of the new language is descriptive of the commercial-policy section, that is, the substantive provisions, of GATT. The proviso is in the words of the protocol of provisional application of GATT which commits a signatory country to apply the commercial-policy provisions "to the fullest extent not inconsistent with existing legislation."

The President's authority, as broadened in H. R. 1, would thus apparently permit him to commit the United States either (1) to a new GATT protocol, or (2) to GATT definitively insofar as it does not conflict with existing United States law, in either case without having to refer the instrument to Congress for ratification.

The President has promised to refer to Congress the organizational provisions of the revised GATT, but not its substantive provisions, that is, not its commercial-policy section. In the revisions of GATT, now going on behind closed doors at Geneva, the two parts may be separated. Only the organizational part may be sent to Congress. The United States could be committed to the substantive part by executive agreement under the broad powers of H. R. 1.

The proviso that appears to safeguard existing United States law is illusory. If Congress subsequently passed laws at variance with GATT provisions the United States would be in the position of having breached the agreement. The attention of your committee has already been drawn to the possibility that H. R. 1 might permit an agreement ending United States quotas on agricultural products under section 22 of the Agricultural Adjustment Act, or otherwise. These quotas constitute one of the bones of contention at Geneva, according to recent press reports.

Another way in which the intent of Congress could be circumvented under the powers of H. R. 1 is in connection with the escape clause. Existing law states, as a principle, that the United States may withdraw concessions if an American producer is injured, and it provides for the mechanics of processing escape-clause applications within the United States. Our law does not state how the escape clause may be invoked in GATT, nor whether the United States will submit to GATT rulings and accept as final retaliatory measures of other countries, or penalties, should we withdraw a concession.

The GATT escape-clause machinery is part of the substantive GATT provisions, now being revised. Suppose the revision provided or permitted, for example, when one country invokes the escape clause and withdraws a concession, that GATT could impose monetary damages on that country for the benefit of other countries interested, or simply as a penalty. Under H. R. 1 the United States seemingly could be committed to such a policy by executive agreement, since it does not conflict with our existing law. If Congress later refused to appropriate for such damages, the United States would be in the position of breaching the agreement.

This is illustrative of possible situations that ought to be explored by Congress before the broad powers of H. R. 1 are bestowed on the executive branch.

It may be thought that the peril-point provisions of United States law will prevent injury to American producers and workers, but we again remind your committee that the peril point has yet to be fully tested in multilateral negotiations. We believe Congress should see how the peril-point procedure works in the Japanese negotiations before considering H. R. 1, which permits addi-

tional rate reductions and so increases the risk of injury to American producers and workers.

Congress last year set the United States Tariff Commission the task of studying all the tariff schedules with a view to their modernization and simplification, without changing the rates, if possible. Being aware that the task might be formidable, Congress directed the Commission to file an interim report with your committee and the Senate Finance Committee by March 15, 1955, on the progress made, the difficulties encountered, and on suggested standards and methods for proceeding further. We believe your committee should have the benefit of that interim report before acting on H. R. 1 which would permit a further proliferation of rates and categories of commodities for customs purposes.

In short, there are compelling reasons for postponing consideration of H. R. 1.

It has been suggested that the passage of H. R. 1 would give a psychological boost to the morale of our friends abroad. We think that point debatable. However, we know that its passage will depress the morale of a considerable portion of American labor, American agriculture, and American industry.

Under its alternative approaches H. R. 1 permits the reduction of every single United States tariff rate, whether or not it has been reduced before, and whether or not it is adequate to safeguard domestic workers and producers.

The 15-percent reduction provision has its genesis in the so-called French plan presented to GATT a few years ago as an across-the-board tariff-cutting scheme. It could be used to reduce again rates already reduced partially or fully under previous extensions of the Trade Agreements Act.

The provision for reducing by 50 percent rates on items being imported in negligible quantities has no definitions or criteria so that the extent of its use cannot be foreseen. This is the provision the President may invoke on his own, without any relation to a trade agreement and without submission to Congress, a new concept of delegated tariff-making power.

The provision for reducing rates above 50 percent to that figure permits lopping off any rate above an arbitrary level, based on a representative period not otherwise defined. This provision is obviously based on the erroneous assumption that all rates above a certain level can be characterized as undesirable. It is our view that each tariff rate must be judged on its own merits, considering the purpose for which it is set.

This three-pronged attack on tariff rates, after the single approach in all the extensions to date, suggests to league members that a mopping-up operation is intended on our tariff structure. They are understandably apprehensive.

The bill is being offered to advance our national interest, and we recognize that our national interest has its international aspects. We agree with President Eisenhower's concise description of the underlying basis for a foreign trade policy, as set forth in his special message of January 10, as follows:

"For every country in the free world economic strength is dependent upon high levels of economic activity internally and high levels of international trade. No nation can be economically self-sufficient. Nations must buy from other nations, and in order to pay for what they buy they must sell."

Measured by that formula the United States has done its share and more. Our tariff level is low. We have a high level of foreign trade, even on commercial account. We have a dynamic economy and a growing population. For the long term our external trade will continue to increase no matter what we do with our tariffs, because—in the President's words—we must buy from other

nations, and in order to pay for what we buy we must sell.

The program envisioned in H. R. 1 has been labeled a moderate one. It is certainly a feeble attack on such knotty problems of foreign countries as balance-of-payments difficulties, currency convertibility, and economic development.

It may seem a paradox that a law which is ineffective as an attack on basic foreign economic problems may have a damaging effect on American industry and labor, but it is true. Small quantities of imports of a commodity, particularly from such low-wage countries as Japan, can disrupt the price structure, the merchandising channels, the production schedules, and hence the employment and prosperity in the American industry producing a competitive commodity.

When uncertainty over tariff action permeates American agriculture and industry, and when unemployment, loss of production, and curbing of capital expansion are spotted here and there throughout the country, there will be present the ingredients of general economic distress. Added to any setbacks due to purely domestic causes, injury from tariff cuts may set off a downward trend in the national level of prosperity.

Yet, while the wholesale tariff cutting which H. R. 1 invites might imperil our economy, it will not create the American supermarket for foreign goods which our friends abroad have been led to expect. The American market cannot be a substitute for the natural, traditional outlets for such exporting countries as Japan, unless we are willing to disband whole industries here, rearrange the population, and bid farewell to certain worker and management skills important to a diversified economy and national security.

By intimating that further cutting our already low tariffs is going to ease the problems of other countries, we give them false hopes and lay up ill will for ourselves.

Because H. R. 1 is an ineffective instrument of our foreign policy, because it bestows on the executive branch unprecedented authority and broader powers than Congress has heretofore seen fit to delegate, because it invites a wholesale reduction of our tariffs, with ever greater risk of injury to American workers, farmers, and producers, and because the hurry to push this bill through Congress prevents a careful study of its relationship to many pending proposals yet unrevealed, we urge that H. R. 1 not be enacted.

Gen. Thaddeus Kosciusko

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REUSS. Mr. Speaker, yesterday I stood with my four children at the foot of the monument in Lafayette Park which commemorates Gen. Thaddeus Kosciusko, whose birthday was February 12 and whom the Nation's capital paid tribute to yesterday.

General Kosciusko was an early battler for American freedom. He came to our shores when this Nation was in infancy to take part in the American Revolutionary War.

Under Kosciusko's leadership in 1777 the fortifications at West Point were completed, and he served gallantly in the campaigns at Saratoga and the Carolinas.

After his return to Poland, General Kosciusko continued to fight for liberty in his homeland. He led the Polish people in their struggles against Prussian and Russian oppression.

In Milwaukee, as in many other American cities, there is a monument to the great General Kosciusko which I have often visited with my family. These Kosciusko monuments serve as an inspiration to the children of this generation.

Here was a Polish patriot with a restless hatred of tyranny. He threw himself into the cause of liberty here in the New World, earning the gratitude of countless citizens who have flourished in the freedom he helped to establish.

What practical things can we do to commemorate Kosciusko and the Polish people who have suffered so much for the cause of human freedom?

First, we should liberalize our immigration laws to permit more persons of Polish descent to enter this Nation.

Second, we must wage a vigorous program to keep alive the hopes for a democratic government among the Polish people by expanding our Voice of America.

And third, we should promptly ratify the world genocide convention making it a crime against humanity and international law for any dictator to exterminate whole nations, races, or religions.

These are but a few of the steps our Nation can take now to commemorate General Kosciusko.

Age Discrimination in Government Employment

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. PRICE. Mr. Speaker, there are indications that provisions of law, approved by Congress in 1952, supposedly abolishing all age limits for Federal employment except those essential to performance of the work, are being ignored by the United States Civil Service Commission.

This disregard for employment policy established by Congress on the part of the Commission has come to my attention because of the experience of a constituent, Mr. Nick Milnarich, of East St. Louis, Ill.

Mr. Milnarich applied for a position as tax collector for the Bureau of Internal Revenue. His application was rejected by the United States Civil Service Commission with a notation that the age limit for this position has been set at 35 years.

There is no question about Mr. Milnarich's physical capability to perform this particular type of work. It was to take care of just such cases that Congress itself abolished age limits on hiring of personnel for Government positions.

While it is true that the law does not totally eliminate maximum age limits, it states the principle that age limits should not be imposed generally, and implies that the Civil Service Commission should exercise sound judgment to apply age limits on a practical basis. In my opinion, rejecting applicants at the age of 35 for the position of a tax collector within the Bureau of Internal Revenue indicates that the Commission is not applying the principle of the law in a practical way.

It is ironical that the United States Civil Service Commission has approved age limits as low as 35 years on the hiring for Government positions at the same time the United States Department of Labor has been campaigning against age discrimination by private employers.

Under leave to extend my remarks in the RECORD, I include herewith the following article on this subject which appeared in the February 17 issue of the *Machinist*, the official weekly publication of the International Association of Machinists:

IAM INVESTIGATION REVEALS 35-YEAR HIRING AGE LIMIT FOR MANY FEDERAL POSTS

The United States Civil Service Commission has approved age limits, many as low as 35 years on hiring for thousands of Government jobs during the past 2 years, the *Machinist* learned this week. This age discrimination in Government employment policies has occurred despite a law adopted by Congress in 1952 supposedly abolishing all age limits except those essential to performance of the work. At the same time, the United States Department of Labor has been campaigning against age discrimination by private employers.

The inquiry into the age-limit policies of the United States Civil Service Commission was touched off by an IAM member, Nick Milnarich of IAM Lodge, No. 121, East St. Louis, Ill.

Temporarily laid off his job, Milnarich sought work elsewhere. One of the jobs he applied for was that of tax collector for the Treasury's Bureau of Internal Revenue. Milnarich is 36 and a bowler and softball player. He was stunned when his application card was returned from the United States Civil Service Commission office at Chicago recently with a notation in red pencil that the top age limit for applicants is 35 years. The job pays \$3,410 a year, about \$65.50 a week.

Milnarich has since been rehired at his old job, but is still interested in seeing that other over-35 jobhunters aren't discriminated against as he was. He wrote *The Machinist*:

"The Government has been preaching antidiscrimination in employing people and has requested that employers hire handicapped and older people and the like. Unless my conception of a tax collector's job is all wrong, I can't see what age would have to do with fulfilling the requirements. If 36 is too old for job hunting, maybe I should apply for my old-age pension." The inquiry touched off by this IAM member's complaint reveals that, despite the 1952 act of Congress, the Civil Service Commission has chosen to set top age limits on applicants who will be considered for scores of different categories of jobs. These limits are waived only in the case of veterans.

GENERAL RESTRICTIONS

These top limits range from 35 and 40 up to 62 years, which was the general Government age limit for all United States job

applicants before Congress passed the 1952 act.

A Civil Service Commission official at Washington told the *Machinist* that the lower age restrictions were justified from two points of view:

Where the job is hazardous or requires special physical strength or condition, such as various types of Government police work, guard duty, aerial work, and the like.

Where the job is considered to be a trainee-type position in which the individual selected is expected to work up through the service as a career employee.

The tax-collector post which Milnarich sought falls in the latter category, the Civil Service Commission claims. However, the training period for a career as tax collector is only 6 months.

THIRTY-FIVE OR UNDER

The records show that many other jobs are also restricted to applicants 35 or under, if they are not veterans. These include almost all the so-called GS-5 professional positions including such jobs as agronomist, soil conservationist, physicist, engineer, and historian.

There is also a lower paid category of aids, such as agricultural aid, engineering aid, range management and conservation aid, and similar posts which have the 35-year limit for applicants.

A field assistant trainee in the Social Security Survivors Insurance Division also must be 35 or under to qualify.

Many of the entering jobs in the category of guards, agents, inspectors, and other police-type work have 35-year limits.

OTHER CATEGORIES

Post Office substitute carriers, clerks, and garagemen-drivers are under a 50-year age limit.

At the top of the age scale, the former 62-year-old limit for applicants for a great number of Government clerical positions has been removed. These employees can be hired up to 70, with the possibility of 1-year temporary appointments from year to year thereafter.

However, civil-service records show that this is not true for many of the craft positions—including machinists, still under a 62-year hiring limit. Here are some other categories where jobs are still under the 62-year limit for nonveteran applicants:

Blacksmith, boilermaker, bulldozer operator, carpenter, electrician, laborer, mason, painter, plasterer, plumber, truck driver, welder, sheet metal worker, and many others.

Many jobs, including bookkeepers and typists, in the Panama Canal Zone have a 45-year limit for applicants who are not veterans.

Civil service records show that ever since the law went into effect in early 1953 there has been a steady increase in the number of jobs to which discriminatory age limits have been applied.

NOT CONSISTENT

As frequently happens, the left hand doesn't know what the right is doing. While the United States Civil Service Commission has been placing new age limits on job applicants, the United States Department of Labor is campaigning for the hiring of more older workers. United States Secretary of Labor James P. Mitchell has said:

"By 1975, according to the Census Bureau, the number of persons 45 and over will total more than 63 million, an increase of 40 percent over 1953. This group will constitute one-half the population over 20 years of age.

"Unless something is done to give them job opportunities, an estimated half of our adult population will be condemned to a life of economic uselessness."

Joblessness in a Boom

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, the joblessness in many areas of the United States is rising to haunt the Nation, and no positive means are being taken to relieve it.

With permission to extend my remarks, I am including an article from *Labor's Daily* by Sylvia Porter. This article is very clear and understandable. It follows:

JOBLESSNESS IN A BOOM

(By Sylvia Porter)

Right now, there are probably more than 3,500,000 American men and women looking for jobs, but unable to find them in our land—and when the Government's official tally of unemployment in the February-March period is released, it may show the total above 4 million.

A 4-million total of jobless would admittedly be an economic "red flag" and be politically explosive.

Yet there unquestionably is a "rosy glow" throughout our economy in this second month of 1955.

There is no doubt that we have been in a rising business trend since the fall of 1954. It well may be that this year our output of goods and services will hit an all-time high.

This is it, the economic paradox of our times; a hard core of unemployment and at certain seasons a steeply rising total of jobless in a period of overall good times.

To date all official statements from the administration have soft-pedaled or ignored this.

In his economic report, for instance, President Eisenhower said "developments hold out promise that we shall achieve a high and satisfactory level of employment within the current year."

Yet, the puzzle remains: In today's good times, millions can't find jobs, and in some areas unemployment is critical.

Why this paradox? Let's rip apart the economists' technical jargon, put it into our language. Here are the two reasons why:

1. Every year more people are coming into our labor force than are leaving it, and at today's pace of advance, industry is not creating enough new jobs to absorb the extra workers.

The official estimate is that a full million additional workers will be seeking jobs in 1955. To absorb all of these our economy would have to be expanding at a much faster rate than it is.

2. Every year our workers and machines are becoming more efficient—meaning it is taking fewer workers to turn out the same total of goods.

In November 1954, industry turned out the same total of goods as in November 1953—but with 850,000 fewer workers. That tells the tale. To offset the increasing "productivity" of workers and machines, industry would have to be expanding at a much faster rate than it is.

The considered forecast of top experts is that our economy will expand by \$10 to \$12 billion this year. But to slash unemployment to 1953's good-times level, the judgment is that our growth in 1955 would have to reach \$25 billion to \$30 billion. Mighty few think this is in the cards.

thority would seriously limit the trade-controlling powers of the Congress.

In this event, present judgments of H. R. 1 as appropriate legislation would no doubt undergo radical change. In fact, the possibility of further tariff legislation of any kind might be ended, at least, for the duration of GATT.

The negotiation of new tariff concessions, beginning at Geneva in February, we refer to as operation No. 3 to maintain the distinction between the renegotiation of previous multilateral concessions and the negotiation of new concessions. In the case of many articles, as we shall show later, these new concessions could amount to as much as 50 percent.

In view of this situation, impending tariff changes promise to be vastly greater than those provided for in H. R. 1.

It would be well for Congress to know the extent of these changes before authorizing new reductions.

The fourth operation is the announced negotiation of a bilateral trade agreement with Japan and, if possible, the admittance of Japan into GATT. H. R. 1 breaks precedent with previous trade-agreements acts by singling out a particular country for a trade agreement. The action is all the more unique in that the Government already has the power under existing legislation to negotiate such an agreement. Moreover, the bill provides that in the agreement with Japan no duty shall be reduced by more than 50 percent of the 1945 level. The stipulation merely reaffirms the minimum limits authorized by existing legislation. Why this legislation redundancy?

The reasons for this particularistic action are precautionary and self-revealing. By incorporating the terms of the Japanese agreement in H. R. 1: The Government is enabled to prolong the period of Japanese negotiation to July 1 instead of ending it on June 12 when present legislation expires. July 1 is made the target date because it is currently the terminating date of firm commitments under article 28 of GATT. This year, the termination date is especially important because of disaffection occasioned by renegotiation and impending Japanese trade agreements either within or without GATT.

The Government anticipates this contingency by tying in the beginning date of the Japanese agreement with the final date of firm commitments, thus more nearly assuring that the agreement with Japan, if need be, can play in part the role of successor agreement, so preventing the lapse of many concessions previously granted to other countries. The strategy would seem to have additional precautionary value in that the United States will probably not wish to run the risk of undue strain on its GATT commitments. Hence, in the event GATT refuses admittance to Japan, or is denied congressional approval, or undergoes a substantial loss of its own membership, necessitating the renegotiation of previously granted GATT concessions, a concurrent trade negotiation with Japan might have to be a wholly separate and distinct proceeding. Accordingly, direct authorization of Congress is sought as the means of lessening both political and legal questionings.

The great care with which the way has been prepared for the Japanese agreement would indicate the expectation of very substantial results by way of tariff reductions. One would expect that Congress would wish to know the extent of these reductions before authorizing additional ones on the basis of July 1955 levels.

Taking the above operations as a whole, the status of the American tariff structure as of next June 12 or July 1 is unpredictable. We can only be sure that it will be far lower than at present.

Against this background of multiple activities, H. R. 1 is revealed as a dangerous and illogical document lacking every important criterion of sound tariff legislation. The authorized 15 percent reductions over the next 3 years through trade agreements would begin with the rates existing on July 1, 1955. These are completely unknown quantities. Hence the 15 percent reduction authorized in the bill may, in effect, turn out to be two or three times that figure as compared with present rates.

The special authorization of a bilateral trade agreement with Japan means that Japan can exhaust concession possibilities based on 1945 rates and then be in line for new concessions based on 1955 rates.

In summary, Japan would get her benefits in three baskets: (a) her own bilateral agreement, (b) the generalization of concessions to be made to other countries through GATT, (c) new concessions after July 1, either direct or by generalization. These are in addition to the concessions previously granted to Japan through generalization of all tariff reductions made by the United States since the beginning of the trade-agreement program.

The power to make unilateral tariff reductions on goods "not imported or imported in negligible quantities may be exercised either unilaterally or other wise. The reductions permitted are 50 percent of the 1945 rates, and on a wide range of articles this percentage can still be fully applied.

The value of the criterion negligible is wholly negligible.

In the determination of goods not imported, the President is not required to relate the condition of nonimport to any representative period or to any special circumstances, or any reason whatsoever. In view of the many items involved, this provision may be the most dangerous feature of the bill.

The power to reduce all rates above the 50-percent ad valorem equivalent down to 50 percent is the only tariff-making power, the meaning of which is clear and definite. It is to be exercised unilaterally and without reference to trade agreements. In conjunction with his tariff-making powers, the President is instructed to make his rate changes applicable insofar as possible to entire categories. In this way the tariff cuts would be accomplished in wide swaths.

The devious and multiple routes which the administration is simultaneously following in the promotion of its tariff policy, when viewed all together, are utterly confusing and to our industry completely terrifying.

Because over 90 percent of the cotton-textile industry's production is represented by the items subject to negotiation at Geneva, we are being forced to appraise the possible effects of H. R. 1 on our industry without having the information vital to such appraisal: namely, starting from what level of tariff do the new tariff-cutting powers apply?

The United States Tariff Commission in September 1953 published a study entitled "Effect of Trade Agreement Concessions on United States Tariff Levels Based on Imports for 1952." Table 3 of this study gives the average ad valorem equivalent of rates of duty in effect on various dates on United States dutiable imports for consumption in the year 1952. With respect to Tariff Schedule 9—Cotton Manufacturers—this official table indicates that the average ad valorem equivalent based on rates in effect before any trade agreements were made was 36.8 percent; that on January 1, 1945, it was 30 percent; and that on January 1, 1953, it was 21.8 percent. Thus it appears that the reduction in rates on cotton manufactures from the pretrade agreement period until January 1, 1953, was 41 percent and that the

reduction from January 1, 1945, to January 1, 1953, has been 27 percent.

Under existing authority, the President has the power to cut tariff rates in effect on January 1, 1945, by 50 percent. However, the Tariff Commission figures quoted above do not mean that 27 of these 50 percentage points have already been used in previous tariff-cutting actions on cotton manufacturers. The Tariff Commission table is based on dutiable imports in 1952 and, of course, many cotton textile items were imported in 1952 only in negligible quantities or not at all. Thus the indicated 27 percent reduction in rates simply means that the particular bundle of cotton manufacture imports in 1952 was such that had that particular bundle of cotton goods been imported in 1944 the average ad valorem rate equivalent would have been higher; indeed, would have been at such a level that the actual ad valorem equivalent in 1952 represented a 27-percent reduction.

However, while very serious tariff reductions have been made since January 1, 1945—the base date for existing tariff-cutting authority—on various important cotton textile items, the great bulk of staple cotton goods have had no tariff reductions since that date.

But many cotton textile tariff rates have already been effectively cut by the process of inflation. Existing tariff schedules provide for lower percentage rates on higher priced cloth. In the case of unbleached cotton cloth the lower rates take effect on values of over 70 cents per pound; on bleached cotton cloth the lower rates take effect on values over 80 cents per pound; and on printed, dyed, or colored cotton cloth, these lower rates take effect at values over 90 cents per pound. Because the whole level of prices has moved upward sharply since these rate-determining price points were set in prewar days, far more of the potential imports would qualify under the lower rates for high-value items.

Furthermore, cotton textile tariff rates were sharply reduced in several prewar trade agreements, the most important being those with the United Kingdom and Switzerland. It is the rates then established which still obtained on January 1, 1945—the base date for existing tariff-cutting authority. Indeed, as compared with rates established by the Tariff Act of 1930, trade agreements previously negotiated have already imposed tariff reductions on about 91 percent of the cotton textile industry's production. These cuts have averaged about 37 percent. For many individual items they have amounted to as much as 50 percent, and on a limited number of items the rates have already been reduced by the permissible maximum of 75 percent of the 1930 level.

Cotton textile items representing about 90 percent of the total yardage output of the United States industry can conceivably suffer tariff reductions of 50 percent at Geneva and under the provisions of H. R. 1 the authority to cut those resulting tariffs by another 15 percent is proposed. Specifically, as an example, the current tariff rate on unbleached cotton cloth of yarn No. 34 and valued at not over 70 cents per pound is 21.90 percent ad valorem. This could be cut at Geneva to 10.95 percent and then under H. R. 1 could be further reduced in a 3-year period down to 9.31 percent.

The Tariff Commission table previously referred to, when analyzed in conjunction with the fact that on most countable cotton cloths the President still has his full 50 percent tariff-cutting powers under existing law, means that most countable cotton cloths are now being imported in what might be considered negligible quantities under section 5 (a) of H. R. 1. That section of the bill before you would authorize the President to cut existing rates on those cotton textile items by 50 percent by simple proclamation. Thus, even should the President

at Geneva not avail himself of his entire tariff-cutting authority relative to cotton textiles under existing law, H. R. 1 in section 5 (a) would, in effect, continue all of his tariff-cutting powers. This may well be the most dangerous provision of H. R. 1 from the standpoint of the United States cotton-textile industry.

Also scheduled for possible tariff reductions in the Geneva negotiations are the products of this industry's chief customers, including, for example, cotton clothing, chenille rugs, knitted gloves, etc. Practically all apparel items manufactured from either woven or knitted cotton fabrics are on the list. While cotton yarns are not directly included, the list does include a great majority of the products manufactured from cotton yarns.

It is particularly significant that the Japanese have found it profitable, at existing tariff rates, to expand cotton textile exports to the United States in a year like 1954 when American textile prices have been depressed. According to the United States Department of Agriculture, United States cotton mill margins in late 1954 were the lowest since July 1952 when the post-Korean price collapse was taking place.

The United States Census Bureau reports that since the crop year 1952-53, domestic cotton consumption has declined by about 1 million bales on an annual basis.

For every dollar the industry earned after taxes in the third quarter of 1953, it made but 40 cents profits in the comparable period of 1954.

In the last few weeks there has been a modest improvement in the cotton textile markets. The present revival will, however, surely be reversed should the threat of substantial additional Japanese imports materialize.

The United States Government has apparently made the decision that the textile industry is available for sacrifice on the high altar of foreign trade policy.

There are in fact three bits of evidence which, when fitted together, make possible no other conclusion:

1. The list of items scheduled for tariff concessions at Geneva includes more than 90 percent of the output of the United States cotton textile industry;

2. H. R. 1 proposes to compound the tariff concessions to Japan by taking as points of departure for further tariff cuts under its authority those new lower rates which will result from the Geneva negotiations;

3. The list of items scheduled for possible tariff concessions at Geneva and H. R. 1 have been drafted by persons who have access to readily available public information indicating that (a) the cotton-textile industry, almost alone among major United States industries, has been in a depressed condition despite the general economic boom of the last 2 years and that (b) the cotton-textile industry, on the record, suffered substantial injury from Japanese imports in the last previous peacetime period (the late 1930's) despite the fact that in those years United States textile tariff rates were higher than at present.

One aspect of the proposed tariff concessions on cotton textiles which the proponents of H. R. 1 have tried to sweep under the table is the intimate connection between the economic health of domestic textile manufacturing industry and the prosperity of cotton agriculture. This relationship can be put very simply: 2 out of every 3 bales of cotton grown by American farmers are sold to United States cotton textile mills. Thus a reduction in the output of those mills would be immediately reflected in a reduction of domestic mill consumption.

Moreover, those officials who drew up the list of items to be considered at Geneva for possible tariff concessions compounded the threat to United States cotton agriculture by including on that list synthetic fibers.

Clearly enough, a reduction of the United States tariff on synthetic fibers would reduce the price of synthetic fibers to United States textile mills and would mean—because mills can process cotton or synthetics depending on relative prices—the loss of additional portions of cotton's current market to synthetic fibers.

Besides cotton agriculture, other important segments of the United States economy depend upon the continued health of the United States cotton-textile industry. The cotton-textile industry, being one of the largest American industries as measured by output, employment, etc., is a major customer of many other industries. Chief among these are the textile-machinery industry and the chemical industry, the latter supplying many hundreds of different products used by the cotton mills. Clearly, any reduction in productive activity of the United States cotton-textile industry would reduce the markets of the United States machinery, chemical, and other supplier industries.

We call to the particular attention of the committee the threat to small business implicit in H. R. 1 when read in conjunction with the list of items subject to tariff concessions at Geneva: the apparel industry is made up almost entirely of small firms; 75 percent of the cotton-manufacturing industry consists of small independent units, none of which has as much as 1 percent of the total business; and cotton agriculture is made up of hundreds of thousands of small farms.

What does the United States Government hope to accomplish through encouraging additional cotton-textile imports? We have given this problem much earnest study and have concluded that there are two basic reasons for the Government's attitude toward our industry. The first reason is, we believe, blind reliance upon the economic theory of free trade in the State Department.

The economic theory of free trade is part of a wider theory of free movements of prices and wages. We cannot practice the theory in one part of our economy alone. A moment's thought is sufficient to remind us that in the United States economy of 1955 we have put firm floors under wages through the Wages and Hours Act and under prices through the agricultural price support program.

The cotton-textile industry is proud of the fact that over the last 20 years it has succeeded in raising the average wage rate paid its employees by roughly 500 percent—a much more rapid rise than the increase in the cost of living during that period. We do not want our employees to have to compete with the low wage levels which reflect living standards of the Orient. In any event, employers and employees in the industry would be prevented from competing in such manner by the Federal minimum wage law. The only adjustment possible for the industry to make, if it is forced to compete with oriental wage scales, would be made through the unemployment of its workers and the bankruptcy of its firms.

A good deal of callous comment has been bandied about on the problem of unemployment as related to tariff policy. Advocates of further tariff cuts, when confronted with the fact that these cuts will mean additional imports and that these additional imports will mean reduced production of those items in United States domestic plants, frequently take refuge in that aspect of free trade theory which holds that such unemployment is but a short-run problem and that those people who lose their jobs as a result of import competition will find jobs in other industries.

One or two comments on this aspect of free trade theory seem appropriate. In the first place, the unemployed are not statistical ciphers. They are real live people who have to eat every day, whose children outgrow shoes every other week, and who are attached by habit if not by mortgage to a

particular geographic locality. Furthermore, they possess special skills which, in many instances, required years of apprenticeship to acquire and they are frequently above the age at which, because of pension cost problems, new employers will hire them.

To say that if we import unemployment by cutting tariffs, it will all work out in the long run, sounds very noble indeed but the fact is that the people involved have to live in the short run and in the long run all of us are dead anyhow.

Nor can the impact of this unemployment problem be limited to those persons who are without work because their employer has lost his market to foreign competition. The economic structure of whole communities is involved. In the textile industry, for example, it is quite a typical situation that the cotton mill is located in a small town and its payroll is the economic lifeblood of the entire community. For every 100 civilian jobs in manufacturing in the United States there are 260 jobs not in manufacturing that are related thereto.

For a long period the American proponents of lower tariffs have declared as part of their propaganda that lower wages in foreign countries were offset here by correspondingly higher efficiencies of operation.

The fact is that Japan now has a cotton textile manufacturing industry whose efficiency is equal to or above that of the textile industries of Europe and which compares favorably with the average efficiency of the American industry. The Japanese industry is new. More than three-fourths of their existing capacity has been built since 1945. Their average wages are in the neighborhood of 13 cents an hour, which is one-tenth of the average cotton textile wage in the United States. Raw cotton costs, because of the low cost of ocean transport, are essentially the same in Japan and the United States. Of the remaining costs, about one-half consists of wages. With a wage cost one-tenth of that in the United States, Japan has a tremendous competitive advantage.

The other major reason that our Government is encouraging additional cotton textile imports into the United States is, in our opinion, excessive timidity in meeting the real problems of the world economy. One would hardly expect to cure the problems of the world coal industry through the device of taking more coals to Newcastle. It is equally foolish to expect to cure the world textile problem by shipping additional cloth into an American market which is already more than amply supplied by a domestic industry characterized by excess capacity. Half the people on the face of the globe are in rags today. The real solution lies in increasing textile consumption in the textile-short areas of the world where textile imports are restricted by all sorts of ingenious quantitative and currency control devices.

We propose that the problem of world trade be met directly. We suggest that our Government demand reciprocal performance by other nations on their previous trade and tariff commitments to this country, including a return to convertible currencies. Let us exert our influence in the world toward that end. Thank you.

We Pushed Chiang Into Tachens

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an interesting article written by Joseph Alsop

So? So this is our choice:

We can settle for a steady but moderate expansion in our economy this year and in the years to come. And we can argue that in this sort of business climate prices will be stable, inflation will remain under control, the dollars' value will hold, and, in the end, America will be stronger and the majority will be better off.

But if we settle for this, we also accept the likelihood that millions of jobless families will find chatter of prosperity a bitter mockery and unemployment will be our key problem.

Or we can insist on a much bigger and faster expansion this year and in the years to come and we can demand Government actions—immediate tax cuts, speeded-up spending, etc., to impel the growth.

But if we insist on this, we also accept the risks of a rising price level, a renewed inflation, and the danger that the dollar's value will shrink year after year.

Application of H. R. 1 to Textile Industry

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following text of the statement filed by the Textile Workers Union of America with the House Committee on Ways and Means which has been furnished me by Mr. John W. Edelman, Washington representative, Textile Workers Union of America, CIO:

TEXTILE WORKERS UNION OF AMERICA,
New York, N. Y., January 24, 1955.

The Honorable JERE COOPER,
The House of Representatives,
House Office Building,
Washington, D. C.

DEAR MR. COOPER: We herewith wish to express our position concerning H. R. 1, concerning which you are now conducting hearings. Basically, our position relates to the application of H. R. 1 to the textile industry. It is that such industries should be exempt and excluded from the application of the provisions of the proposed bill, so that further reductions in rates of the appropriate schedules be prohibited.

We are, therefore, proposing that a further provision be included, providing such exemption, which would read:

"No foreign trade agreement entered into by the President after January 1, 1955, under section 350 of the Tariff Act, as amended and extended (19 U. S. C., sec. 1351), shall operate to reduce, for any period on or after the effective date of this act, the rates of duty which were applicable on January 1, 1955, with respect to any of the articles listed in sections 901-918, 921-923 of schedule 9; sections 1002-1023 of schedule 10; sections 1105-1122 of schedule 11; sections 1202-1211 of schedule 12; sections 1301-1312 of schedule 13."

We hope that the committee further resolves that this exemption shall be equally binding upon the President of the United States in his further negotiations with the Government of Japan.

We wish to make evident one basic fact to you and the members of your committee. The industry likely to be primarily affected by reductions in tariff rates is the textile industry. Current estimates by Dr. Howard Piquet indicate that one-half of the estimated increase in imports likely to result

from such reductions would consist of textiles. A movement for more extensive imports at the expense of domestic industry would, therefore, primarily affect the textile industry.

We are determined to stop this movement, designed to make the textile industry the sacrificial lamb for the aggressive large-scale American industries promoting foreign exports. The present bill is clearly an attempt to sacrifice some American industries for the purpose of promoting immediate exports by others.

The present bill is being promoted behind a barrage of claims which cannot stand up under careful and close scrutiny. The main accomplishment will be a gesture to the export interests of some foreign countries and of the United States. They have exaggerated the possible economic advantages which would result from the present bill or even from a sweeping removal of tariff restrictions. There will be individual beneficiaries among the foreign countries, but the absolute value of increased imports would be rather minimal. The primary result would be the injuries to established American industries, rather than assistance to the whole of the foreign economies. The impact on specific groups of American employees will be immense, but the benefits to the balance of payments of foreign countries will be of small order.

It is important to record the important fact that the ratio of imports to American production has been reduced over the last few decades, not because of import barriers but because of the ability of the American economy to produce more cheaply and economically, and to substitute synthetic products for former imports. We eliminated more opportunities for foreign earnings through the production of nylon, synthetic rubber, dacron, orlon, and similar products, than we have ever stopped through our tariff rates. To contend otherwise is to overlook the facts of history.

The major impact, therefore, is the destruction of or severe injury to some American industries.

One of the major defects of the current bill is that it permits the indiscriminate application of lower rates without providing the President of the United States any guidance as to the type of industries which should be protected and what guide posts might properly be used in determining the size and range of injury which may be permissible. It is a reckless delegation of power. It appears to us that it is incumbent upon the Congress of the United States to itemize such restrictions and concerns and to enumerate the areas where injury may not be done.

We believe, for reasons we have previously enumerated, that no such injury should be perpetrated upon the American textile industry. These may be summarized as follows:

1. A high level of unemployment prevails in many divisions of the textile industry. Alternative employments are limited in textile areas.

2. Current technological changes, inter-fiber, interprocess, and interproduct competition are threatening many more jobs.

3. In view of the prevalence of unemployment, this is an inopportune time for further concessions which would complicate the adjustment process.

4. Certain branches of the textile industry included in the current negotiations are the branches of the traditional industries which have the best chance for continued survival in inter-fiber competition and therefore should not be threatened by a new increase in the volume of imports.

5. The industry has lost many foreign markets and export volume has been sharply reduced and is further threatened.

6. Textile imports should not be conceived as primary sources of international trade for

countries involved in the proposed negotiations.

7. The maintenance of an adequate American textile industry is essential to our national standard of living, position, and defense.

8. The American textile industry is one of the largest of all textile industries and its position must be maintained.

9. Protection of the American industry has had few unfavorable effects upon the American or world textile economy.

10. The tariff mechanism is a faulty determinant of the flow of textiles and is complicated by current raw-material price policies.

11. Concessions should not be negotiated for products which are primarily supplied by countries other than those with whom negotiations are contemplated.

12. Limited types of imports of textile products can contribute to new ideas, developments, fabrics, and designs, but they should not come in such volume as to destroy segments of the American industry.

13. We urge the promotion of international fair-labor standards in the world textile industry to avoid competition on the basis of exploited labor.

We have reiterated on several occasions our conviction that textile imports into this country can only have a destructive effect upon our domestic industry which is now suffering from widespread disorganization and in which hundreds of thousands of unemployed may be found. The benefits resulting to the foreign producers will be limited. They will disorganize the markets temporarily, accelerate the closing of mills, and aggravate the unemployment conditions, but in the long run they will be unable to match the efficiency, designing, and merchandising qualities of the American market. The rising efficiency in the American industry has enabled the American textile industry to meet foreign exports with considerable success. Current developments promise to increase this capacity to meet the foreign exporter in the American market. But during this transition the increased volume of imports can only be harmful to us, and ultimately, to the foreign producer, for it will be creating the false illusion that he will be able to get a permanent foothold in this country when as a matter of fact he will not.

The internal competitive forces in the textile industry are so virulent and destructive of existing interests within our country, that they are displacing tens of thousands of workers and rendering the adjustments difficult and staggering. We urge that these problems not be intensified through imports which, within a short period of time, will be unable to hurdle even our most modest tariff rates because of the rising productivity, merchandising and designing skill of our American industry.

Therefore, we request the enactment of an exemption of the textile industry from the above bill and the Tariff Act of 1930 as the most fitting declaration of public policy.

Among the most doctrinaire free-traders, there are many who are willing to concede that a special exemption should be granted to the textile industry. We herewith appeal to you and members of your committee that this prevailing sentiment among the free-traders should be reflected in the current legislation.

For a more extensive presentation of fact, I am enclosing our statement before the United States Tariff Commission and a further statement before the Committee on Reciprocity Information.

Please have this letter and the enclosures inserted in the record of your hearings. We have not appeared personally because of the short time you made available and your crowded schedule. We, nevertheless, believe that this written communication will receive the same attention as an oral presentation.

Very truly yours,

JOHN CHUPKA,
General Secretary-Treasurer.

The Helena Bridge

EXTENSION OF REMARKS OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert an excellent editorial from the February 12 issue of the Memphis (Tenn.) Commercial Appeal relative to the proposed bridge at Helena, Ark., across the Mississippi River.

This bridge has been a 30-year dream of progressive and civic-minded citizens not only of Helena and Clarksdale, Miss., but of good far-sighted citizens throughout the Midsouth.

This is another milestone in the work that has seen the creation of the Helena-Friars Point Bridge Commission with such fine men on the commission as W. K. Anderson, R. N. Baltser, Clarence Thomas, E. K. Brewer, Jr., and M. D. Brett, of Clarksdale, Miss.; R. L. Brooks, J. B. Lambert, John C. Sheffield, and J. B. Lasswell, of Helena, Ark.; Grady Cooke, of Pontotoc, Miss.; Ballard Deane, of St. Charles, Ark.; Jack Dunlap, of Batesville, Ark.; Sol Hersberg, of Friars Point, Miss.; Neil Hodge, of Oxford, Miss.; C. N. Houck, of Mariann, Ark.; DeWitt Poe, of McGhee, Ark.; and William Campbell, of Forrest City, Ark.

These commissioners were joined some 2½ years ago by a group of good Helena citizens who created a nonprofit citizens committee to secure this bridge. C. L. Harris, of Helena, Ark., was elected president, and W. G. Dinning, Jr., was made secretary-treasurer. J. D. Molitor, of Marvell, Ark., was named vice president. This group established a steering committee to handle the actual work of the committee. This committee consists of Judge John C. Sheffield, ex-Gov. Ben Laney, C. L. Harris, Sam Anderson, Walter Morris, J. B. Lambert, J. J. White, and Wayne Stone.

This is the background of hard work and civic enterprise that has resulted in this favorable action toward securing a much-needed bridge across the Mississippi River at this point.

Such a bridge will be of great value to the economy of the great Midsouth area and will result in even greater growth. It will provide an excellent artery of travel for all the citizens of our Nation. But—of equal importance—it will furnish a needed bridge to fit into the great program of defense in the linking of military installations throughout the Nation.

The editorial from the Commercial Appeal reads as follows:

THE HELENA BRIDGE

Reports that a bridge can be built across the Mississippi near Helena, Ark., on a businesslike plan, is good news for the entire Midsouth. It also demands warm congratulation and commendation for the civic-minded and farsighted citizens of Arkansas and Mississippi who have cherished and fought for the realization of a dream for nearly 3 decades.

The enthusiasm of the proponents of the bridge has been of the hard-headed, realistic sort, which is all to the good, and it is a fact typical of the spirit of sound progress that now animates the entire Midsouth area. It has resulted in the careful formulation of a program that will mean a cooperative enterprise that will benefit all the people of this area and pay for itself through tolls no higher than charges now made for inadequate ferry service.

Present circumstances and the experience of comparable communities in the Midsouth indicate that the bridge at Helena can be financed on a sound basis, and that it will pay out in from 12 to 14 years. Such an estimate is, we think, conservative, as it should be. Unless all signs fail, however, revenues may easily be considerably larger than current planning envisions.

The fact that another bridge over the Mississippi is so needed is another proof of the consistent growth and prospering of the region. The structure will be so designed that it will be capable of meeting demands sure to be made by the future importance of this section. While the best interests of the communities closest to the bridge may seem to be most directly served, it will actually be an asset of comparable value to all of us in the Midsouth.

Nothing could better justify confidence in our future than such a demonstration of resolution in behalf of progress.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, why destroy the jobs of 2,250,000 workers in the American textile mills by enacting H. R. 1?

Under leave to extend, I am inserting in the RECORD the statement of the American Cotton Manufacturers Institute, presented by Claudius T. Murchison, economic adviser, American Cotton Manufacturers Institute, Inc., before the Ways and Means Committee in opposition to H. R. 1, the so-called Reciprocal Trade Agreement Act extension, as follows:

The textile products industry is one of the great industries of America and about three-fourths of it is composed of the cotton-textile industry. To give it exact ranking is difficult because of the technical and sometimes arbitrary nature of industry definitions. But it is enough to know that by the usual measurements it is one of the top six of the manufacturing industries of the United States, the others being food, chemicals and allied products, motor vehicles, iron and steel, and machinery manufacture.

Stockholders equity and borrowed capital of the textile products industry are reported by the Federal Trade Commission as being \$8.3 billion, which is about 5 percent of the total for all American industry. If we add the apparel and finished goods industry, which is merely an advanced stage of the textile products industry, the total of invested capital or assets, however we wish to term it, becomes \$11 billion, or about 6.5 percent of overall total of American industries.

This giant activity employs roughly 2¼ million people who are about evenly divided between the 2 major divisions. In a num-

ber of States and in many localities and areas textile employment is the most important single source of income, and in several States such employment exceeds that of all other manufacturing activities combined.

In our appearance here today we propose to show that textile-mill-products industry and the closely related apparel-manufacturing industry are seriously threatened by the administration of tariff policy under existing legislation, and that the effect of H. R. 1 would be greatly to intensify the threat of damage or even destruction which already confronts us. We would like to emphasize this statement without impairing its meaning by stating that H. R. 1, if enacted, would complete the process of entrusting the jobs and the well-being of 2¼ million textile workers to the executive division of Government, more specifically the State Department, as an incident of our foreign economic policy.

We propose to show that no effective criteria are provided either to guide or to limit the State Department in the exercise of this great responsibility. Even more important is the absence of any effective recourse or defense against whatever course of action the executive division of Government might choose to follow.

We propose to show that, in fact, H. R. 1 would represent the final installment of power to destroy the textile industry of the United States. We do not say that this power will be fully exercised, but its incorporation in the hands of an agency whose function is normally and rightfully restricted to international affairs is a violation of our concept of constitutional government and a danger of the first magnitude.

While H. R. 1 is being debated in terms of its specific provisions, the Government has under way 4 other foreign trade operations whose completion will completely transform the significance of those provisions.

The effects of the bill, therefore, cannot be judged by relating its provisions to the current trade and tariff structure, or to the current tariff powers of Congress. Before its effective date, if enacted, important portions of the tariff structure, as we now have it, will be dismantled and the tariff-making responsibilities of the Congress may be seriously impaired, if not abrogated.

These impending events are the goals of the following scheduled operations:

1. The renegotiation of GATT as an international agency of trade and tariff control;
2. The announced intention of the Chief Executive to seek congressional ratification of GATT;

3. The scheduling of another round of multilateral tariff concessions among GATT members beginning in February;

4. Intention to negotiate a bilateral trade agreement with Japan, and to press for the admittance of Japan into GATT.

The first of these, the renegotiation of GATT, has been in process for some weeks. The outcome is uncertain, the conflicts of interest are bitter. Certain members may resign, others may withdraw concessions as permitted by article 28. Large-scale revisions of the over-all tariff structure may, in consequence, have to be made, involving previous concessions in addition to the long list of articles to be newly negotiated. Also up for renegotiation are the policy provisions of GATT relating to such vital matters as, quotas, subsidies, exchange restrictions, trade discriminations and internal economic programs.

How can Congress or the industry judge H. R. 1 as to its ultimate effects without first knowing the outcome of these negotiations?

The second tariff operation aims at the congressional ratification of GATT. It is possible that Congress may be requested to impart treaty status to this organization. Such action could transform GATT into a supranational instrumentality whose au-

and appearing in the Washington Post and Times Herald of February 13, 1955:

MATTER OF FACT

(By Joseph Alsop)

WE PUSHED CHIANG INTO TACHENS

TACHEN ISLANDS.—If you want the real measure of what has happened to the Eisenhower administration and American foreign policy in the last 2 years, consider the story of those barren, controversial rocks, the Tachen Islands. If it were not so serious, it would be a cosmic joke.

The background of the drama of the evacuation of the Tachens was simple enough. It is no secret that for 10 days or so Chiang Kai-shek balked bitterly at making a present of the Tachens to the Communists. The Eisenhower administration had to press Chiang very hard indeed to take his troops off the Tachens before the Chinese Communists attacked them.

The joke lies in the fact that just 2 years ago the shoe was on exactly the other foot.

Those were the brave early days of Eisenhower policymaking. There was no talk then of cease-fires and peaceful coexistence and the like. Instead, the watchwords were liberation, dynamic new foreign policy, recaptured initiative, and the "unleashing of Chiang Kai-shek."

President Eisenhower's dramatic announcement that, after being wickedly held in check by the Truman administration, the generalissimo had now been boldly unleashed by the Republicans, caused a wave of reaction that reached all the way to the rocky Tachens.

At that time the islands were held by light guerrilla forces, hardly more important than those which fought for Yikiangshan through close to three bloody days. The Formosa government considered the Tachens too distant from the main island to be covered by air or supplied by sea. The generalissimo and his military advisers did not wish, therefore, to commit either their prestige or large components of their regular forces to the defense of the Tachens. In short, the islands were then being treated as expendable.

But President Eisenhower had given the watchword. Chiang Kai-shek was unleashed. The Tachens were doubly valuable, as a base for irregular guerrilla operations on the mainland and as a forward radar warning point for both Formosa and Okinawa. So the American military advisory group on Formosa began pressing Chiang very hard to put regulars on the Tachens. This was one of the measures devised in Washington to give a little reality to the famous unleashing.

The Americans did not win their point with ease. The generalissimo was extremely reluctant to put regulars on the Tachens. Certain key Chinese military leaders, particularly the chief of staff of that period, Gen. Chou Chi-jo, resisted the American project to the end. Nonetheless, as usually happens on Formosa, the American advisers triumphed in the end.

The 46th Division was specially chosen to be sent to the islands. Even after the 46th had been installed and the defense positions had been organized, however, the American advisers of the Chinese Government were still dissatisfied.

The commander on the Tachens, Gen. Hu Tsung-nan was one of the old boys of the Chinese Nationalist army, with a record that did not inspire confidence.

Once again heavy American pressure was put on the generalissimo to replace the Tachen commander. When this reporter was in Formosa last year, the Americans had just won their second victory for the defense of the Tachens. Gen. Hu Tsung-nan had been recalled and the able Gen. Liu Nien-li has just been given the Tachen command, which he still holds.

In those days, too, one of the real wonders of Formosa was the world's most uncovered covert operation, the American-financed Western Enterprises. Western Enterprises combined the claim to invisibility with a private housing development, special PX's, social clubs and other rather conspicuous amenities. The whole town of Taipei knew that the Spooks, as they were locally called, were helping the guerrilla operations based on the Tachens.

But now the Spooks are folding their bedsheets and packing to go home. Western Enterprises, as any pedicab driver will tell you, is soon to be no more, and its assets, whatever they may be, are to be transferred to the Navy. This is in fact a significant move in the direction of a cease-fire down the middle of the Formosa Strait and general acceptance of two Chinas, which are now the real aims of the Eisenhower administration's Asian policymakers.

All of which is important for two reasons. In the first place, what are the unfortunate Chinese Nationalists to think when they are first powerfully pressured to defend the essential Tachens at all costs, and then told that the Tachens are not essential after all, and please to evacuate at once? This reporter has never shared the Knowland-Robertson-Radford view of the unvarying rightness of Formosa. But in view of the record the generalissimo and his advisers certainly seem to deserve some sympathy at this time.

In the second place, might we not be better off in Asia today if there had not been so much loud, empty talk at the beginning, and if there were a bit more boldness, spirit and determination in our policymaking today? Maybe it is impolite to ask the question, but the facts demand that it should be asked.

Address by Gov. Theodore R. McKeldin, of Maryland, on Occasion of Lincoln's Birthday

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. DORN of New York. Mr. Speaker, on Saturday evening, February 12, 1955, Gov. Theodore R. McKeldin, of Maryland, addressed the largest dinner in the United States in honor of the memory of Abraham Lincoln. It was held in the largest ballroom in the Greater New York area at the Hotel St. George in Brooklyn. Over 2,000 people attended the affair which was sponsored by the Kings County (N. Y.) Republican County Committee of which Commissioner John R. Crews is chairman. Governor McKeldin's speech was most enthusiastically received by all, and I believe all my colleagues would be interested in what he had to say. The following is his speech:

In the heart of the capital city of each of the two super powers that bestride the world today stands a monumental structure dedicated to the memory of a great man. In Moscow's Red Square, and at the foot of the Mall in Washington they stand, two masses of stone, silent, yet each clamoring for the attention of a vast nation. These structures of stone are dumb, yet each voices the

aspirations of a people dominating half the world.

They are symbolical, but it is precisely in its symbols that one may see most clearly displayed the heart and mind of a civilization. The Parthenon in Athens, the Forum in Rome, Westminster Abbey in London, and Napoleon's arch in Paris speak to us more eloquently of their epochs than do the rhetoric of orators and the tomes of historians. So may the two symbols of our own time, if we will pause long enough to study them and to understand.

In certain respects they are similar. Both are massive. Both stand foursquare, planted solidly on the solid earth, built not for the uses of the moment but for all time. Both are focal points of history and patriotic shrines. But beyond these superficialities they are as widely different as the men they memorialize and as the civilizations that erected them.

The memorial in Red Square is secret, shut in, and without doors, fortified at every point to resist vandals and containing two mummified corpses. Like the Egyptian pyramids, it is eloquent of the most futile, yet most persistent, of human delusions, the idea that men can be erected into gods, eternal and unchanging. Scornful of life, because the law of life is change, it is, indeed, a tomb in which are buried not only the remains of two mortals, but also freedom of the mind and spirit. It is a reminder that although Lenin and Stalin are dead, yet they claim rulership of the future, dominion over the souls of the Russian people, and it is blasphemy to dispute the claim. It is in reality a monument to what the law calls mortmain, the grip of the dead hand upon the living spirit.

The Lincoln Memorial in Washington is doorless, too, but because it is wide open, the light may enter, storm and sunshine may enter, the winds of heaven may sweep through it, and the people may enter. High or low, rich or poor, venerable patriarch or babe in arms, none is shut out for race or color or creed, and the only price of admission is humanity. Save for a marble statue, it is physically empty; but it seems to me that its emptiness might well be described in the phrase that the Arabian storytellers often applied to deserts and mountain heights—"filled with nothing but the presence of God."

For the walls are covered with certain great truths that I believe Abraham Lincoln was inspired of God to utter. His dead body lies elsewhere, but the living truth is in the memorial; and it is our faith that "man doth not live by bread only, but by every word that proceedeth out of the mouth of the Lord doth man live." He who has put into unforgettable words the truth of the living God, lives in that truth and nothing that happens to his mortal frame can extinguish that life. It is to this principle as exemplified in the man that the American people have erected a memorial to the living Lincoln who, although he suffered the common fate, still lives in the truth that shall never die.

From the walls of the memorial I take some words spoken, shall I say on March 4, 1865, or this morning? For when words apply to a situation the precise moment in time when they were first uttered is not important; they are living words at the moment when their wisdom and utility become apparent. Consider the situation in which our country finds itself in 1955, 90 years later; and then imagine, if you can, that you read in today's newspapers this counsel: "With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive on to finish the work that we are in . . . to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Abraham Lincoln did not face the problem of coexistence with a world half of which is dominated by communism, but it is my belief that if he had done so he would have altered not one word of that carefully studied utterance. He was, in fact, facing an enemy whose armies had come closer to inflicting final defeat upon this Republic than any other armed force has come, before or since. British, Mexican, Spanish, German, Austrian, Italian, and Japanese foes we had, or we have since dealt with effectively, and without ruinous strain; but when Americans rose against us we almost went under. It was to a badly shaken and almost exhausted nation that Lincoln addressed his words; it is unthinkable that he would be less insistent upon justice and moderation were he addressing a nation superbly armed and possessing economic power that towers over the world.

When enemy tanks, the modern substitute for cavalry, have penetrated the suburbs of Baltimore and circled within sight of the Washington monument, then we may begin to feel what Lincoln's hearers were feeling when he urged upon them "malice toward none and charity for all," and dismissed victory in favor of "a just and lasting peace." If his counsel was wise and good then, it is wiser and better now; his body was consigned to the earth long ago, but "by every word that proceedeth out of the mouth of the Lord doth man live," and words of wisdom and righteousness proceed from the Lord. The living Lincoln is still our counselor and guide.

His profound fear is implicit in every word of that passage. It was not fear of the Confederacy. "With firmness in the right as God gives us to see the right" he was ready to face any armed foe steadily and calmly. But he knew that more dangerous enemies were advancing upon the Nation as he spoke. He knew that hatred in our own hearts is a willier and more elusive foe than Stonewall Jackson and that prejudice and vengeance can crush a nation that the military genius of Robert E. Lee could not overcome. If that was true in 1865, it is not a whit less true in 1955.

Let us, as St. Paul advised, "think on these things" in a day when it is bodily proclaimed that "there is no substitute for victory" not even a just and lasting peace. Let us remember them when a President's efforts to restrain the hasty and proceed in accordance with the law of nations are denounced as "shrinking weakness." Let us bear them in mind when the merchants of hate are asserting that any attitude toward an opponent save one of blind fury is a betrayal of the Nation. For if the day ever comes when Americans reading the second inaugural react with nothing but incredulous scorn, then indeed Lincoln will be dead—and the greatness of our country will be dead with him.

Our position is difficult and perilous, but this is not the Nation's darkest hour. That came when Abraham Lincoln was President of the United States and nothing since has approached it. We shall do well now to remember that in the most fearful crisis through which the country has passed the most steadfast man in America was none of the fire-eaters who had passionately demanded war to the death. It was the man who valued a just and lasting peace far more than victory. It was the man whom they accused of worse than shrinking weakness. It was the man whom they called trimmer, time-server and coward but who, when the war had grown red hot, and the braggarts and swashbucklers had fled in panic, stood undaunted "with firmness in the right."

Lincoln saved the Union, not with his muscular, but with his spiritual strength; and he was spiritually powerful precisely because he lived "with malice toward none, with charity for all." Lincoln will save the

Union again, will save it whenever it is threatened if we allow his spirit to govern our thoughts and deeds.

For he understood as only our greatest men have understood how the destiny of America is oriented toward the rising, not the setting sun, toward the future struggling to be born, not toward the dead past. His mind was large enough to comprehend all the implications of Jefferson's dictum that the earth belongs to the living. One of those implications is that government is a living organism that must assume new shapes if it is to flourish under new conditions.

Lincoln would have been distressed and alarmed at the suggestion that his words were to be received as the law of the Medes and Persians, that altereth not. In this famous letter to Greeley he expressed his readiness to adopt any policy that would assure preservation of the Union, and because he was always ready to shape his policy according to the facts he was accused of wavering and inconstancy.

Of course we know today that Lincoln was the steadfast figure and it was those men who were willing to subvert the truth rather than surrender one of their pet theories who were inconstant. We know it of Lincoln, but it is hard for us to realize that those men of our own generation who adhere to the standards of reason and justice, even if it means a shift in policy every day, are more steadfast than those who quote, but misapply the words of Lincoln, or Washington, or Jefferson to justify measures that are neither reasonable nor right.

There are among us, of course, men so obsessed by the love of novelty that they will approve any change merely because it is a change. These are men who have never come fully alive, just as those who would subvert truth to tradition are already half dead. Neither immature minds, nor senile minds can comprehend the mind of the living Lincoln which is neither for nor against change, neither scornful of nor dedicated to tradition, but committed to the search for truth and to nothing else.

This is the essence of that much-abused word "liberalism." The liberal believes that the American form of government is not like the Statue of Liberty, finished and complete, but is like a tree, a living and growing thing. Normally, the liberal looks toward the future, but this does not mean that he never glances at the past. Truth is one and immortal; but it has more shapes than Proteus and he who would hold it firmly must turn now this way, now that. Yet if his grip upon it is never broken, he is the most consistent of men for he steers a true course, although the shortsighted will call him today a radical and tomorrow a reactionary.

No man is today striving with more might for the peace that justice brings, or with more realization of the overwhelming necessity for the achievement of this goal, than our President, Dwight D. Eisenhower. By his actions and by his words he is seeking to do in our day what Lincoln sought to do in his.

Only last month, in his state of the Union message, President Eisenhower named as first among the purposes of our Federal Government its obligation "to maintain justice and freedom among ourselves and, to champion them for others so that we may work effectively for enduring peace." He further placed particular stress on our national obligation, "to labor earnestly, patiently, prayerfully, for peace, for freedom, for justice, throughout the world." Many times has President Eisenhower reiterated, since his inauguration, that we cannot hope to achieve these goals unless our Government in all its dealings acts with "integrity and decency and dignity." Just as Lincoln recognized the importance of spiritual strength, so has President Eisenhower, who recently summarized

his philosophy of government in the striking phrase: "To keep America strong, our Government must have a heart as well as a head."

Thus, President Eisenhower follows the path which the living Lincoln continues to illuminate.

The man whose only policy is to do what seems to be reasonable and right in any situation that may arise is a follower and spiritual heir of Abraham Lincoln, although he may never parrot Lincoln's words or imitate any of his deeds. The ways and means that any great man uses to attain his ends are, like his physical body, part of the time, adapted to the time, and passing with the time. It is the goal at which he aims that endures through generations, and all who aim at the same goal are his successors, although their ways and means may be different.

"To achieve and cherish a just and lasting peace among ourselves and with all nations" was Abraham Lincoln's goal. Note well the qualifications—it was not merely peace that he sought, it was the kind of peace that should be just and lasting. A man who is for peace at any price is a stranger to Lincoln, for justice is more important than peace, and stability and order cannot be maintained without justice. But whenever an American strives with all his might for the peace that justice brings, in that man Lincoln lives again, speaks again, labors again.

So we have left the Lincoln Memorial wide open, knowing that no tomb, however stately, could contain his living spirit. "The whole earth," said Pericles, "is the sepulcher of famous men, not only are they commemorated by columns and inscriptions in their own country, but in foreign lands there dwells also an unwritten memorial of them, graven not on stone but in the hearts of men."

It is true of this man. In all the world there is no country so remote that it has not heard some whisper of his fame and been illumined by the radiance of his character. The work that we, his fellow countrymen are in, and that we should strive on to finish, is to make all men in all lands realize that he is not dead, but lives in the Nation that he saved; for its lordly ambition is today what it was yesterday and will be tomorrow and forever—not empire, not dominion, not the power of arms or of gold but "to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

The Subversive Activities Control Board and Communist Fronts

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. FEIGHAN. Mr. Speaker, the high-ranking status of the Georgetown University TV and Radio Forum as a medium of analysis and thoughtful interpretation of the numerous major issues confronting this Nation is well known to many of our Members. On January 16 a highly informative program was broadcast on the subject of the Subversive Activities Control Board and the Communist Fronts. The significance of the role of the Subversive Activities Control Board was developed against a full

background of Russian Communism by the participants, the Honorable Thomas J. Herbert, Chairman of the Subversive Activities Control Board; Dr. Lev E. Dobriansky, of Georgetown University; and Dr. Edward M. O'Connor, staff director of the House Select Committee on Communist Aggression, and authority on communism. Under unanimous consent, I include this transcription in the RECORD:

Now, Mr. Herbert, first, would you describe the SACB for us?

Mr. HERBERT. Mr. Warren, it is difficult to describe it very comprehensively in a brief manner, but in short, this act, called the Internal Security Act of 1950, of which the Subversive Activities Control Act is a chapter, provides for orderly and proper procedure for the Attorney General of the United States to bring petitions before the Subversive Activities Control Board against what are classified in two categories, either alleged Communist action organizations or Communist front organizations. The only action brought against a so-called Communist-action organization is this suit which was commenced back in 1950, in November, shortly after the Board was organized, against the Communist Party of the United States. That the Board finally, after lengthy hearings, extending over about a year and a half, found the Communist Party of the United States of America to be a Communist-action organization as provided in this act. And then that was appealed by the Communist Party to the United States Court of Appeals, another one of the procedures provided in the act. Only last Friday the Court of Appeals denied an application for rehearing following their previously made ruling, to the effect of upholding in all major points the finding and report of the Board against the Communist Party. They now under the law have the right to appeal that to the United States Supreme Court, and they have 90 days in which to do that.

That shows you how the due process provisions of the Constitution are followed in giving all review rights directly from our Board findings to the court of appeals of this United States for the District of Columbia, and from there to the Supreme Court. It is a five-man board. The proceedings are initiated by a petition filed by the Attorney General, which is sworn to, and then after all the motions are ruled on, in exactly the same manner as they would be in a court proceeding, the thing is finally brought to issue by a petition and an answer by the respondent organization. Then long hearings are held and both parties are, that is, the Attorney General's department and the respondent organization, given a full chance to present all their evidence in open hearings, a record is made of that; they may introduce exhibits that are pertinent, and both sides are given full opportunity to cross-examine the other's witnesses. At the conclusion of that the recommendation is made for a finding. Then the full board considers it, and then eventually an order is written by the full board directed to the organization. If the Attorney General's case is sustained by the evidence, they find it to be a Communist front or Communist action organization, whichever the case may be, and then they take it on up from there.

There were 12 cases filed against so-called Communist-front organizations shortly before I became a member of the board in May 1953. We are in the process of hearing quite a number of these dozen cases now. I just recently concluded and rendered my recommended report and decision in the case of the Attorney General versus the Jefferson School of Social Science in New York City. That, in brief, is the way our board operates.

Mr. WARREN. I am sure we will be hearing more about that Jefferson School problem a little bit later in the program. That gives us a very good idea of the operation of the SACB. Mr. O'Connor, as staff director of the Select Committee to Investigate Communist Aggression, what did your committee discover?

Mr. O'CONNOR. Mr. Warren, our committee devoted over 1 year of intensive inquiry into the subject of Communist aggression. We heard 335 witnesses, and took over 1,500 individual sworn depositions from actual eye-witnesses of Communist aggression and the victims of that tyranny. And the committee in a report rendered to the Congress as a whole during the month of December just past made this as their first conclusion, and now I quote: "That communism is a criminal conspiracy purposely designed for and deliberately directed at the enslavement of all mankind and the establishment of a world colonial empire."

I believe that statement on the part of a truly bipartisan committee, made up of very distinguished Americans, sets the record clear so far as just exactly what communism is and what communism intends to do to the world.

Mr. WARREN. Now, I think it is time we heard from Dr. Dobriansky. What are your observations, sir?

Dr. DOBRIANSKY. Concerning this particular question, I must say my observations are many. We have two matters here. Here is a governmental organization, the SACB, and just a moment ago Mr. O'Connor mentioned one of the main conclusions or recommendations of what has been called the Kersten Committee to Investigate Communist Aggression. In looking over some of the parts of the law and also the findings of the SACB I notice time and time again reference made to the world Communist movement, and in fact anyone scanning these findings and also parts of the Internal Security Act, can't but be impressed by the fact that some relationship must be established between any organization that calls itself American and this world Communist movement in order to predicate a charge against that organization or to compel it to register.

Now, when one looks at the political field one can see that this law and the activities of the SACB are in a sense a response to definite political necessities that have arisen in our time. For one thing one knows, looking through the political literature of the times, that many members of the Communist parties that one finds in countries outside of the Soviet Union are sent to Moscow for instruction; some for months, some for years. You have leaders of political parties, Communist parties, like Togliatti in Italy and others who frequently go to Moscow for consultations.

We have on the basis of the findings of the Kersten committee numerous Ukrainian Communists, Byelorussian Communists and Communists in the Baltic States and elsewhere who have played a conspicuously traitorous role. Not only that, I might say this, that the world Communist movement is not simply a political projection, if you will, of any ideology called Marxism but in fact has even deeper roots I would say in totalitarian Russian politics under the czar and even prior to that time.

I think the listening audience would be very much interested in knowing just how, let us say, that Moscow or St. Petersburg operated prior to the coming of the Communists, to give us an idea as to this matter of a world movement of one sort or another.

My contention here is that communism is an ideology which is used as an instrument to bedevil, dupe and subvert individuals in the free world in order to prepare for subsequent Communist aggression.

I have a few quotes here from none other than the masters of communism themselves. Take Engels, for example. Writing in about the eighties, Engels says this concerning totalitarian Russian politics:

"On the matter of pan-Slavism the idea is more than 100 years old and Russia uses it now every day. What is pan-Slavism but the application by Russia and Russian interests of the principle of nationality to the Serbians, Croats, Ruthenes, Slovaks, Czechs and other remnants of bygone Slavonian peoples in Turkey, Hungary and Germany. Even at this present moment the Russian Government has agents traveling among the Lapponians in northern Norway and Sweden trying to agitate among these nomadic savages the idea of a great Finnic which is to be restored in the extreme north of Europe under Russian protection, of course."

In a letter, for example, to Karl Kautsky, Engels said, "But in truth, pan-Slavism is a smoke screen for world dominion appearing in the cloak of a nonexistent Slavic nationality and therefore our worst enemy."

We can also find this in Karl Marx, who is oftentimes referred to by our contemporary Communists on the matter of conspiracy—this is taken from an article in the New York Tribune of April 19, 1853: "Hundreds of Russian agents perambulated Turkey, pointing out to the Greek Christians the Orthodox Emperor as the head, the natural protector, and the ultimate liberator of the oppressed eastern church, and to the south Slavonians especially, pointing out that same Emperor as the almighty Czar who is sooner or later to unite all the branches of the great Slav race under one scepter, and to make them the ruling race of Europe."

Those are their particular expressions of the past, but I might say here that in Moscow or at the Jefferson School of Science up in New York, or even among the various cells of the Communist Party, these particular abstracts that I have just rendered are not used. These words of Engels and Marx are banned. But my point is this, that Moscow today is using communism Marxism as an ideological instrument to serve its own ends, in the same way that the Russian Government in the past used pan-Slavism, and even going further back, used orthodoxy as a weapon to render other people in a subjugated state and to hold them captives.

Mr. O'CONNOR. Dr. Dobriansky makes some excellent points, that the conspiracy of communism has many roots that go back 100 or more years, even before the days of Karl Marx.

Now, I think, Doctor, you would agree with me that the conspiracy of communism, because of the many forms of camouflage that it has been able to develop and, moreover, the use of scientific methods in its propaganda program, in its programs of the Trojan horse, and in its other means of infiltrating free societies, such as ours, that the operators of the past are not to be compared with the present. They weren't as clever. It is far more devious today than it was then; would you agree with that?

Dr. DOBRIANSKY. I agree wholly. I may say the difference is one in degree rather than in substantial kind. The reason I brought this up, in looking over the position taken by the Communist Party in the case of a year or so ago, you will find that witnesses would, time and time again, bring up the fact that, "After all, this is simply a matter of difference in philosophy and ideology, and we have every right to espouse this ideology just as any other group would theirs."

My point here is that it isn't simply a matter of difference in social system, a difference in philosophy, but, on the contrary, that you have Marxism as a system of theoretic thought being subverted, exploited, if you please, into an ideological instrument to serve the expansionist aims of the Moscow government that has been for some time.

Mr. O'CONNOR. Governor, I wonder in terms of what Dr. Dobriansky has said and what I added to it, to wit, the devious methods that have been developed by the Communist Central Authority in Moscow, particularly, if you will, the scientific approach they use to confusing and dividing and misleading free peoples has caused special problems for your Board? For example, you cited to us the Communist action organization, the Communist front organizations, and is there a third category called "Communist infiltrated organizations"?

Mr. HERBERT. That is correct, Mr. O'Connor. That was the result of an enactment by the outgoing 83d Congress. It is called the Communist Control Act, and it was intended to bring within the scope of our Board's proceedings any actions which the Attorney General of the United States might want to commence against organizations which in his judgment are Communist infiltrated. That includes both labor organizations and employer organizations. It also extends a prima facie assumption of noninfiltration to any labor organization which is a part of a recognized established big union, such as the CIO, A. F. of L., or UMW.

Mr. O'CONNOR. That is some indication of the devious methods that they use when we have to have the three categories here.

Mr. HERBERT. In my judgment, it is the American way to try to approach a new peril which never confronted the country before. I think, if I may go back to Dr. Dobriansky's brief summary, that the teachings of Marxism and Engels is really now being taught as interpreted by Lenin and Stalin. Those books, taken all together, constitute what even the Communists refer to as the "Communist classics." If anyone wants to read that mess of material, believe me, first, I think they will find themselves in terrible confusion trying to even correlate all of the teachings that one finds in there, but emerging from it I definitely got the impression that what they are trying to say is that they want to have the domination and control by the proletariat. Their interpretation of the proletariat means that they want all the workers to do what they tell them to do. They are the so-called vanguard and they are the ones that are going to say, and you can't question what they direct you to do. Their whole philosophy is based on two things; first, the teachings, and second, putting those teachings into execution by action. That is the phase of it that constitutes the real threat not only to the liberty of this country but to every democratic people on the whole globe.

Dr. DOBRIANSKY. Governor, if I might interrupt at this point. My main point in connection with this ideology I made in the light of a background of study of the various countries, the captive non-Russian countries behind the Iron Curtain, who likewise were exposed to this so-called new ideology. You recall during the thirties in many of these countries of central Europe, as indeed the United States and others, since that time, the general impression that this is a sort of great experiment, some new social undertaking that should be given the opportunity to work. In fact, they even applied the concept of peaceful coexistence, let us see this new system get into operation. All this time, and especially on the basis of evidence that has been presented to the Kersten committee, take the non-Russian areas in the Soviet Union who as far back as 1918 and 1920 saw that this was not simply a matter of economic difference, of philosophical difference, but rather a weapon in the hands of a group in Moscow that sought to even surpass the imperialist ambitions of the Czar. Then, of course, we saw the evidence of it in connection with the central European states. Now they continue. They continue with this matter of Marxism and the like, as an ideological instrument, a teaching, if you will, of a new society coming into being. My conten-

tion here again is simply that that is a matter of Babbity, more so than one of scientific credibility. Actually, it is a deceptive tool. Take these organizations that you speak of. You take what you call Communist action groups. The Communist Party, I take it, is an example of a Communist actionist group. That group, therefore, is subservient to whom? Moscow. You take a Communist front group, that group may be, let us say, immediately dominated by a Communist action group, as perhaps the Jefferson School up in New York, to the Communist Party, but ultimately it is subservient to whom? Moscow. You take a Communist infiltrated union. Now, there it is not completely dominated as yet. It may in turn be, let us say, again immediately dominated by a Communist actionist group, but ultimately subservient to whom? Moscow. So it all points to Moscow, and as a result here—

Mr. O'CONNOR. Excuse me. In pointing to Moscow I think the Governor made a point about the proletariat. I think it is a matter of the interpretation of what they mean by the proletariat. The proletariat, as they have applied it, or at least all the evidence I have seen adds up to this, that a handful of men in the Kremlin are indeed the dictatorship of the proletariat. You can call them the Politburo, if you will. They were known as the Comintern. They are known as a lot of things, but the hard and bare cold fact remains that it is a handful of men who are indeed the dictatorship of the conspiracy. There is no more proletariat revolution in communism that there is democracy.

Mr. WARREN. In view of what we might consider a better understanding of communism and its effects, let's tie it a little more to the SACB. Mr. Herbert, as the presiding Board member in the case of the Jefferson School of Social Science of New York City, would you tell us what you found about that institution?

Mr. HERBERT. If I may make one preliminary statement. I omitted completely in my earlier discussion of the SACB act the penalties provided in the law. You see, Congress was confronted with this terrific problem of how to meet communism and still not impose limitations on our own liberties that we constantly recognize every American citizen is entitled to. So they went at it very carefully, to not forbid these activities but merely to put a label on them. That is the whole purpose of the Internal Security Act and the Subversive Activities Control Act. When the Board finds an organization to be a Communist action or Communist-front organization, as the case may be, then certain sanctions are imposed when that is concluded. For example, they are not run out of existence, but they must label their publications as issued by a Communist organization. They are denied free employment in government or in defense plants. They are denied passports. Certain of those sanctions go to these individuals, but they are never at any point denied their liberty. The Jefferson school, for instance, has pleaded and argued all through this proceeding that they cannot exist if they are forced to wear the label indicated by the provisions of the act.

Mr. WARREN. This institution was found to be a Communist front?

Mr. HERBERT. That was my recommendation. It will have to be acted upon by the whole board after exceptions have been filed by the parties after full hearing on the exceptions by the board. The board will pass on my recommended report and ultimately the board will issue its board order, and that is what either side may appeal to the United States court of appeals.

Mr. WARREN. This is a school. As a school it would teach. This wouldn't be a violation of any academic freedom?

Mr. HERBERT. It is their contention they are perfectly free to teach anything they choose. Of course, they contend that the question of liberty to teach, freedom of education is involved. I tried to make it clear in my report that actually they do not have that liberty of education there now. They don't have true freedom of education. They teach the philosophies and doctrines of Marx as interpreted by Lenin and as finally interpreted by Stalin. Underlying all of that is this basic factor that with their teachings must go action to implement those teachings. That is the threat that they confront us with.

Dr. DOBRIANSKY. Governor, in this case are you suggesting that this Thomas Jefferson School of Social Science is in a sense comparable to the Marx-Lenin-Stalin Institute in Moscow, as a sort of school for revolutionary tactics, a training school?

Mr. HERBERT. That is the part they disclaim, Dr. Dobriansky. They contend that they are merely teaching Marxism and Leninism slanted to what they believe Marxism and Leninism to mean. But there is evidence in the testimony, in the record in our case, that they teach not only that but that they teach, and their students at the school appeared on the witness stand, who testified to what their teachings were. This program isn't long enough for me to go into it.

Dr. DOBRIANSKY. I think it would be significant to know in this case the composition of the student body at this school. Has the board any material or data as to who frequents the classes at this school?

Mr. HERBERT. Around 1050 they stopped their open registration. They issued to each student only a card indicating that he was entitled to take that particular course.

Mr. O'CONNOR. Governor, isn't it rather well established that the Communists use every facet of civilization to their ends? I would like to cite for you here something that the Select Committee To Investigate Communist Aggression found under the heading of how the Communists use education to further their purposes, "That the principal purpose of education under Communist rule is to propagate Communism and to eliminate the distinctive culture of the victim state. Teachers and students are placed in an intellectual straitjacket." That is precisely your point. There is no academic freedom in a school of this type.

Mr. HERBERT. It is not indicated in our record.

Dr. DOBRIANSKY. Certainly looking over the roster of the faculty at the Thomas Jefferson School you don't find any person who may be critical of Marxism as interpreted by them on that roster.

Mr. HERBERT. He wouldn't have a chance to teach there.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the Record the following:

BRIEF IN OPPOSITION TO H. R. 1 SUBMITTED TO HOUSE WAYS AND MEANS COMMITTEE BY W. RAY BELL, PRESIDENT, THE ASSOCIATION OF COTTON TEXTILE MERCHANTS OF NEW YORK, FEBRUARY 1, 1955

I am W. Ray Bell, representing the Association of Cotton Textile Merchants of New

York, which I serve as president. Our members are large, medium, and small firms engaged in the marketing and distribution of textiles and textile products made by the mills of this country which are located chiefly in southern and New England communities. Beside these areas of concentration, the cotton-manufacturing industry is of high importance in the Middle Atlantic States of Pennsylvania, New Jersey, Maryland, and New York. Its marketing and merchandising activities are largely centered in New York.

In recent months we have appeared twice before the Government's Committee for Reciprocity Information, first to oppose binding the present United States concessions on textile tariffs for a fixed period beyond July 1, 1955, and in the second instance to advise against additional concessions to Japan on tariff rates for textile commodities. Upon each occasion the viewpoint was identical in its expressed fear of Japanese ravages on our domestic markets and, as a consequence, the potential disaster to the United States in terms of curtailed mill activity and enlarged textile unemployment.

We do not believe the threat was exaggerated nor that the potential peril to American institutions and our national welfare can be lightly regarded by the Congress. For the essence of the pending programs, now inherent in the proposed new legislation, is a frantic drive to bolster the advantages of import competition and force on the United States an unnatural dependence upon foreign resources whose interests are not concerned with creating American employment or maintaining our standard of living. Yet those objectives are the basic foundation of practically all the social and labor legislation written into our statutes during the past 22 years and cannot be ignored in your decision as to the propriety of further abandonment of our greatly reduced measure of protection to American industry and labor. So far as textiles are concerned, we believe that the proposed bill and the related Japanese negotiations pose a complete contradiction in national policy to the long-established principles and statutes that have guided the Nation on the domestic front. Our farm policy is unchanged in its adamant protection and price supports to domestic crops. Our labor policy still favors mounting wage scales and ever-higher standards of living for American workers. How can these realities of domestic competition be reconciled with a foreign policy which invites and promotes the overrunning of our markets by identical and similar textile products made under the low-wage standards of far eastern production?

The clamor for increased imports through additional reductions in our tariff rates is not founded on any realistic need for increased supplies of textiles in this country or any burden of inflated price levels for domestic goods. It is ironic that the issue should arise at a time when wholesale prices on cotton broad woven goods, according to Bureau of Labor statistics, are approximately 10 percent below the 1947-49 averages, whereas other commodities, excepting farm products and foods, are about 15 percent above the 1947 to 1949 levels. Synthetic fabrics are even more depressed and average but 73.7 percent of prices in the base period. This statistical evidence of depressed values emphasizes not only the relative bargains offered in American textiles to the consuming public, but reflects the overabundance of American production in a peacetime period of great national prosperity. We are now just beginning to emerge from the most serious textile depression of the postwar period. Although marked by temporary situations of curtailment and unemployment plus some plant liquidation, there are other scars in the form of meager earnings and heavy financial losses which can best be summarized by citing consolidated

profit margins for the past year of less than 1 percent return on total sales.

Admittedly, this is an unhealthy situation and must be corrected in the near future if the textile industry is to continue its functions for the benefit of the Nation. We believe these are of vital and indispensable nature especially in three major directions. First in importance is the collective responsibility of a large employer of labor. In December of last year total United States employees in the manufacture of textile-mill products were listed at 1,089,400 and in the related group of apparel and other finished textile products, another 1,182,100 employees were included. Together these represent more than 1 out of every 8 employees in all manufacturing industry whose total in December was 16,102,000 employees.

Of greater significance even than numbers is the fact that textile mills are the lifeblood and often the sole economic reliance of hundreds of communities in many States, ranging from hamlets or villages to towns and cities. Upon the maintenance of textile activity in these many widespread communities depend the well-being of countless other citizens in trade and serves supplying the particular localities. These communities make up a large part of American life. They are vital to our economy, and it is pure nonsense to propose that they can be uprooted and dislocated or that their inhabitants can be put on the dole in wholesale fashion.

In cotton textiles alone, the State of Alabama has at least 52 separate textile communities and at the present time about 50,000 workers engaged in their textile plants. This is roughly 1 out of every 4 industrial workers in the State of Alabama, making it that State's largest industry. In Georgia the record shows 92 separate textile communities and in June of last year textile employment was 101,000 workers out of 294,000 in all its manufacturing. The ratio here is 34½ percent. South Carolina, in 1953, had 83 textile communities with textile workers numbering 154,000 out of 193,000 workers in all industries. Here the percentage is 80 percent. Figures for North Carolina, also for 1953, show 152 communities of textile location, and 234,000 textile workers or more than 50 percent of manufacturing employment totaling 464,000.

These are 4 States in which textiles are predominant, but similar situations different only in degree exist in New England, Middle Atlantic, Southern, and Southwestern textile-producing areas. Since apparel commodities are likewise involved in the contemplated expansion of imports, the list of affected communities could be enlarged through all this eastern and southern area and extended throughout the mid-West and to the Pacific coast. Hardly any region of the United States can escape the danger of accelerated foreign competition which is grounded in superior cost advantages and does not have to reckon with the restrictions imposed by statute and custom on operations in the United States. Workers in these American textile and apparel plants enjoy the highest wages and a highest living standards of any textile producers in the world, but if they can't get work or must work on short time it is small consolation for them to know that their markets have been sacrificed by our State Department on the altar of international expediency and benefits to foreign nations.

Beside the inherent values to industrial activity and employment in the United States, there are impelling considerations of national security which can be assured by no other nation around the negotiating table at Geneva or elsewhere. In two world wars and in the Korean struggle, the textile industry was always among the first to be called into mobilization. To make the thousands

of items in apparel and equipment required by our Armed Forces, from heavy duck and webbing to the finest of fabrics for parachutes, powder bags, bandages, and other imperative needs, the industry literally turned itself inside out and accomplished miracles of productive achievement, so much so that high officers of the Army and Navy publicly stated that textiles were second to steel in the winning of World War II. Later, in the Korean mobilization, private business was deliberately sacrificed without Government compulsion to give preference to orders for Government military requirements. With war clouds again on the horizon and an emergency always around the corner, it would be a grave risk to endorse measures which could have the effect of crippling both our capacity and will to produce the essential needs of our forces. The potential in cotton textiles, since the beginning of World War II, has been reduced by approximately 2 million spindles, or 8 percent of installed capacity in December 1941. Further contraction that could result from an overload of foreign competition might seriously handicap our basic strength when most needed.

The third major function of the cotton textile industry, as we see it, is to consume the bulk of the American cotton crop and by so doing, provide the main pillar for the price supports of our cotton farm policy. As this committee knows, quota restrictions and tariffs effectually prevent the domestic textile industry from using more than a negligible amount of foreign growth cotton. In the 9 post-war years, on a calendar basis, domestic cotton consumption has averaged 9,231,000 bales, with only 1949 and 1954 falling below 9 million. We exceeded 10 million bales in 1951. Without such faithful activity I venture to say that the whole structure of our farm support policy, as related to cotton, would fall flat on its face. If Secretary Benson really wants trouble, let him transfer this dependence to foreign textile mills, especially in those countries which seek the lowest priced fiber obtainable in the world's markets.

There are varying opinions on the adequacy of present farm supports and their future course, but few people today have the temerity to advocate their abandonment. In some form they are viewed by most as a necessary balance to the high wages and price levels of American industrial products. Is there any appreciable difference between this situation and that of the large bulk of cotton woven cloth production? This too is produced primarily as a raw material for hundreds of industries and thousands of common items. American growth cotton must be used if for no other reason than that the United States fixes quota limitations by countries on imports of foreign cotton, totalling to a mere 29,000 bales of the staple lengths commonly used by the vast majority of American cotton mills. In addition the quota permits about 91,000 bales of high grade cotton, chiefly Egyptian, and 140,000 bales of short, rough cotton, not grown here, and chiefly from India. This policy of stringent limitation of the supplies of raw materials used by cotton mills is in striking contrast to the liberal climate arranged for competitive imports of basic cotton cloth, where quotas do not exist and tariffs are the only safeguard against the devastating effect of identical goods made under the cheap labor standards of Japan and India.

We do not advocate changes in the measures through which the Congress has insured the stability of farm income. But the tenacious preservation of home markets for raw cotton, with most liberal aids provided for its export distribution, is justified in the national interest by the same Government officials who have been unconcerned by the loss of export markets for American textiles

and would cheerfully trade our home markets to the lowest bidder.

At the present time this lowest bidder is Japan, which has become the chief beneficiary of many tariff reductions in textile schedules already brought about through various trade-agreement negotiations. Although not yet a member of the international circle of GATT, Japan has been favored by our policy of generalizing these concessions. After a relatively minor role in 1951 and 1952 as a supplier of cotton piece goods to this country, Japan emerged in 1953 with nearly half of the total imports in the major category of countable cotton cloths, having 30,665,000 square yards out of total imports amounting to 64,251,000 square yards. Comparable figures are not yet available for 1954 but the evidence from cargo manifests and Japanese news sources indicate at least a doubling of these quantities last year.

According to Japanese mill statistics, shipments to this country in the third quarter advanced from 4,771,000 square yards in 1953 to 16,456,000 in the like period of 1954. News reports from Tokyo have claimed monthly quantities of 12 to 13 million yards each for October and November. This present experience of a four- or fivefold jump in volume follows the same pattern of progressive market invasion as we underwent in the depression years of 1934 to 1937 with respect to Japanese bleached goods. These grew from negligible quantities in 1932 and 1933 to 6 million yards in 1934, to 30 million in 1935, to 65 million in 1936, and to 89 million in 1937. Long before the latter figure was reached, the harmful effects on our economy became of national concern and by resolution of Congress an investigation was ordered. Upon finding by the Tariff Commission that on certain fabrics the original duties fixed by the Tariff Act of 1930 were not adequate to equalize the cost of production between Japan and the United States, President Roosevelt issued a proclamation on May 21, 1936, which established increases of between 42 and 43 percent over the 1930 rates applying to these particular goods. The fact that these increased amounts of duty had no appreciable effect in limiting the volume of imports from Japan up to the outbreak of war only lends weight to our strong conviction that the Japanese industry doesn't require tariff concessions in order to do business in our textile markets. On many textile commodities present rates are far below those of 1936 which proved no barrier in prewar experience. Since that time our wage rates have advanced from around 36 cents an hour to approximately \$1.25, and while Japanese wages have risen in the postwar years, by comparison they remain infinitesimally low.

We fear greatly that the trend of administrative policies, as indicated in the proposed legislation of H. R. 1, leads directly to a repetition of the unfortunate developments which occurred in the late thirties and intensified our years of depression. The threat is even more serious now because it is not confined to bleached goods but extends to practically all areas of cotton goods production. Already the Japanese have gained a virtual monopoly in the low-end price ranges of such varied products as kitchen and dish towels, damask tablecloths, pillowcases, plain back velveteens, and many other types of fabricated products which are not included in the woven cloth statistics of yardage. Domestic producers of such articles have been forced out by reason of costs which are sometimes higher than the retail selling price of the imported goods. During the past 5 months a similar situation has originated in articles of wearing apparel—men's and boys' shirts, ladies' blouses and housecoats, cotton gloves, and brasieres. Fabrics used in these articles of apparel include gingham, corduroy, printed

cloth, flannel, and suede. Here the great advantages in labor costs are pyramided and our customers in the apparel industry must compete with fabricated merchandise sold below their costs of production.

More immediate concern has to do with the entry of large and increasing quantities of staple grey cloth, in standard American constructions and good quality at prices that take business away from our most efficient manufacturers. Grey cloth is not ordinarily wearable but a raw material for countless other industries. The same applies largely to its finished state, which serves as raw material for factories making all kinds of apparel. As such, most cotton textiles are bulk commodities, sold in volume quantities in one of the Nation's most highly competitive markets, where a difference of even 1/2 cent a yard may be the difference between profit and loss. Competing in this market, the low-cost Japanese goods are similarly raw material which loses its identity when converted into finished cloth or made into garments which move into domestic consumption or export as American products. In this primary market, a sale of even 500,000 yards at cut prices can have a demoralizing effect on the values of many millions of yards in American production. For that reason the ability of the Japanese to consistently undersell American values is probably more injurious than the actual amount of yards brought in to date.

We have no optimism about a favorable change in this competitive situation for Japan has overdeveloped its textile industry since the war and still has the superior advantage of an abundant supply of cheap juvenile labor, industrious and contented to live on a diet of fish and rice. Measured by spindleage, their productive facilities have been doubled in the past 5 years, with approximately 8 million now in place, most of which are of modern and automatic type. There is a high degree of technical efficiency and their traders are all over the world. Last year Japanese exports of cotton cloth reached approximately 1,277,000,000 square yards, or more than those of the United Kingdom and the United States combined.

This is a large share of the shrunken world market and points up the inability of other textile producing countries, outside of India, to compete on the cheap qualities of peace goods used by the native millions of people in Asia and Africa. Extension of the market conquests to the United States is entirely feasible if our Government pursues a policy of eliminating by degrees the already weakened measure of protection accorded to its own people. We have grown to have no faith in the processes of international bargaining. Around the negotiation table sit some 10 or 12 nations with a vested interest in exporting surplus textiles. All of them have an eye on the American market and complain about our tariffs, which are innocuous compared to their own quantitative or other restrictions. We feel that American representatives have consistently used textile tariff schedules as bait to hook some fancied political advantage.

The American textile industry is highly competitive and we believe it can compete with any form of fair competition. But it is an industry grounded in American standards of good wages and high standards of living. Its technologies and product naturally cannot offset the unfair competition of imports from countries of similar high technical standing whose wage levels are but a tenth or less than a tenth of our wage levels. It is a large, widespread, and vital industry whose health is essential to the American economy in peace and whose wartime capacities are indispensable. For such industries, adequate tariffs must be maintained as the essential safeguards of our basic national welfare.

What Nonfarmers Should Know About the Farm Program

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. HOPE. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a copy of an article which I wrote for the magazine *Successful Farming* and which appeared in the February 1955 issue of that publication:

WHAT NONFARMERS SHOULD KNOW ABOUT THE FARM PROGRAM

The title of this article assumes that nonfarmers are not well informed about the problems of farmers and the various Government programs which deal with those problems. I believe this is a valid assumption.

This is a situation of comparatively recent origin. As late as 1910, a third of our population was directly engaged in agriculture. Many more lived in small rural communities. Under these circumstances, most of our people had a pretty good idea of farming and its problems.

But now, less than 14 percent of our people are farmers. Furthermore, farming itself has changed so much that people who were born and grew up on farms even a few years ago know nothing of modern farming problems.

I am convinced that today perhaps 75 percent of our people have little or no understanding of agriculture as an industry. And worse than that, 50 percent or more have a poor opinion of farmers—to state it in the mildest terms.

Aside from the fact that we don't want people thinking badly of farmers without justification, there is a most important reason at this time why city people should understand farmers and their problems. That is because, like every other industry, agriculture is affected by Government policies more than ever before.

This applies not only to policies dealing with prices but to such questions as export markets, credit policies, conservation, rural electrification and telephones, and research and education programs. And with less than 14 percent of our people on farms, it is obvious that Government policies which fit the needs of agriculture must receive the support of other segments of our population.

I would like to suggest some things which I think you should tell your nonfarmer friends about farming.

What should we tell them? Frankly, the only thing we need to tell them is the truth—the plain, simple truth—about what farmers are up against in these times.

While it isn't the most important point, the first thing that ought to be told is that farmers as a class are not getting rich.

Then there are people who feel that farm prices and food prices are too high and criticize farmers for that reason. These people are obviously mistaken, because no one who has made a fair study of farm prices or food prices can complain that they are out of line with the prices of other commodities.

First, it ought to be pointed out that as far as food prices are concerned, the farmer now gets only 43 percent of the consumer's dollar. The other 57 percent goes for processing, transportation, and distribution costs.

Furthermore, in the case of many commodities, there is little connection between farm prices and prices which consumers pay. In a loaf of bread selling at from 17 to 20 cents, there is 2 3/4 cents worth of wheat. A

cotton shirt selling for \$3.95 and up contains about 30 cents worth of cotton.

A study made by the House Committee on Agriculture last July showed that while farm prices had fallen 19 percent since 1951, retail food prices remained right at the postwar peak.

Then there are people who tell me they think farm programs have worked to the disadvantage of consumers. Figures don't bear this out either.

Our first price-support program began in 1929, and if these charges were true, it would mean that consumers were worse off now than they were at that time. Yet the figures prepared by the Department of Agriculture show just the opposite.

In 1929 the average factory worker could buy 6.4 pounds of bread with an hour's earnings. Today these earnings will buy 10.3 pounds. For an hour's wages he could buy 1 pound of butter in 1929 and 2.6 pounds today; 3.9 quarts of milk in 1929 and 7.9 quarts today; 17.4 pounds of potatoes in 1929 and around 30 pounds today; 1.2 pounds of round steak in 1929 and 2 pounds today, and so on.

In other words, consumers have gotten real reductions in food prices during the time price supports have been in effect.

Another complaint which keeps popping up is that agriculture is being subsidized in vast amounts by the Federal Government and to a greater extent than other industries. It is true that agriculture has received subsidies. But I think we should point out to our friends in the cities that subsidies began when our Government was first set up in 1789—and that only in fairly recent years have they been used to any appreciable extent to protect agriculture.

The first Congress set up a subsidy to encourage the development of an American merchant fleet. Since that time many billions in subsidies—both direct and indirect—have gone to business and industry, as well as to labor and consumers. Among other things, these subsidies covered portions of the postal deficit, aids to the shipping industry, various aids to air navigation, flood control, electric-power projects, housing construction, unemployment insurance, public-assistance grants, and many others, including indirect subsidies like tariffs.

The House Appropriations Committee in 1954 published figures indicating subsidies amounting to about \$45 billion were paid to business and consumers since World War II. It is fair to say that a part of this was in business reconversion payments following the war, but nevertheless, it was a subsidy.

As compared with this \$45 billion of subsidies to business and consumers, farm-price supports and surplus removal, operations for the 20 years up through 1953 cost only \$3½ billion, or 1 percent of the value of crops and livestock marketed.

In order to fairly inform our urban friends of the problems of agriculture and the need for remedial measures, we must point out the tremendous changes that have taken place in farming in recent years.

There was a time when farmers were very largely self-sufficient; and under those circumstances, the prices received for commodities were not particularly important. Today this situation is entirely changed. In 1953 the total assets of agriculture in this country totaled almost exactly the same as the total assets of all manufacturing corporations.

Even more significant is the fact that in 1953 the average investment per agricultural worker was \$16,480. That is almost twice as much as the average investment per industrial worker.

Today even the small farmer must make a heavy investment in land and equipment, and in addition requires a large amount of working capital to pay for fuel, fertilizer,

labor, insurance, taxes, and other expenses which must be paid in cash. These expenses are constant, and there is little the farmer can do to reduce them. If he is to meet them, he must have a dependable cash income.

But consider the risks that the farmer must take in getting this income. Drought and floods take their toll somewhere each year. He is subject to the ravages of insect pests, and crop and livestock diseases. And when he finally produces a crop, he has nothing to say about the price he will receive for it. If he ships his cattle to Kansas City or Chicago, he takes what the buyers offer. His alternative is to ship them back home again.

Much of the farm legislation of recent years has been for the purpose of adding to the stability of farming. Crop insurance has been tried to partially eliminate the risks of weather and disease. Cooperative marketing has been developed to give farmers more to say about the price of their products. And price-support programs through Government loans have been set up to bring about more orderly marketing. This prevents farmers from having to dump their crops on the market in such quantities as to depress prices.

And that brings us to the question of surpluses and how they affect prices. "Surplus" is a comparatively new term. We did not hear much about surpluses until after the First World War. But we have always had them—that is, except when we had distress and famine.

In past years, surpluses were in the form of reserves which people kept in their storehouses and cellars. Individual surpluses and reserves now are a thing of the past—but for our own safety and protection we must have on hand more food than can currently be used. And yet these surpluses, so destructive to farmers' prices when we do not have farm programs are simply the reserve people used to have in their cellars.

It doesn't seem right that when this surplus is for the protection of all of our people, the farmer should have to bear the whole expense and loss of carrying it. And yet that is our situation when we do not have farm programs.

Nonfarmers also ought to be told that the fact that less than 14 percent of our people can furnish the food and fiber required for all the rest of us is the principal reason why we have what we refer to as our American way of life and high standards of living.

The energies of the other 86 percent of our people can be released to build our automobiles, radios and television sets, our great highway systems, to maintain our educational facilities and our progress in the arts and sciences, as well as our churches and cultural institutions. In some countries it takes 80 to 85 percent of the people to produce enough food for themselves and the remaining 15 or 20 percent.

Certainly one of the greatest problems confronting the country today is the conservation of our soil and water. That is a responsibility that is very largely in the farmer's hands—and yet there is no way on earth the farmer can carry it out unless he, as a businessman, has sufficient income to do like other businessmen and maintain his plant by conserving and rebuilding the soil.

There is one other point. I don't know that farmers can say very much about it because it would sound too much like bragging. That is that here in this country we have always regarded the family-type farm and the people who live on it as our greatest reservoir of social and moral values. There is no way that we can maintain the family-type farm unless farming is at least profitable enough that people who love the land and want to farm can afford to do so.

These are some of the things that nonfarmers ought to know about farming. You

can think of others. But that will not do any good unless in some way we get the story told. I think it is up to the farmer to do it one way or another. Perhaps the big part of the work will have to be done through organized effort—that is through farm organizations, the agricultural press, or farm-minded commentators over radio and television.

But every farmer and farmer's wife has some opportunity to dispel the fog of misunderstanding and misinformation that exists in such a large measure among so many of our people. In your own interest and the Nation's interest, you ought to make use of that opportunity.

Leave Our Judges on Olympus

EXTENSION OF REMARKS OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond News Leader of Friday, February 11, 1955:

LEAVE OUR JUDGES ON OLYMPUS

File away as needless legislation a proposal that the Chief Justice of the United States be formally requested to report to Congress from time to time on "the state of the Federal Judiciary." Nothing would be achieved by such a report that cannot be gained already through regular channels, and much would be endangered. The practice would inject our Judges into politics and threaten the strict constitutional separation of the judiciary from the congressional and executive arms of the Government.

The measure was sponsored by the Deputy Attorney General, William P. Rogers, and presented by Tennessee's Senator Estes Kefauver and New York's Representative Kenneth B. Keating. Its advocates assert that it would dramatize the needs of the Federal courts, which are so jammed in some jurisdictions that it takes 3 or 4 years for final settlement of a case.

Our view is that the Chief Justice of the United States need not debase the office by going before Congress in the role of a huckster seeking more money, more judges, more secretaries, more facilities. The regular avenues of budget hearings are sufficient to acquaint President Eisenhower and the Congress with the Court's physical problems. Indeed, Brooklyn's Representative EMANUEL Celler, head of the House Judiciary Committee, points out that Mr. Eisenhower himself could improve conditions without congressional action by filling some 20 vacancies that exist on the Federal bench.

One doubts exceedingly that the dignified office of Chief Justice would be given over to a mere statistical account of cases in district courts across the country, delivered before a sleepy, uncomfortable Congress. Any clerk—or adding machine—could accomplish that purpose.

Our suspicion is that as time went on a Chief Justice would not confine himself to a presentation of physical problems but would stray into comment on the Court's decisions, might even feel impelled to defend certain judgments. Whatever elaboration might be needed on the Court's decisions can be found—and ought to be found—solely in the written opinions of the justices.

That this fear of a discussion of decisions is not so far-fetched was shown clearly by

the recent address at William and Mary College of Judge Bolitha J. Laws, of the United States District Court for Washington, D. C. Judge Laws apparently approves the idea of such a report to make known the affairs of the judiciary of our Nation. He observed that we of the law have no established plan to make known that laws . . . must be well interpreted and well enforced in order to preserve our Nation. Further, he described judges as living detached lives, catapulting to favorable attention on occasion but usually having their virtues hidden as a candle beneath a bushel.

In our view an air of detachment is precisely what is to be prized in the men who run our courts. Let us leave our Chief Justice on the cool heights of Olympus or, if you prefer the figure, under the homely bushel basket.

Irrigation Offers Solution to Farmers' Big Worry

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Irrigation Offers Solution to Farmers' Big Worry," which appeared in the February 10, 1955, issue of the Leitchfield Gazette, of Leitchfield, Ky.

The editorial is as follows:

IRRIGATION OFFERS SOLUTION TO FARMERS' BIG WORRY

More stress is being placed every year upon irrigation as a means of insuring crops in Kentucky as well as other States in this area of relatively heavy rainfall. The past 3 dry seasons have given impetus to this trend among more progressive farmers who almost uniformly report that saving one crop pays for installation of irrigation systems.

Not many farms have terrain suitable for gravity flow irrigation, but pumping techniques have been improved to the point where crops could be given ample water during periods of greatest need when usually rainfall is lightest. Most farms have areas that could be dammed up and used as storage for the abundant rainfall which unfortunately does not come regularly when needed yet amounts to about 50 inches a year—more than enough for any of our crops.

Weather observers have said there is a possibility we are in for a long period of short rainfall that may grow worse. If this is true, irrigation may become necessary to exist because it is practically impossible to follow "dry farming" practices successfully on land that is as thin and rolling as that found in this area.

Since adequate water is the most important need of any crop, drying out of the soil retards growth and cuts the value of production. Even in years of abundant rain there may be several times when money is lost because the soil becomes too dry to support a vigorous and continuous normal growth. Besides insuring steady growth, irrigation would remove the uncertainty now accompanying farming operations where expressions of worry about rainfall are common topics during the growing season.

In the West, where water is much more inaccessible than it is here, fortunes have been made by irrigation which requires more work and planning as well as capital outlay but has paid off handsomely. The Govern-

ment advanced money for establishment of many irrigation districts in the West, and this money was repaid by farmers through crops made possible by the water.

As water is available here for a fraction of its cost in the semiarid States of the West, it should not be necessary to depend upon Government funds to finance individual irrigation plans. Reliable farmers should have little trouble finding financial backing for installing systems that would insure crops regardless of the weather.

Opposition to H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. under leave to extend heretofore granted, I am inserting in the RECORD the statement of O. R. Strackbein, chairman of the Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, before the House Committee on Ways and Means in opposition to H. R. 1, the trade agreements extension bill of 1955, on January 26, 1955:

The Nationwide Committee of Industry, Agriculture, and Labor on Import-Export Policy, of which I am chairman, is composed of some 65 organizations and groups of industries, agriculture, and labor. A list of members and associates is attached.

These organizations have banded together because of their common concern over the effects of import competition. The competition that gives them concern is the kind that derives its advantages from lower wage payments than those our own producers pay.

This is a type of competition that we regard as unfair because to meet it all along the line, unless it is properly regulated, it would be necessary to reduce wages, to impose inferior working conditions upon workers, to reduce social security and to strip away price supports for agriculture or as an alternative permit the afflicted industries and branches of agriculture to be killed off.

Not only would such a trend be heavily opposed by labor and farm organizations but it would, if left alone, lead to a lower national income and would undermine the purchasing power of our workers and farmers.

Minimum wage laws have been established in this country with the specific objective of preventing low-wage employers from gaining a competitive advantage over those who pay higher wages and driving the latter to lower wage levels or putting them out of business.

Price supports for farm products under the parity principle have been adopted to give agriculture what is regarded as a fair price in relation to prices on manufactured goods.

The obligations imposed upon industry and agriculture by law as described above result in high fixed costs and these create a competitive handicap in the face of many imports that are not produced under the same high standards.

Parity prices for agricultural products and price supports no less than collective bargaining and social security thus make for high domestic market prices. All who favor this system must recognize the competitive disadvantage that in many instances results from its operation in the field of import competition.

In the case of farm products the handicap is readily apparent. In the case of industrial products it is no less real even if not so obvious. By these various laws we interfere with the free market. Restrictive immigration laws fall into the same class.

This is not a plea for abolition of price supports or for repeal of our minimum wage laws or for abandonment of collective bargaining or social security. It is a call for recognition of the simple fact that it is not fair to place cost-raising burdens upon our producers on the one hand, no matter how desirable the objective, and on the other, to expose them progressively to sharper import competition by stripping away the tariff or by banning the use of import quotas except for the benefit of a few agricultural products such as wheat, cotton, sugar, peanuts, etc.

It is not very logical to help the farm and labor groups in one way and then to go in the opposite direction in our tariff policy.

To maintain the high level of national income that is necessary to meet our extremely high national obligations as reflected in the Federal budget, we must uphold the conditions that make possible continued high production and high employment levels throughout the economy. In the seller's market that we enjoyed for nearly a decade after the war, it was possible to uphold these high levels; but great care will be required under increasing surplus conditions to avoid the onset of widespread deflationary forces.

It is highly questionable economic policy to proceed along the import front with further tariff cutting as if prosperity would continue at the same level regardless of increased import competition. The constant minimizing of the effects of imports on employment, repeated by Secretary of Labor Mitchell before this committee, is shortsighted and dangerous.

That competition, it should be kept in mind, is not spread evenly over all industry and agriculture. It strikes with great severity in some sectors while others are free of it. Even cotton and wheat producers, who are highly protected by import quotas, would feel a sharp impact if their protection were stripped away as these groups would strip it away from other products and as this bill would permit stripping it from cotton and wheat growers themselves.

If the agricultural quotas that limit imports of these products are unnecessary, they should be taken off. If they are necessary, it should be clear that for similar good reasons protection is also necessary for many manufactured and other agricultural products.

The present bill, H. R. 1, however, is much more than a tariff bill. It contains provisions that would go far to deprive Congress of its authority and responsibility to regulate our foreign commerce. It would lodge this power in the hands of the Executive. From there it would soon pass to an international organization and thus destroy the responsiveness of Congress to the electorate in this field.

That is the intent behind the bill and confirms the purpose long harbored in the Department of State. That was the purpose of the ill-fated charter for an international trade organization which died in 1950, before the House Committee on Foreign Affairs. The present bill would pave the way for its revival.

We would have no objection to membership in an international trade organization that confined itself to consultative and advisory functions. Great service might come from such an organization. We do object most strenuously against a shift of congressional powers over our foreign commerce to such an international organization. That would require a constitutional amendment.

We should not forget that the industry and agriculture of this country were built under the protective system. Some seg-

ments have presumably grown beyond the need of further protection. Just as surely others have not. Those that have not cannot, however, properly be described simply as marginal or inefficient and unworthy of protection. This is a common error subscribed to by academicians and enthusiasts who hold no direct stakes to be dissipated. It is repeated by those who seek gains from exports whether these gains would hurt someone else or not.

It is also repeated by those who are deeply concerned over the international struggle and the course of the Communist threat to the world. These good people must be accorded the highest consideration for their sincere concern. They may be excused for grasping at what has been pictured as a sure path to world pacification.

The Communist threat has been turned into an overriding consideration and liberalized trade has been tapped as the best way to fight communism.

If it were only that easy. Yet there is nothing in the history of commerce and trade that will sustain such a view.

It is true that under Communist theory commercial rivalry among the capitalistic nations leads to war. If the whole world were absorbed to communism war would end, that theory holds. There would be free trade, free access to raw materials, and no competition or rivalry for markets. War would vanish.

This is a superficial concept belied by religious wars, by conquests for personal glory, and much else in the past. Yet it is true that a great part of trade does make for international rivalry.

Competitive trade is of this kind. It does not make for friendship as does complementary or noncompetitive trade. It makes for ill will rather than good will. Unless it is regulated to assure fairness it can indeed lead to violence.

Our noncompetitive imports by and large are already conducted without tariff or other barriers. The hitch comes in the competitive field, where we make the imported goods very well ourselves. That is where the character of the competition becomes important. The question of fairness is of the highest concern. Fairness does much to draw the sting from the rivalry of competition. That is where regulation comes in. This regulatory function resides in Congress. It was placed there because policy must determine the shape of regulation; and in a republic the electorate is the policymaker. Elected representatives are held responsive to the electorate. The executive's function is that of carrying out the law.

If the Constitutionmakers were wrong in lodging the power to regulate commerce and to control the tariff in Congress, the Constitution itself prescribes a method of changing the lines of authority and responsibility.

This bill would place certain powers in the hand of the Executive by which Congress itself could be shorn of its trade regulatory function without first amending the Constitution. The Executive could further alienate this function, as already indicated, by passing certain powers to an international organization, providing only that Congress consented to our entrance into such an organization.

He could impair the power of Congress, for example, by entering into a trade agreement containing a provision to ban import quotas. We are already, indeed, a party to an agreement (the general agreement on tariffs and trade) that does so, with certain exceptions, most of which do not apply to the United States. Seeing how far the State Department has gone without authority, we may well wonder how far it would go with authority, as proposed in this bill.

Import quotas are a means of regulating foreign commerce. Can any Congress then properly empower the President to enter an

international agreement that would tie the hands of Congress? If a given Congress were willing to be thus bound, would any future Congress be bound? Does not each new Congress have a right to legislate for itself? Does it not have a right to amend or repeal any previous law?

If so, what would a trade agreement be worth if it contained a ban on import quotas? What would it be worth in any case if extended beyond 2 years, i. e., beyond the tenure of the existing Congress?

Certainly it would not help our international standing to enter an agreement that any succeeding Congress, or the existing Congress for that matter, had not only a perfect right but good reason to upset.

In the course of time damage to the international reputation of this country as a responsible nation would be risked unnecessarily.

A foretaste of this was provided by the passage of section 104 of the Defense Production Act of several years ago. This was held by GATT to be a violation of our obligations under the general agreement. Why did the State Department agree to such an obligation in the first place?

Under the present bill the President, meaning the State Department, would have full power to remove or to enlarge existing import quotas on cotton, wheat flour, peanuts, etc., in the course of a trade agreement. This could be done without consulting Congress. An offer to abolish or liberalize quotas on farm products could be used, in negotiating with other countries, as a means of obtaining concessions from them that would expand the exports of our automobiles, office machines, apples, or anything else.

It is true that the bill provides that in applying section 3 (A) existing legislation is not to be violated; but section 3 (B) is excepted. What happens if there is no existing legislation? Cannot an agreement then be made that would forestall legislation? There is, for example, no law that there shall be no ban on import quotas or that the Executive may not use quotas as he sees fit in a trade agreement.

A trade agreement outlawing import quotas would therefore upset no existing legislation with the possible exception of the Sugar Act; nor would an agreement lifting existing quotas do so, with the exception noted.

The same goes for customs formalities. The bill would empower the President to make agreements relating to customs formalities. Aside from being extremely general in character and granting unlimited discretion, this power could be used to run ahead of Congress and close certain premises to future legislation.

Then comes the broadest proposed grant of all, i. e., entry into a trade agreement containing provisions on other matters relating to trade. This would simply give free play to the State Department to use our home market as a pawn in the moves of power politics.

To all this we object most strenuously. We have seen enough of the State Department maneuvers to forewarn us against any such grant of power.

Indeed we have seen enough of it to call for a complete reversal of the system under which the remedy spelled out under the escape clause by Congress in 1951 has been nullified. We are thoroughly convinced that the escape clause remedy will continue to be thwarted by the State Department if the veto power is not taken away and given to Congress where it belongs.

Our greatest quarrel with the trade-agreements system is precisely this denial of a remedy; and we will not easily be fooled by assurances. These were offered to us when the escape clause first made its appearance in 1943 in the form of an Executive order.

We learned from repeated experience that the assurances were designed merely to lull opposition and were, as judged by the results, completely insincere.

Then in 1951 the escape clause was written into law. We counted this as a distinct gain; but since that time we have seen the law frustrated by executive disinclination and refusal to accept Tariff Commission recommendations.

This long experience has fully convinced us that administration of the clause must be removed from the Executive power. Otherwise the remedy will remain a nullity and worse yet, a cynical farce.

Objection to the escape clause comes from other countries on the grounds that its use creates uncertainty in the marketing of their products here. Overlooked is the fact that GATT itself contains an escape clause similar to our own; that the need for a remedy against import injury is recognized in the general agreement. Was it contemplated that this clause be mere window dressing? If not, what is the outcry about?

Actually a great degree of stability in our tariff could be assured if the present trade-agreement rates were adopted as the tariff of the United States by law. Provision should then be made for only such changes in rates as could be demonstrated to be necessary, one item at a time, either to avoid injury, by increasing given rates, or to increase imports, by reducing given rates that were shown to be higher than necessary.

Considerations of foreign relations should not be ignored, but neither should they be given top and overriding priority as is now the case. The Department of State should be given full opportunity to make known its views to Congress in each case of recommended duty restoration.

There are other objectionable provisions in this bill. One is the provision that would empower the Executive to cut all rates down to a level of 50 percent if they are above that level. This would be an arbitrary action and has no economic justification. It is surprising that such a suggestion should be made. Evidently the idea was adopted without reflection.

Another provision would limit any rate restoration to the level existing on January 1, 1945. This represents a direct attempt at legislative crippling of the escape clause, and we object to it. Nineteen hundred and forty-five was a war year and is not a satisfactory base for measuring the suitability of tariff rates.

It is to be observed also that the provision that would permit a 50-percent cut in the rates on items not now being imported, or imported only in negligible quantities, provides for no remedy, since such cuts would not be in the nature of concessions in a trade agreement.

The theory underlying this provision seems to be that if we do not now have an import problem the thing to do is to create one.

The nationwide committee last year supported a bill that we believe to be far superior to the present bill, both in the moderate protection it would offer to domestic industry, agriculture, and labor, and in creating the conditions that are essential to maximum trade.

It would adopt the present rates in trade agreements as the statutory tariff of the United States, thus offering a higher degree of stability than H. R. 1. These rates could only be changed by individual applications to the Tariff Commission in order to assure fairness of import competition. There would not and could not occur any general tariff increase under that system, but also no general tariff cut. Neither is justified under present economic conditions.

One highly important change would be made. The Tariff Commission would send its recommendations to Congress rather

than to the Executive. This change is necessary if Executive nullification is to be overcome as it should be in the interest of fair treatment and good government. The present situation of Executive debasement of the Tariff Commission, now in its fourth or fifth year of practice, is inexcusable and intolerable. As an example of high-handed disregard of basic rights and division of powers, it merits the severest condemnation and should be stopped.

Another Man's Poison?

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. George Sokolsky, well-known columnist and radio commentator, which appeared in the Washington Post and Times Herald of Thursday, February 10, entitled "Another Man's Poison."

The article is as follows:

ANOTHER MAN'S POISON?

(By George Sokolsky)

Most people know as little about fluoridation as I do. Most of those who favor it and oppose it are and are littered with propaganda on both sides would find it difficult to explain why anyone should get all hot and bothered about this business of pouring another poison into our water. For our health, our water has already been chlorinated and the real effect is to give it so horrible a taste that alcoholism is on the increase. Whenever I taste water that has been manhandled by a chlorinator, I understand why the late Heywood Brown preferred gin.

So now they are to put fluorides into our water to save our teeth. My suspicions are naturally aroused because so many dentists are for it. They must have grown eleemosynary of late to favor something that they claim will put them out of business. As I have no teeth of my own, perfect teeth are of small moment to me personally, but I, too, can be eleemosynary and favor something that benefits someone else, if it does.

The question that arises in my mind is, Suppose 10 or 20 years from now, the professors change their minds about fluoridation. Suppose they say that instead of saving teeth, it harms something else. So I read an article in the Scientific American, entitled "A Study of the Anti-scientific Attitude," and discovered that the authors, Bernard and Judith Mausner, agree with Senator FULBRIGHT that there is a "swinish blight of anti-intellectualism," and that whoever says that if you want to use fluorides for the teeth, get it in a bottle at the

drugstore instead of in the waterworks, is an aforesaid swinish anti-intellectual. This broad generalization reminds me of the anti-Fascists who denounced everyone who despised Stalin as pro-Fascist, and the anti-Communists who believe that everyone who reads the Daily Worker is a Communist.

In a word, here is supposed to be learned writing on a technical subject which I pick up to inform myself and find in the first paragraph a polemic on the distrust of intellectuals, which has nothing to do with the subject. I am sure that the Mausners, whoever they may be, regard themselves as intellectuals but I doubt whether they can write learnedly on the moral systems of Maimonides, Thomas Aquinas, Spinoza, and Kant and, if they cannot, I shall everlastingly deny them the title of "intellectuals." Also, unless they can write several thousand words on the romantic period in music and unless they can speak authoritatively on the influence of Wagner on Verdi's Otello, I shall mark them down as having no right to wear the sign of the egghead.

The trouble with a fellow who becomes fanatical about such a subject as fluoridation is that while he can explain why poison, if taken in small doses, might do no damage, or might even be beneficial, like opium, if one has a bellyache, he does not explain why it should not be sold in a drugstore so that the fellow who does not care for the stuff is not obliged to have it in his coffee. The answer, of course, is that it is a poison.

In a free society, no one ought to be forced to do what he chooses not to do, just as a Christian Scientist may eschew a physician, or a Jew, pork. These choices are made on religious grounds and therefore are protected by the Constitution, but fluoridation is advocated by dentists and social workers and therefore the Constitution may not be invoked to protect them.

The Customs Budget

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an interesting and informative editorial entitled "The Customs Budget" that appeared in the January 28, 1955, issue of the Journal of Commerce of New York City:

THE CUSTOMS BUDGET

This piece is intended primarily for the House Appropriations Committee which shortly will take under consideration the Budget Bureau's recommendation that \$41,200,000 be allocated for the 1956 fiscal year for the United States Customs Service.

This sum is about 3 percent higher than approved for fiscal 1955, but is still short of what is needed, since it will just about cover certain minor employee expenses now allowable, and the automatic pay increases.

The basic problem still remains unsolved. This is the steady decline that has taken place in the number of employees doing customs work, while the workload of this service has constantly moved higher. Expressed another way, employees retiring or leaving the service have not been replaced in recent years by collectors forced to trim costs to the bone, while the volume of our imports that are dutiable and the paper work in processing both imports and exports for reasons of security have steadily mounted.

Also, there are the airports which now handle as many incoming passengers as the steamship lines, and the liberalized provisions governing imports by mail, both of which require customs inspection.

Now economy in Government is something with which few people can quibble. Also it is difficult at a time when balanced budgets are prime objectives to make exceptions without opening the gates to others.

Nevertheless some good arguments can be advanced for considering the customs service as a hardship case, because we are inevitably approaching the time when, through lack of manpower alone, we are endangered with a breakdown of proper import inspection, narcotics control, and strategic materials supervision. When this happens the smugglers, dope peddlers, and subversives will have a field day.

In seeking to explain this extraordinary condition there appears to be only one answer—the customs service has not been articulate over the years in its applications for funds so that its modest requests have been drowned out by the multimillion demands of other agencies.

The time is here to correct this situation before it is too late. Responsible importers are concerned because they cannot compete with the smuggler, and the public must be concerned if made aware of the facts, since the best place to stop narcotics is at the shoreline.

Thus we have a collection and enforcement agency whose activities touch many people, but whose position as a responsible Government bureau is being steadily and dangerously weakened.

Let us look at the situation at the port of New York where we were able to gather some figures to implement the above statements.

In 1940 there were approximately 3,000 customs employees here who collected some \$173 million in receipts.

Last year 2,600 workers collected \$350 million in receipts. This represented an even greater increase in actual handlings, since tariffs have been substantially reduced during the postwar period on about half our imports.

Import mail entries at New York in 1941 came to 3 million packets; last year the volume was 9 million.

Pier guards, which numbered 800 at the war and postwar peak and normally numbered 500, are now down to 280.

Passenger entries by airline and steamship is at an all-time high and bid fair to set new records this year.

To handle this increased work with less people and still insure some supervision, it has been necessary to resort to spot inspection of baggage, accept invoice weights on many dutiable imports, and eliminate review of final acceptance of certain duties by the Comptroller.

All these moves were expedients resorted to by New York officials in a desperate effort to utilize available forces to the best possible advantage in collection and enforcement work.

New York, which normally collects about 40 percent of customs revenues, has been held to a budget of approximately \$9 million a year, or about 23 percent of the total. It employs about 30 percent of the total customs force, so that on the basis of both personnel and collections it has been curtailed below what should normally be expected. In fact, further cuts in the ranks appear inevitable here unless Congress does something about budget funds for fiscal 1956.

This is the outlook, and it is not a pleasant picture. We urge careful review of the entire problem by the House Appropriations Committee before any attempt is made to accept the Budget Bureau recommendations.

The situation is serious enough to call for some facts. They can be obtained without too great effort and should be studied by

Congress to find out if our customs service needs strengthening and to what extent to preserve one of our basic national interests.

Yes; We Can Abolish War

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REES of Kansas. Mr. Speaker, I believe Members of the House will be interested in reading a timely editorial by the well-known columnist, David Lawrence, in a recent issue of the U. S. News & World Report. It is entitled "Yes; We Can Abolish War":

General MacArthur says war must be abolished. Here is a great soldier speaking, a veteran of three wars, a hero who won the adulation of his people for military achievement but who, ironically enough, became the main target of the European press as a "warmonger" because Communist propaganda falsely portrayed him as wanting to send American troops to the Chinese mainland.

What paradox is this which brings from the lips of a military man of such wide experience the most stirring plea for the abolition of war that has been heard in our times?

What fantastic suggestion, what dream of impracticality is this, ask the skeptics, as they fling at him the facts of practicality in an age of aggression.

But the idea is not to be rejected so readily. It is neither fantastic nor impractical. It is real and it is practical. It is the liveliest issue of our day—if we will but examine it as carefully as we do the power of a new bomb of destruction.

For here is a concept that challenges the imagination of man. It is intangible now, yet it is something the human mind can make tangible whenever there is a determined effort to do so.

Let us examine the words of General MacArthur as he spoke at Los Angeles on January 26 last on the occasion of his 75th birthday:

"It is a sad truth that human character has never reached the theological development which would permit the application of pure idealism. In the last 2,000 years its rate of change has been deplorably slow compared to that of the arts and the sciences. But now the tremendous and present evolution of nuclear and other potentials of destruction has suddenly taken the problem away from its primary consideration as a moral and spiritual question and brought it abreast of scientific realism. It is no longer an ethical equation to be pondered solely by learned philosophers and ecclesiastics but a hard-core one for the decision of the masses whose survival is the issue."

That phrase, "the decision of the masses," epitomizes the whole problem and points to its solution.

But how? Where is the blueprint? Where is the mechanism that can accomplish this worthy object? Have not men always preached the doctrines of peace? And have not wars come anyhow?

True enough, we have asked but we have never answered the real question. For we have always sought the solution through governments—when it is the governments themselves which have assumed the power to impose slavery and by their discipline to create armies.

Governments, of course, can be the honest servants and spokesmen of free peoples, but

too often they are the masters of enslaved peoples. The problem is to find a way to divest rulers of their despotic power.

We shall not make peace by attending conferences or writing treaties with cliques of evil men. We cannot win them by exhortation. We can unhorse them only by reaching to the sources of their power. Anything which enhances the prestige of bad rulers helps to deceive and discourage the peoples who have been enslaved.

Our moral power should be strong enough to refrain from all contacts with evil men. The maintenance of our armament is essential only to protect us against the caprice of these evil rulers. This we must make clear to other peoples—that it is their government which threatens the peace of mankind.

Does anybody doubt that if such a message could reach the people of Soviet Russia and the people of Red China that they would react against war any differently than we do? Of course not. All human beings are instinctively in favor of survival.

Then what are we waiting for? Only for the mechanism to implement the formula whereby peoples talk to peoples, and governments begin to do what peoples want them to do. The 200 million people in Soviet Russia and the 600 million in China can at any moment remove any clique or group which is usurping authority. Armies would crumble, because soldiers, too, wish to survive.

Inventive geniuses must bring forth an electronic device to make it possible for the words of a President or the words of our spiritual leaders everywhere on this side of the Iron Curtain actually to be heard by all the oppressed peoples.

We now can amplify the human voice so that it can be heard across huge public squares in our big cities. We must look forward to the day when science will transmit words spoken in the native tongue of enslaved peoples and, again and again, convey to them the biggest truth of today—that war can and must be abolished.

The voice of humanity, speaking the language of reason, inevitably will be heard in every home in every country. When that happens, tyrants will vanish, because the concerted will of millions of people will take from such rulers the power to make war. Therein lies the salvation of the world.

Congressmen Get Prayer Room

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Congressmen Get Prayer Room," which appeared in the February 8, 1955, issue of the Irvington Herald, of Irvington, Ky.

It is good to feel that the public as well as the Members of Congress realize how the prayer room has been needed and have some conception of what this place of quiet retreat and meditation will mean in the stress and strain of the present and the future.

The editorial is as follows:

CONGRESSMEN GET PRAYER ROOM

For the first time in more than 150 years, Members of Congress have been provided with a prayer room at this session of Congress. The prayer room, which was author-

ized last year, is open to Members of Congress only and is not to be used for any other persons or groups.

The idea is to provide the legislators with one room in the Capitol where they can find seclusion, peace, and quiet. The prayer room's special window was built by volunteer labor from California's 21st Congressional District.

Clergymen of all faiths were consulted about the furnishing of the prayer room, and a large plain oak altar was finally selected. The room is covered with green carpet and there are chairs along the walls, in front of which are wooden screens which furnish privacy. Adequate copies of prayer books, Bibles, and other literature are available in the room.

Anyone who ever worked in the Capitol, amid the tensions and pressures which are exerted on the legislative branch, knows there has long been a need for a prayer room such as this. We hope that on more than one occasion in the future this room of meditation and inspiration will be useful in helping to guide decisions made by the highest elected legislative officers of our country in these critical times.

Ten Years After Yalta

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REECE of Tennessee. Mr. Speaker, the Yalta Conference of February 1945 fashioned the Roosevelt peace, which now has tormented all of God's children for 10 long years. Some day, Yalta must be undone.

The principals in that tragic conference were Roosevelt, Stalin, and Churchill. Stalin and Churchill, though both older than Roosevelt, were in robust health. Roosevelt, as we now know from recent memories, was a dying man. Alger Hiss and Harry Hopkins were intimate, confidential advisers of Roosevelt at Yalta.

Official State Department publications has summarized the accomplishments at Yalta, so far as they are known; but these publications do not tell the story of Roosevelt's physical and mental disintegration during the 15 months immediately preceding the Conference.

Not until Rear Adm. Ross T. McIntire, United States Navy, retired, published *White House Physician*, in 1946, did the world learn that President Roosevelt's fatal illness first struck him in December 1943, almost a year before the historic fourth-term election of November 1944, and 15 months before the epochal Yalta Conference.

Churchill quickly recognized Roosevelt's tragic physical condition at Yalta and since has commented on that facet of the conference at some length. Mrs. Eleanor Roosevelt likewise wrote—in 1950—that everybody in the White House family knew that the President was far from well during the summer and fall of 1944. But nobody in the White House ever commented on the President's health because all under-

stood clearly that Mr. Roosevelt felt it his duty to continue in office and those around him could try only to make things as easy for him as possible.

This fixed policy of the court circle was spearheaded by Admiral McIntire, who issued five public statements during 1944 indicating that Mr. Roosevelt was in sound health. These statements by Admiral McIntire were published in the *New York Times* on March 6, May 8, June 9, September 26, and October 13, 1944.

With the Nation thus reassured on Mr. Roosevelt's robust health, the President was reelected triumphantly for a fourth term on November 7. Immediately after the inauguration, January 20, 1945, he took off on the cruiser *Quincy* from Norfolk, Va., for the fateful Yalta Conference, which saddled Germany with the savage Morgenthau plan for a pastoral economy, betrayed Poland, and delivered China to Kremlin communism. Yalta designed and erected the Iron Curtain.

In *The Roosevelt Myth*, published in July 1948, John T. Flynn, a competent and respected anti-Communist journalist, meticulously documented Roosevelt's last illness from its inception in December 1943 to the President's death at Warm Springs, Ga., April 12, 1945. Using Mr. Flynn's basic chronology as the framework, I now have buttressed the story with additional details since published in the Churchill memoirs, the Ickes diaries, Frazier Hunt's biography of Gen. Douglas MacArthur, and Mrs. Roosevelt's *This I Remember*, published in 1950.

President Roosevelt returned from the Tehran Conference in December 1943, and after a brief season in Washington, moved on to Hyde Park for the Christmas holidays. There, Dr. McIntire relates, the President suffered a brief attack of influenza, which was followed by a persistent bronchial infection. From this point until his death in April 1945, the President never regained sound health and normal physical energy.

Flynn records that Mr. Roosevelt was away from the White House 175 days during 1944. Some 30 days were required for his junket to the Pacific to confer with MacArthur and Nimitz; he gave 2 weeks to the presidential campaign; about 10 days to the Quebec Conference with Churchill; and spent something more than 100 days at Bernard Baruch's secluded retreat at Hobcaw Sound, S. C., at Hyde Park, and at the sheltered Shangri La hideout in western Maryland. The true significance of these extended periods of presidential rest and recuperation was obscured by Admiral McIntire's periodic reassurances to the public throughout the year concerning Mr. Roosevelt's health.

Merriam Smith, veteran White House reporter for the United Press, comments in *Thank You, Mr. President—1946*—that Admiral McIntire never lied about Mr. Roosevelt's physical condition but, on occasion, has told the truth in language that easily could be misleading to the public.

At Hyde Park several celebrated specialists were called in during January

1944 for a consultation on the President's influenza. Their findings, documented through Admiral McIntire several years later, disclosed a moderate degree of arteriosclerosis—the infirmity which finally produced the fatal stroke at Warm Springs, April 12, 1945. While this Hyde Park consultation occurred in January 1944, the findings were not documented publicly until June of 1946.

History thus records that President Roosevelt's last illness began, and was correctly diagnosed, in December to January, 1943 to 1944, but was concealed from the public, to accommodate the urgent political stratagems of the fourth-term campaign in 1944, and further concealed during the critical days of the Yalta Conference with Stalin and Churchill—in February 1945—which gave us the Roosevelt peace, the United Nations, and the deliberate betrayal of China to communism after the carefully plotted Lattimore plan.

Under all the customs and usages of international law the question now arises whether, in the circumstances of President Roosevelt's then advanced infirmity in January 1945, his secret deliberations and vocal one-man commitments at Yalta impose in any degree the slightest moral obligation on the part of the United States Government or the American people?

After the January 1944 medical consultation at Hyde Park, McIntire notes, he placed the President on a regime which limited him to 4 hours work a day. With D-day in Europe only 6 months forward, and the fourth-term presidential campaign already well underway, this 4-hour-day regime—not documented for the public until 1946—marked Mr. Roosevelt as no longer physically fit to discharge the heavy duties of his high office. Nevertheless, 11 months later, he was reelected, in November 1944, for another term of 4 years.

Mrs. Roosevelt confirms Dr. McIntire's account of the limited presidential regime, noting that Mr. Roosevelt on June 6, 1944, had only one significant task on his calendar for the day—delivery of his D-day prayer over a worldwide radio network; after which for hours, all hearts in the White House were with the men on the beaches.

Precisely at this point, Mrs. Roosevelt continues, another election campaign lay immediately ahead. She knew, without asking, that since the war was not over, Mr. Roosevelt, if his health permitted, would run again. It was thereupon decided finally that if the President would agree to certain rules set down by the physicians, he could carry on as Chief Executive—*Washington Post*, February 1, 1950, page 13-B. Mrs. Roosevelt does not record, however, who made this momentous decision in the summer of 1944, nor why it was not disclosed to the American public until February of 1950, almost 5 years after Mr. Roosevelt's death.

About a month earlier, Dr. McIntire, in May 1944, had brought down from Boston a famous heart specialist, arranged his immediate induction into the United States Navy, and assigned him to President Roosevelt's side. Eleven months later, at the scene of the Presi-

dent's death, this heart specialist, Dr. Howard Bruenn, told newspapermen he had never let Mr. Roosevelt get out of his sight. These fundamental facts of 1944 White House history were not made known to the public until mid-1946.

En route to the Pacific in July 1944, Mr. Roosevelt stopped his special train long enough in the railyards at Chicago to issue his historic dictum, "Clear it with Sidney," to Senators Truman, Byrnes, and Barkley. This dictum related to the Democratic National Convention's then pending selection of a vice presidential nominee for the fourth-term ticket, the southern Democrats having earlier informed the President in Washington that Henry Agard Wallace would not be acceptable for another term. From this situation soon emerged the nomination of Harry Truman, the only other considerable candidate before the convention acceptable to the late Sidney Hillman.

From Chicago, Mr. Roosevelt moved on to San Diego, where he made his acceptance speech for the fourth-term nomination, thence by battleship to his war conference with MacArthur and Nimitz, which lasted only a few hours.

On this trip—

Flynn explains—

his appalling physical condition was revealed to the commanders in Honolulu. They were shocked at his appearance, despite the long, restful, sea trip. Here for the first time, we hear of his conversation falling into intervals of irrelevance.

As he was wheeled from his quarters, officers noted his head drooping forward, his jaw hanging loosely. Mr. Roosevelt did not return to Washington until August 18.

Campaigning in the rain in New York City late in October, he rode in a specially equipped heated limousine, with an electric heater under the seat, and another under the heavy fur blankets thrown over his lap. Three or four stuttering lapses in diction during his radio speech that night were attributed jovially by the newspapermen present to possibly a slight excess of before-dinner martinis.

One week later, on election night, Merriam Smith noted at Hyde Park that Mr. Roosevelt "looked older than I had ever seen him, and he made an irrelevant speech."

After the election, November 7, President Roosevelt dropped out of the news until November 28, then went to Warm Springs until December 23, then to Hyde Park for the Christmas holidays. Just 1 year had passed—as we now know—since his fatal illness had been discovered, diagnosed, and suppressed.

On January 19, 1945, the day before inauguration, Secretary of Labor Frances Perkins tarried after the Cabinet meeting to present her resignation and bid farewell.

The physical appearance of the President shocked her. His deep pallor, apoplectic hands, and sagging facial muscles suggested a man gravely ill. Distracted, she hastened to her office, called in her personal secretary, closed the door, and whispered in a frightened voice that the President appeared near death.

Forty-eight hours later, the inauguration over, Mr. Roosevelt left Washington for the Yalta Conference—the most appalling disaster in modern history.

Someday, somehow, Yalta must be undone. God's mankind will not continue forever in the toils and chains there spun by barbaric communism about the broken body and shattered mind of a President recently elected for a fourth term by the most gigantic and egregious public fraud in the history of the world.

Fallout—Another Dimension in Atomic Killing Power

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. BOLLING. Mr. Speaker, the following article appeared in the New Republic for February 14, and was written originally for and appeared in the February Bulletin of the Atomic Scientists:

FALLOUT—ANOTHER DIMENSION IN ATOMIC KILLING POWER

(By Ralph E. Lapp)

The first A-bomb which shattered Hiroshima struck out at its victims over about 7 square miles. Compared with the TNT blockbuster this primitive nuclear weapon constituted a "quantum jump" in the instruments of war. On November 1, 1952, a much more powerful bomb spread its blast-heat punch over 300 square miles. This was quantum jump no. 2. The world did not have long to wait for no. 3. It came on March 1, 1954, with a fallout of radioactive particles over thousands of square miles of the Pacific Ocean.

The lethal radioactive fallout of quantum jump no. 3 is still too recent to appreciate fully. Indeed, most people have scarcely begun to comprehend the meaning of Hiroshima, let alone the more recent event which dwarfs it in significance. And dwarf it, it does. Fallout adds a new dimension to war. A single superbomb, exploded close to the ground, can now contaminate a State the size of Maryland with lethal radioactivity.

TECHNICAL CONSIDERATIONS

The November 1954 Bulletin of the Atomic Scientists stated that about 4,000 square miles could be contaminated with serious-to-lethal radioactivity by the March 1 explosion. It emphasized that this was a conservative estimate. Using more recent data, this calculation can be refined. When a bomb is dropped, the sequence of events is as follows:

1. The exploding superbomb produces a 3-to-4-mile diameter fireball, which, unless it is exploded as a very high air burst, will touch the earth's surface.

2. As the blast-heat of the explosion craters the surface below the bomb it dislodges millions of tons of surface earth and substratum.

3. The glowing fireball rises skyward and sucks up in its column debris from the crater. Massive chunks of debris fall back to earth promptly, but lighter particles are churned into the fireball and coated with prodigious quantities of radioactivity created by the fission process.

4. Split atoms of uranium or fission products adhere to the debris, the smaller parti-

cles carry less radioactivity than the more massive ones which have more surface area. The hot debris is swept upward to the stratosphere, where it is dispersed downwind by the high winds aloft.

5. As the bomb could sweeps downwind there is a continual fallout of the radioactive particles, the heavier ones falling first, while the lighter particles drift farther downwind.

6. The pattern of the fallout area is roughly elliptical.

Not all the radioactive particles come to earth in the fallout which concerns us. Some radioactive debris falls back into the crater area and much of it is carried on such tiny particles that they are wafted around the world without descending. Stratospheric winds of 50 knots are not uncommon over the United States, so that the hot cloud could travel 200 miles in several hours. Assuming an ellipse width of 50 miles and a length of 200 miles, this would correspond to an area of about 8,000 square miles.

Assume then that the bomb is of the general type as that detonated in the Castle series in March-April of last year. Assume further that the pertinent energy release is 8 megatons (8 million tons of TNT). The exposure one would receive if one stayed in the contaminated area for an infinite length of time is 2,500 roentgens, which corresponds to a 1-hour activity of 500 roentgens per hour. Roentgen, as used here, applies to the integrated exposure from 1 hour to eternity.

Naturally as time passes the intensity drops sharply. From 1 hour to 1 years there would be a 50,000-fold reduction in the level of contamination. Yet, even at the end of 1 year the rate would exceed that set as safe for laboratory workers today.

About one-half of the eternity dose of radioactivity is delivered in the first day—the time of maximum danger from fallout. Although the intensity then drops sharply, it does not drop to zero. At 50 years, 7½ percent of the eternity dose remains.

IMPLICATIONS FOR CIVIL DEFENSE

Let us consider the fate of one person, call him Mr. A, who panics and attempts to flee from the fallout area. Assume that Mr. A seeks no shelter and flees on foot (perhaps having been caught in a traffic jam). Assume that he walks or runs all day, spending 9 hours in the hot area before finally reaching a noncontaminated place or before someone forces him to take shelter. At an intensity of 55 roentgens per hour, at the end of 1 hour he would have had a dose of 550 roentgens—the lethal dose is 400 to 500 roentgens. His panic or his ignorance would have cost him his life.

Consider now the case of Mr. B who is alerted by the thunderclap of the explosion and fortunately being out of immediate blast damage range seeks shelter. A prudent man, he has prepared a simple basement shelter to which he takes his family and food and water to last for 2 days. After 2 days he emerges, receives an advisory on his battery-powered radio, and then either stays put or travels to a safe area. He will have received very slight radiation while sheltered. In traversing the contaminated area after 2 days he could go a full day without radiation injury.

These two cases illustrate that the maximum peril from fallout is concentrated in the first day, or in the most heavily contaminated area, in the first 2 days. This does not mean that the danger has vanished after 2 days, for one still has to contend with the remaining half of the radiation. But since this is delivered more slowly over a period of weeks and months, it is not an acute hazard, although it cannot be disregarded.

Mr. B in our example was fortunate because he had a prepared shelter with sufficient shielding to protect against the penetrating rays in the fall-out. Very few peo-

ple today can claim to be Mr. B. This raises the question as to what people can do if there are no good shelters available. The question can be answered in a word: improvise. Dr. Willard F. Libby, in one of this first speeches as an Atomic Energy Commissioner, wisely pointed out: "The radiological hazard of atomic weapons is something one can do something about."

Doing something about the fall-out involves (a) action during the acute phase of the hazard, i. e., the first few days, and (b) measures applicable to the nonacute radioactive hazard.

Obviously, if one knows where to flee one can escape from the fall-out region. But this is rather a risky undertaking once the bomb has been detonated and fall-out has begun. People within the shadow of the H-cloud should seek emergency shelter as quickly as possible.

The fundamental rule of survival then is: Get below the surface of the earth—a basement under a multi-story house, the fruit cellar of a farmhouse, or simply any hole in the ground. When one gets his head below the earth's surface he ducks out of the "illumination" of the radioactive rays from the surrounding area and reduces his dose very greatly. Even a hastily scooped out foxhole affords good protection. It is true that some fall-out will descend upon the occupant but a coat stretched across the top for a few hours and then discarded will minimize later exposure.

If no emergency shelter is available and time does not permit digging a foxhole (or where soil and weather conditions deter such excavation) one may seek second-class protection in a structure like a barn. Radioactive particles falling on the roof still irradiate the individual but they are farther away and the distance is a substitute for solid shielding. Furthermore, the refugees in the barn can improvise shelters inside. Having a roof over your head, even though your head is not below the earth's surface, has the decided advantage that it protects from direct contamination by the particles themselves. By keeping the radioactive debris from touching the body, one eliminates the hazard of the short-range beta particles which would otherwise cause beta burns on the skin.

An analogy may prove useful in illustrating the fallout radiation. When a plane surface like an open field is covered with an invisible mantle of radioactivity, one has an infinite plane (so dear to physicists) as the source of radiation; which means that if you stand in the middle of the field you receive radiation from all parts of the field, more from close by and, of course, less from the more remote parts. Substitute for the invisible mantle a huge array of incandescent bulbs. Standing in the midst of this blazing field of illumination you will receive light from every part of the field. Now duck below the earth's surface into a foxhole and you will cut down your exposure enormously, although you will still receive some scattered light. In the case of gamma rays scattered in the air, the amount of penetrating radiation which looks in the foxhole should be small.

A simple calculation shows that a person standing in an open field, uniformly contaminated with the fallout, receives 50 percent of his radiation from the fallout which is over 25 feet away from him. Further calculation shows that a person in a normal basement (below the level of surrounding terrain) would be exposed to only less than one-third the above-the-ground hazard. The smaller the basement the better the protection will be for there will be less overhead illumination. On this basis a foxhole, with its small entrance for radiation is better protection than a basement. And a foxhole dug in the basement or a basement corner room extension would be even better protection.

Overhead protection with earth or concrete is desirable but it is surprising how much protection is afforded by the simple expedient of getting below the earth's surface.

Imagine that 1 hour after the fallout each electric lamp in our radiation field glows at a 100-watt level. At the end of 1 day the level will drop to 2.2 watts; in other words, the intensity will drop forty-five fold in the first day. With such a dropoff in intensity one can emerge from the shelter phase of civil defense and begin to do something more actively. If you were a farmer with a tractor and plow you could plow under the contamination. This would be equivalent to dimming the lights. One would not have to dim all the lights for those closest to you would be most important.

Take the case of a man who lives in a New England community. He is apt to be caught in a multiple fallout, that is, he may be in an area where fallout from more than one bomb occurs. To travel to a noncontaminated region—say Canada or the Adirondacks—might be unwise. Yet to stay put is most uncomfortable, especially in a foxhole. A homeowner could return to his house, if it survives, and begin decontamination. Sweeping down the roof would be the most urgent task. A good stiff sweep-down would remove much of the radioactivity. Then the surrounding hard surfaces like the street and driveway could be swept and the sweepings buried in the lawn or flushed into a sewer. The lawn should be thoroughly turned over with a spade. Even raking would help.

Care should be taken to minimize direct contamination of the body, especially when sweeping. Using a simple face mask and afterward discarding clothing will be effective measures. Inadequate unclassified information exists upon which to base a realistic evaluation of the inhalation hazard of fallout radioactivity. Entry of the particles into the lungs can undoubtedly be minimized with filters and masks.

The reason for decontaminating your immediate environment becomes clear if you think about the accumulated dose. Suppose you emerge after 2 days during which time you have received little, if any, radiation. The radiation level has dropped from its initial 1 hour rate of 500 radiation-hours to about 5 radiation-hours. Such a level is still respectable but one can work around the house for a few hours without serious injury. If one did not undertake decontamination measures to clean up the radioactive contamination, then a significant amount of radiation would be delivered to a person who lived in the house during the next week. One might receive as much as 250 roentgens during this time.

A community which is left untouched (i. e., no decontamination measures are undertaken) and which experienced a fall-out corresponding to our initial 1-hour rate of 500 radiation-hours would have a radiation level of about 1 radiation-hour at the end of 1 week and 0.2 radiation-hour at the end of a month. In the interval from the week to the first month the accumulated dosage would amount to 230 roentgens. From the first month to the end of the year would add 265 more roentgens. While such dosages would probably not cause death (since they are delivered over a long period of time and the body "forgets" some of the radiation it receives) they are very definitely unhealthy amounts of radiation.

Thus, unless a community is decontaminated, it might be uninhabitable for a considerable period of time, ranging up to several months. One cannot escape the conclusion that many metropolitan areas will become a kind of no man's land should they become heavily contaminated. People might enter them for limited periods of time but

they would not be habitable in the ordinary sense of the word.

A city, especially one smashed into rubble, would be almost impossible to decontaminate. It would seem that the wisest thing to do with the central city would be to level it with demolition charges and bulldozers and cover it with earth, converting it into a huge metropolitan park. Moreover, the doughnut nature of the restored city would serve as a grim reminder to city planners on how to design cities of the future. In some cases nature would solve the problem by creating lakes in the craters formed where the business centers once stood. One would expect such metropolitan lakes in low-lying areas like Detroit, Chicago, Baltimore, and in other seaboard cities with business districts close to sea level.

IF THE UNITED STATES IS ATTACKED

This then, is the nature of the radioactive fallout. Let us now examine the impact of a small-scale nuclear attack upon continental United States of America. Because Soviet military planners would probably be reluctant to abandon the traditional use of an explosive as a blast agent, the assumption is made that a bomb is dropped over the following target cities: On the eastern coast—Washington, Baltimore, Philadelphia, New York, and Boston; inland—Chicago, Milwaukee, St. Louis, Indianapolis, Louisville, Cincinnati, Columbus, Pittsburgh, Detroit, Cleveland, Akron, Buffalo, and Syracuse. This would total 18 bombs. Then to maximize fallout and strike at a myriad of smaller targets, bombs would be dropped in the following areas: west of Chicago, over South Bend, over Grand Rapids, over Ft. Wayne, near Elmira, west of Washington, west of New York, over Springfield, near Albany, and over Allentown. These 10 additional bombs would be dropped in such a way as to have the prevailing winds blanket dense metropolitan areas in an unseen mist of radioactivity.

This small-scale attack with 28 bombs restricted to the industrial heart of America could produce an inverted L-shaped pattern over the Northeastern States and an irregular fallout bracketing much of Indiana, Ohio, Michigan, New York, and Pennsylvania. The atomized area would normally be occupied by 50 million Americans. Over two-thirds of the United States industrial production centers in the same areas. This is the magnitude of the problem. This is what the third quantum jump in modern weaponry means.

Moreover, the time factor—the persistence of radioactivity—adds a new dimension to warfare. It adds a denial factor for many homes are denied the dispossessed. Many factories, even though intact and even though manpower might be summoned, utilities restarted, and feed material scrounged up, would be out of commission. That the United States industrial colossus could be so paralyzed is incredible but, unfortunately, true.

Confronted with the overwhelming magnitude of fall-out hazard, the Federal Civil Defense Administration must feel that it has been admitted to the anteroom of hell. Civil defense plans had no sooner been formulated to deal with Hiroshima situations than they were obsolete. Then as some FCDA planners struggled manfully to revise thinking to adjust to megaton-class weapons, along came fall-out. It is easy to understand why much of the civil defense in this country is of the world war 2½ type. Events have come too fast to adjust to quantum jumps.

Thus it is a good time for a thorough house-cleaning in the civil defense establishment. An inventory should be made to see what measures are in the hopeless or useless category. Since so much of the civil defense measures have focused upon disaster relief these should be carefully assessed. Should we plan elaborate fire-fighting de-

fenses if no one can venture into the area for 2 days? A host of other questions need realistic assessment.

Probably the greatest single question revolves about the principle of preattack evacuation of target areas. Is this still a valid program or has fall-out killed its chances of success? One does not need an electronic brain to answer this question. As pointed out in the article in the November Bulletin of the Atomic Scientists too much of our urban population is concentrated in such a few targets. One simply cannot expose these populations to the unavoidable primary effects of superbombs—in other words, staying put is the worst possible policy. To minimize destruction by blast and heat the central urban populations have to be dispersed to sites where they can survive being crushed or burned. Naturally, an evacuated population which escapes blast and heat is by no means safe. It has yet to hurdle the invisible barrier of radioactivity. In many communities those who are evacuated upwind will be out of the fall-out region and there is even hope that preferential evacuation may be possible, i. e., deployment of the people in an upwind direction. This will be more precarious in regions such as Ohio and New England where you might evacuate upwind of one target into the downwind region of another.

I believe that it has become mandatory that the Government begin construction of an extensive system of survival shelters on the periphery of every large city. While evacuees might improvise shelter, it is far more desirable to have reinforced concrete shelters built in a cordon 8 miles or more from the city center. These need not be plush or elaborate shelters. Simple flush-to-the-surface concrete shelters with additional earth shielding will provide real protection. These shelters can be built on public land in school playgrounds, under suburban parking areas, in between divided highways, on park property, and on golf courses. Such a shelter program together with minimal numbers of radiation measurement devices need not exceed a total investment of \$2 billion.

At the same time all new construction, whether for industry, for government, or for homes, should be scrutinized from the overall viewpoint of national vulnerability. New industrial plants must be dispersed—this has been obvious for 10 years—but, in addition, they must be equipped with adequate shelters for their workers. Each plant should be prepared to shelter all of its worker force for 1 week and should provide for this emergency.

It should be made mandatory that every new house outside the central city should be built with a special shelter room in the basement, just as was done in Germany before the Allied air blitz began. Sanity would dictate that any new construction within the central city should be undertaken only if it reduces population density in that region.

Both the policies of evacuation and of dispersion are still valid, although they have to be coupled to a realistic shelter program.

But most of all, the Government has to conduct the most carefully planned and thoroughly implemented program of nuclear education on the facts of survival. Radioactivity is a kind of mystic subject understood by less than 0.1 percent of our population. It must be translated into the language of the layman in films, demonstrations, and test drills. The scientist with his dispassionate comprehension of the atom can scarcely begin to understand what terror the "invisible killer" holds for the nonscientist. Education is the only antidote for this new terror.

Civil defense faces a task as formidable and as important as that traditionally as-

signed to the Department of Defense. Fall-out makes it imperative that this Nation have an effective civil defense. Unless we are prepared to meet this awesome radioactive threat the military may well have little left to defend.

Dr. Willard Libby broke the ice in his informative speech of December 2, 1954, so far as official information about fall-out is concerned. There is reason to believe that the Atomic Energy Commission will release authentic data about radioactive effects as a basis for strengthening our national security. There is also reason to believe that these facts will confirm the conclusions presented here and that, in fact, they will, if candid, verify that the author's calculations have been conservative.

Keep Your Fingers Crossed

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the Record, I include herewith an editorial entitled "Keep Your Fingers Crossed," which appeared in the February 10, 1955, issue of the Franklin Favorite, of Franklin, Ky.

The editorial is as follows:

KEEP YOUR FINGERS CROSSED

One cannot help but feel apprehension that the evacuation around Tachens Islands has brought the United States perilously close to a shooting war. It is a touch-and-go operation where any triggerhappy Chinese Communist could set off the fireworks. Or Chou En-lai, the Chinese dictator, might get up feeling bad one morning and blow his hat to save his face.

A brief glance in recent history of United States policy on Formosa is very enlightening. In the first place, the idea of drawing a line around Formosa and the Pescadores is not new. Since the Korean War, the territory the United States has been pledged to defend includes Formosa and its immediate waters and islands.

The new thing about this crisis is ordering the 7th Fleet into waters only a few miles off the coast of China, yet 200 miles north of Formosa. This policy is definitely a change. It is much like sticking your toe in a mousetrap and seeing how much pressure you can apply without springing the trap.

It is a dangerous but bold policy. Actual fighting between Red Communists and Nationalists has been going on in the Tachens area. The United States in helping Nationalist forces off a trouble spot—which obviously they could not hold—is thrusting its forces right into the Chinese civil war.

Of course, the evacuation is a retreat for Chiang Kai-shek forces. But the bold action of the 7th Fleet is no backdown on the part of the United States. The very boldness of the move may convince the Red Chinese they have grabbed all they are going to get by bluff and loud talk.

While it is a dangerous operation, and there may be several exciting and provocative events and threats, there is a little likelihood a United States-Red China war will start. But let's all keep our fingers crossed.

Once this dangerous evacuation is over we believe that the United States should clearly define what is out-of-bounds territory for Red China.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily Record at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

The State of Minnesota

EXTENSION OF REMARKS OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, February 15, 1955

Mr. THYE. Mr. President, a very fine appraisal of Minnesota and its people in the light of nearly a century of development since the State was admitted to the Union has been made by Dr. Theodore C. Blegen, dean of the graduate school of the University of Minnesota and one of our State's most distinguished historians and writers.

This appraisal is contained in an address on the subject *This Minnesota* which Dr. Blegen delivered at a meeting of the Minnesota Historical Society on January 27.

I ask unanimous consent that the text of this fine address, because of its universal interest, be published in the *Appendix of the Record*.

In accordance with the rules of the Senate, I have requested the Public Printer to estimate the number of pages this manuscript would require, and I have been informed that it would occupy 2½ pages of the *Record*, at a cost of \$200.

There being no objection, the address was ordered to be printed in the *Record*, as follows:

THIS MINNESOTA

(By Theodore C. Blegen)

A memorable passage in Richard II comes to its climax in these words: "This blessed plot, this earth, this realm, this England." Tonight I wish to apply this phrase to Minnesota, and, in particular, I should like to point to some sources of strength and hope and courage that have been built up by the history and traditions of our own plot, earth, and realm.

In an age of anxiety and fear, when problems are many and complex, it is fair to look at our past and to examine our traditions, not in a mood of pessimism or defeatism, but in a mood of courage and hopeful anticipation. We may be able to identify and locate some poles of confidence and stability by which we can steady ourselves for whatever the future may bring. Perhaps, by seeing our past and ourselves with perspective, we can gain in strength. To look through, to see through—that is perspective, and that, also, is the heart of history.

The first thing I note about "this Minnesota" is that our whole history is marked by a stubborn curiosity to know, to solve problems, to open new paths—paths to trade, paths to development, and paths to human advance along a thousand lines.

In that brave tradition we can view a long and glamorous line of explorers who faced nearly every hazard to reduce European and American ignorance of our geography and resources. Take Radisson, for example, a fur trader, fighter, woodsman, adventurer—but, among the first Europeans to see these lands, he was primarily curious and eager to know.

This Caesar of the wilderness came to a tangle of lands and streams and lakes, with no map to guide him, and when he saw what he saw, he had a kind of dream of what this area, "so pleasant, so beautiful and fruitful," might mean to an old world that, as he said, started wars over some sterile rock in the sea. And so with scores of other explorers: they were determined to know and understand the physical world not yet mapped by man. What were these vast inland freshwater lakes of America? Where did the country's greatest river take its rise? Were there paths to the shining sea of the west and to the dominions of the Great Khan of Cathay? How chart this region with its meandering streams and myriad lakes? What could these fruitful lands mean to the world? So the good company of explorers did their job—Radisson and Groselliers, Hennepin and Duluth, Le Sueur, Verendrye, Carver, Thompson, Pike, Cass, Schoolcraft, Nicollet, Beltrami, and many another. For them all, a motion picture would have lines running here and there and everywhere through this western country, each one representing the will and courage and curiosity of a man. The map took shape, the curtain of mystery lifted; the kind of ignorance that caused our diplomats in 1783 to try to run a boundary west from Lake of the Woods to intersect the Mississippi was replaced by tested knowledge. All this took time: we had the flags of France and England, of Spain and the United States, over this region in whole or in part, but through it all the stubborn search for truth and understanding went on. Cathay proved to be very far away, but men of will broke through the continent to the Pacific coast, and in doing so they found, and told the world about, an inland empire better than Cathay. Sometimes they let themselves soar into prophecies that time has made good, as when Jonathan Carver, after seeing Minnesota before the American Revolution, wrote, "There is no doubt that at some future period, mighty kingdoms will emerge from these wildernesses, and stately and solemn temples, with gilded spires reaching the sky, supplant the Indian huts, whose only decorations are the barbarous trophies of their vanquished enemies."

I shall return to the tradition of curiosity and the will to solve problems, for these found outlets in many areas other than the physical world, but before I do so I want to look at a few other traditions that were woven into the fabric of Minnesota life.

In one of my books I have suggested that Minnesota has had three ages: ancient, medieval, and modern; that the ancient age is that of the pioneer and fur trader, the medieval that of settlement and the pioneer, and the modern that of our growing up—our advance from youth to maturity. In many aspects, as in transportation, they overlap, but by and large they stand out as identifiable. We can talk all we want to about ages, but when we ask their meaning and character, we come to people, for every age caught its character from the people who did its work, grappled with its problems, and held what faiths they had. A great deal has been said and written about the second of our ages, that of the pioneer, and I cannot try to analyze for you the scores of forces and actions and achievements that mark the age—the fur and lumber industries, the building of farms and towns and cities, the beginnings of industries and institutions, the dotting of the land with churches and

schools, the creation of government in all its range, the development of transportation from steamboats and sleds and carts to roads and railroads, and the hard ordeals people met in transforming Carver's wilderness into a garden.

But certain things of enduring interest for the interpretation of the state claim the historian's attention and deserve to be said—not in the spirit of adulation for the pioneers, but in sober appraisal. Of course we know that some people knuckled under, some gave up and went back; we know also that the bad went along with the good, and there were dark and ignoble as well as bright and noble sides in the pioneer experience. But we are not drawing an idealized picture when we point to a few traits or characteristics or traditions that, alongside material achievements, are a part of our pioneering heritage.

One is simply the tradition of work. Minnesota, like Rome, was not built in a day—nor was it built by lazy people. This is perhaps too obvious, like the barn on the landscape that people fail to see, and so it needs to be emphasized. The European thinks of Americans as strenuous, and I think we are. The strenuous President who glorified the strenuous life voiced American doctrine and habit. American strenuousness is rooted in the pioneer experience. There was so incredibly much to do in telescoping into decades the building job that the Old World spent centuries in doing that we had to be strenuous. Historians have not given sufficient attention to our tradition of strenuousness or to the work contributions of thousands upon thousands of mostly unknown people. Elsewhere I have spoken of them as "the wilderness Marthas who sustained the men of the frontier, the farmers and workers who did the job of their day quietly and efficiently, the men of trades and professions and business and enterprise, the men and women of faith and of dreams, the builders of homes and of the web of our social life, the sustaining folk at the roots of our existence." One could perhaps argue that there was not enough leisure or that leisure was much too restricted to a Vebelian privileged class; and one could differentiate kinds of work done—unskilled, skilled, professional. But the major point I want to make is that the pioneer age, an unspecialized age, set a tradition of hard work, of determination, to get both big and little jobs done.

Closely allied to this is the tradition of hope and opportunity—the pioneer awareness of the potentiality of better days. Hard work had its satisfactions and solace, but it was a means, not an end. People knew they were building foundations for a great state and society to come, and thousands of them saw that state and society as widened and enriched opportunities, opened doorways for their children, economic advantage, education, a fuller and more rewarding kind of life. Here again we are dealing with a fundamental thing that could be spelled out with thousands of illustrations. Perhaps the tradition widens into the larger American trait of optimism which so often has interested European observers, an optimism that, looking beyond triumph to the future, would not and will not settle for defeat. I have seen its spirit reflected in hundreds of immigrant pioneer letters that I have read—a kind of patience and moral standard that could meet just about every kind of ordeal,

including loneliness and back-bending work, privation and suffering, setbacks, even Indian wars, because courage was buoyed up by hope for the future. Some writers have suggested that the American frontier, in terms of the fulfillment of hopes, was pretty much a myth, but this is a failure to grasp the realities of American life in the span of more than one generation. There were individual disappointments, frustrations, failures; there were exaggerated claims; there were blasted speculations; but no one can survey the broader immigrant story that includes native Americans and Europeans alike without understanding that substantially the pioneer hopes were realized. Myths blossomed in the verdant literature of the frontier, but the frontier was no more a myth than America was a myth.

Some years ago, while exploring the beginnings of the University of Minnesota, I came upon the report of a territorial legislative committee in 1851 calling for the establishment of a university. The Territory was only 2 years old, its population only a few thousand, and yet the legislature took action to found a university. The committee said that "the cause of education in the Territory demands the early establishment of an institution of learning, which shall afford to the youth of the Territory an opportunity of obtaining a liberal, scientific, and classical education. . . . Men do not 'gather grapes of thorns, or figs of thistles,' neither does society grow virtuous citizens from the haunts of vice, or exalted minds from the abodes of ignorance and stupidity." The committee offered the opinion that to govern and restrain the ignorant is far more difficult than to educate and fit men to govern themselves, and then it went on to say that the children of that pioneer day were the citizens and rulers of the future, upon whose education depended the character and destiny of the infant commonwealth. The great immigration of folk to Minnesota had not then taken place, but the leaders who wrote that document spoke the faith and standards of thousands to come. They illustrated the trait of frontier hope coupled with planning and work. They also blended into Minnesota traditions, other traditions that went back to 17th century New England. And however one may describe these traditions, they merge with that of the stubborn drive for enlightenment and the fight against ignorance.

The episode from the birth of the university could be accompanied by illustrations touching all the colleges and the schools of the State as well as the many churches of different, but usually related, faiths—and indeed all our institutions, including this society of history, which began with hopes of service through an expanding future. I have always thought that the founding of the historical society back in 1849 was less a bow to what Governor Ramsey called "history in a land of yesterday" than it was a confident and brave approach to the land of tomorrow. The pioneers created this society because they believed in the promise of Minnesota. They believed that Minnesota would have a great history, the records of which would deserve to be kept and cherished. This institution was an act of faith done in harmony with the faith of Minnesota in its own future.

Today we are hard bitten by the ordeal of war and the problems of an atomic age. Talk about faith may fall on cynical or frightened ears, but I think we should realize that there is such a thing as faith in good purposes and in the human integrity behind such purposes. Unless we have faith and back it by resolute action, we may have to resign ourselves to the fate of a static society—a society driven by fear and cowardice instead of confidence and courage.

This brings me to another aspect of our history. Mighty forces in agriculture, indus-

try, and the transition from a general to a specialized society compelled the state to adapt its ways and methods as it moved into the machine age. Transfers of ideas from the East and from Europe had, indeed, gone hand in hand with experiment in the pioneering days, but as the need for modern transition came our people developed more and more the practice of experimentation, coupled with advancing research as specialization equipped itself to solve new problems. Here we must recall some of the big things that happened as we grew to maturity. Our population jumped from about 6,000 to 1,750,000 in 1900. The frontier was pushed westward toward the Pacific. The railroad age came, with giants like James J. Hill; and lumbering, with other giants like Frederick Weyerhaeuser, arrived at its golden age. Minneapolis emerged as the milling center of the world. Seven iron men disturbed the sleeping giant Mesabi, and Minnesota became a producing partner in the American steel age. Articulate labor lengthened its stride, while agriculture, after serving King Wheat, struggled with the change to new and diversified crops. At the same time its protests gave vigor to political reform movements in the agrarian crusade. Inevitably government expanded its interests and activities and moved toward its present complex and wide-spreading range.

But in all this great change, it is evident that things did not just happen. We did not just grow, like Topsy. There was leadership. There was planning. There was experiment. There was courage. There were people in league with the future. Business and industry had an alert eye to new needs and opportunities and adapted its techniques and operations, sometimes with ruthless efficiency. Education met new needs in an age of specialization and research, and it embarked upon the universal education of our people, with opportunities for the gifted to carry their training to a high point. And the State proved that it was not afraid of experimentation and widened responsibility, though often it was conservatively slow to turn sound ideas and proposals into practical action.

Many examples of the new pioneering could be presented—and in all this, people again occupy the stage—the whole people in one sense, but also leaders of intelligence, vision, and courage. Conservation, once a dim idea, became a movement, and its prophet and explorer bore the fitting name, Christopher Columbus Andrews. But we were slow to act. He preached his doctrines for 2 decades until they were reinforced by calamity, the tragic Hinkley Fire, and then we acted. Sometimes great results flowed, outside governmental action, from the ideas and will of men of "hope and forward looking minds," to use a phrase applied to the Doctors Mayo. There is one of the memorable sagas of the State—that of imaginative surgeons who kept pace, and more than pace, with the age of transition, pioneering medical cooperation and a vast medical practice, employing research in every part of their enterprise, and blazing trails to high training in clinical medicine. In public health Dr. Charles N. Hewitt of Red Wing was a quarter century ahead of his time, but his ideas gradually took hold. A village minister, Hastings H. Hart, laid the foundations of our advances in social welfare and public institutions, while a social pioneer, LeGrand Powers, stirred the people, with his painstaking reports, to State intervention in behalf of better conditions for labor and industry. So we could find leaders in parks and playgrounds, the cooperative movement, State regulation of railroads and warehouses, education, and many other fields, rallying the people to achieve better conditions of life. We have a tradition of research and experiment, and today in scores of fields Minnesota knows well that research is no remote ivory

tower, but a dedicated service to State and people, as is most recently illustrated in the story of a modern scientific explorer who, like Radisson, wanted to know, and whose researches have helped to open up the new taconite industry of the north country.

When our State saga is written as one day it should be, it will catch up and interpret such factors as our mobility, our age-long interrelations with nation and world, and the special flavor of a people who have interwoven many cultural and national strands and combined cultural transfers from Europe and the American East with the newer ways and ideas that are American and mid-western and Minnesotan.

Each one of these themes is an unwritten book of interpretation. Our historians are too afraid of interpretation, but I think we need interpretation as one of our roads to understanding. Look, for example, at this business of mobility. Here we share in and reflect the national character. An essayist in the Yale Review has described the American as "the moving American." We played leapfrog with our lands, as even a colonial American observed. We moved from frontier to frontier. We moved from country to town. We moved from crop to crop, from job to job, from level to level; we moved from cabin to house and house to house or apartment. Our story is migration. It is search for freedom and for advance; it is pursuit of happiness. Land frontiers disappeared, but we continued to move. We moved socially, economically, and politically; Henry Ford widened our front yard; and if we couldn't go away on wheels, we moved vicariously with the aid of radio and television and all the arts of communication. Perhaps the reflective life suffered, and it is true that we gained more stability as the frontier ended, but we have never stayed put. So a poet tells us that "America is west and the winds blowing," and another says that "Americans are always moving on." The tradition of migration finds a thousand illustrations in Minnesota. We move from somewhere or something to somewhere or something else. The tradition merges with those of space and freedom, of opportunity and democratic choice. Is it in our blood—this moving on?

The other two themes I have mentioned are very closely connected. We cannot understand Minnesota unless we understand that from the dim days when the flags of France and England and Spain flew figuratively over our lands, we have been part of the currents of world history. We have never been an isolated island, cut off from the world, as some commentators on isolationism have suggested. The wars and turbulence, ambitions and hopes, ideas and aims of Nation and world have, through all our history, left their marks upon this state and its people. Frenchmen sang their songs on our rivers; Scotsmen ran our fur-trading posts; our furs went out to London and Leipzig and Russia and even Canton, China; our northern boundary was set by international treaties; we have been caught up in national and international wars; and our people, only a generation after the state itself was founded, were two-thirds of European blood in the first and second generations. We have known a good deal about our organic connection with the world. Incidentally our once extensive immigrant press gave a better and more detailed picture of the affairs of the European world than did our English-language newspapers. We had a better schooling in international relations than some critics have known, though it is true enough that we shared the traditional American skepticism about foreign entanglements. We had a lot of work to do and we have not been too happy about being diverted from it. But it is no unexplainable phenomenon that a son of Minnesota in recent years was a leading American

voice in advocating world cooperation and control for justice and peace.

Meanwhile, we have been a merging cosmopolitan people, with bridges facing not only New England and the East but the many peoples and cultures of the Old World. Professor Krey once suggested that if Desiderius Erasmus of Rotterdam came alive and visited Minnesota today, he would find many things here that would be quite familiar to him. We have had and have pulsating links with the Old World from which we sprang. In the long run the Zangwill melting pot theory may come true, but the processes are slower than people once thought, and no one traveling about this State or studying its history can fail to realize that, to change the figure, our cultural streams, slowly merging, have identity enough to help stamp Minnesota with a certain individuality. Look about you and you see its signs everywhere—the leadership of New England and other native American forces in the launching of our professional life, our newspapers and banks and schools and commerce—the tough strain that Oscar Firkins caught when he praised a great teacher, Maria Sanford, “travel-soiled and dusty, vehement and gusty, kinked and knurled and crusty, leonine and hale and lusty, oaken-ribbed and trusty.” But alongside this wiry heritage, we should remember that many other elements in the making of the State have left their impress on its leadership and its everyday life. Our history must take account of a host of institutions, traditions, and practices that might be suggested by recalling our schools and colleges, Catholic and Protestant; the thousands of churches that enfold age-old faiths; the St. Olaf Choir and the sacred songs of hundreds of congregations; the sokol of the Bohemians; the kantele and sauna of the Finns; the Scandinavian and German singing and other musical societies; skiing and other sports; the German Turners, the Danish cooperatives and folk schools; our symphony orchestra and various institutes of arts; our creative literature and arts in wide range; and newer streams of trained and imaginative leadership. As Esther Jerabek has written, “Each nationality, bearing with it its own special heritage, has woven strands in the web of Minnesota’s cultural life, helping to make a rich fabric of unique design.” So we have had a schooling in tolerance and in the amenities of intercultural living as well as in the democratic spirit of the frontier, in which a man’s demonstration of worth, and not his pedigree or claims, give him status. This twin schooling may have helped Minnesota to weather with balance and fair sense some storms of intolerance, of hate, and the nasty fears and suspicions that feed on ignorance—though our record cannot be said to be without blemish.

As I near the end of this little excursion, I come back to the tradition of curiosity—to the will and courage to know and understand. It is characteristic both of our maturity and of the persistence of this tradition that we seem now to be in a period of self-appraisal. Lengthening perspective, the rich resources of the Minnesota Historical Society and of other institutions, and a sense of important decisions to come contribute to critical self-scrutiny. Much remains to be done, but historians are supplementing the earlier work of Dr. Folwell and others. Novelists, in their creative work, are going on from where Sinclair Lewis, F. Scott Fitzgerald, and O. E. Rølvaag left off. Historical appraisals are being made of schools and artistic institutions as well as of banks, mills, our iron industry, and other business organizations and forces. Imaginative leadership in our past is being recognized through biographies of the Drs. Mayo, Governors Johnson and Olson, and not a few others. Artists are joining in the task of interpreting Minnesota life and scenes. And the drive for appraisal is reaching into government. How far it will go in our social, cultural, intel-

lectual, educational, and political affairs I am not wise enough to say, but the impulse to know ourselves springs from an old tradition and it fits in with the spirit of an adult State that soon will celebrate its 100th State birthday.

However deep our concern with problems as we face the future, we should also recall some imponderables that are not too easy to put into words. The people of Minnesota have an affection for and a pride in the State which, if not quite so vocal as the rhapsodies of a Texan or Californian, are real and have substance. Who can analyze the deeper sources of affection and pride? Perhaps they are related to the sum total of our State heritage. Perhaps they are rooted in an awareness of things accomplished—things that, taken all around, have made this portion of the good earth a good place in which to live, notwithstanding worries and anxieties. I think that in part the emotion of affection flows from the fact that, with all the work and problems and crises and troubles and battles of people, they have been human and resilient enough to find joy and happiness and fun and reward here. This is not unique to Minnesota, but it remains true that the harshness of struggle has been abated by the genialities of community living and by the sense of progress toward better days. And the setting has been and is a State not denied a beauty and charm of its own, alongside the resources developed from earth and water and human effort. If we are moving Americans, we can move out from the confines of town to areas that still have a touch of the wilderness Radisson once saw. There are lakes of beauty; there are bending rivers, including the one the Indians termed the “Great River”; and there are waterfalls that inspired legends among our aboriginal redmen. There are cherished valleys and hills, deep woods and wide prairies, and red earth and black earth, all encrusted with natural and historic lore. And there are the material monuments of man’s dreaming and man’s industry.

It is only to superficial eyes that the gopher prairies are alike. There is both natural and man-created diversity in the State. Both for local and for State scenes, as indeed for the national scene, we need to remember that we are not just land and people and buildings and institutions, but that these, plus a world of ideas and practices, are bound together and given meaning by a past that stretches through all our ages and comes up to the ever-shifting line of the present. And we who are on that line could increase in wisdom by remembering with Shakespeare that “what’s past is prologue,” and that the prologue always merges into the ongoing drama.

Fewer Jobs, the Same Production

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. McNAMARA. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a comment about the sharp decline in employment in manufacturing industries revealed by figures from the Department of Labor and by Federal Reserve Board data. These figures show a loss of more than a million jobs among production workers in manufacturing employment alone in the past 14 months.

There being no objection, the state-

ment was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McNAMARA

The Federal Reserve Board index of manufacturing production for January of this year was the same as in November 1953, 14 months before. The index number was 132.

The dramatic and challenging thing about this figure is not alone the evidence that manufacturing production is in the doldrums. When this index is placed beside the Department of Labor employment figures for the same 2 months, the data show that this level of production has been maintained with a loss of more than a million jobs among the production workers in these industries. In January 1955, about 12½ million workers were able to produce as much as 13½ million produced 14 months before.

Employment drops while production is maintained, manufacturing industries

Date	Index of production ¹	Production worker employment ²	Index of man-hours ³	Indicated output per man-hour
November 1953.....	132	13,534,000	110	120
January 1955.....	132	12,528,000	102	129
Change.....	0	1,006,000	(7)	(9)

¹ Federal Reserve Board of Governors; monthly releases.

² Department of Labor, Bureau of Labor Statistics; monthly report on employment and earnings.

³ Minus 7 percent.

⁴ Plus 8 percent.

Taking into account the number of hours worked, we find that the number of man-hours put into the job has declined by 7 percent. Those who prefer to talk in terms of man-hour output will find that there has been an increase of about 8 percent during this short time.

I think these figures show very dramatically how fast our technological revolution is moving.

I would like to see evidence that the administration is conscious of what this means, and has the plans to turn this technological progress into higher living standards for all people, instead of for only those lucky enough to keep their jobs. I hope there are plans for protecting the workers whose jobs are melting away, so that they and their children are not forced to pay a heavy price in unemployment and the destruction of their living standards. So far, I have seen no such plans.

The job is not an easy one. If the administration takes it on, it will have the sympathy and help of all of us. If the administration continues to fiddle with optimistic forecasts about increasing production while unemployment continues to grow in our major industries, the cost to all of us will be great.

Tariff Reductions Authorized by H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, much has been said about the so-called gradual tariff reductions authorized by H. R. 1.

I have had a list prepared concerning a few items, such as textiles, which shows the maximum rate reductions permissible under H. R. 1.

The list follows:

Extent to which existing rates of duty on specified products could be reduced under the authority that would be given to the President by H. R. 1

Commodity	Ad valorem equivalent ¹ of present rate of duty	Ad valorem equivalent ¹ of lowest rate of duty permissible under H. R. 1	Extent of reduction which is permissible under H. R. 1 in present rate of duty
	Percent ad valorem	Percent ad valorem	Percent
Soybean oil.....	45	23	50
Flavoring extracts, fruit flavors, esters, oils, and essences, containing alcohol.....	67	50	25
Certain lead pigments.....	20	10	50
Chrome brick.....	25	12½	50
Block mica.....	27	13½	50
Earthenware table and kitchen articles.....	63	50	20
Decorated china table and kitchen articles.....	88	44	50
Certain glass containers for toilet preparations.....	75	37½	50
Lenses with ground or beveled edges (for spectacles).....	40	20	50
Certain scientific or laboratory instruments and parts.....	50	30	40
Thermostatic metal.....	50	25	50
Power-transmission chains and parts (low-value).....	30	20	33
Steel trouser buttons.....	12	6½	46
Pocket knives (low value).....	85	50	41
Hypodermic syringes (dental).....	60	30	50
Slide fasteners (zippers), metal (low value).....	66	33	50
Tennis-racket frames.....	45	22½	50
Scrap tobacco (other than Cuban product).....	103	50	51
Cigars and cheroots (other than Cuban product).....	116	50	57
Lard compounds and lard substitutes.....	32	16	50
Turkeys, dressed or undressed.....	23	11	50
Rosefish, fresh or frozen.....	49	25	49
Fish, in oil:			
Sardines.....	40	15	63
Tuna.....	45	38	15
Barley flour.....	23	11	50
Rice, cleaned or milled.....	25	12½	50
Cherries, dried or evaporated.....	39	19½	50
Candied citrons or citron peel.....	33	25	24
Fresh or dried dates in packages.....	60	30	50
Raisins.....	16	7	56
Prunes, etc.....	14	7	50
Almonds, unshelled.....	18	9	50
Lemon juice, concentrated.....	85	50	41
Countable cotton cloth (low value).....	40	20	50
Cotton corduroys (high value).....	30	15	50
Cotton blankets, Jacquard-figured.....	30	22½	25
Cotton sheets and pillow cases.....	20	10	50
Gloves and mittens of cotton knit fabric (low value).....	60	30	50
Cotton handkerchiefs and woven mufflers.....	30	20	33½
Friction or insulating tape.....	40	20	50
Cotton rag rugs.....	75	40	33½
Fine clothing wools.....	30	20	33½
Worsted and woolens (low value).....	60	50	16½
Wool blankets, plain or embroidered (low value):			
Hand-woven.....	64	21	67
Other.....	63	50	21
Wool felt hats, blocked, trimmed, etc. (low value).....	60	42	30
Certain wool tapestries and upholstery goods.....	48	37	23
Broad silks (wide), Jacquard-figured, bleached, printed, piece-dyed (low value).....	65	32½	50
Silk handkerchiefs, hemmed or hemstitched (low value).....	60	50	17
Rayon knit underwear (high value).....	36	18	50
Copying paper (high value).....	29	14½	50
Envelopes, filled or unfilled, lithographed, made from various kinds of paper.....	35	12	66
Wrapping paper, sulfite, machine-finished.....	20	12½	38
Imitation solid pearls (low value).....	60	30	50
Tooth brushes (with handles or backs of materials other than cellulose, etc.) (high value).....	31	15½	50
Hair and other toilet brushes (with cellulose handles or backs).....	60	30	50
Pearl or shell buttons.....	83	50	40
Cork insulation pipe coverings, etc.....	22½	11	50
Certain plastic dolls.....	90	50	45
Certain abrasives.....	60	30	50
Dressed furs.....	12½	7	44
Silver, black, or platinum fox wearing apparel.....	37½	25	33
Men's and boys' fur or fur-felt hats.....	50	30	40
Women's and girls' fur hats.....	45	30	33½
Metal articles, such as compacts, vanity cases, cigarette cases, etc. (low value).....	65	50	23
Various kinds of articles (except wearing apparel) in part of machine-made lace.....	65	45	31
Lace window curtains (except cotton Nottingham lace curtains).....	90	45	50
Hat brads (except of straw, paper, grass, ramie, etc.).....	90	45	50
Leather footwear (various types).....	20	10	50
Leather gloves (various kinds).....	30	20	33½
Tobacco pouches (except of leather).....	60	30	50
Tobacco pipes with bowls of briar wood or other root, partly finished (medium value).....	85	40	27

¹ Based on imports in 1932.

² About.

³ Value bracket established in 1930. Since then, values have increased about threefold, consequently cloth of this value does not exist in normal trade channels.

Why VEPCO Wants TVA Sold

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I issued discussing the action of Virginia Electric & Power Co. in circulating Dean Clarence Manion's proposal that TVA be sold.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

A shareholder of the Virginia Electric & Power Co.—known as VEPCO—has sent me a piece of literature being circulated by the company among its shareholders.

It consists of a printed copy of an address delivered by Dean Clarence E. Manion on last November 28, in which he urges the immediate sale of TVA, recalls that he once before proposed this before he was fired as Chairman of the Intergovernmental Relations Commission, after which President Eisenhower said he was "shooting from the hip," and stated that if this "be treason to the TVA brand of socialism, then Senator KEFAUVER can once more make the most of it."

In their letters to the shareholders J. G. Holtzclaw, president, and D. C. Barner, chairman of the board of VEPCO, refer to Dr. Manion's address as a "forthright statement of facts," and a statement of "the fundamentals of the American way of life."

The statement is not a statement of facts by any means, but I believe the shareholders of VEPCO, and even more the ratepayers of VEPCO, would be interested in why this utility wants the TVA sold.

One can get an inkling of why by examining their rate structure. VEPCO users in Alexandria, for instance, pay \$7.25 per 250 kilowatt-hours, while right across the Potomac River in Washington—an actual stone's throw for George Washington according to legend—ratepayers of another private utility pay \$5.84 for the same amount.

At the other end of the VEPCO system, the TVA end, the same bill for TVA users is \$5. Naturally, along with their allies on the western side of TVA—the Dixon-Yates combination—VEPCO is set on destroying this example of what is a fair bill for power.

Prior to merger of the two companies which formed VEPCO—and took over substantial domination of power in Virginia—the Federal Power Commission required them to write off more than \$28 million of inflationary items—mostly water—on their books. "Inflationary items" is another way of saying items used for the purpose of building up a high-rate structure and milking the public.

That the day of inflationary items is not entirely over would be indicated by the fact, which also should be called to the ratepayers' attention, that they pay for the printing and mailing of the misleading and non-

factual propaganda which I am talking about when they pay their power bills. It all becomes a part of the expense of operation.

It might also be mentioned in passing that this propaganda being circulated by VEPCO, while so many of our friends are out making speeches eulogizing Abraham Lincoln, is the statement of a man who says he doesn't agree with Lincoln.

On the broadcast at which Dean Manion proposed sale of the TVA, he was asked by Mr. William Wise, one of the panel: "Dr. Manion, I wonder if you agree with my favorite Republican of all times that the Government should do for the people that which they cannot do for themselves or that which they cannot do so well for themselves; I refer, of course, to Abraham Lincoln."

And Dr. Manion's reply was: "No. I do not agree with Abraham Lincoln."

Apparently VEPCO doesn't either.

It is highly important that the Senate Antimonopoly Subcommittee, which did such fine work in this field under the chairmanship of Senator WILLIAM LANGER last year, move rapidly ahead with the investigation under Senator HARLEY KILGORE's chairmanship this year, and I am confident it will.

A thoroughgoing inquiry should be made into possible savings of hundreds of millions of dollars annually to the ratepayers of the Nation.

Bill of Rights Day

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered at Chicago, Ill., on December 5, 1954, by Irving Breakstone, State commander of the American Legion, Department of Illinois, on the occasion of the 163d anniversary of the establishment of the Bill of Rights.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BILL OF RIGHTS DAY

(By Irving Breakstone, State commander, the American Legion, Department of Illinois)

On the 163d anniversary of the adoption of the Bill of Rights amendments to the Constitution of the United States of America, it is altogether fitting that we pause in tribute to the memory of the great men of our Nation who drafted the original document to which the Bill of Rights was made a constituent part. Under our Constitution, this Nation has enjoyed, and still continues to enjoy, the highest standard of living ever attained in history. We are an orderly society, with liberty and freedom for every citizen, in a measure seldom, if ever, equaled, and never eclipsed, on this earth.

Only 22 amendments have been attached to the Constitution. Of these, the first 10 constitute the Bill of Rights, which we celebrate today. These 10 were added because the conventions of several States refused to ratify the Constitution in its original form until they had been assured that the Bill of Rights would be made part of it.

The fourth and fifth amendments to the Constitution give us a clue to the genesis of the Bill of Rights. It is a reference to the ancient right expressed in the phrase, "Every

man's house is his castle." Lord Coke expressed this principle nearly 400 years ago when he stated: "The house of every man is to him as his castle and fortress, as well as for his defense against injury and violence as for his repose." At that time this principle had been the law of the land for more than a thousand years.

The makers of our Constitution and the framers of the first 10 amendments were never tired of quoting these immortal words of the elder Pitt:

"The poorest man may in his cottage bid defiance to all the force of the Crown. It may be frail; its roof may shake; the wind may blow through it; the storms may enter; the rain may enter—but the King of England cannot enter. All his forces dare not cross the threshold of the ruined tenement."

When ratification of our Constitution was pending before the Virginia convention, the eloquent patriot, Patrick Henry, declared that he was "most awfully alarmed," that the document threatened the liberties of his country, among other reasons because it lacked a Bill of Rights. Henry challenged the view of James Madison, the so-called father of the Constitution. He challenged the views of the galaxy of scholars and statesmen who had drafted the Constitution and even that of the eminent George Washington, who had presided over the Constitutional Convention.

The Virginia convention, after prolonged debate, ratified the Constitution by a bare majority of 10 votes, but only after James Madison had pledged his word that, at the earliest opportunity, he would use his energy toward placing in the Constitution the requisite amendments guaranteeing each citizen's rights, privileges, and immunities.

As soon as the Virginia convention had finished the work of ratification, it adopted resolutions for the addition of a Bill of Rights as demanded by Patrick Henry, and these resolutions were forwarded to the governors of the various States.

The first measure considered by the First Congress of the United States of America under the new Constitution was a bill to raise revenue to pay the expenses of government. On July 21, 1789, James Madison, then a Member of the House of Representatives, introduced the second measure. This was a resolution to consider amendments to the Constitution in accordance with the pledges of faith and honor which had been made by public men everywhere in securing ratification of the Constitution.

The Bill of Rights amendments were ratified by the States within 2 years and 3 months. Thereafter, as far as Americans are concerned, and as far as the Constitution itself is concerned, they became as much a part of the original Constitution as if they had been signed on the 17th of September 1787, when the main instrument itself was signed.

The 10 amendments constituting the Bill of Rights are restrictions upon national power. All the rights and immunities enumerated were already in existence. They did not owe their origin to the Bill of Rights. As had been stated in the immortal Declaration of Independence, these rights were inalienable and had come from the Creator. The Constitution was established, among other purposes, to make these God-given rights secure against oppression, secure against oppression even from the Government which the Founding Fathers were setting up.

The Bill of Rights amendments deal with 13 points covered by the opening words, "Congress shall make no law." The first 4 points view the citizen as a soul, or mind. Religion, speech, the press, public assembly—all reflecting man as a spiritual being—shall be forever free from interference by Congress. The next 3 points protect the

citizen's person, home, and effects from high-handed, star-chamber methods of government, such as are practiced in every totalitarian country today. The next 4 define the citizen's rights when involved with the criminal law.

These 11 points are double-clinched by the last 2—the 1, warning that failure to mention a particular right in the bill must not be construed as denying that right's existence; the other, warning that a power not granted to the Federal Government is not thereby left ownerless but is reserved in full to the States or to the people.

The Bill of Rights is the law the people lay on their Government, but—notice—not on themselves. They themselves violate it with impunity. They constantly deprive others of what they will not permit Congress to deprive them. Does religious persecution exist in this country? Certainly, both public and private. Is free speech ever restricted by force and violence and boycott? Why, peaceable public assembly has been at the mercy of the mob in any number of our communities. Have you ever heard of the forcible invasion and destruction of private property in this country? Many times. And other rights also have been violated or denied. The law is written in the Constitution, but not on our hearts—which alone makes a law effective. Otherwise, all of us would know what some of us do not know, that to keep our own rights, we must respect the rights of others.

This great charter of the American—the American as a soul, as a citizen, as a political sovereign—has come to its 163d anniversary in circumstances emphatic with warning that rights entail duties. Evade the duty and you lose the right. May this anniversary serve to engrave sharply the meanings of both in the deep places of our minds.

The faith of our forefathers gave them the strength to plan for the ages. May we, with equal faith, guard our birthright and hand it down to posterity so that this heritage of liberty and this Nation, under God's will, may long endure.

Fifty-seventh Anniversary of the Sinking of the Battleship "Maine"

EXTENSION OF REMARKS

OF

HON. FREDERICK G. PAYNE

OF MAINE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. PAYNE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief statement I have prepared on the 57th anniversary of the sinking of the United States battleship *Maine*, in Habana Harbor.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PAYNE ON THE 57TH ANNIVERSARY OF THE SINKING OF THE BATTLESHIP "MAINE"

Today is the 57th anniversary of the sinking of the battleship *Maine* in Habana Harbor. It was a peaceful Sunday evening when an explosion tore that great ship apart as it lay peacefully at anchor. Two hundred and sixty-six officers and men died in that tragic event.

The *Maine* was in Habana on a friendly visit to protect American interests while the people of Cuba struggled for independence against tyranny.

A great wave of patriotic fervor swept the country. The sinking of the *Maine* aroused and united the Nation to intervene and help the Cubans gain their freedom and independence. The cry "Remember the *Maine*" echoed across the land.

The Spanish-American War was our first overseas war in the cause of freedom. In the past 57 years Americans have fought and given their lives for the cause of freedom in the fields of Flanders and on far off Pacific Isles in world wars and police actions.

Today, four veterans of the Spanish-American War still serve in the Congress of the United States. Three are Members of the Senate—the Senator from Pennsylvania [Mr. MARTIN], the Senator from Rhode Island [Mr. GREEN], and the Senator from West Virginia [Mr. NEELY]. One is a Member of the House—Representative BARRATT O'HARA, of Illinois.

It is particularly fitting today that we pay tribute to those who lost their lives on the valiant *Maine* and to all those who served in our Volunteer Army in the Spanish-American War. They served the cause of freedom well. Oppressed people everywhere can take courage from the fact that the spirit of the *Maine* lives on in America today.

Florida Vacation Season Flourishes Without Vice and Crime

EXTENSION OF REMARKS OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES
Tuesday, February 15, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD one of the best answers to the contention that a resort area must have vice and crime. The Senate Crime Subcommittee, in its investigation in Florida a number of years ago, was met with that argument. The answer lies in the resort and vacation experience of Florida, and is contained in an article written by Frank Eidge, Jr., published in the Fort Worth Press of February 3.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FLORIDA'S "GOLD COAST" EXPECTS RECORD SEASON MINUS VICE, CRIME
(By Frank Eidge, Jr.)

MIAMI, February 3.—The Florida Gold Coast is on the threshold of a record season but with gangsters, gambling casinos, call girls, and big-time bookies in short supply.

This may be the biggest winter ever and the swarm of visitors make the conceivers of the Florida boom 30 years ago appear short-sighted pessimists.

Officials of the rich sun-strip, running between the ocean and the Everglades from Palm Beach south to the Florida Keys, now have the more difficult job of providing enough roads, bridges, parking places, jobs, and land to handle the tide of vacationers and permanent new citizens.

The tourist season won't reach its height until mid-February but already airlines have reported passenger flow up as much as 47 percent over last year. Railroads said their trains were 6 percent fuller and U. S. 1, the east coast highway artery into Miami, is carrying 50 percent more cars than last season.

Miami hotels are about 90 percent full, according to J. J. Shephard, president of the Greater Miami Hotel Association.

On Miami Beach, most top-flight ocean-front hostleries are nearly full and the occupancy over-all is about 70 percent despite a big increase in the number of lodgings available.

The miles of glittering hotels (more than 400) and fancy motels represent a \$200-million-a-year business. And by the middle of February, they will be crowded.

One of the season's barometers is the horse parks. Tropical Park closed a near-record season recently and Hialeah's first week showed a 7-percent gain in betting and 4.6-percent rise in attendance. Dog tracks and jai alai games showed similar surges.

Some second-class night clubs are having rough sledding to meet the competition of the big-name spots and the growing list of hotels offering star performers for after-dinner entertainment.

Long lines form nightly at eating places and even at the movies. Miami Beach is about the only place that can televise a prizefight locally and still draw nearly 4,000 persons to its auditorium.

Prices are high—about the same as last year. But Miami Beach remains the place where you can hunt out a night's lodging for \$3 or take over the wing of an ocean-front hotel, like the Shah of Iran, for nearly \$1,000 a day.

Daniel P. Sullivan, director of the Greater Miami Crime Commission, says the gold coast isn't anything like the old days.

"There are a few small-time floating crap games, a lot of loose girls willing to be picked up for money, sneak bookies, and like, but none of the organized, wide-open vice like we had just after the war," Sullivan said.

The real-estate boom is in full surge, with developers building whole cities of 10,000 homes on reclaimed Everglades land and beach hotels going up at a unit cost of \$26,000 a room. Luxury-hotel building won't last long, however, for south Florida is running out of beach space.

Even the old boom-time dodge of selling lots by mail has sprung up again and penants of the land-office promoters dot the sandy scrub and pine woods of Florida's coastline.

The Foreign Operations Administration

EXTENSION OF REMARKS OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES
Tuesday, February 15, 1955

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "World's Costliest Baloney," published in the New York Daily News of February 7.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORLD'S COSTLIEST BALONEY

Since 1948, United States taxpayers have handed over \$40 billion to foreign countries. In that period, also, we have anted up half a billion dollars (that's just 500 millions) for overseas propaganda, to induce our charity beneficiaries to appreciate us and love us dearly.

Strangely, despite these unprecedented giveaways, we don't seem to have any more international friends and sincere allies than we had in 1948. Maybe not as many. And

lots of people, at long last, are beginning to ask why.

As it happens, one highly qualified American has just come up with some interesting answers to this one. Eugene W. Castle has been a leading producer of documentary films. During World War II he distributed training films and other movies for the Army, Navy, and Red Cross. He is a real pro who knows his public relations onions.

UNPOPULAR PROPAGANDA

Mr. Castle recently completed a 3-year, 75,000-mile trip around the globe, at his own expense. He looked carefully into our multi-million charity and propaganda setups. He's fit to be tied. His angry and revealing findings have just been made available in book form: *Billions, Blunders, and Baloney*; Devin-Adair; 278 pages, \$3.50.

How much good has our half-billion bucks' worth of movies and printed propaganda done us in Europe, Asia, and Latin America? Almost none, this expert snorts. Perhaps the 10,000 well-meaning press agents, psychological warriors, and drooling dogooders on our United States Information Agency payroll have even netted us some real harm. Most overseas people resent and are bored by anybody's propaganda, including ours.

These same folks will gladly stand in line for a look at a nonpropaganda Hollywood movie, or to pick up a copy of a genuine United States magazine or newspaper. They're delighted to read the objective, unsalted news of our Associated Press (which operates its global day-and-night wire services with a mere 3,000 employees). But movies and writings produced by USIA's 10,000 tax-supported geniuses are seldom seen or read, and wouldn't be believed, anyway.

"NEVER HAD IT SO GOOD"

Mr. Castle works up an even higher head of steam, if possible, when he gets around to discussing Childe Harold Stassen's fantastic Foreign Operations Administration (FOA), which "picks the pockets of Americans in billions," instead of just millions.

Stassen's sprawling, almost unbelievable outfit, Castle reports first-hand, shovels out astronomical quantities of cash and goods to such unpredictable nations as Yugoslavia, Italy, Egypt, Indonesia, and India, but never is so rude as to ask what Uncle Sam's getting in return. Chief beneficiaries, says Mr. Castle unkindly, are the FOA bureaucrats who are determined to stay glued to the Washington payroll, with fine, envy-provoking overseas homes and at salaries "in excess of what most of them ever earned in private stations or can ever hope to earn again."

On the strength of what his horrified eyes have seen, Castle recommends that those costly FOA and USIA circuses either be dumped or carved to the bone. We'd say those sensible reforms can't start too soon.

The Merchant Marine and Our Foreign Policy

EXTENSION OF REMARKS OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES
Tuesday, February 15, 1955

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address entitled "The Merchant Marine and Our Foreign Policy," which was delivered by Mr. Alexander Purdon, executive director of the Committee of

American Steamship Lines, before a joint meeting of the national security and foreign relations commissions of the American Legion on January 27, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE MERCHANT MARINE AND OUR FOREIGN POLICY

(By Alexander Purdon, executive director, Committee of American Steamship Lines, before a joint meeting of the national security and foreign relations commissions of the American Legion, Statler Hotel, Washington, D. C., January 27, 1955)

I have been asked to speak today on An Arm of Diplomacy, and I am grateful to the person who conjured up that title for giving me a fresh slant and a new reason for an American merchant marine.

But I would ask your indulgence if I expand the topic slightly and discuss our merchant marine as an instrument of national policy.

Although I sometimes think that the trouble with our diplomacy is that it is too diplomatic, this is not my sole reason for enlarging the topic.

Nor do I propose to attach more importance to our merchant marine than is its proper due in our total transportation system. Yet, since our merchant fleet is an international link, it has a particular significance.

I honestly believe that the United States has erred in not considering its merchant marine as an instrument of national policy.

To be sure, it is national policy that we must have an American merchant marine for our commerce and our defense, but this is quite different from considering it as an instrument of our total national policy and particularly of our foreign policy. On the contrary, it has sometimes appeared that the necessity for a merchant marine was an unwelcome consideration to our foreign policy planners.

While our foreign policy is always fluid and at times, perhaps, difficult to define, it surely divides most easily into trade policy and defense policy. There are many other facets to it, but these, you will agree, are the most important.

Mr. Dulles will probably not appreciate my help, but at the risk of incurring his displeasure, I would venture that our trade policy is basically directed at maintaining an expanding American economy and promoting increased world trade. But the reasons are not entirely selfish. It is not trade merely for trade's sake or for our own economic advantage. Our trade policy, I believe, has a broader, a firmer foundation in the realization that improved opportunity for the peoples of the world is a powerful antidote for communism.

Thus, our trade policy is inextricably mixed up with our defense policy, because the economic strength of our Nation and of all free nations is, in itself, a very important defense consideration, and our ability to out-produce a potential enemy may be our greatest advantage still if the race for atomic superiority results in a stalemate.

Foreign-trade policy is going to be a major topic for debate in this session of Congress. It will be a battle royal between the protectionists and those who favor liberalization. The chances are there will be no clear-cut victory. Nevertheless, when the tumult and the shouting die, we will probably have edged a little further in the direction of more liberal foreign-trade policies.

But whatever the outcome, it is crystal clear that a merchant marine is essential to any sound foreign-trade program. How can you sell if you cannot guarantee delivery?

Oddly enough, some have considered our merchant marine as expendable—something

to be bartered away in return for a trading advantage elsewhere.

Those who hold that view fail to see that without our own merchant fleet our foreign-trade policy could be controlled by those nations with the foresight to use their merchant fleets as instruments of national policy.

It isn't just sentiment that suggests the desirability of having American goods transported under the American flag. It's good sense as well as sentiment. I think it is good diplomacy, too, and it makes no difference whether it is aid cargo or commercial cargo. We gain a great psychological advantage when peoples in other countries can identify, whether as gifts or purchases, the products of the American economy and of the democratic system which makes it possible.

Since the end of World War II, we have practiced a new kind of dollar diplomacy. In fact, we have poured some \$50 billion into the restoration of the free nations. This is a kind of dollar diplomacy of which we need not be ashamed. While there has been criticism, and some with good reason, it has nevertheless produced rewarding results. One has only to look at the tremendous strides that have been made toward economic self-sufficiency in Europe to appraise the merits of our various aid programs. Economic aid has proved so effective that it is becoming a major offensive weapon in the world struggle against the force of communism. It is indicated that this may be one of the chief weapons we will use in southeast Asia. I venture to say that we will continue to improve the effectiveness of our economic aid. No, this is not dollar diplomacy of the old type. This is diplomacy with a high moral purpose yet based upon sound and practicable considerations. This type of program would be impossible without merchant shipping, and so our merchant marine must be considered an instrument of our foreign economic policy.

In addition to furnishing aid, we also want to increase our trade with other nations. As a matter of fact, we hope that trade will supplant aid and make it unnecessary, or at least reduce it. Here, again, a healthy merchant marine is essential to an expanding foreign trade. The United States is the world's biggest market and the world's biggest supplier, but increasingly other nations, as they restore their economies are entering world markets and giving us healthy and effective competition. We simply cannot depend upon our competitors to carry our products. That doesn't make sense.

Our expanding economy requires that we sell more and more of our products abroad, and the advocates of the more liberal trade policy tell us that to sell more we must buy more. Here again, in the expansion of two-way trade with other nations, the merchant marine is an indispensable instrument of trade policy. The American ship operator is the partner of the American producer in selling our goods abroad, and he is the partner of the American importer in obtaining raw materials from foreign sources. He is aggressive and alert to the opportunities that exist in foreign markets. He is a roving ambassador for American business.

However, despite its commercial utility, it is perhaps in the field of defense that we have the most dramatic evidence that our merchant marine is an instrument of national policy. In the headlines of this week, there is now proof that we have world responsibilities on which our own freedom ultimately depends. We cannot fulfill these commitments—we cannot draw defense perimeters—we cannot guarantee the security of friendly nations, far across the seas, unless we can reach them and supply them with the men and the materials necessary to our mutual defense.

There is, perhaps, no more eloquent testimony to the role of our merchant marine as an instrument of our national defense policy than the words of Admiral Carney. Let me quote them for you:

"With amazing speed Russia is emerging from her land-locked situation and today must be counted as a nation of great maritime potential."

"Perhaps the strangest aspect of this ever-widening air age in which we are living is that rather than the air lessening the strategic importance of the sea, actually the truth is that airpower has made the sea more important than ever. For airpower has increased the load on our maritime forces; increased the requirements of our Nation for overseas bases as well as raw materials, many of which must be brought in from overseas. Most of the world's commerce, as in the past, is still seaborne; nor is there any anticipated change in this situation for the foreseeable future. The vast bulk of the supplies transported in time of war must be moved by sea. The sea is still the main highway between allies when it comes to the transport of the millions of tons of commodities which must be moved and exchanged to keep alive the economies of the countries of the world. As long as this holds true, control of the sea for our own uses and its denial to any enemy will remain a vital factor in security and defense."

I know that aviation is making rapid strides, and we have heard of great new air cargo carriers being planned, but nothing we have now or nothing that would appear available in the foreseeable future can replace the merchant ship as a floating pipeline joining the vast industrial and military potential of this Nation to our farflung bases and allies overseas. Those who have thought of this as an age when air transport would completely supplant ocean transport would do well to remember the dramatic message from the *Nautilus* under way on nuclear power. Ocean transport will gear itself to the atomic age. Effective transportation is the very core of our defense, and that means transportation of all kinds, but it is when we speak of transportation overseas that we recognize the merchant marine as an indispensable instrument of our defense policy.

There is no escaping the fact that it costs money to maintain an American merchant marine just as it costs money to maintain our Defense Department. Actually, the cost of maintaining the merchant fleet is a little more than one-half of 1 percent of the defense budget.

For the next fiscal year, the Maritime Administration has requested \$103 million for ship construction and \$115 million for operating subsidies. A substantial portion of this latter amount is to pay for past-due Government obligations.

These operating subsidies are the Government's share of the cost of having a privately owned and operated American merchant fleet of over 280 modern vessels servicing 29 essential world-trade routes. This fleet completed almost 1,500 voyages last year to provide American business and agriculture with a global network of regularly scheduled American-flag transportation service.

This is by no means a haphazard operation. The essential trade routes served by this fleet are established by the Government after careful investigation and constant review to link our economy with world markets.

These operating subsidies based on parity are in a sense an investment in our foreign trade. They are insurance that we will have access to world markets and world sources of supply. They enable us to maintain a hard-core nucleus merchant fleet in being for emergency use.

The construction subsidy enables us to keep an active shipbuilding industry going

as part of our mobilization planning. This is a partnership arrangement between American business and the United States Government. Both make a contribution, both assume obligations and responsibilities, and the end result is a sound investment to the American taxpayer.

Each American pays a small proportionate share of support to the American merchant marine. He is entitled to know the personal benefits he gets from that expenditure. He ought to know, too, how much we paid in the past because we neglected to adopt a prudent and long-range maritime policy.

Thirty-four Presidents of the United States have acclaimed the merchant marine as essential to our national defense, which convinces me that it is also invaluable to my personal security.

The United States is now stockpiling 75 different materials, 50 of which are metals and minerals. We are self-sufficient in only 5 strategic metals and minerals.

American industry depends upon imports for current production requirements of such necessary metals as aluminum, antimony, bauxite, cobalt, copper, lead, zinc, tin, nickel, platinum, manganese, mercury, and tungsten. Copper, lead, and zinc are three of the most important metals in our industrial economy. This convinces me that our employment, our economy, our security and living standards as we know them, are closely tied to imports made possible by ocean shipping.

It has been estimated by the President's Materials Supply Commission that the output of goods and services in the United States by 1975 will be double that of 1950, resulting in an increase of about 90 percent in our requirements for minerals. This points toward increased dependence upon ocean trade lanes.

Studies conducted by the Committee of American Steamship Lines, to determine the importance of ocean shipping on inland States, indicate that no man can prudently disassociate himself from the importance of the world trade carried on by ocean ships.

If he is a farmer 1 acre in 10 on his farm is raising crops for export.

If he works in the industrial or commercial field, chances are very high that the product he helps manufacture or merchandise depends upon imports for raw materials or foreign markets for production volume. There is no person in this Nation whose daily life and whose personal security is not in some way affected by the presence of a merchant fleet under the United States flag.

But it is easy to forget that the American merchant marine directly benefits the American economy. While it is available to serve as an auxiliary to our Armed Forces in time of war, the American merchant marine is also a substantial customer of American business. The operation of a single ship, the *United States*, contributed more than \$18 million in 1 year to the domestic economy, but despite the fact that we have to appropriate money to maintain the merchant marine, there are very tangible benefits in return. I venture to say that when all the benefits, including its availability for defense are balanced against all the expenditures, the merchant marine will prove to be a dividend producing investment.

We cannot maintain our economy without ships. We cannot trade without ships. We cannot obtain the many raw materials we need without ships. We cannot defend ourselves without ships. We cannot help defend our allies without ships. The solvency and security of the United States require a better understanding of the vital role which the American merchant marine plays as an instrument of our foreign policy—as an arm of our diplomacy.

A strong America is a safe America.

The Situation in Asia

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful and interesting article entitled "The Risks War," written by Chalmers M. Roberts and published in the Washington Post and Times Herald of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RISKS WAR

(By Chalmers M. Roberts)

STILL SEEKS PEACE IN ASIA

President Eisenhower seeks peace in Asia and a live-and-let-live arrangement with Communist China. But the American position today entails the most serious risks of war.

These risks arise from the protective American military umbrella which the United States has thrown over the Nationalist-held Quemoy and Matsu Islands just off the Red China coast.

To be sure, the commitment is unilateral on our part. We have given Chiang Kai-shek no pledge and we are willing to withdraw the protective military umbrella if Peiping will undertake not to attack Formosa and the Pescadores.

But Red China has been intransigent. The United Nations cease-fire discussions have gotten nowhere. Efforts to arrange a peace conference outside the U. N. thus far are likewise unsuccessful.

Therefore, if Red China decides to assault the offshore islands, the United States may be committed to war which would be most difficult to limit to the immediate area.

The United States Government appears determined to stand and fight if challenged. In that case, these are some important considerations:

The United States can expect to have allies if Formosa is attacked but many nations would be reluctant to join in fighting confined at the start to the offshore islands.

It would be just about impossible for the United States to rate any Red assault on Quemoy or Matsu as a local action rather than as a move preparatory to an assault on Formosa itself. Hence the unilateral commitment must be honored.

Any assault on Quemoy or Matsu would certainly mean air clashes between Communist and American planes since control of the air over a battlefield is vital. If Chiang's manpower is to win the ground fighting we would have to control the air.

Chiang has about one-third of his 300,000 or more men committed to the offshore islands. Their loss would seriously affect his ability to defend Formosa itself from assault.

As of today, the Communists probably have sufficient air power not only to control the air over Quemoy and Matsu, but also to prevent the reinforcement of the islands by ship from Formosa. Reinforcements of men and supplies for Chiang would be necessary if Peiping were to throw a big part of its massive army at the offshore islands.

For the United States to gain air supremacy, both to protect the immediate battlefield and to permit reinforcements, immobility

of Communist bases would be necessary. That is, air strikes would be necessary at Red bases on the mainland. The United States is determined that there will be no "Yalu sanctuary" if fighting starts. Once strikes began on the mainland, pressure for striking deeper into China would mount with the intensity of battle.

If there should be serious American reverses or casualties, there would be both pressures and temptations to use nuclear weapons.

All of this illuminates the choice which would face the President, who has said he alone would give the orders for any American action beyond self-defense or against an immediate threat to Formosa and the Pescadores.

Why should Peiping assault the offshore islands? Success would seriously damage the political and military power of the Communists' hated enemy, Chiang. Success probably would end the threat of Nationalist manpower if there should be war later in Korea or southeast Asia. Success would seriously weaken the resolve of America's other allies in Free Asia—the Filipinos, the Japanese, the Siamese, the Vietnamese. And success would remove a military block to the "liberation" of Formosa itself.

For exactly these reasons the Government of the United States feels compelled to resist an attack on the offshore islands under the present set of circumstances.

Washington officials, both in the administration and at the Capitol, generally expect Communist "probing" actions to test America's determination.

What the President is trying to get is a peaceful solution in the Formosa Strait that could lead to diminution of tension throughout Asia. To get it, the United States is taking a gamble that, in the event of failure, could lead to war of unlimited scope and uncertain outcome.

Eisenhower's Crusade Compared to Lincoln's

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very thoughtful article written by Mr. Gould Lincoln and published in the Washington Evening Star of February 12, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EISENHOWER'S CRUSADE COMPARED TO LINCOLN'S—ARE HAD TO FIGHT FOR UNION; IKE MAY FIGHT FOR PEACE

(By Gould Lincoln)

The Republicans today pay tribute to Abraham Lincoln, the man who more than any other saved the Union. He had to fight for it.

Another Republican President, Dwight Eisenhower, is now engaged in a crusade to keep this Nation and the world at peace—even if he has to fight for it. Lincoln was the target of bitter partisan political attacks. In far less measure—to date—Mr. Eisenhower has become a target of the Democratic opposition. The President has had, however, strong support from the Democrats

on vital decisions regarding the Far East situation.

The Democratic-controlled Congress voted overwhelming support of a resolution giving the President authority to use the country's Armed Forces if the Chinese Communists attack Formosa.

The Democratic-controlled Senate, under the leadership of Senator GEORGE, of Georgia, chairman of the Senate Foreign Relations Committee, put through the Formosa defense treaty between the United States and the Chinese Nationalist Government.

PRESIDENT TAKES LEAD

Mr. Eisenhower has taken a lead in the tribute to Abraham Lincoln. The President, however, has not at this time undertaken to beat the political tomtoms. His statement praised the first Republican President, but made no partisan attack on the Democrats. Further, the President is taking no part in the hundreds of Lincoln Day dinners which the Republicans are staging from coast to coast. A year ago Mr. Eisenhower attended the great box-supper celebration of the Republicans in the national capital. He made a Lincoln Day film, too, distributed throughout the country. It is noteworthy, also, that Vice President NIXON is not making political speeches in this period usually dedicated to politics by the Republicans. The Vice President is on a good-will tour of the Central American and Caribbean nations.

The Republicans, however, are staging the usual number of Lincoln Day dinners from Maryland to California and from Minnesota to Texas. Speakers have been provided for 225 of these celebrations through the Republican National Committee. Three members of the Cabinet, Attorney General Brownell, Secretary of the Interior McKay, and Secretary of Labor Mitchell; several Governors, and a large number of Republican Members of Congress were included in the speakers' list. These speakers have not pulled their punches in the past. Their aim has been to convince the people of America they have had better and cleaner government under the Eisenhower administration, that the Republicans have reduced by billions Government expenditures and taxes, and that the Republicans are doing their utmost to call a halt to big Government in Washington and return to the States their proper responsibilities.

EISENHOWER PRAISED

With a view to the Presidential campaign, which is to grip the country next year, the Republican speakers are extolling Mr. Eisenhower, although here and there dissidents raise their voices. Senator DUFF, of Pennsylvania, always a plain-speaking man, gave voice to the vast majority opinion when he told an audience in Oyster Bay, home of the late President Theodore Roosevelt, that this country "is fortunate beyond measure" in having such a man as Mr. Eisenhower as Chief Executive at this critical time. Senator DUFF declared that Mr. Eisenhower did not undertake his great responsibilities out of personal ambition, but solely from a devoted sense of duty. A like sense of devotion to duty, the Pennsylvania Senator predicted, will cause the President to stand for reelection when a call from the people reaches him.

This, indeed, is the growing belief and hope of Republicans and many other voters in many parts of the country. Like Lincoln, Senator DUFF pointed out, Mr. Eisenhower "came from the common people" and has kept himself in touch with their aspirations and problems. Senator DUFF concluded: "Today, as in the days of Lincoln, and in the words of Lincoln, 'Let us have faith that right makes might and in that faith let us to the end dare to do our duty as we understand it.'" That, Senator DUFF said, "is our obligation under the magnificent leadership of the President."

When Oregon Wasn't Wanted

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. NEUBERGER. Mr. President, on the occasion of the 96th birthday of the State of Oregon, which was marked on February 14, 1955, I ask unanimous consent to have printed in the Appendix of the RECORD an illuminating editorial about Oregon history entitled "When Oregon Wasn't Wanted," published in the newspaper Greater Oregon, of Albany, in my State. The editorial was written by Francyl Howard, editor of the publication.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN OREGON WASN'T WANTED

Last week Dr. Nix-It received a letter from a rural subscriber asking how Oregon got its name. Now there are some questions that the good doctor can answer. He is an authority on preventing divorces, finding wives for lonely bachelors and husbands for lonesome widows and maidens and he always has a spare coat, dress, shoes or overalls for needy souls, but he rightly decided that this question did not belong in his department. He lost no time in giving the letter to the editor, breathing a sigh of relief as he turned away.

Now just how did Oregon get its name?

Following the Louisiana Purchase from France for \$15 million the Rocky Mountains was deemed the western boundary line of these United States. There were just 24 States then and the Senators and Representatives said that the country on the other side of the Rocky Mountains would be apt to trade with the Orient instead of with the United States which was 1,500 miles away through an unexplored wilderness.

Early Indian tribes in that part of Mexico which is now California told of a great river in the north which they called the Auragon.

The name Oregon was first given to the territory west of the Rocky Mountains 133 years ago on Tuesday of this week by Dr. John Floyd. On January 18, 1822, Dr. Floyd introduced a bill in Congress authorizing the President of the United States to take over and occupy all the territory lying west of the United States from the Rocky Mountains to the Pacific Ocean. The bill by Dr. Floyd provided that when the population in the territory west of the Rockies and north of the 42d parallel of latitude totaled 2,000 persons it should be occupied along the Columbia River as a territory of the United States under the name of Oregon.

Since 1765 the great river in Oregon now called the Columbia after Gray's ship of that name had been called the Origon.

Dr. Floyd worked hard to get the bill passed but it was defeated by a 100 to 61 vote.

It was not until 26 years later in 1848 that Congress voted to give Oregon a territorial government. An effort was made by William Mallory, one of Vermont's representatives, to have the territory called Columbia but Dr. Floyd had enough votes promised to defeat this effort. This time his bill passed and the spelling of the territory name Origon was changed to Oregon.

Helping to get the bill passed were Senators Linn and Benton, and the boundary line of Linn County at first extended from the Rocky Mountains to the Columbia River and south to California.

Later when Lincoln County was divided and Benton County was created it was for Senator Benton that it was named.

It is written in the diary of John Quincy Adams while he was Secretary of State that President Monroe told him Dr. Floyd's brother had been caught in using some of the State of Virginia's money as his own while he was State treasurer and that as he was anxious to get a job for his brother in a place as far away from Virginia as possible he thought the new territory of Oregon should be a good safe place for him. Dr. Floyd served two terms as governor of Virginia and no one seems to know what happened to his brother or whether he actually got some of the State of Virginia's money mixed up with his salary. It may have just been political scandal or character assassination as to Dr. Floyd's reasons, but whatever they were they furthered development of the territory.

Just 133 years ago, Oregon was not wanted as a State and no one had the remotest idea that 133 years later the election of a Senator in Oregon would change control from the Republicans to the Democrats in Congress.

Oregon has come a long way since 1822 and now it is fitting and proper that 133 years and 3 days later you should know how Oregon got its name.

The Foreign Operations Administration

EXTENSION OF REMARKS OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article on the Foreign Operations Administration, written by John O'Donnell, and published under the headline "Capitol Stuff," in the New York Daily News of February 7, 1955.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, February 6.—This is all about money—your money, my fellow taxpayers—and how the deal is shaping up so that more billions of our economic lifeblood will continue to be syphoned off to foreign nations in the vain hope that we can buy their everlasting loyalty and firm affection.

Of course, the fantastic idea never worked regardless of what label we stuck on the one-world giveaway plan. It began with lend-lease and UNRRA, then was labeled the Marshall plan, and currently dishes out the billions as the Foreign Operations Administration run by the perpetual GOP presidential aspirant, Harold Stassen.

FOA winds up its legislative life come June 30, but the boys will be operating on the old stand—but under another title and, if present plans go through, will be buying international love with United States hand-outs.

The new firm name has not yet been selected—some setup in the State Department probably. Louisiana's Senator ELLENDER, of the Appropriations Committee, who has made a careful survey of the new giveaway program, figures that next year we'll be handing out in the nonmilitary assistance program alone \$2 billion, a \$700 million jump over the present economic aid and defense

support program which ELLENDER scornfully describes as "just a new and fancy name for the Marshall plan which should have terminated long ago."

The fall of the Mendes-France government last week gives further proof (if such could possibly be needed) that the French juicy slice of the \$67 billion which we've handed out to foreign nations since World War II shooting stopped, never bought the trusting love of La Belle France.

And now come more headaches from sunny Italy. Over in Rome, Mrs. Clare Boothe Luce has done the best possible job as our Ambassador under the circumstances—far better than most critics thought could be done, under all the handicaps the charming and alert lady had to surmount. Last week Mrs. Luce returned to her Rome post after reporting to the State Department. What's important is that before the month is out, the charming lady will be back here in the capital and with her, for consultation with President Eisenhower and the State Department and Treasury and the Stassen organization, Italy's Prime Minister Mario Scelba.

A TOUCH IN THE GRAND MANNER

Now the mere arrival of Prime Minister Scelba in this capital isn't of itself so important. In fact, the Italian chief of state will be only a file closer in the big parade of foreign heads of state who have arrived here in the last 6 months and been welcomed and entertained by official Washington. And it has been a big parade. Time was when parades were estimated by the time they took to pass a given point. In this case the estimates would be wrong because they all passed the United States Treasury.

The importance of Prime Minister Scelba's visit rests in the so-called Vanoni plan which he will bring with him for presentation to the White House, State Department, the Treasury, and Harold Stassen. Yes; you guessed it, it's another touch—but this time in the grand manner.

The new Italian proposal is named after Scelba's budget minister, Ezio Vanoni. It is a 10-year economic blueprint for Italy, designed to create 4 million new jobs, put, as they express it, "Italy firmly on its financial feet" and—here's the important note for the United States taxpayer to watch—"calls for new public and private investments of \$40 billion in the next decade."

Without being brought into the consultations, this reporter has a rough idea, based on past experiences, that Uncle Sam is going to be asked to pick up most of this sizable tab or go as comaker on the notes of the borrowers.

Of course, the plan does have an international touch. Nine top Italian experts worked with Vanoni on preparing the broad outline. They in turn consulted with British, Dutch, and American economists. A Cambridge University professor put the text in English. Vanoni, a soft-spoken financier, has already explained in Rome that his plan calls for the imposition in carefree Italy of "a policy of extreme austerity for 10 years."

ITALY'S FLAT WARNING TO WASHINGTON

In his private talks in Rome, Vanoni emphasized that this plan which Scelba brings to the White House this month, means the ultimate salvation of Italy. If it's not adopted, Italy must collapse. It was a flat warning to Washington and the Italian budget director frankly declared: "Only through substantial foreign aid and extensive foreign capital investment can the objective of this program be achieved without endangering monetary stability."

A reliable Italian source in Rome, in connection with Scelba's forthcoming Washington visit, bears down on argument that the present Prime Minister is merely "continuing

the same policy and approach of the late Alcide de Gasperi.

He pointed out the similarity between the two men, saying: "Like de Gasperi, Minister Scelba is a Liberal-Catholic, anti-Fascist, and staunch enemy of Communists."

Referring to the latter, he said, Scelba wants it known that he is anti-Communist not in words but in fact.

One important thing the fiery Scelba is proud of since taking over the Government is the fact that he has brought relations between Italy and the United States to the highest point since the war.

This relationship remains the cornerstone of Italian foreign policy.

But, different from all former governments, is the breakaway from the day-to-day solution to Italian economic problems, by the presentation of the Vanoni plan.

"How can our friends help us? That's easy. We need international aid in commerce. Our industries are working at only a percentage of their capacities. Italy needs orders, lots of them, for her factories."

Drilling for Oil

EXTENSION OF REMARKS

OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. DANIEL. Mr. President, all too often we read about the few fortunate individuals who have good luck in drilling for oil. Many times we forget that 9 out of every 10 wells turn out to be dry holes, and it costs just as much to drill these as it does to drill producers.

A recent article in the Houston Post, Houston, Tex., entitled "Meet the Champ Dry-Hole Driller," relates the experiences of 1 Texan who is reported to have drilled 196 wells without finding production. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MEET THE CHAMP DRY-HOLE DRILLER (By Harold LeBourgeois)

This might be called Can You Top It? Week.

We recall that a man named James A. Clark once wrote about some people who made themselves distinctive by going out and drilling a bunch of dry holes.

There are Jack Frazier (of recent Mykawa fame), John Mayo, and Harold Boysen, all of Houston, of course.

Mr. Frazier has drilled something like 200 projects that didn't turn up anything except bills.

Mr. Boysen drilled 81 consecutive wells before he finally hit.

And Mr. Clark refers to Mr. Mayo as "maybe the champion consecutive dry-hole driller of all time." The latter sank 116 straight dusters.

Today we are introducing Morris K. Womack as the champ among champions.

In a conversation recently about the lumber business in east Texas, Mr. Womack wryly mentioned that So-and-so had worse luck than he did, that luck being 196 consecutive dry holes.

"I beg your pardon; you mean 96?" Mr. Womack was asked.

"No; 196, not 96," he countered; "196."

He mouthed the numerals as if there was some succulence in them.

"How can this be?" was the next question aimed at the attorney (he's listed as an attorney, not an oilman).

"Well," Mr. Womack said, "because there wasn't any oil in those 196 holes."

He started playing around with deals about 20 years ago and is still enthusiastic.

And the reason he doesn't quit is twofold: 1. Mr. Womack likes to put together deals and drill wells.

2. He figures one of these days he's going to hit.

It is understandable that the attorney scoffs at the statistics which show that 1 out of every 9 wildcats is successful.

A 196-0 score is pretty awesome.

Mr. Womack does recall hitting oil, actually.

But the producer turned out to be worse than a dry hole.

It yielded crude oil for only 30 days.

The return on 30 days' production didn't make a dent in the expense involved in setting casing and completing the thing.

For all practical purposes, we will consider a 30-day producer as a duster.

Mr. Womack, like the other top-notch dry-hole drillers, never has a lot of his own money tied up in wildcats these days.

He works with a handful of friends, farm-owners and major companies.

It is almost a certainty at this time that there will be reason soon to print the details of a Womack well.

The story of a drilling deal can be an amazing one, even if it does turn up a dry hole.

Anyway, that's the record for Attorney Womack.

But he isn't a failure by any means.

In the first place, he has several businesses that yield returns.

In the second place, Mr. Womack enjoys hunting for oil.

What else do you want?

A Lincoln Memorial

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent poem entitled "A Lincoln Memorial," written by Robert Serrell Wood Walker.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

A LINCOLN MEMORIAL

(Tribute to a man)

Whose visage chiseled out of stone
To sit in temple white
The peopled millions call their own
In countless streets tonight!
And whose yon monumental head
That broods upon the land
O, Great Republic, once he lead
With his own magic hand!

Sprung from a breed of humble mold
Yet sired to walk with fame
He kept "the common touch" to hold
A nation's heart a-flame;
O, 'graven image 'bove the sod
A-top the hallowed earth
What noble man fashioned from God
Has left his priceless worth!

And tho' the years have found it stilled—
The heart that loved mankind—
Forever will the ages build
Their steeples to his mind;
O, blessed land! revere this day
By Roman temple fair
That they who travel by its way
May pause in tribute there!
—Robert Serrell Wood Walker.

The Challenge in Asia

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. SMITH of New Jersey. Mr. President, from my experience on my trips to foreign countries, and especially to the Far East during the past few years, I have come to the conclusion that a new and somewhat different approach should be taken in preparing our foreign-aid program, aside from military assistance, as it affects what may be designated as the underdeveloped countries of the world, and particularly the Middle East and Far East.

In the New York Times magazine section for February 13, the well-known writer, Barbara Ward, a former editor of the Economist of London, has an article entitled "The Challenge We Neglect in Asia." Miss Ward points out that in the yearning of these peoples for freedom, independence, and self-determination there is beneath the whole revolutionary movement a psychological upheaval in the world's backward areas which we have failed adequately to comprehend and deal with.

Because of the importance of this subject, I ask unanimous consent that Miss Ward's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHALLENGE WE NEGLECT IN ASIA

(By Barbara Ward)

The attention of the free world these days is fixed upon the Strait of Formosa. Yet while this is the most sensational danger facing the West, it is well to recognize another type of aggression in Asia that may, in the long run, prove disastrous to the security of the free world.

As communism's propaganda is carried to the towns and villages, it finds its opportunity in the scale of the social revolution from which no nation is exempt—a revolution rooted in the desires and expectations of the people.

We in the West are reasonably familiar with that revolution. In simplest terms, it represents the desire of the peoples of Asia to escape from the static poverty of the past and share in the dynamic growth already achieved in the West—and, in part at least, in Russia. But perhaps the implications of this desire are less clearly understood.

The revolution in Asia has two aspects. One is economic; the other is psychological and social. So far the Western Powers have at least taken some note of the economic problem and have considered some marginal policies for dealing with it. But they have taken virtually no account at all of the psychological aspect. The Communists, on the

other hand, have a program—crude, certainly, and evil—but, nevertheless, a program for dealing with both the economic and psychological upheaval in the world's backward areas. This fact gives them a head start over the West.

The starting point is the fact that there is only one road to the achievement of a dynamic economy—the road of capital accumulation and the building of industry. "Industrialization" is a magic word in the world's backward areas; a spell; a philosopher's stone of future prosperity. But the precondition of industrializing an economy is to transform rural life, to do away with subsistence farming in closed village units, and to introduce an economy based upon the commercial exchange of goods.

This exchange enables the villages to become purchasers of manufactured goods—of what use is a local consumer industry which commands no market? It gives inducements to the farmer to increase his productivity and supply an urban population. And this margin of productivity is—short of foreign aid and investment—the chief source of saving and the means whereby laborers, now underemployed or merely idle in the village subsistence economy, are released to the towns and factories of the growing industrial sector.

Whether the process is carried on in the free enterprise economies of 19th-century Britain and America or under total dictatorship in 20th-century Russia and China, the underlying shift is the same—the decay of the village, the rise of the town, the decline of static incomes derived from land, the growth of a vast wage and salary earning class. If Asia and Africa are ever to reach western standards of health and consumption, their road must be the same. There is no other.

But the village is far more than an economic unit. The village community is usually made up of families who, if not actually related, are all known to each other, and in more primitive tribal areas are actually part of the same kinship group. Collectively they farm their share of the village's communal land. They provide aid, security, backing, and any necessary subsistence to any member of the group.

Village families in turn are ruled by a headman whose authority is almost parental as well as social, and they are guided by the priest, whose performance of ceremonies and rites marks the rhythm of the agricultural year, insures rain and fertility, provides the social order in the community, and puts sanctions behind its social discipline.

Indeed, in more primitive communities headman and priest are one. In short, the village is a complete society and one in which there is a high degree of those social attributes upon which the modern world tends to lay great stress—solidarity, interdependence, mutual aid, stability in the family unit, emotional security.

Just because village life is so all-inclusive, the impact upon it of an evolving industrial system is cataclysmic. The young Asian villager who goes away to the seaport or city tends to lose in one move the economic and emotional security of the family system and the social disciplines of local religion. Like the dazed rural workers of Britain in the 1830's, he finds himself in the featureless, friendless city, among a majority who, like him, seek feverishly for material advancement and change and who are uprooted from the traditional faith and sanctions of village life. The big cities of Asia—or Africa—today are fringed around with lawless shanty towns where the uprooted first-generation worker turns hooligan or fanatic under the pressure of bewilderment and despair.

So great is the upheaval and so devastating its potential consequences that there are those who argue that it must be prevented and village life preserved in its original soli-

darly. But not only does this approach run counter to the economic aspirations of backward peoples; it also ignores the darker side of village life. Subsistence is never more than a bare living. In times of dearth, it is a living death.

Mutual aid and family security can be fetters which bind the enterprising and adventurous youth to a small but total collectivity. The "extended family" implies slavery and a degraded status for the many wives. The concentration of social and religious power makes for tyranny as complete when exercised over a group of huts as over a whole nation. With or without the West, the young people in Asia and Africa wish to escape to self-determination, to disciplines accepted voluntarily, to a wider choice of profession, to marriage which can be a partnership; in a word, to the personal freedom and responsibility of western man.

But here is the dilemma. In pressing forward to Western types of urban life and factory organization, in abandoning the security and interdependence, however tyrannous, of the old village, the new industrializing societies of Asia and Africa are entering an arena where, even in the most advanced Western nations, the conflicts between freedom and security are still unsolved. Take only four of the fundamental social dilemmas of emergent Asian and African communities—overcrowding and insecurity in industrial slums, restlessness at new factory discipline, the degradation of children in a marriage system that is breaking down, the collapse of moral standards under a weakening religion—and few will maintain that they bear no resemblance to the urban problems of the West.

It is at this point that the effectiveness of Communist propaganda in such areas as southeast Asia, India, or tribal Africa begins to become apparent.

That Communist propaganda exploits the poorer peoples' desire for modernization hardly needs to be repeated. That Communist governments ruthlessly modernize their own peoples is common knowledge. But what is perhaps insufficiently considered is the extent to which, in the short run, the Communist approach meets the underlying social and psychological dilemmas of modernization.

The Communists not only uproot the villages, build the towns, recruit factory labor and reinvest ruthlessly the "savings" extracted from the underconsumption of the masses. In their crude, rough way, they also recreate the security of the village life. The omniscient state organizes social security, the party imposes group action and solidarity. Marxist-Leninism, the infallible "word" of the bureaucrats, produces the old concentration of spiritual and social power.

Men and women only just emerging from the small collective tyranny of the primitive village fall—perhaps with relief—under the vast collective tyranny of the modern state. By canceling 3,000 years of striving after personal autonomy and self-discipline, communism makes easier the transition from a closed rural economy to modern industrialization, but it does so by creating a society which risks being primitive in everything but the machines and gadgets which it controls.

This formidable appeal of communism to backward peoples—or, indeed, to comparably bewildered and uprooted groups in the wilderness of Western urban society—will hardly be withstood unless some comparable effort of policy and insight is achieved on the Western side. So far, our contacts are curiously haphazard. Our own commercial interest, together with a little foreign aid and a fraction of private investment, make up our quite inadequate contribution to massive modernization.

On the side of social evolution, Britain, foremost among the colonial powers, has worked to graft Western institutions on to

primitive economies—but colonial authorities are necessarily suspect. The missionary churches make a great, though sometimes contradictory, contribution. Some private business firms have done pioneer work in the field of workers' housing and labor management. But of a major concerted Western effort to assist the backward areas over these perilous times of social readjustment, there is little trace.

There is, in fact, barely the realization that such an effort is necessary to counter the ceaseless confident pressure of Communist totalitarian faith. Materially and psychologically, the West is allowing the challenge of the backward areas to go largely by default.

Even with communism at the very door—as it is today in southeast Asia—there is little disposition in the West to make long-term strategy for world development the first priority, not the last afterthought, of Western diplomacy.

Yet the Communist inroad on Asia is already a fact, and the risks in many parts of Africa are increasing. And behind this advance lies the possibility that when at last the stirrings and ambitions in Asia and Africa result in a world which is united in standards and technology, as well as in aspiration, the stamp set upon it will be not the unforced unity of the free West, but the single collective straitjacket of communism.

Abraham Lincoln

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. SCHOEPPPEL. Mr. President, during the present month our Nation has been honoring the memory of a great President of the United States, Abraham Lincoln. On February 11, 1955, there appeared in many newspapers throughout the country an article entitled "We Need a Lincoln." The article was written by George Sokolsky, and was published in his regular column which bears the heading "These Days." Mr. Sokolsky's article so well typifies the character of the great Abraham Lincoln, and so splendidly sets forth what, I am sure, Americans all over the Nation are most vitally interested in, that I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of February 11, 1955]

THESE DAYS

(By George Sokolsky)

WE NEED A LINCOLN

As the years roll in the saga of America Abraham Lincoln grows in stature not because he was assassinated, nor even because he was President during our Civil War, but because he was a philosopher, a moralist, a rare figure among those who rise in our political system.

The American President has usually been a politician, not a statesman; an operator of techniques of manipulating the people's choice, not a thinker who leads his followers into the lofty realms of moral philosophy. Too often his speech has been of the earth

rather than inspired by revelation. How many of them could have thought, much less put into rhetoric, the grandeur of the second inaugural:

"With malice toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Abraham Lincoln thought lyrically and his poetry was sunshine in a dark moment of national history. He required no ghost writer. He was not briefed by researchers. He called no conferences to decide what he was to think and say. His artistry came from his consciousness, and to it, no man add or detract. A man who could compose the Gettysburg Address on the back of an envelope while traveling on a railroad train is unusual among our politicians, who generally submit their major thoughts to associates for criticism, the associates taking out of it everything that is of sufficient potency to produce controversy.

Lincoln was never afraid of controversy. In fact, he started his national career as a controversialist, debating the little giant, Stephen Douglas, no mean man. The Lincoln-Douglas debates stirred a generation by the deftness of logic, by the fullness of the knowledge of both debaters, and by the courageous stance of each man on a public question. There was no pussyfooting in anything that Lincoln did and said, as the more popular Seward discovered to his discomfiture.

What a wonderful thing it would be in this age of television if two candidates for the Presidency—say Eisenhower and Stevenson in 1952—could have debated the issues before the Nation, face to face, with questions and answers and interpolations. Perhaps the Nation might have discovered that the eggheads are really behind the scenes.

Lincoln lives for us not so much in deeds as in ideas. One can pick and choose nuggets of thought, wisely and literally spoken, courageously phrased with no idea of advantage. Such men do not often appear in any country; they have rarely appeared in ours since that magnificent group of philosophers sat in Independence Hall to adopt the Declaration of Independence and later to write the Constitution. Lincoln might have been of that galaxy had he been born earlier; he was of their succession.

Our people in these days pray for the inspiration of a national ideal. We live in a period of excitement, of action, of motion, but we are a sad people because we are not at peace with ourselves or with the world. We need the wisdom of a great mind and the leadership of one who walks with God. We again need the gentle hand of Abraham Lincoln, who could be firm in the right without permitting himself the wickedness of hate.

Accomplishments of Savings and Loan Associations

EXTENSION OF REMARKS

OF

HON. PRICE DANIEL

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. DANIEL. Mr. President, the outstanding record of the First Federal Savings & Loan Association in Paris, Tex., shows what can be accomplished through

such organizations without cost to the taxpayers.

For instance, 118 homes for veterans of World War II have been financed by this one organization. I ask unanimous consent that an article and an editorial from the Paris News, of Paris, Tex., be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

RECORD SAVINGS AT FIRST FEDERAL

Savings placed in First Federal Savings & Loan Association of Paris during the year 1954 amounted to \$2,212,355.12, according to President O. W. Boswell. The net gain amounted to \$1,155,383.21. The dividends paid for the year 1954 amounted to \$194,216.19 of which \$100,352.57 was paid during the last half of the year.

A new high in homes financed during the year amounted to \$1,975,885.03 for 389 borrowers. Sixty-six new homes in the Paris area were financed amounting to \$415,725. One hundred eighteen homes were financed for World War II veterans amounting to \$789,128.27. A total of \$5,320,154.24 has been loaned to veterans since the enactment of the Servicemen's Readjustment Act of 1944 to buy or build homes. The total number of veterans' homes financed to December 31, 1954, was 1,048. No veteran has been denied a home loan if he could qualify under the terms of the act.

Net assets increased from \$6,662,468.18 on December 31, 1953, to \$7,763,302.25 on December 31, 1954, reflecting a gain of \$1,200,834.07. Savings increased from \$6,104,873.61 on December 31, 1953, to \$7,260,256.82 on December 31, 1954, reflecting a gain of \$1,155,383.21.

Reserves increased from \$421,497.31 to \$452,000.

With the aid of the new liberalized home loans under the terms of the National Housing Act of 1953 and the 1954 amendments permitting longer terms and smaller down payments should create a greater demand for the buying and building of homes, Mr. Boswell said.

While more than 1 million starts in home building in the Nation were made during 1954, forecasts are being made by some authorities that as many as \$1,200,000 starts probably will be made during 1955, Mr. Boswell concluded.

WHY FIRST FEDERAL'S STORY WAS PARIS NEWS FRONT PAGE MATERIAL

Some people may consider a story on the front page of the Paris News Monday an advertisement instead of a news story. It may be that so considering it is the right way, but it must not be classed with the ordinary paid advertisement, for it has a news value of an interesting nature.

The story was a condensed report of the operation of the First Federal Savings & Loan Association of Paris, made by its president, O. W. Boswell, the man who started the Paris Building & Loan Association thirty-odd years ago. Assisted by some citizens who believed Paris needed such an organization, Webb Boswell has seen his small financial institution grow year by year until today its transactions have grown into the millions of dollars.

The story said 118 homes for men who had been in the Second World War had been financed and since the enactment of the Servicemen's Act in 1944 loans to veterans for buying or building homes, total more than \$5 million. Total number of homes for veterans at the end of last year, financed by this association, is 1,043. Few, if any, of these homes would have been bought or built without the aid of First Federal. Sixty-six new

homes in the Paris area were financed during the year.

Stories like this may well cause folks to wonder why the Government feels it necessary to build houses at a cost to the taxpayers of billions of dollars, while the houses the First Federal finances cost the taxpayers nothing and the owners pay taxes to support their State, county, and city governments.

Webb Boswell is an outstanding home builder of national reputation, and has had the highest honors the national associations could confer. So the Paris News believes that any story of him or his building accomplishments is front page material.

Opponents of H. R. 1 Outnumber Proponents by 3 to 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, during the public hearings on H. R. 1 held by the Committee on Ways and Means, the opponents of the legislation outnumbered the proponents by approximately 3 to 1.

In spite of this fact, the report of the committee on the bill makes specific reference only to the proponents.

Mr. Speaker, in order to keep the record clear and to avoid any possible distortion of the facts, representatives of the following industries, labor groups, and organizations testified in opposition to H. R. 1:

General Electric Co., qualified opposition.

California Fish Cannery Association.
American Manufacturers of Thermo-static Containers.

The Candle Manufacturers Association.

Collapsible Tube Manufacturers Association.

The Industrial Wire Cloth Institute.
The National Building Granite Quarries Association.

The Rubber Footwear Division of the Rubber Manufacturers Association.

The Toy Manufacturers of the U. S. A., Inc.

The Twisted Jute Packing and Oakum Institute.

United States Potters Association.
The American Manufacturers of Toy Balloons.

American Tariff League.
National Federation of Independent Business.

Nationwide Committee of Industry, Agriculture, and Labor.

American Coalition.
Bausch & Lomb Optical Co.

Voland & Sons, Inc.
R. Thomas & Sons, Inc.

California Pottery Guild.
Homer Laughlin China Co.

Vitrified China Association.
International Brotherhood of Operative Potters.

Westinghouse Electric Corp.
Monsanto Chemical Co.

Manufacturing Chemists Association, Inc.

Dow Chemical Co.
Synthetic Organic Chemical Manufacturers Association.

Otto B. May, Inc.
Allied Chemical & Dye Corp.

American Cyanamid Co.
American Glassware Association.

Kent Metal & Chemical Corp.
American Flint Glass Workers Union.

Ohio Glass and Pottery Workers Protective League.

Pennsylvania Glassworkers Protective League.

Indiana Glass Workers Protective League.

Seafarers International Union of North America.

American Tunaboat Association.
Seafood Producers Association.

Massachusetts Fisheries Association, Inc.

Northwest Horticultural Council.
Independent Petroleum Association of America.

National Stripper Well Association.
North Texas Oil & Gas Association.

Independent Petroleum Association of America.

Pennsylvania Grade Crude Oil Association.

New York State Producers Association.
Bradford District Pennsylvania Producers Association.

Southwestern Pennsylvania Producers Association.

Oil Producers Agency of California.
San Joaquin Valley Oil Producers Association.

Independent Oil Producers Agency of California.

Texas Independent Producers and Royalty Owners Association.

West Central Texas Oil & Gas Association.

Lawton Oil Corp.
Oklahoma Independent Petroleum Association.

Kentucky Oil & Gas Association.
Kansas Independent Oil & Gas Association.

Ohio Oil & Gas Association.
Independent Oil Producers & Land Owners Association.

East Texas Oil Association.
National Coal Association.

Pennsylvania Railroad.
United Mine Workers of America.

American Retail Coal Association.
Foreign Oil Policy Committee.

Anthracite Institute.
Norfolk & Western Railroad.

Order of Railway Conductors and Brakemen.

Southern Coal Producers Association.
Brotherhood of Railroad Trainmen.

Women's Patriotic Conference.
American Cotton Manufacturers Institute, Inc.

National Association of Cotton Manufacturers.

Association of Cotton Textile Merchants of New York.

New England Textile Committee and six New England Governors.

National Association of Wool Manufacturers.

Carpet Institute, Inc.
National Wool Growers Association.

Boston Wool Trade Association.
Philadelphia Wool & Textile Association.

National Wool Trade Association.
National Federation of Textiles.

Textile Fabric Association.
Tufted Textile Manufacturers Association.

Forstmann Woolen Co.
CIO Textile Workers.

Linen Thread Co., Inc.
United Hatters, Cap, and Millinery Workers International Union.

National Authority for the Ladies Handbag Industry.
S. Morgan Smith Co.

Pin, Clip, and Fastener Association.
Clothespin Manufacturers of America.

Western Condensing Co.
National Machine Tool Producers Association.

Amalgamated Lace Operatives of America.
American Lace Manufacturers Association.

American Fabric Glove Associates.
American Knit Handwear Association.

National Association of Leather Glove Manufacturers.
Underwear Institute.

Work Glove Institute.
United Wallpaper Craftsmen and Workers of North America International Union.

Lapp Insulator Co.
American Fluorspar.

Mica Fabricators Association.
New England Manufacturing Jewelers & Silversmiths Association.

Clock Manufacturers of America, Inc.
Cigarette Lighter Manufacturers Association, Inc.

Lead Pencil Manufacturers Association, Inc.
Tungsten Institute.

Rubber Manufacturers Association, Inc.
Okonite Co.

Industrial Fasteners Institute.
American Optical Co.

Shears, Scissors & Manicure Implement Manufacturers Association.
American Manganese Producers Association.

White Sewing Machine Co.
Woven Wood Fabric Industry.

Hardwood Plywood Institute.
Hardboard Institute.

California Almond Growers Exchange.
California Walnut Growers Association.

Northwest Nut Growers.
Oregon Filbert Commission.

Sunkist Growers, Inc.
Cherry Growers & Industries Foundation.

Wine Institute.
Mushroom Growers Cooperative Association of Pennsylvania.

American National Cattlemen's Association.
National Milk Producers.

Cultivated Mushroom Institute of America, Inc.
National Cheese Institute, Inc.

American Dry Milk Institute.
National Creameries Association.

Texas Sheep & Goat Raisers Association.

Western States Meat Packers Association.
 California Fig Institute.
 National Independent Union Council.
 Argus Cameras.
 International Allied Printing Trades Association.
 Fur Dressers' Guild, Inc.
 National Knitted Outerwear Association.
 Eastern Metal Products Co.

The School Aid Program

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. MOSS. Mr. Speaker, as far as the State of California is concerned, the administration proposal on education is completely inadequate. It will not give any material aid in the area where the schools desperately need emergency assistance.

I fear the plan lacks the imagination and boldness necessary to solve the problems of overcrowded and understaffed schools. The program has been publicized as one to aid schools; as far as California is concerned, the plan presented by the administration could only delay until too far in the future any important assistance for education.

I fear local school districts, under the impression they will get some adequate Federal aid, will delay approval of their own necessary bond issues. The program presented by the administration will call for a great deal of local financial participation—too much, I fear, to make the Federal program workable.

Congress should take the lead in proposing right now an aid-to-education program to provide real aid to local school districts—aid that will end the second-class education too many children are receiving.

At my request, Frank M. Wright, the head of the division of public school administration of California, analyzed the administration's proposal on education. His comments, which follow, point up the fact that the program is little more than a thin veneer on a ramshackle structure:

Members of my staff and I have reviewed the recommendations made by President Eisenhower in his proposal to aid in financing the construction of needed school buildings throughout the United States. His proposal is divided into three parts.

"Part 1, Bond Purchases by the Federal Government," seems to us to be absolutely unworkable in California due to the fact that we have no difficulty in selling bonds that districts authorize. The current district rate runs between 2½ and 3 percent, and I have never known of a single area in California that has had difficulty in disposing of its bonds.

"Part 2, State School Building Agencies," seems to contemplate a type of operation similar to the Pennsylvania plan which sets up a State school building authority. Under this proposal the districts would have the buildings built for them by some sort of

combination between the Federal and State governments and then would rent the buildings and be required to pay an amount equal to principal and interest out of their annual operating funds. In California the law would have to be materially changed to provide for special taxes for this purpose in lieu of bond taxes, or the bond authorization would have to be changed in order to permit bonds to be issued for that particular purpose. We do not believe that this is a workable plan at all. The State program which I have attempted to describe briefly in the enclosed statement covers that operation. We do not believe that there is anything in part 2 that would be of any benefit to California.

"Part 3, Grants for School Districts With Proved Need and Lack of Local Income," does not offer any help to our State. In the first place, we do not have a situation where a district has not reached its legal bonding capacity because it could not sell its bonds. If a California district has bonding capacity it naturally would sell its bonds and would be able to use that money. The second part of the proposal concerns a situation where a district has reached its legal bonding limit and is unable to pay rent and would need to obtain additional aid. That is about the only part of the proposal where it appears that California would receive any assistance. Then the degree of assistance would depend almost entirely upon the language of the act, as to whether or not a State building authority was provided which would provide for leasing and paying rent.

Coexistence and Commonsense

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Mr. Lawrence Hunt, a prominent New York City attorney, who delivered it before the Canadian Club of London, Ontario, on December 8, 1954. The subject of the address was Coexistence and Commonsense.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COEXISTENCE AND COMMONSENSE

(Address by Lawrence Hunt, of New York, before the Canadian Club of London, Ontario, December 8, 1954)

Mr. President, members of the Canadian Club of London, friends and neighbors of Canada, as an old and affectionate friend of Canada, I am glad as well as honored to be your guest today. An invitation to speak in Canada is always alluring to me, and when your invitation was extended, on your behalf, by the Honorable Ray Lawson, Canada's greatly esteemed and warmly liked Consul General in New York, it seemed irresistible.

My subject today is Coexistence and Commonsense.

There is nothing inherently wrong with the idea or the policy of coexistence or peaceful coexistence in the Anglo-American sense. It means, for us English-speaking people, neither surrender nor softness toward Communist imperialism. In the course of vigorous and free public debate, this policy, advocated by that wise and consistent foe

of communism, Sir Winston Churchill, has been doubted and distorted, misunderstood and maligned, by some sincere citizens on this side of the Atlantic, and especially in my own country. But many Americans are beginning to realize that peaceful coexistence, as we mean it, can be a positive, constructive policy for maintaining freedom and progress, peace and prosperity for ourselves and our children.

Coexistence is not a startling, new idea. Any foreigner, who did not understand our American ways, perhaps wondered during our election campaign 6 weeks ago, how Republicans like myself could possibly coexist with the Democrats. We cheerfully do, between elections. Canada is an inspiring example of how it is possible and sensible, though at times difficult, for two vigorous civilizations, British and French, with different backgrounds, customs, and language, to coexist as a strong, united, ever-growing people whose moral and material contributions to world stability are today greater than ever before. The long and successful coexistence, despite outspoken differences, between Canada and the United States is unsurpassed in modern history. And the cordial coexistence—more correctly, the unwritten partnership—between the British Commonwealth and America is our best reason to hope for our common future.

We English-speaking peoples should learn how to coexist more successfully with our allies, and, in this connection, I cannot refrain from expressing my belief that today we ought to understand more clearly the moral and political problems of France and to appreciate more warmly her best qualities. Three times invaded, with increasing savagery, by the same enemy in less than 90 years, victorious but frightfully weakened in the First World War with a million and a half dead in battle, conquered, occupied, and tormented, bodily and mentally, in the Second World War, and worst of all, with the French genius for lucid self-analysis, knowing that, with noble individual exceptions, she had failed, badly failed, when the going got rough, France has been very sick, and spiritually and politically ineffective since the end of the last war. But France is getting well. She is surely coming to herself. And soon again she will be not only the beautiful nation, both irritating and inspiring, of our memories but also a staunch and helpful ally.

We Americans hope that our allies will coexist cordially with us, and that they will try harder, despite healthy differences, to understand our deep feelings and great problems. You Canadians and most of our British friends know that the caricature of America as a well meaning by ignorant adolescent is out of date even as caricature. Of course, my country, like other countries, has made some bad mistakes and she has missed some splendid opportunities to do an even better job as the most powerful of all nations. There is room for improvement in our foreign economic policy. There are moments in my land when the strident voice of the demagogue is heard above the quiet prayers of the multitude. There is probably no other nation so enthusiastically addicted to washing its linen in public.

America seems to have been born to greatness. By her own efforts she achieved greatness. And in our time greatness has been trust upon her by friends and foes. But it's not all fun. As an international pastime, tweaking the eagle's feathers has largely, though of course not entirely, supplanted twisting the lion's tail.

You will agree, I think, that in recent years America has done her share to preserve Western civilization from the tyranny of Russian communism. And we Americans want peace, the only peace worth having, the peace of free men and women. Less than 2 months ago, as an American, my heart

was warmed as the hearts of Americans yet unborn will be warmed, by the genuine and graceful tribute to my country from the most magnificent statesman of the 20th century. Sir Winston said: "There is no other case of a nation arriving at the summit of world power, seeking no territorial gain, but earnestly resolved to use her strength and wealth in the cause of progress and freedom."

But what about Russia? The masters of the Kremlin don't mean what we mean by peaceful coexistence. They mean time enough to undermine and finally destroy us. Does that mean the end of man's life on this planet—an atomic war? We don't, we can't know for certain. We can try to make an intelligent guess. I prefer to guess on the side of the angels. There will be no such war.

There seems to have arisen recently a tacit understanding among all the peoples of the world, on both sides of the Iron Curtain, that to become radioactive corpses in a radioactive ruin is not a consummation devoutly to be wished. Although many of the masters of Communist Russia during the past 37 years have not been notably successful, under the Soviet system, in the art of personal survival, we can reasonably assume that even Russian Communists like to survive. Now that we have about reached the point where our and the Russian cataclysmic weapons apparently cancel themselves out, we and the Russians will not cancel each other out. World wars are out of date. There is no longer any possibility that they can settle anything.

Moreover, America and the British Commonwealth will never start a preventive war, not only because it would bring death and irreparable ruin to all peoples but also because our spiritual and religious heritage makes it morally impossible for us to do so. The Russian Communists cannot be expected to understand that spiritual fact. But we know it in our hearts and feel it in our bones.

Short of atomic war, however, the rulers of Soviet communism will use any means to gain their ends—espionage, infiltration, subversion, propaganda and, above all, day in and day out schemes to divide Britain and America. They will try and try and try.

So what? Let them try. Where they have failed by force, they may attempt to subjugate us by seduction. They may soften their offensive tactics, whisper sweet nothings to us and our allies, and meanwhile wait, patiently wait, watchfully wait until we let ourselves grow weak or until we destroy our free political and economic system through greed and fear. By all means, let us keep them waiting.

This is where commonsense comes in. There can be no coexistence without commonsense. Unfortunately, there are times when commonsense seems as rare as uranium; it is often hidden under great bogs of emotion or under the hard layers of domestic politics. But find it and use it, we must.

Commonsense in our policy toward Communist Russia means many things. It means that the free nations of the world shall remain united and progress in power and prosperity. It means that the unique, unwritten partnership between the United States and the British Commonwealth shall always grow in strength and in trust and in understanding. It means that our political and intellectual leaders shall never again, as some of them did near the end and shortly after the last world war, fail to recognize or delude themselves about the sinister nature and the imperialistic objectives of Russian communism. It means no more illusions, no day dreams which can turn so quickly into nightmares, no weakness, no lethargy, and no despair. It means vigilance within ourselves and toward our common foe. Vigilance without fear. It means that we pay

heed by day and by night to the stirring wisdom of Oliver Cromwell: "Put your trust in God but keep your powder dry."

And within the alliance of free nations, particularly within the Anglo-American partnership, commonsense means and requires faith in each other's purpose and charity toward each other's shortcomings.

Canada has been destined to be not only a strong, rich, and progressive nation on her own account but also to be the interpreter's house between Great Britain and the United States. When Britain and America get too far out on a limb, Canada can help them to climb back to safety, with a minimum of embarrassment. She understands the understandings of the one and the overstatements of the other. She can translate to each the different accents with which they speak a common language. She knows their sometimes different approach and different timing toward the same goals. She appreciates the best in both nations.

The policy of coexistence and commonsense will not be easy. At times it will be terribly difficult and exact all our patience and self-control. It's a challenge more tremendous to the spiritual and mental stamina than even to the physical endurance of free men and women. We shall meet that challenge. In one form or another, that challenge is as old as the human race. Five hundred years ago, the Augustinian monk, Thomas à Kempis wrote words which can help us today: "It is no great matter to associate with the good, and gentle. . . . But to be able to live peaceably with hard and perverse, or undisciplined persons, is a great grace, and an exceedingly commendable and manly deed."

Let's admit that an unpleasantly plausible case can be made for pessimism. Russia is mighty and ruthless. Russian communism is clever and insidious and persistent. In English-speaking nations, a few men in important positions have been seduced by its evil appeal and have betrayed their country. Soviet imperialism has several satellites, and, at present, Communist China is an ally. The leaders of Communist China, intoxicated with recent power and insolent in their ignorance of the vastly greater power of Western civilization, may attack Formosa or its neighboring islands, or some other spark will hasten the fiery doom of our world. For whom does the bell toll? It tolls for the whole human race.

So the pessimists tell us, with morbid embellishments. The horrors of the human imagination can multiply like locusts. Moreover, many intelligent Americans have yielded, at least in part and temporarily, to pessimism. But whatever our characteristic sins may be, pessimism is not one of them. Americans simply don't know how to act and think like polished pessimists in a profoundly thoughtful or gracefully melancholic manner. We just howl. But after a while we usually escape from the doubting castle of giant despair and we are again on our way in the pursuit of happiness. We know, deep down in our hearts, as do our friends and neighbors in the other English-speaking nations, that pessimism is a sullen denial of the grace of God.

We need more than armament, more than a policy of coexistence and commonsense, more than the unity of free nations; we need even more than faith and charity between Britain and America; we need hope.

Hope is the forgotten virtue of our age, and yet we have reasons to hope—good and sensible, true and triumphant reasons. Let's think about them and be of good cheer.

For all its power, Russian communism has no spiritual basis, no religious heritage, no moral tradition. Without them no civilization—no system of society—can long endure. The Soviet regime has existed less than 40 years—a long time for its victims, but a relatively brief period even in the recorded history of mankind. Not suddenly, but

rather slowly, I believe, bit by bit, not from force without but from forces within, Russian communism will change, breakdown, wither, and be cast away.

Let us devoutly believe and humbly pray that the spiritual, as well as the material, odds will always be on our side.

In the years ahead, we shall know disappointments, suffer checks and setbacks, make mistakes, wrestle with the honest differences among ourselves, and somehow live through crises, but the future belongs to the free.

The diplomatic events of the last few months give us reasons for hope. The lessening of tensions in the Middle East, the settlement of the Trieste dispute, and the promising results of the London and Paris conferences, under the inspired leadership of Sir Anthony Eden, have strengthened the free nations and have given a tremendous lift to everyone except the Communists and the pessimists. Greater triumphs beckon us forward.

What does all this add up to? What do these spiritual and material facts, these triumphs of patient and resourceful diplomacy mean for us and our children? They mean a better chance, a surer hope than we have known in nearly a half century for a relatively peaceful and prosperous era, for a certainly hard but possibly a golden age. They may mean the increase of trade between the Iron Curtain and the free countries. For us, the primary motive of trade has been profit, and I suppose that, once in a while, even the Communists like to make a little profit. But trade, in modern times, has also fostered and stimulated civilization, and more frequently than not, has provided the opportunity to preach the gospel of those ideas which are the birthright of our English-speaking family, the ideas of each man's dignity and every man's freedom.

We English speaking peoples have been slow to realize and at times reluctant to admit that the unwritten partnership between the United States and the British Commonwealth is the surest reason for hope. Two world wars, the events of the past decade, the obvious facts of the world we live in, and the uncompromising forces of destiny have created that unique partnership. No other partnership has had such vast power and such an inherent sense of responsibility in using it. No other partnership has had so many burdens and so many blessings. But what of the future?

The future is ours. We are united by more than common fears and a common foe. We are united by commonsense. We are united by a common heritage which we proudly cherish irrespective of the race or nation of our individual ancestors. We are united by common ideas of what is right and decent, of what is just and kind. We are united by our common vision of the future we want for ourselves and our children. Together, America and the British Commonwealth can dare to hope. Together, we can dare to make, and, with God's grace, we will surely make a fairer world.

Competence and Integrity of the Federal Mediation and Conciliation Service

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES
Tuesday, February 15, 1955

Mr. DOUGLAS. Mr. President, for the information of Senators who are concerned both about the competence and

integrity of the Federal Mediation and Conciliation Service and about the justice and nonpolitical conduct of civil-service procedures, I ask unanimous consent to have printed in the Appendix of the RECORD the searching editorial from the St. Louis Post-Dispatch of February 8, 1955, entitled "The Firing of Major Estes." Those who are also concerned about justice to the person involved must share the editorial writer's hope that the Civil Service Commission and the new Director of the Mediation and Conciliation Service will give this case a most careful review.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FIRING OF MAJOR ESTES

"Let me welcome you aboard. It is good to have you."

With these warm words President Eisenhower, on Monday, greeted Joseph P. Finnegan in a swearing-in ceremony at the White House. Mr. Finnegan, 50-year-old industrial relations lawyer from New York, is the second Eisenhower appointee to hold the office of director of the Federal Mediation and Conciliation Service.

The President expects much from the Mediation Service and he is fully right in doing so. Speaking before the AFL, in the 1952 campaign, Mr. Eisenhower, in criticism of the Truman administration, said:

"It is time we got some responsible leadership in the Government. Consider how woefully inefficient is our Federal Mediation and Conciliation Service. Federal mediation has fallen into such disrepute that our people have forgotten what it can do."

In view of the high hopes that Mr. Eisenhower has for personnel of the Federal Mediation Service, just about the first thing Mr. Finnegan, as its new Director, ought to do is to look searchingly into the case of Maj. Charles T. Estes. Major Estes is the highly regarded mediation officer who was dismissed last July 9, while stationed in St. Louis, by Director Finnegan's political predecessor, Whitley P. McCoy, of Alabama.

Major Estes is precisely the kind of man needed in the Government service. Born in Gainesville, Ga., he was graduated from the University of Georgia and then went into business in his home city. When World War I broke out he entered the Army and served with credit. After the armistice he decided to continue in uniform and served in China, Japan, and the Philippines, under General MacArthur.

After nearly 10 years in his country's service, by which time he had become a major, he returned to business from which he entered the NRA in 1935. His talents for conciliation and adjustment led him to the Conciliation Service 3 years later. From 1940 on he was liaison officer and special assistant to the director.

The value of Major Estes' work is attested by no less a person than Republican businessman Cyrus S. Ching, who was for nearly 30 years supervisor of industrial relations of the United States Rubber Co. Mr. Ching, director of the Mediation Service, 1947-52, swore to the following, November 17:

"One of Charlie Estes' outstanding characteristics was his complete, enthusiastic devotion to the Mediation Service. I frequently thought he took too much out of himself in endeavoring to carry out his assignments. I never had from Major Estes at any time anything but loyal and enthusiastic support."

This testimonial of a prominent Republican to Major Estes' loyalty is important because the basis for the Estes discharge is that he was "disloyal" to the service.

How was he disloyal? Well, he once referred to the fiscal office of the Mediation Service as "money bags." Once he spoke of his duty station as his "new salt mine."

Could charges possibly be more trivial? In any case, President Eisenhower on August 25, 1954—so the press reported—on facing "the prospect of reading and signing a mountain of bills on arrival at the summer White House in Denver quipped: 'Back to the salt mines.'"

So far as we can discover, no one who knows anything about this dismissal thinks that it was for any reason other than to create a job for one of GOP Chairman Hall's cohorts. For first the partisan director, Whitley McCoy, sent Major Estes to St. Louis. Presumably McCoy thought Major Estes would resign rather than leave Washington. Instead Major Estes came to St. Louis, did excellent work here and won the admiration of many businessmen and labor leaders. But somebody wanted Major Estes' job and wanted it enough to fire him—to fire a man who served under seven Directors and ranked 8th in seniority among more than 200 mediation personnel.

Fortunately Major Estes has the right of appeal to the Civil Service Commission. Fortunately he is exercising his appeal. But he has this right only because he has worn his country's uniform. Without application of the veterans' preference clause, he would be out and that would end it.

Were the Civil Service Commission not currently so political, Major Estes could expect justice there. Surely a career official with his record ought to get justice anywhere. Thanks to the change in control of Congress, the Senate Civil Service Committee, under Senator OLIN D. JOHNSTON, of South Carolina, has asked the Commission to grant a public hearing with Senate representatives sitting in.

Yes, it is good to have Director Finnegan aboard. If Mr. Finnegan has anything more important to do than go fully and fairly into the Estes case, we would like to know what it is. If the Estes ouster stands, on its present flimsy basis, the career personnel in the Mediation and Conciliation Service might as well disband now.

The President's School-Aid Program

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, February 15, 1955

Mr. BUSH. Mr. President, in the Hartford Courant of February 12 appeared a leading editorial under the title "Posing a Challenge to Community Effort." This excellent editorial deals with the President's message on school construction aid and with Senate bill 968, of which I am one of the cosponsors, along with my distinguished colleague from Connecticut (Mr. PURTELL). I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POSING A CHALLENGE TO COMMUNITY EFFORT

The past week's Eisenhower message on school aid proposes a program to arouse the American people to a community effort for schools and a community concern for education unparalleled in our history. At the

same time it breaks precedent by having the Federal Government, for the first time, give direct aid to public-school construction throughout the country. But it does not pretend to be the final answer. The President has encouraged local and State authorities and citizens to come together in meetings throughout the country to find, if possible, some long-range solution that can later be set into law.

There is one thing upon which everyone agrees. We are not doing well enough now in educating our children. With waves of young bearing down upon an inadequate plant in the future, to be met by insufficient numbers of trained teachers, the prospect calls for immediate action. But the program proposed by Mr. Eisenhower is already under fire. It is seen by Senator LISTER HILL as presenting an interminable delay on the one hand, or a meager dole on the other. Its financial provisions are sharply criticized by those who would have Washington spend large sums on education. In this it might be well to quote from the President's press conference:

"[The Senators] criticized your program rather strongly yesterday as being inadequate and said it merely loaded more debts on the States and communities, which could not afford to pay the debt. . . ."

The PRESIDENT. "Did they mention the debt of the United States?"

It is easy to look to Washington to solve problems. Just as it is easy to look to Hartford when the burden becomes heavy in smaller communities. But the political facts of life are that when the smaller governmental unit accepts financial aid from the larger, it leads to intervention and an inevitable measure of control. He who pays the piper calls the tune. If the Nation is to keep its independence, its variety in the face of pressure to conform, it must govern its affairs at the local level.

The Eisenhower program for Federal aid to education recognizes where the duties and responsibilities lie. It allows the purchase of bonds of districts where they are not readily marketable at a reasonable price; it assists the States in forming agencies outside the State government itself so that the difficulty of debt and other types of laws can be overcome; and finally, where clear need is shown, arranges for matching grants-in-aid.

The serious concern of the American people is that we provide continuing opportunities for the finest education possible to as many of our youngsters as possible. We want to encourage the talent and genius of our youth to flourish. We must if we are to survive and prosper. But fine education can't be measured in glossy schoolrooms. It can develop only from the effort and attention of the people of America who are directly concerned, the parents and citizens of the local communities. That is the challenge of the Eisenhower program.

Legislative Program of Veterans of Foreign Wars as It Pertains to Veterans' Benefits

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 13, 1955

Mr. TEAGUE of Texas. Mr. Speaker, on February 15, 1955, the national commander of the Veterans of Foreign Wars, Mr. Merton B. Tice, appeared before the

Committee on Veterans' Affairs to present the legislative program of that organization for the consideration of the committee. In order that all Members of Congress may have an opportunity to examine this statement, it is included for the Record:

STATEMENT OF MERTON B. TICE, COMMANDER IN CHIEF, VETERANS OF FOREIGN WARS OF THE UNITED STATES, WITH RESPECT TO VFW LEGISLATIVE PROGRAM BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS, TUESDAY, FEBRUARY 15, 1955

Mr. Chairman and members of the committee, I appreciate the opportunity to appear here this morning to discuss our Nation's responsibility to those who have served in the Armed Forces in time of war or national emergency and to the dependents of those who gave their lives in that service. I am especially grateful that you have scheduled this hearing so that it can be witnessed by this fine group here assembled. The group includes most of our national officers, major national committees and department officers from nearly every State and Territory. They constitute, in large measure, the leadership of our great organization and have an abiding interest in the work of this committee.

May I also express our appreciation to the 11 members who have elected to remain with this committee in the 84th Congress. Your background and experience in veterans' affairs will be invaluable to the new members, who in turn will contribute a fresh viewpoint and varied experience to the full committee.

THE VETERANS OF FOREIGN WARS

For the benefit of the new members may I point out that the Veterans of Foreign Wars of the United States was founded in 1899 by returning overseas veterans of the Spanish-American War. It is now composed of a million and a quarter members in 10,000 posts in every State and Territory and some foreign countries. Membership in our organization is restricted to men who have served in the Armed Forces of the United States on foreign soil or in hostile waters during a war, military campaign or expedition and are native or naturalized American citizens. Many national figures have held high office in our organization and I am pleased to acknowledge one of our ablest past commanders in chief, Gen. B. W. (PAT) KEARNEY, as a distinguished member of this committee. A former member of this committee and distinguished colleague of yours in the House, JAMES E. VAN ZANDT, of Pennsylvania, is also a past commander in chief of our organization. Our common purpose "to honor the dead by helping the living" is given expression through our home for orphans in Eaton Rapids, Mich., and our National Rehabilitation Service, which offers free representation and counsel in the presentation of claims to all veterans and their dependents irrespective of membership in the VFW. One of our contributions toward making America a better place to live is an extensive community service program which had the active participation last year of more than 8,000 posts and 4,000 auxiliaries embracing some 275,000 projects. This is only a part of the program of service which is continually conducted on a nationwide basis by the Veterans of Foreign Wars, and I mention it to establish understanding of the nature and purposes of our organization and because I take pride in these achievements.

I should like to proceed by discussing the questions raised by your letter of last December, Mr. Chairman; then I should like to comment on some major VFW legislative proposals and make some frank observations on general aspects of the veterans benefit program.

AMENDED FORM 10-P-10

The first question posed by your recent letter, Mr. Chairman, relates to the effect of the amended form 10-P-10, which requires applicants for hospital and/or medical care to list their assets and liabilities. Our 55th national encampment approved a resolution protesting the amended form and urging its discontinuance. Our opposition was not based on the fact that we favor free hospital and medical care for the nonservice disabled who can afford to pay for such treatment from private sources. In fact, for many years our service officers have been directed not to encourage hospital and medical care in non-service-connected cases for those who are able to pay. They have universally informed us that they have strictly adhered to this directive. Our opposition to the use of this form is based on the premise, first, that the applicant is already required to sign an affidavit that he cannot afford to pay, and second, that we consider abuses to be negligible. While we recognize that in such an extension program it is inevitable, regardless of the rules and regulations adopted, that there will be some isolated instances of hospitalization of persons who have the ability to pay. It is our belief, however, that the incidence of such violations will not be reduced by the amended form and, if our assumption in this respect is correct, the amended form serves no useful purpose. If it is not effective to reduce the abuses it seeks to correct, its continued use is not justified and we feel that in some cases it requires an unwarranted disclosure of personal information.

TERMINATION OF WARTIME BENEFITS

The second question submitted by your letter is in regard to the desirability of terminating wartime benefits for service during the Korean conflict. This has to some extent become a moot question by reason of the subsequent proclamation of the President terminating the emergency and benefits for service after that date. We supported your bill, Mr. Chairman, H. R. 587, to continue educational benefits for those in service prior to February 1, 1955, for the reason that simple justice required such action. It was not because of a conviction that compulsory peacetime service requires the continuation of wartime benefits. This broad question of the obligation of the Government to those who are required to perform service in peacetime is one that is under study in our organization. It is a very complex question and in the consideration of it we are not unmindful of the fact that in peacetime, military service is in some respects similar to Government service in positions which we generally characterize as civilian. The essential functions of Government engage the services of more than 2 million persons in positions which we commonly classify as civilian. It is significant that these positions in Government are filled by voluntary recruitment. In fact, the pay scales and working conditions are sufficiently attractive that people compete with each other through civil-service examinations for the privilege of obtaining them. National defense is at least an equally essential function of Government and employs even more citizens than is required to carry on governmental functions in so-called civilian capacities. Yet these defense positions in Government can only be entirely filled by using the police power of the state to compel performance of the duties required. In a limited mobilization many are excused from the compulsory service that some are required to perform. If this condition is to continue on a selective basis for an indefinite period, surely we will be required to give further consideration to this perplexing problem so that we may determine what,

if any, obligation is owed to the few upon whom we impose the duty of national defense. We believe that the obligation, if any, is affected by the universality of service. If peacetime service is made universal, then it seems that there is less discrepancy in the obligation imposed upon our citizens and, consequently, less obligation on our part to offset the inequity through any benefit system. Important as this question may be, we feel it is not presently urgent since those who have been deprived of benefits by the Executive order will not be affected, except in a few instances, until their release from service, in February 1957. In the meantime, world tension may erupt into a violent war and remove the necessity for determination of this question but bring in its wake others far more difficult and agonizing.

RENOVATION OR REPAIR OF VA HOSPITALS

Question 3 deals with the need for major renovation or repair of existing Veterans' Administration hospitals and domiciliary homes. We recognize, of course, that there is no economy in postponing necessary repairs and in neglecting adequate maintenance. It is equally apparent that with the passage of time buildings acquire a certain degree of obsolescence, which raises the question of the desirability of remodeling older structures to conform to more modern requirements. Difficult problems arise in cases where temporary hospitals, while still in use, are to be replaced by new, modern structures. Some of the buildings that comprise the Winter General Hospital at Topeka, Kans., are not usable in their present condition, yet funds expended for extensive repairs will be of no benefit when the new hospital is completed and ready for use. The long time that elapses between the authorization for a new hospital in such cases and the date when such hospital is ready for use merely compounds the difficulty that arises in these instances. We believe that the expenditure of funds for the repair of temporary structures in such instances and the difficulties that attend the use of improperly maintained facilities can be greatly reduced by prompt action in the construction of replacement hospitals.

LOAN-GUARANTY DIFFERENCES

Question 4 relates to the operation of the VA loan-guaranty program, with particular reference to the difference in guaranty and entitlement under the guaranteed-loan program and the direct-loan program by the veterans purchasing residential property and certain classes of farm real estate to be used by the veteran for a home. We see no reason why the entitlement in the case of a home located on a farm should be \$4,000, while the entitlement in case of homes located in a city is \$7,500. I am pleased to say that we support legislation to extend the \$7,500 entitlement to farm homes.

SCHOLARSHIP ASSISTANCE

Question 5 refers to the desirability of a modest scholarship-assistance program for dependent children of servicemen who lost their lives in the service of their country during a period of war. The 55th national encampment of the Veterans of Foreign Wars unanimously adopted a resolution approving the principle of such legislation and authorizing our national legislative committee to make appropriate recommendations to the Congress. If educational opportunities are to be denied children in such cases, the effect is to perpetuate and compound the hardships inflicted upon individuals by reason of their sacrifice to the Nation in time of war. We believe it is only fair to assume that one who has given his life in defense of the Nation could have provided educational opportunities for his children had he

lived. The cost of such a program is not prohibitive and we hope for early enactment of such legislation by this Congress.

FIVE-POINT PROGRAM

The 55th National Encampment of the Veterans of Foreign Wars, meeting in Philadelphia, August 2-7, 1954, adopted numerous resolutions which established the official position of our organization. Our national legislative committee, working with our security committee and the chairmen of four other committees, has evaluated the resolutions adopted in Philadelphia and formulated a five-point program of top priority objectives, a copy of which is hereto attached for the information of the committee. The five-point program contains the following statement which succinctly sets forth our view as to the relationship of our objectives:

"Without adequate security all other American values, including representative government, individual freedom, social benefits, and economic resources would be jeopardized. Members of the Veterans of Foreign Wars, as citizens and taxpayers, insist on intelligent economy in the operation of Government but oppose pinchpenny economy at the expense of security for the United States and care for those who have borne the brunt of battle, and their widows and orphans."

I wish to emphasize that we consider the security of the United States of paramount importance, and recognize our entire future and way of life depends upon it.

COMPENSATION AND PENSIONS

As to matters which come within the jurisdiction of this committee, I wish to express our disappointment that compensation increases, as established by the 83d Congress, did not conform to the recommendations of the Subcommittee on Compensation and Pensions when it originally reported H. R. 9020 to the full committee. As reported by the subcommittee, H. R. 9020 would have restored the traditional balance in the disability compensation schedule so that compensation payments would be commensurate with evaluated disability. The 10-percent increase as recommended by the subcommittee would have established the rate for permanent total disability at \$190 per month, nearly equal to the increase in living costs since 1940. This was in accord with the recommendations of the Veterans of Foreign Wars of maintaining the same ratio between compensation and living costs as existed in 1940 when the Consumers Price Index of the Bureau of Labor Statistics was at 100, and the compensation rate for permanent total disability was \$100 per month. We hope that this Congress will see fit to revise the rates upward so as to remove the loss that has actually occurred in compensation rates by reason of the decline in the purchasing power of the dollar.

In addition to a general revision of compensation rates, we urge the committee to give consideration to H. R. 3808, recently introduced by the chairman at our request. This bill would grant a premium of 25 percent for disabilities incurred in combat with the enemy. It is a long-standing objective of the Veterans of Foreign Wars and is in accord with our view that a sound benefit system should consider the type of service rendered as in the case of active duty pay, bonuses, and mustering-out pay. While we recognize that a disability incurred in a stateside training camp is just as disabling as a similar disability incurred on the battlefield, we believe that the service rendered in the latter case is far more hazardous and merits an increased compensation rate.

We appreciate the conscientious and determined efforts of this committee which resulted in the 5-percent pension increase granted by Public Law 698, of the 83d Congress. However, in our view pension rates are still tragically inadequate. This is espe-

cially true in the case of the aging veterans of World War I, many of whom find it nearly impossible to exist with present high living costs. We must remember that World War I veterans did not receive educational aid and training benefits except for vocational handicaps. Thousands of veterans endured long and rigorous overseas service without proven service-incurred disability only to have disability catch up with them after discharge and, consequently, are now forced to exist upon the meager pension rate.

I would not be realistic if I did not recognize the increasing opposition to benefits for the nonservice disabled. Generally speaking, the public accepts benefits for service-connected disabilities and, of course, one could not reasonably take any other position in view of the widespread workmen's compensation laws which provide benefits for civilian workers who are injured in the course and scope of their employment. Compensation benefits have become so widespread that it is hardly exaggeration to say that the compensation program for veterans merely conforms to the program that has been established for the civilian population. If veterans are to be considered a special class deserving of benefits for wartime service—a view we support—the pension program for those whose disabilities occurred after discharge must be strengthened and continued. We are alarmed by the attacks on this program, which are exemplified by the following statement of the President, contained in his recent budget message:

"Our veterans' pension and compensation laws, in particular, are in need of constructive reconsideration. The non-service-connected pension system dates back to the Revolutionary War, and its principles require reexamination in the light of recent developments, including the nearly universal coverage of the old-age and survivors insurance system."

We will resist the increasing clamor to place the nonservice disabled under the old-age and survivors insurance system on the same basis as those who have not rendered wartime service to their country. If considerations of economy are to prevent the establishment of an adequate pension rate under existing rules of eligibility, then we must suggest that consideration be given to basing pension eligibility on length or type of service—or both—so that the thousands of overseas veterans with nonservice disabilities may receive adequate care.

The false alarm that has been expressed about the cost of the benefit program for the nonservice disabled has also resulted in a tightening of eligibility requirements within the Veterans' Administration. Our national rehabilitation service reports many cases where pensions have been terminated or denied by the Veterans' Administration on the strange theory that earnings within the income limitations represent the pursuit of a substantially gainful occupation. It seems illogical to us that the Congress, under its power to regulate interstate commerce, should require private employers to pay wages of not less than 75 cents per hour, while another agency of the Government holds that wages at a lesser rate constitute a substantially gainful occupation and thereby prohibit payment of part III benefits. At our request the chairman of the committee has introduced House Resolution 3807, which is designated to correct this situation by providing that in no event shall a substantially gainful occupation be deemed to exist if the income therefrom does not exceed the minimum wage in interstate commerce.

PRESIDENT'S COMMISSION ON VETERANS' PENSIONS

The Veterans of Foreign Wars is not unduly alarmed by the President's announcement of the appointment of a Commission on Veterans' Pensions "to study the entire structure, scope, and philosophy of our veterans' pension and compensation laws in

relation to each other and to other Government programs." We welcome any fair and impartial study since any sound program depends upon a true knowledge of the actual facts uncolored by exaggeration, distortion, or misrepresentation. Our chief concern comes from the possibility that such a Commission might approach its task with a preconceived idea that its principal purpose was to save money and, consequently, render a report which disregards many traditional American principles to which we subscribe. I do not wish to be understood as charging that the Presidential Commission will approach its task with that view. I merely recognize it as a possibility.

One other point of concern prompted by the President's action is the growing tendency of some public officials to express alarm over the cost of the veteran benefit program while remaining strangely silent on the costs of other Federal programs, such as foreign aid. Our 55th National Encampment in Philadelphia, concerned over administration opposition to compensation and pension increases, unanimously adopted a resolution on the opening day deploring the contrast in attitudes over veteran costs and foreign-aid costs. The resolution went on to point out that in less than 15 years United States taxpayers had shelled out some \$83 billion in foreign aid while the total cost of compensation and pensions to veterans and their dependents during the past 160 years has amounted to less than \$35 billion.

VETERANS' COMMITTEE INVESTIGATION

We are especially pleased by the approval of House Resolution 63, which authorizes and directs this committee to conduct an investigation and study of specified benefit programs with the view to determining if they are being conducted economically, efficiently, and in the best interests of all concerned. I pledge to the President's Commission and your committee the full and complete cooperation of the Veterans of Foreign Wars in the performance of these studies. We especially welcome an investigation into programs such as the home loan program, which necessarily depends upon the cooperation of persons outside of the Veterans' Administration, such as builders, lenders, and the real-estate industry. This is also true of the contract hospital and medical program, and we believe that your inquiry into these matters will be of real assistance in insuring compliance with the intent of Congress.

HOSPITAL AND MEDICAL PROGRAM

Hospital and medical care for the sick and disabled is one of the most essential veteran benefits. For the information of the committee, I should like to read from a resolution of our 1954 national encampment, which states the position of the Veterans of Foreign Wars in regard to hospital and medical care:

(a) Unlimited hospitalization of veterans who have service-connected disabilities;
(b) Adequate hospitalization of veterans who have non-service-connected psychosis, tuberculosis, and other chronic diseases;
(c) Continued hospitalization of veterans who have other non-service-connected disabilities where beds are available and the veteran is unable to pay for private hospitalization; and the veteran's statement under oath that he is unable to pay shall be accepted as sufficient evidence of inability to pay;

(d) Continued construction of new hospitals and domiciliary facilities; and

(e) Vigorous opposition to programs of the American Medical Association and all other groups seeking to curtail the medical, hospital, and domiciliary program of the Veterans' administration.

It is a well-known fact that the high cost of hospital and medical care denies adequate treatment for all but the well-to-do. It is regrettable that notwithstanding this fact the spokesmen for the American Medical

Association continue their attacks on the Veterans' Administration hospital program. Sound statistical refutation of their charges by VA Medical Director Adm. Joel T. Boone and veterans' organizations have been ignored by AMA spokesmen and their irresponsible charges continue. We regret that a large segment of the press and public have been misled by their statements and in order to keep the record straight, I wish to reiterate that a bed census conducted from time to time by the Veterans' Administration reveals that less than 10 percent of the patients in VA hospitals on any given day come within the category of non-service-connected requiring hospitalization for 90 days or less. The exact number of these patients who could afford to pay is not known. We continue in our belief that the percentage is negligible and applaud the efforts of this committee to develop further information through your recent hospital questionnaire. I assure you that if the information thus developed indicates any significant abuse of the hospital and medical program that we will cooperate with you to the fullest extent in correcting those conditions.

CONCLUSION

In conclusion, I wish to again thank you for the privilege of appearing here today and remind you of our dinner tonight at the Statler Hotel honoring Members of Congress who have served in the Armed Forces. I will yield to our national legislative director, Mr. Omar B. Ketchum, who, I am sure, is well and favorably known to the members of this committee. Mr. Ketchum is prepared at this time to offer for the record a more complete statement of our legislative objectives.

FIVE-POINT PROGRAM OF TOP PRIORITY OBJECTIVES OF THE 1954-55 VFW NATIONAL PROGRAM

The following VFW five-point program is themed to security for the United States. Without adequate security all other American values, including representative government, individual freedom, social benefits, and economic resources would be jeopardized. Members of the Veterans of Foreign Wars, as citizens and taxpayers, insist on intelligent economy in the operation of Government but oppose pinchpeny economy at the expense of security for the United States and care for those who have borne the brunt of battle, and their widows and orphans. All points and all items under the VFW five-point program have equal force and effect notwithstanding the order and sequence of presentation.

1. Security for the United States—A free economy, social benefits, and economic resources are dependent upon security:

(a) To adopt a system of universal military training or, in lieu thereof, a workable reserve program by amendments to existing law.

(b) To maintain the most powerful offensive and defensive Air Force in the world, together with an adequate Army, Navy, and Marine Corps.

(c) To promote stockpiling of strategic and critical materials.

(d) To support the National Guard plan of defense against sneak enemy air attacks.

(e) To enforce the Monroe Doctrine if and when any foreign nation intervenes in the internal affairs of any nation of the Western Hemisphere.

(f) To develop a strong merchant marine.

(g) Encourage participation in civil-defense programs.

2. Veterans' rights—recognition for service to security:

(a) To maintain and expand the VA hospital and medical program so as to insure to veterans of all wars adequate hospital care and medical treatment.

(b) To develop plans for educational and vocational training for dependent children of deceased veterans.

(c) To increase rates of compensation and pension; liberalize pension eligibility requirements, including VA regulations on unemployment; and reaffirm traditional VFW demand for liberalized World War I pension.

(d) To protect and strengthen veteran preference in Federal employment, together with a demand for sufficient funds, properly allocated, to be made available for public employment agencies.

(e) To establish a standing Committee on Veterans' Affairs in the United States Senate.

(f) Liberalize and protect housing loan programs.

3. Armed Forces personnel—adequate and competent personnel, with good morale, promotes security:

(a) To renegotiate any treaty with a foreign nation under which members of the United States Armed Forces serving therein are subject to criminal laws and trial in foreign courts with respect to offenses committed against foreign citizens or foreign property.

(b) To restore fringe benefits previously granted members of the Armed Forces and to expand hospital and medical care for their dependents.

(c) To seek the release of all Americans held as prisoners of war by the Communists.

(d) To study benefits provided under Federal law for the surviving dependents of deceased members and former members of the Armed Forces.

(e) To effectuate a program to fortify servicemen against enemy brainwashing.

4. Americanism—Promotes internal security:

(a) To maintain the sovereignty of the United States of America through opposition to all efforts to convert the United Nations into some form of World Government or Atlantic Union.

(b) To use vigilance in combating Communist infiltration and subversion in all phases of American life.

(c) To tighten Government regulations on security risks.

(d) To oppose admission of Red China to United Nations.

(e) To prevent international treaties and executive agreements from superseding the United States Constitution and domestic law unless implemented by legislation approved by both the United States Senate and House of Representatives.

(f) To designate, by Federal legislation, May 1 as Loyalty Day.

5. Domestic economy—A strong domestic economy depends upon and promotes security:

(a) To provide full productivity and employment through the construction of highways, schools, hospitals, and other projects in the public interest.

(b) To conserve and develop the natural resources of the United States.

(c) To provide for the creation of a self-liquidating Veterans' Employment and National Development Corporation, for the purpose of creating jobs and economic opportunities through broad lending powers and technical service to self-liquidating projects and businesses that will agree to employ veterans and to qualified veterans themselves.

(d) To provide adequate loan funds and personnel to enable a greater number of worthy and qualified veterans to become established on farms.

Reclassification of Postal Jobs and Increase in Pay

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the House Committee on Post Office and Civil Service, Tuesday, February 15, 1955:

I appear here today in support of H. R. 1592, a bill offered by Representative JAMES H. MORRISON. This bill provides for a reclassification of all postal jobs and sets up a 10-percent salary increase—or \$400 per annum, whichever is the greater—for all postal workers. It provides also that after salaries are increased they shall then be adjusted to the nearest multiple of \$100.

Let us take the case of letter carriers, for example: A letter carrier in 1939, claiming 3 exemptions, had a take-home pay of \$2,007.47. This same letter carrier in 1952 took home \$3,378.78. If we were to provide the equivalent purchasing power of 1939, the take-home pay should be \$3,927.60, or a gross average for letter carriers of \$4,800. The gross average, however, would be considerably less because the preponderating majority of letter carriers are not in the top longevity grade. This picture holds true not only for letter carriers but for postal clerks and others proportionately.

The administration takes the position that the Post Office Department should be self-supporting. I am in emphatic discord. Farmers receive from \$750 million to \$1 billion annually, depending upon the level of price supports. There are no questions asked with reference to farm parity supports and balancing anything. Business receives benefits totaling approximately \$900 million. These are subsidies for airline companies and shipowners and others. We don't ask the companies thus aided to balance the Federal budget or any other budget of any department. In the same manner, the Post Office deficit should be charged to business and the public generally, because the loss sustained arises primarily in the handling of second-, third-, and fourth-class business mail.

We have many departments in the Federal Government where no question of income exists. We do not set a policeman's salary on the basis of the income of the police department. We don't set the salary of men who work for the FBI on the basis of the income received through the FBI. The Post Office Department renders a general public service for which the public generally must pay. The Postmaster General seems obsessed with the idea that the Post Office Department must be self-sustaining. If it is to be self-sustaining, then I suggest that Mr. Summerfield speak to the owners of publications like Life, Time, the Saturday Evening Post, Look, and others. They are the ones who do a great deal to create the deficit. But neither they nor the Federal employees should be charged with making up the deficit.

In these last years, there has been a greatly increased productivity on the part of postal employees. Frequently, wages are kept down because of inadequate productivity. Commitantly, they should be raised where

increased productivity occurs. Postal employees have, in recent years, almost doubled their value and services in their workload and benefit to the public generally. It is estimated that a single employee handled 20 percent more mail per year in 1952 than in 1938.

One cannot exaggerate the importance of the work of our postal employees. They benefit immeasurably our industry, commerce, education, religions, politics, and our cultural development. We dare not be pinch-penny nor niggardly in our approach to an evaluation of the monetary value of their services.

Azusa, Calif.

EXTENSION OF REMARKS OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. HILLINGS. Mr. Speaker, after years of ribbing by radio comedians and others, Azusa, Calif., has been recognized by the august New York Times.

I am proud to say that Azusa is in my congressional district and is one of the fastest growing cities in southern California.

Rich in historical lore, Azusa has passed through a transition from a Spanish rancho to an orange-growing area which is rapidly giving way to subdivisions of well-kept homes owned by the people who live in them. Azusa is also contributing to national defense with its mushrooming industrial plants.

The following is an article by Mr. Gladwin Hill, Los Angeles correspondent of the New York Times, which appeared in that newspaper on Sunday, February 13, 1955:

THE REAL AZUSA—TOWN EVEN OLDER THAN RADIO COMICS' JOKE
(By Gladwin Hill)

AZUSA, CALIF.—Tourists approaching Los Angeles on transcontinental U. S. 66 may be surprised to find themselves going through this town, which many people have thought must be a figment of radio comedians' imaginations. Actually, it is a flourishing community 25 miles east of Los Angeles.

Azusa boosters say their town has "everything from A to Z in the U. S. A." And in fact its activities range from that ancient pursuit of agriculture (it is a citrus center) to the plant of the Aerojet Engineering Corporation.

It is not true, however, that the town's name was concocted from this slogan by a fireball real estate promoter. The name far antedates real estate promoters.

There is one school of thought that the name came from an Indian dialect word variously spelled "Asuksumvit," "Asuksagna" and "Azuncsabit," but all meaning "place of skunks." It has no conspicuous concentration of skunks today. But the name Azusa Valley has been traced back as far as chronicles of the 1769 explorations of Gaspar de Portola.

LAND LITIGATION

Azusa is the gateway to beautiful San Gabriel Canyon, where gold was discovered in 1854. But the strike petered out within a

decade, and the prospectors hurried on to the Mother Lode country of northern California.

A community entitled Mound City was laid out on the site in 1857, but never got off the ground. The area languished pastorally until the 1880's, when an English immigrant, Henry Dalton, bought a 12,000-acre tract that was part of an old Spanish land grant.

Protracted litigation with the United States Government, however, concluded with the ruling that title to the land, as a result of the transition from Mexican to United States sovereignty, was not clear. The area was opened up to homesteading. Dalton, to pay his litigation expenses, had to give up all his holdings except one 55-acre tract. It looked picayune then, but is nothing to sneeze at today. (Dalton's grandson is one of Azusa's leading citizens.)

Meanwhile Jonathan S. Slauson, the Los Angeles banker who had backed Dalton and acquired the property, laid out the present town of Azusa. People stood in line all night to buy lots, and paid as much as \$15,000 for them—and express no regrets at having done so.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRINTING DOCUMENTS AND REPORTS

Documents and reports of committees with the evidence and papers submitted therewith, or any part thereof ordered printed by Congress, may be reprinted by the Public Printer on order of any Member of Congress or Delegate, on prepayment of the cost thereof (U. S. Code, title 44, sec. 162, p. 1940).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at \$1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

The United States Forest Service

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BOGGS. Mr. Speaker, the American people are proudly congratulating a great conservation agency—the United States Forest Service—in celebrating, this month, its golden anniversary.

The accomplishments of this fine organization as it pioneered in improving, maintaining, and protecting our forests and streams have benefited our people from coast to coast. We are proud of this quiet, hard-working, competent group.

It is my pleasure here to throw a little light on one of the many outstanding groups in the Forest Service organization. The headquarters of the Forest Service's Southern Forest Experiment Station is located at my home, New Orleans. The southern station was established in 1921 when only a few visionary people looked upon timber as a replaceable resource. The station has been, and continues to be, a sturdy guidepost for good forestry in the loblolly- and shortleaf-pine forests of the mid-South, the hardwoods of the Arkansas and Tennessee uplands, the delta hardwoods, and the longleaf- and slash-pine lands of the lower South.

Research at the southern station has helped make possible the tremendous pine-planting program underway in the South. The contribution of the forest survey in determining the extent, volume, and condition of southern forest lands and in appraising probable future timber requirements has been of inestimable value to wood-using industries and in stabilizing communities. Research in the growth and economic possibilities of farm woodlands is showing the way toward an improved standard of living for thousands of small farm-forest landowners.

Yes; the foresters of the southern station are doing a great job—but they have an even greater job yet to do.

The census people say that as a nation we are now using more industrial wood and wood products than ever before. We sometimes forget that in addition to lumber, plywood, poles, crossties, and piling, many of our everyday commodities come from wood—paper, boxes, rayon, cellophane and plastics, to name just a few. And each year new products are added to the list. The census people further tell us there are 164 million people in the United States, and that in less than 20 years the figure will be raised to 210 million. Forty-six million

more Americans will be demanding more and more wood.

Where are we to get this wood? There is no doubt about it, our forests from Oregon down to Louisiana and up to Maine must be managed at their best to meet the demand. Within our Southland, the region with one of the greatest forest potentials is the Longleaf Slash Pine Belt. This region blessed with high rainfall and long growing season lies across the lower South from east Texas and Louisiana to Georgia and Florida—50 million acres of some of the best timberland in America, but 50 million acres growing trees at less than one-fourth capacity. These capable lands are growing 20 good trees where they should be growing 100.

America can no longer afford the luxury of idle, or even half-idle, land. America needs the wood and the people of the forest communities need the steady jobs—steady jobs that productive forests can offer.

The lower South supports a growing population of 10 million people—people who have lived on the land in the past—people who are inseparable from the land in the future. Yet, in this era of general prosperity there are still many unstable communities in the Longleaf Slash Pine Belt—communities with submarginal incomes.

Good forestry and forest research are making great strides. Much has been accomplished, but many tough problems remain. The extensive planting of southern pines has been a real help, but the problems go much deeper. For example, we need better ways of using or removing low-quality and worthless weed trees now encumbering southern forests. Important forest management research in the longleaf-slash pine forests of Louisiana, Mississippi, Alabama, Georgia, and Florida must be continued and strengthened to keep pace with the requirements of southern industrial development.

More and more people are becoming familiar with the many pine seedling nurseries throughout the South, with the tremendous job they are doing and have left to complete. Last year 60 million pine seedlings were grown in Louisiana alone, yet at the present rate of planting it will take more than 50 years to do the job. Research and industry together must find ways to speed the task of reforestation—perhaps by planting seeds directly on areas needing restocking instead of seedlings grown in nurseries and by finding ways of making our best trees produce more seed.

Another problem is the growth of longleaf pine—one of the finest timber trees in the world. Longleaf seedlings often grow less than a foot in height during their first 10 years. This delay costs the South colossal volumes of wood

annually—wood that could provide steady jobs for the people in the forests and in the mills. If research can solve the problem, the solution will be a spectacular achievement with Southwide application.

Most of the beef cattle in the lower South graze part or all of the year on forest ranges. Although these forest ranges produce tons of grass and good grazing, meat production per animal is too low. We need more efficient ways to convert this grass to beef, and we must also learn how to profitably raise timber and cattle simultaneously.

Forestry is not the mere growing of trees. If America is to remain strong, our forests must produce high-quality materials—both timber and forage, and in large volumes, in the shortest possible time. Pulp and paper mills are playing a greater and greater part in the southern forest economy. Less than 20 years ago, only 31 paper mills were operating in the South. Today there are 67 and more are under construction. What is the impact of these mills? We must learn how to grow and how to use our forests to supply the demands of both pulp mills and sawmills.

These are just a few of the problems that we are counting on the Forest Service to help solve. Forests mean jobs and payrolls. The history of the world has shown that depleted forests and depleted nations go hand in hand. But thanks to men of vision, America's forests are a renewable resource managed for permanency. We congratulate the Forest Service at its golden anniversary—and we expect even greater accomplishments during the next 50 years.

Residual Oil Versus Coal

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, when Mr. Charles P. Taft, president of the Committee for a National Trade Policy, testified before the Committee on Ways and Means and the Joint Committee on the Economic Report, he took it upon himself to act as the champion for the entire foreign trade program, and in doing so belittled the effects which the importation of oil and glass in competition with domestic industry and labor was having upon our national economy.

Mr. Taft, in his appearance before these committees as president of the Committee for a National Trade Policy,

although he did not mention it, was not entirely unselfish in his presentation. Mr. Taft, if he is not now, has been in the past, registered as the agent for a foreign government representing the government of Venezuela and the Venezuelan Chamber of Commerce. Therefore, when, in Mr. Taft's statement, he devotes some very specific, pointed remarks to the efforts of the coal industry to obtain relief from the damaging imports of foreign oil which have greatly reduced coal's market on the east coast, he joins in a very well organized and highly financed campaign being conducted by some of the richest and most powerful oil companies, to destroy vital segments of our industry.

Mr. Taft, as well as other spokesmen for the major oil companies, seven of whom control the entire world petroleum market, attempt to belittle, discredit, and destroy an industry that supplies the Nation's biggest source of energy that keeps the electric power and steel industries operating, and which is the keystone of the prosperity of the railroad, chemical, and other related industries.

The coal industry, in an appearance before the House Ways and Means Committee which is now considering a proposed extension of the Reciprocal Trade Agreements Act, testified that the coal industry must have a quota limitation on residual fuel oil imports if it is to remain competitive in the large east coast energy market. The coal industry has not asked for absolute elimination of the imports of foreign oil. The request has been modest and only asks that the House committee write into the Trade Agreements Bill, and that Congress vote it, an amendment limiting foreign oil imports, including residual oil imports, to 10 percent of the domestic demand for petroleum products in the corresponding quarter of the previous year. Such a formula would mean only that the level of imports that would be permitted would be the same as the level of imports which prevailed during the post-war period from 1946 to 1951.

I support that request as reasonable—so do a growing number of my colleagues.

The reaction of the oil industry spokesmen, including Mr. Taft, has been one of hysterical denunciation of the coal industry. In addition, the oil industry spokesmen and Mr. Taft have made statements and quoted figures, in attempts to disparage the coal industry's contention, which are deliberately misleading.

In his statement before this committee, Mr. Taft asked for all the facts, "not the selected ones which coal spokesmen and their auxiliaries bring to this committee." Then Mr. Taft cited facts of his own which add up to half-truths and untruths. Mr. Taft asks for facts. Well, let us have the facts about the amount of coal displaced by oil imports. Coal producers and coal shippers, shipping to industries and public utilities on the east coast, know the reason for the discontinuance of these shipments to their East customers. As an example, a coal producer or shipper has an order with an industry for a certain tonnage of coal.

He is notified that shipments must be discontinued. He is given the reason; if not, he requests it. Now, by simple addition, the total number of tons of coal displaced, added up, totals approximately 32 million tons per year. It is just as simple as that, and it is accurate.

The coal industry does not need the juggling of figures as to railroads and natural gas and light fuels, and the tonnage lost to other industries. I do not know what "other industries" mean, nor do I know what he means by "light fuels." But the facts are as I have stated above about the loss of tonnage.

Does Mr. Taft think for one moment the amount of residual oil being shipped to the United States is not displacing coal at all? What is being done with it? What is the purpose of shipping it then?

He said that heavy residual fuel oil consumption increased by only 11 million tons coal equivalent in the United States between 1947 and 1953. Actually, the increase of foreign residual fuel oil—including that refined from foreign crudes—increased from 17 million tons coal equivalent in 1946 to 47 million tons coal equivalent in 1954, or an increase of 30 million tons.

The fact is that foreign fuel oil represents a type of competition without end or limit, with the capacity—through dump pricing and shifting the cost to other oil products—to drive coal completely off the east coast. Foreign oil has taken over approximately 50 percent of the coal competitive energy market on the east coast.

Mr. Taft said shutting out residual oil would definitely hurt American manufacturers in 30 States employing 30,000 people in manufacturing for export to Venezuela. But the damage already done to the coal industry has contributed to a decline of employment in American coal mining from 400,000 men in 1950 to 214,000 in 1954, has cost the coal miners \$81 million in wages or the equivalent of 25,000 jobs for 1 year, and cost railroad labor \$44 million in wages. Approximately 75,000 miners went off the payrolls in 1954 alone.

Mr. Taft said that the real employment problem in coal mining is the turn to strip mining which he said accounts for fully 25 percent of total bituminous production. Actually, strip mining production in 1953—the latest year for which statistics are available—represent only 23.1 percent of the total national production of bituminous coal. In 1947, strip-mine production represented 22.1 percent of the total national production—an increase of only 1 percent in 6 years. These facts are certainly far different from those presented by Mr. Taft in support of his misinformation that "the real employment problem in coal mining is the turn to strip mining."

The number of strip mines has declined from 1,750 in 1947 to 1,554 in 1953; production has declined from 139,395,000 tons in 1947 to 105,448,000 tons in 1953 and the number of men employed in strip mines has fallen from 43,338 in 1947 to 31,088 in 1953.

Mr. Taft says, "This is a technological change opposed as vigorously by the

United Mine Workers as is the importation of residual oil, but with less publicity."

The United Mine Workers do not oppose, never have, technological changes. Their vigorous opposition of strip mining has been against the nonunion strip miners. Historically the United Mine Workers have encouraged technological improvements in coal mining. It is exemplified by the fact in the United States the average production of coal per day is 8 tons. In England and on the Continent where these changes were opposed by the union, the average is 1½ tons per man per day.

At the mine the cost is lower than it is abroad.

Mr. Taft in his statement, implied that with a bituminous coal production of 400 million tons in 1954, the addition of only 70 million tons would be ample for this country's war needs. The actual facts do not support Mr. Taft's statement. In the first year of World War II, the requirements for coal rose 130 million tons and coal supplied 82 percent of the grand total added energy needs in the first year of the war. Likewise, Mr. Taft failed to mention that in World War II the supplies of foreign oil on the east coast received by tanker, dropped 93 percent as a result of submarine sinkings.

Seemingly, Mr. Taft attempts to present himself as a technical expert in coal production when he says "existing mines by going to a full week without overtime, could add 150 to 200 million tons a year." Mr. Taft assumes that the current production capacity of the bituminous coal industry is 670 million tons annually. That figure is for 1953 and it ignores completely the current availability of manpower and the condition of the necessary machinery and equipment to produce coal. Between October 1953 and October 1954, according to the Bureau of Mines, there was a reduction of 74,000 miners. The Bureau of Mines figure of capacity is directly related to days worked and number of employees. With the indicated reduction of employees by 27 percent, the potential capacity is cut proportionately. On that basis mine capacity as of October 1954 would have been more nearly at less than 500 million tons.

As a matter of fact, as of now the anticipated coal mine production for 1955 is much less than 500 million tons—more nearly 400 million tons.

Mr. Taft makes the categorical statement "that there is no evidence that shutting out residual oil helps coal," and then he continues with a personal observation that he personally found "that the mines in southern Kentucky and Tennessee on the Southern Railroad at least, had no competition from residual oil since the last reduction in freight rates down there." These statements are wholly untrue. In the first place, foreign oil today potentially displaces 32 million tons of coal equivalent, principally in the east coast energy markets. In fact, through operation of various price understandings and market agreements within the oil cartel, bituminous coal is now virtually wiped out of the

east coast energy market, and if the flood of imported oil continues, it will be wholly eliminated. The present coal displacement by foreign oil represents approximately 25 percent of the total production of coal in the principal coal mining States of West Virginia and Pennsylvania, and such a tonnage reduction sponsors a chain reaction which affects the entire coal producing areas.

Mr. Taft's statement regarding the mines in southern Kentucky and Tennessee is contradicted by the President of the Southern Appalachian Coal Operators Association, which is made up of the coal mine owners in southern Kentucky and Tennessee, who in a telegram to the chairman of the House Ways and Means Committee, says:

Regarding Mr. Taft's testimony that coal mines Southern Appalachian area particularly those located on Southern Railway have been materially helped in competition with residual oil by reduction in freight rates. Reduced freight rates have helped a few cases in competition with natural gas but cannot find in any instance of help in competition with residual oil sufficient to regain or hold coal in these seaboard markets.

The record shows that residual fuel oil imports are being dumped primarily in one geographic area, namely the east coast, the heart of our industrial arsenal. This foreign residual oil originates in the main from Venezuela, which today is living on a level of prosperity unequalled by any section of the United States, principally because the majority of the income in Venezuela is derived from taxes amounting to 50 percent of the value of the petroleum products which it exports—90 percent to the United States.

It is time for the Congress to end the folly of destroying a major portion of our domestic industry, namely coal mining and domestic oil production, with unreasonable and excessive importations of foreign oils. Further, it is time for the oil industry spokesmen, including Mr. Taft, to temper presentations, such as that made before these committees, with some factual research and reasonableness so that the consideration of their own selfish interests might be leavened somewhat by a respect for American businessmen and workers, who today are being seriously and vitally affected economically by trade advantages granted to foreign nations.

The Brilliant and Beneficial 40-Year Record of Service of International Kiwanis, 1915 to 1955—Part I

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McDONOUGH. Mr. Speaker, as an honorary member of the Southwest Los Angeles Kiwanis Club, I take pleasure in including in my remarks the 40-year record of service to mankind of the International Kiwanis Club.

It has been an unselfish service of the greatest good to the greatest number which has made life better for everyone it has touched.

I am proud to be associated with such a fine group of loyal Americans.

Part I of the record follows:

Nineteen hundred and fifteen was the sunrise period for Kiwanis, the year an exciting new idea entered the lives of a few business and professional men in Detroit and in Cleveland, Ohio. Allen S. Browne, a professional organizer, set about forming a mutual-interest club for Detroit businessmen. The first one he signed up was a merchant tailor named Joe France. Then, in swift succession, came Harry Cowden, Charles Young, Don Johnston, and George Haas. With over 100 other pioneers they set up the first club. Like ripples spreading outward in a still pond, Kiwanis expanded beyond the limits of the community where it was born. Later in that same eventful year, Cleveland businessmen found the Kiwanis idea had a magic appeal. They too set up a club and thus established the universality of what was soon to become an international movement. The mists of four decades obscure those formative months, and today we view our beginnings with a sense of awe. We must marvel at the thin thread of probability which held the whole proposition together in spite of certain personal difficulties that threatened more than once to capsize Kiwanis. Perhaps faith is a better word than probability. For it was faith in a broad ideal, as yet largely undefined, that guided those early Kiwanians.

Nineteen hundred and sixteen saw Kiwanis grow from 2 to 32 clubs. One of those was in Hamilton, Ontario, and its founding made Kiwanis International. Dimly aware of the implications of their birth, these new clubs were touched with human curiosity about the Kiwanis clubs and Kiwanians—some said "Keewaniisers"—in other cities. Out of this vague desire to know each other came the first convention, held in Cleveland. A constitution was drawn up and international officers were chosen.

Nineteen hundred and seventeen: The speed with which Kiwanis spread from community to community confounded even those who had given birth to the original idea. A second convention was held in Detroit. The delegates decided that their emblem would be the words "Kiwanis Club" enclosed in a double circle. The international president was reelected—the only such occurrence in Kiwanis history. A conflict was shaping up between those who believed Kiwanis should be materialistic and others who felt the urge to serve.

Nineteen hundred and eighteen: The official magazine described Kiwanis thus: "Its purpose is personal advantage. Its advantage is social advantage." The armistice came, and Kiwanis counted 353 casualties out of a total membership of 10,000. O. Sam Cummings was elected as the first full-time international secretary and a two-room headquarters was established in Chicago. The magazine was overhauled and Roe Fulkerson became editor. From this vantage point, he was to exert a powerful influence on Kiwanis thinking.

Nineteen hundred and nineteen: At the historic Birmingham convention, Kiwanis "bought itself" from Allen S. Browne who had, until that time, exercised much control. The price raised by pledges on the convention floor: \$17,500. Alert to the threat of communism, some Kiwanians conducted an "America for Americans" campaign which, according to one observer, "drove the Red agitators mad." A non-member observed: "Kiwanians are boosters of the most eloquent type. A pessimist cannot live long in their atmosphere."

Nineteen hundred and twenty: A decade of phenomenal expansion was beginning. There were 267 clubs and 28,500 members, and across the continent the new organization with an Indian name was capturing the fancy of business and professional men. A club-building tempo was begun which was to set an all-time record. At the Portland convention, Kiwanis adopted as its motto the meaningful phrase "We Build." The first Canadian international president held office during part of this year.

Nineteen hundred and twenty-one: The exciting concept of community service was sweeping the young organization. This found expression in certain broad policies which were beginning to emerge. Great emphasis was being placed on the development of rural-urban cooperation, public affairs and work with underprivileged children. A second international secretary, Fred C. W. Parker, began what was to be a 20-year period of service. Two hundred and sixty-nine new clubs, a record number, were built during 1921-22.

Nineteen hundred and twenty-two: The first observance of United States-Canada Day was held in April and this highlighted a growing Kiwanis emphasis on the need for international understanding. Toward this end the international convention was held in Toronto and a Canadian was elected international president. The present system of district organization was shaping up. Kiwanis adopted officially a set of administrative policies to guide clubs in their activities. In later years these became known as objectives and were to be used widely.

Nineteen hundred and twenty-three: Realizing the need for a revised set of rules and standards, Kiwanis issued the official call for a constitutional convention to be held the following year in Denver, Colo. Months ahead of the meeting ideas were simmering throughout Kiwanis. Clubs on both sides of the border were enthused about a memorial to Kiwanian Warren G. Harding, a charter member of the Marion, Ohio, club. Kiwanians in many clubs gave money to finance the project, which cost \$44,559.

Nineteen hundred and twenty-four: During this important year much of the growing organization's thought and energies were devoted to drafting a workable legal framework. Out of the 1924 constitutional convention came these lasting results: (1) The six unchanging objects; (2) the organization machinery through which Kiwanis International now operates. This included creation of the International Council and defining the functions of major committees. (3) Kiwanis International became the official name.

Nineteen hundred and twenty-five: The first Key Club was founded in Sacramento, Calif. Few realized the significance of this event, which was to burgeon into the largest single continuing Kiwanis activity after World War II. The International Council convened in Chicago, and for the first time governors-elect assembled to plan in advance for their administrations. Similar meetings subsequently developed on the club and district levels. The Harding international goodwill memorial was dedicated in Vancouver.

Nineteen hundred and twenty-six: The rapid growth of Kiwanis was emphasized by 2 things that happened during 1926: (1) Membership climbed to almost 100,000, which caused Kiwanians to realize the importance of their role in the service club movement. (2) The largest Kiwanis convention to date was held at Montreal. A total of 5,248 men and women registered, representing 1,546 clubs. For the first time the term "Objectives" was used to define those broad service categories to which clubs were directing their energies.

Nineteen hundred and twenty-seven: The end of prosperity seemed nowhere in sight, and the spirit of happy optimism prevailed.

Kiwanis clubs in the United States were helping the Dominion of Canada celebrate her diamond jubilee. Youth work, public affairs and rural-urban cooperation were assuming ever greater importance. The International Board authorized a system of field service contracts to determine the problems of existing clubs. This was to prove of great value during the depression.

Nineteen hundred and twenty-eight: The leaders of Kiwanis International saw increasing evidence of the need to help club and district officers bring the broad Kiwanis service program to focus in every Kiwanis community. For this reason the present comprehensive leadership training setup was established. As a result, Kiwanis has since paced the whole service club movement in leadership training. This ascendancy has been reflected, through the years, in the steadily increasing Kiwanis community services.

Nineteen hundred and twenty-nine: The degree of Kiwanis interest in underprivileged child work was revealed in a survey made public in 1929. It showed that 95 percent of all clubs were carrying on UPC projects. The stock market crash cast an ominous shadow over Kiwanis. For the first time the young organization faced the gloomy prospect of a membership loss as business conditions worsened. To survive, Kiwanis began trimming its sails—by strengthening leadership and service programs on club and district levels.

Nineteen hundred and thirty: Hard times halted the steady membership growth which had been registered every year since 1915. The actual loss of less than 1,000 men cut the Kiwanis roster to 102,811. As an antidote to the hard times, emphasis was placed upon the organization's widening service program. Administratively, it was a period of belt tightening. Officers were more conscious than ever of the need to reduce costs and at the same time increase service to clubs. This set a pattern which still prevails.

Nineteen hundred and thirty-one: Old man depression killed only one Kiwanis club this year, but he claimed as casualties some 5,000 Kiwanians. The general office moved to its present location in what was then the undeveloped outskirts of Chicago's main business district. In an effort to broaden their already widespread youth program, Kiwanians adopted a new objective dealing with both boys and girls work. This paved the way for Kiwanis activity in fields outside of the underprivileged category.

Nineteen hundred and thirty-two: "Back to the Birthplace—Forward in Kiwanis," was the convention theme as Kiwanians gathered in Detroit for the second time since the founding 17 years before. A serious but enthusiastic group of conventioners swung behind their leaders to launch a new and vigorous attack on the depression. This included programs of morale building, support to schools, stabilizing employment, economy in government, and furtherance of good citizenship.

Nineteen hundred and thirty-three: The President and Congress of the United States formally recognized "I Am an American Day," which Kiwanis had originated. Everyone was enthusiastic about the book titled "Outline for Citizenship," written by the international president. The appalling severity of the great depression was reflected in the membership figures, which reached a low point of 79,589 before resuming their traditional upward course. Kiwanis not only survived; the lean years prepared the way for a great expansion.

Nineteen hundred and thirty-four: "The dark clouds of doubt are scurrying away," declared the international president, viewing the national scene. "There is a stimulating freshness in the air. Membership is increasing by leaps and bounds." Indeed, the tide had turned. Membership jumped

4,000 and only 1 club was lost during this year. And at the 1934 Toronto convention, club delegates heard these inspiring words: "Kiwanis has been tested by these difficult times, and we are grateful that it has not been found wanting."

The Brilliant and Beneficial 40-Year Record of Service of International Kiwanis, 1915 to 1955—Part II

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McDONOUGH. Mr. Speaker, the following is a continuation of the record of International Kiwanis during the past 40 years previously referred to:

Nineteen hundred and thirty-five: The increasing interest in churches began to take recognizable form. Kiwanians were talking about some sort of regular program for support of churches in their spiritual aims. Kiwanis observed its 20th anniversary with 1,858 clubs and some 86,000 members. Twelve Canadian clubs joined with New England Kiwanians in laying the first Kiwanis peace tablet on the United States-Canadian boundary. Since then 25 others have been dedicated, attesting to the friendship between our nations.

Nineteen hundred and thirty-six: The President of the United States made an appearance at the international convention in Washington, D. C., where he saluted 4,037 visitors for the active role Kiwanis was playing in the fight against the retreating depression. A prominent part of this vigorous program was the open forums Kiwanis was sponsoring to promote thought and action on public questions such as the use of leisure time, business stabilization, and administration of relief and other Government services brought about by the hard times.

Nineteen hundred and thirty-seven: Clubs reported more than 30,000 separate service projects, giving dramatic meaning to the annual theme: "Kiwanis builds better communities." The system for reporting club projects developed in this period was the foundation for the present method of tabulating activities by Kiwanis International. These carefully recorded totals serve as an index of current trends in club thought and action. Kiwanis began plans for a foundation to administer bequests made to international.

Nineteen hundred and thirty-eight: Kiwanis services continued expanding year after year. Nineteen hundred and thirty-eight saw an increase of 17 percent in club activities. The 2,000th club was formed. The international convention was held in San Francisco and delegates were voicing the theme "The Golden Gate in thirty-eight." The first key club district was established in Florida. Sixty-five affiliated key clubs were included in what was actually the beginning of the Kiwanis-type administrative pattern for key clubs.

Nineteen hundred and thirty-nine: Once again the world went to war. Canada stood with Britain in opposing Nazi aggression and thus cast aside the pursuits of peace to defend the principle of freedom. Under these conditions, Kiwanis appropriately began observing United States-Canada Good-Will Week every year instead of biennially, as in the past. On the verge of its silver anniversary, Kiwanis was also on the eve of a wartime renaissance which was to heighten its

vitality, broaden its horizons and win the organization public acclaim.

Nineteen hundred and forty: To celebrate its 25th anniversary, Kiwanis International laid a wreath on the grave of Joe Prance, the first Kiwanian, and put up a plaque at Detroit's Griswold Hotel, where the first club met. Twenty-five silver dollars adorned the huge birthday cake at the silver anniversary banquet in Detroit. Meanwhile, Canadian clubs were providing entertainment, food and other services for fighting men. There were 2,099 clubs and 109,856 Kiwanians.

Nineteen hundred and forty-one: Pearl Harbor brought the United States into the war to which she had been morally committed by her common bond with the freedom-loving peoples. The International president mobilized the vast resources of Kiwanis over a nationwide radio hookup, then arranged a meeting between heads of the major service clubs to see how all could make the utmost contribution. International Secretary Parker retired after 20 years of service. Kiwanis moved swiftly into a broad emergency program.

Nineteen hundred and forty-two: At its last full convention till the end of hostilities, Kiwanis pledged itself to "morale building for the war effort." More than morale was built by energetic Kiwanians on the home front, however. They started collecting scrap rubber and metal, sponsoring victory gardens, marshalling blood donations, entertaining troops and watching over the dependents of men who were fighting overseas. The new International secretary helped coordinate the swiftly growing Kiwanis victory effort.

Nineteen hundred and forty-three: Because of wartime travel restrictions, a limited convention was held in Chicago. Although the attendance was a fraction of normal, the spirit of Kiwanis burned at white heat. "Victory! By United Effort—By Individual Service" was a theme admirably suited to the present activities of Kiwanis. (By war's end, clubs had sold an average of more than \$70,000 war bonds each.) Kiwanis was sending a newsy, monthly bulletin called "Contact" to all of the 15,000 Kiwanians in service.

Nineteen hundred and forty-four: Membership climbed to an alltime high of 132,005 as Kiwanians labored for a common goal: "All Out for Victory." Kiwanis meetings became important community forums where wartime problems were discussed. With victory in sight, Kiwanians redoubled their efforts on the home front, performing an astounding number of vital services. Kiwanis was represented by official observers at the United Nations conference, which millions hoped would lead to never-ending world peace.

Nineteen hundred and forty-five: Kiwanis was keyed to victory with the theme: "Win the War—Build for Peace." The final totals for wartime service showed that Kiwanis clubs had sold over \$2 billion worth of war bonds and stamps, collected more than 3 million tons of valuable scrap and contacted over 6 million members of the Armed Forces by letter and other means. The Legion of Honor was established to recognize the contribution made by men who had served Kiwanis for 25 or more years.

Nineteen hundred and forty-six: Kiwanis clubs were formed in Alaska and the Yukon Territory, and membership increased by almost 15,000 during the first full year of peace. A record crowd of 9,346 came to Atlantic City for the gala victory convention. Kiwanis was protesting against the continuation of wartime controls which were widely considered as a barrier to recovery. Key club became a full-fledged part of the Kiwanis program, with its own international structure paralleling that of Kiwanis.

Nineteen hundred and forty-seven: Kiwanis built more than 200 new clubs, 3 of

them in Hawaii. Sentiment was growing in favor of outlawing lotteries in connection with Kiwanis projects. International President Jay N. Emerson died on the eve of the great Chicago convention. He was the first president to pass away while in office. Some Kiwanians were considering the need for a Kiwanis-sponsored organization for college men. Called Circle K, the new idea was beginning to gather force and direction.

Nineteen hundred and forty-eight: The longstanding Kiwanis interest in preservation of freedom found expression in the *It's Fun To Live in America* and *It's Great To Be a Canadian* pamphlet series produced by Kiwanis International. Clubs circulated more than 16,200,000 of these folders. Our awareness of the realities of world leadership was reflected in the growing number of public affairs activities. Much interest was shown in the United Nations, housing, universal military training, and other vital matters.

Nineteen hundred and forty-nine: Kiwanis sponsored its first congressional dinner in Washington, D. C., honoring Kiwanians in the highest branches of Federal Government. Since then Kiwanis has sponsored similar meetings every 2 years. (Testimonials for Canadian legislators are held on alternate years.) The first Kids' Day was held, with 1,239 clubs participating. The 3,000th Kiwanis club was formed in the city of Lancaster, New Brunswick. The Freedoms Foundation cited our *It's Fun To Live in America* series.

Nineteen hundred and fifty: The International board adopted a long-range goal of 250,000 members and 4,000 clubs by the 40th anniversary in Cleveland. Floods inundated Canada's Red River Valley. In a spontaneous gesture of international good will, some 457 clubs on both sides of the border contributed money for flood relief. Newfoundland had recently joined the Dominion of Canada, and in 1950 the first Kiwanis club was built on this northern island.

Nineteen hundred and fifty-one: Another war—this one in Korea—inspired a new degree of national and community service. For the third time in Kiwanis history, clubs were busy selling war bonds, conducting blood and conservation drives. The growing awareness of communism's menace was emphasized by the international president and reflected in the number of club services aimed at preserving and strengthening the established way of life. In this category, the *It's Fun To Live in America* series was adapted for radio.

Nineteen hundred and fifty-two: The international convention in Seattle was highlighted by a vigorous assault on certain internal forces which "threatened the integrity of the Constitution of the United States." Kiwanis clubs joined together in a massive effort to get out the vote for a nationwide United States election. Under the banner of the ballot battalion, hundreds of clubs worked alone and with other local organizations to stimulate public awareness of the basic issues and then to bring voters to the polls.

Nineteen hundred and fifty-three: The international convention in New York City set the alltime attendance record with 11,532 Kiwanis people registering. Sessions were held in Madison Square Garden. Delegates decided once more against extending Kiwanis into foreign countries. Circle K, the Kiwanis-sponsored organization for college men, was expanding steadily. Hundreds of clubs joined in supporting Radio Free Europe, a private anti-Communist network which broadcasts the truth to people behind the Iron Curtain.

Nineteen hundred and fifty-four: A historic development was the decision by an overwhelming majority of clubs to construct a permanent home office for Kiwanis International. Extension boomed, and more new clubs were built than in any 1-year period

since 1922. Membership moved steadily forward toward the quarter-million mark. A second series of pamphlets called the Minuteman enjoyed a circulation exceeding 6 million copies as part of the continuing Kiwanis program of strengthening the national heritage. Some 1,400 radio stations were using Kiwanis religious radio recordings. Hundreds of clubs were taking part in the nationwide crusade for traffic safety. Kiwanians were making an organized effort to understand the complex farm problems which affect farm and city. Kids' day was held under Kiwanis sponsorship with 2,000 clubs participating. Vocational guidance reasserted its importance as a Kiwanis program with many clubs emphasizing this type of service. As 1954 drew to a close, there was a growing awareness that the year ahead, while marking 40 years of growth, would also mark 40 years of preparation for tomorrow.

OBJECTIVES FOR 1955

1. Enhance the spiritual life of our people, giving active support to churches.
2. Champion human dignity, individual initiative, and free enterprise.
3. Help to make our schools the finest possible training grounds for responsible citizenship.
4. Sponsor community activities and strengthen homes to combat delinquency and guide our boys and girls to sound maturity.
5. Work for effective highway safety.
6. Elect, support, and recognize worthy public officials.
7. Provide leadership in the conservation and development of our natural resources.
8. Maintain and foster friendship, understanding, and cooperation between Canada and the United States.
9. Strive with all our power to promote world peace and strengthen the United Nations.
10. Make our 40th anniversary of service a challenge for greater achievement.

FORWARD IN KIWANIS

We have all been traveling down a road together. Arm in arm, we have moved from 1 milestone to the next until today we find ourselves at No. 40. Here the road forks. One branch is straight and level. It goes on and on until the road is lost in the mist.

The other fork winds upward over narrow ridges and chasms. The grade is steep. The way is sometimes clogged with boulders. But it leads to the summit of the towering mountain—this we can see.

Which road shall we take as we venture on beyond 40? The smooth pathway that leads to nowhere? Or the rough one which will, with God's grace, carry us to a commanding height of land?

This, my friends, is the choice before Kiwanis on our 40th birthday.

One path—the easy one—is tempting. But if we choose to tread its course, old age will have set in upon us. For the sake of our own ease and comfort, will we be content to jog along, enjoying a pleasant, placid journey to oblivion?

The other course then? Looking up this pathway, we know the climb will be rugged. But even from where we stand we can see that the goal—the snow-capped summit—will be worth attaining. The choice before us was also the choice of the pioneers who built our two nations. A century ago they were crossing the plains in lumbering Conestoga wagons laden with children, furniture, and courage. After weeks of endless prairie they saw the mountains shimmering in the distance. The land through which they passed was fertile. Game was plentiful. And the pioneers' bones ached from months of jarring travel.

The temptation was to take the easy course—to stop and avoid the trails that lay ahead. Some did unload their wagons, build their homes and break the virgin prairie sod.

But others—most of the others—kept on going. They took the rugged road that led through howling mountain passes, Indian ambushes, deep snows, and treacherous cliffs. Some faltered. Many died. But a thin stream of civilization trickled over the mountains and two new nations reached the outward limits of their destiny.

The lesson seems clear: The easy road, the way of least resistance, is not worth taking. By following the rugged path of challenge we continue to be worthy of those many men whose pioneering efforts have built our nations and our beloved Kiwanis.

The rugged road means ever-expanding service: More children saved from poor health and delinquency. More towns salvaged, by civic alertness, from strangulation. More religious faith established in the hearts of millions. More courageous citizenship that defies corruption. And more dynamic leadership for the free world.

This is the difficult road, but it leads straight to freedom, the shimmering goal of all men since time began.

This is the path for Kiwanis! After 40 years of climbing up the rugged trail we shall not turn away down the sluggard's road. They say that life begins at 40. My Kiwanis friends, our life is truly beginning if we, at 40, have the courage to choose the path of continued challenge.

DAN E. ENGDAHL,
President, Kiwanis International.

Peace Campaign and a War Pledge

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include an article written by Marquis Childs appearing in the *Washington Post* and *Times Herald* of February 16, 1953.

While I do not challenge or disagree with this observation the concluding sentence of Mr. Childs' article could well and correctly have been "That is, indeed, an extraordinary example of patriotism—particularly by the Democrats."

I feel confident Mr. Childs would not oppose this amendment.

The article follows:

PEACE CAMPAIGN AND A WAR PLEDGE
(By Marquis Childs)

The remarkable demonstration of American unity on foreign policy which preceded the successful evacuation of the Tachen Islands is, as American officials are well aware, in marked contrast to the internal troubles of America's allies. With only five votes in the entire Congress in opposition to President Eisenhower's Formosa resolution, the world was put on notice that defense of the Pacific island chain considered essential to America's security is above politics.

The contrast with Western Europe is striking. France is going through another prolonged governmental crisis as one politician after another undertakes to form what will be, at best, a dubious coalition cabinet.

The Socialist and neutralist opposition to Chancellor Konrad Adenauer in West Germany is conducting an intensive campaign with demagogic overtones aimed at preventing ratification of the armament accords. Adenauer still has a great popular hold in Germany but the effort to undermine his

policy is not discounted, particularly in view of the new tough-talking policy in Moscow.

In Great Britain the Labor Party is united in opposition to America's Formosa policy. Clement Attlee, the Labor Party's former Prime Minister, has repeatedly called for turning the island over to the Communists. The Conservative Foreign Minister, Sir Anthony Eden, put his whole political future, including his chances of succeeding Prime Minister Churchill, in jeopardy by agreeing to go along with the American stand. Britain must hold elections in 1956.

Here in this Capital even those Members of Congress most apprehensive over the possible consequences of the Formosa resolution and the mutual defense pact with Chiang Kai-shek felt compelled, with few exceptions, to demonstrate national unity and vote with the President. What makes this all the more remarkable is that Republican strategists injected foreign policy into the congressional campaign last fall with emotional appeals that stirred the anger of Democratic candidates.

In the closing days of the campaign in advertisements, in newspapers, and on radio and television the Democrats were called the war party and the Republicans the peace party. In Illinois small-town dailies and weeklies were flooded with advertisements that began, "Vote Republican—the life you save may be your son's."

Senator PAUL DOUGLAS, Democrat, running for reelection, believed this last-minute peace campaign, which coincided with President Eisenhower's intensive airplane tour in key States, reduced his majority by 200,000. It is believed to have been influential in Ohio, Iowa, and Colorado where Democrats were defeated by narrow majorities.

While the advertisements were paid for by local Republican organizations their similarity indicates they were part of a carefully planned national campaign. Some of this propaganda had a peace-at-any-price ring to it, which is in strange contrast to the stern language of the President's message on Formosa. One advertisement listing the achievements of the administration concluded: "And all this done without war in Indochina and the useless war in Korea ended."

"The life of your son sacrificed on some foreign battlefield is too high a price to pay for inflated prosperity," was another advertisement widely used.

Others quoted from the President's 1952 and 1954 campaign statements with respect to the futile sacrifices of the Korean war. One advertisement appearing in many papers was a box score listing the casualties of World War I, 360,000; World War II, 571,000; and Korea, 142,000, with the Democrats in power. This ad concluded: "1954—peace—the Republican Party in power."

Another advertisement showed a scene of disaster with ambulances and wounded and dying strewn about. The caption was "Remember Nagasaki—it may be Elgin or Aurora (two neighboring Illinois towns) next time and you."

Injected at the last minute, this was difficult to answer. Many Democrats feel that it was much more effective than the personal smear of being soft on communism. The irony, of course, was that at the same time Republican strategists were using the soft-on-communism accusation they were also accusing the Democrats of being warmongers because they went to war, as in Korea, to stop communism. Yet, despite this campaign of only 4 months ago not a word of it came into the debate on a critical foreign policy issue. That is, indeed, an extraordinary example of unity.

Remarks of Robert H. Shields, President and General Counsel, United States Beet Sugar Association, Washington, D. C., at Michigan State College, East Lansing, Mich., on Sugar Beet Day Program, February 8, 1955

**EXTENSION OF REMARKS
OF**

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. HILL. Mr. Speaker, I wish to include in the Appendix of the RECORD the following remarks of Robert H. Shields, president and general counsel, United States Beet Sugar Association, Washington, D. C., at Michigan State College, East Lansing, Mich., on February 8, 1955:

Three years ago I had the pleasure of appearing on your Sugar Beet Day program and I am honored indeed to be invited to come again.

In this centennial year of your great Michigan State College—the first State agricultural college established in America—we are especially aware of the heritage left to us by the pioneers of long ago, pioneers who dared to dream of the future and, more importantly, gave substance to their dreams.

As people long interested in the agricultural economy of Michigan, we today salute this institution not only for what it has done for the sugar-beet industry in the last 100 years but also for what it has done for all agriculture in this State and throughout the land.

And special tribute should also be paid on this occasion to the sugar-beet industry of Michigan which, in fact, is nearly 20 years older than Michigan State College. In 1837—the year Michigan became a State—pioneers in St. Joseph County organized one of the very first beet sugar companies in the United States.

History records the hardships and disappointments these and other pioneers suffered in trying to establish our industry in this country. And the great progress of our industry in the last 50 years would not have been possible without the persistence and determination of the pioneers of 50 and more years ago, whose repeated disappointments and failures merely doubled their resolve to plan and build for the future.

When I was here 3 years ago, the question in everybody's mind was the same as it is today: "Where do we go from here?" All the discussions on your program today—such topics as chemical weed control, spring mechanization, better beet varieties, and, above all, Director Turk's stimulating talk on Our Next Hundred Years—demonstrate that you are still addressing yourselves to the challenging future of this industry. You are continuously seeking ways to make it even more efficient and to help it contribute still more effectively to the food needs of this Nation.

In Washington we are concerned with the administrative and legislative facets of these and all other industry problems. But certainly the industry problem that is uppermost in everybody's mind on the Washington scene today is the problem of prospective sugar legislation.

As you know, the present law—the Sugar Act of 1948, as amended in 1951—expires December 31, 1956. Obviously, it must be amended and extended either in 1955 or 1956. Domestic sugar producers, foreign sugar suppliers, and the American sugar consumers can all plan more intelligently and with more confidence for the future if the Sugar Act is amended and extended in 1955.

Legislation is necessary this year to enable the sugar industry to go ahead with its current operations and future plans with a minimum of uncertainty. If the act is not extended in 1955, sugar-beet and cane farmers will not know at planting time this fall or next spring what the provisions of the Sugar Act will be when the time comes to market their sugar. The need for farm-management planning and continued investments in plant-modernization programs and long-range scientific investigations—which in the past half century enabled our industry to more than double its beet yield per acre and triple its sugar yield per acre—make action now all the more imperative.

The Sugar Act must also be amended this year to give the domestic beet and mainland cane areas some immediate relief—in 1955—from the economically impossible positions with which they are faced. They have been placed in those positions by a combination of the increasing yields per acre which technological advances have brought about and a temporary waiver, for Cuba's benefit, of the domestic areas, just and historic share of the American market.

Although annual sugar consumption in the United States has increased about a million tons since the Sugar Act of 1948 was passed, not one ounce of this increase has been added to the rigid marketing quotas of the domestic beet or mainland cane-sugar areas. And yet under the act these areas have always been subject to acreage restrictions and marketing controls. During the last 2 years these restrictive measures have been sharply applied.

In the mainland cane area, for example, acreage cuts of 10 and 8 percent, respectively, have been imposed in the last 2 years. Unless legislative relief is forthcoming in 1955, a further acreage cut of 30 percent would be required in order to bring stocks in line with normal carryover. This, of course, is unthinkable and as a practical matter is not possible.

The domestic beet-sugar area is also faced with a most difficult situation, in view of its fixed marketing quota of 1,800,000 tons. Production in 1953 was almost 1,900,000 tons. In 1954, with planted acreage held to a level below that of 20 years ago and with adverse weather conditions prevailing in important producing areas, domestic beet-sugar production was almost 2 million tons. In Michigan historical acreage factors have temporarily minimized the amount of sacrifice, but for the rest of the country acreage cuts of 10 to 15 percent have been ordered for this year for established beet growers. Other farmers, including many veterans on reclamation lands, will not be allowed to grow sugar beets at all. In spite of this reduction in planted acres, present beet-sugar stocks are at such levels that less than 10 percent of the total 1955 production can be marketed in 1955, instead of a normal 20 to 25 percent. In fact, for some processors virtually none of their share of 1955 production can be marketed in 1955.

Farmers this year are faced with substantial curtailment of acreage of several export crops we produce in surplus. I find it hard to justify as being in the national interest for farmers to be required to make sharp curtailments also in acreages of a crop of

which we import nearly half our annual needs.

I have mentioned that improved farming methods, technological advances, and the application of scientific research have more than doubled the beet tonnage per acre and tripled the yield of sugar per acre in the last 50 years. Tremendous strides have been made even since 1948, when the present Sugar Act became effective. The average beet yield per acre has increased almost 20 percent in that period—from 13.5 tons to 16 tons per acre. In some of the heaviest producing areas, like California, Oregon, and Washington, yields of 30 and more tons of beets to the acre are common.

Along with increasing yields, American sugar beet production has become highly mechanized. American beet farmers now can supply the raw material for 100 pounds of sugar with less time in the field than the farmers of any other sugar-producing nation in the world.

This kind of progress cannot be stopped in America. And it should not be stopped. It is obvious that the domestic beet and mainland cane people need immediate quota increases to relieve the pressure resulting from the attempt to hold the clock still too long. And unless a recurrence of a similar situation in a few years is to be invited, the domestic industry needs also a restoration of its historic right continuously to share in the growth of the United States sugar market. It had this right in the past but voluntarily relinquished it on a temporary basis in 1948 to help our friends in Cuba with their serious postwar adjustment problems.

We all know that the various Sugar Acts, beginning in 1934, have been good for our Nation and have provided a stabilization in which the domestic industry and the American consumer have benefited. But I think any unbiased observer will also concede that American sugar legislation has greatly benefited foreign suppliers of sugar to the United States, especially Cuba. In looking at the record now, it is tempting to assert that Cuba has been the primary beneficiary of American sugar legislation.

Before the Sugar Act was first passed, the Cuban sugar industry was prostrate. For several years before, Cuban sugar was selling for less than a cent a pound. Cuba, without quota restrictions, sold only about a million and a half tons to the United States in 1933. The duty on Cuban sugar at that time was \$2 a hundred pounds.

Look at the changed situation today. Cubans sell their sugar in the United States market for more than 5 cents a pound. Today their basic quota, under which Cuba now benefits from most of the increase in the United States sugar market, is 2,668,000 tons—about 85 percent greater than their sales here in 1933. The duty on Cuban sugar entering the United States today is only one-fourth of what it was before 1934. Cuban dollar income from sugar sold in the United States in 1954 was approximately 10 times that of 1933. All these have been direct benefits to Cuba flowing from our sugar legislation.

But these facts tell only part of the story. American sugar quota legislation not only put Cuba back on her feet and maintained her welfare at an increasingly high level in the 1930's and early 1940's, but Cuba has enjoyed particular attention and additional benefits under the provisions of the 1948 Sugar Act.

When the Sugar Act of 1948 was being considered in 1947, sugar was still under rationing and price control. Because of the worldwide shortage of food, some sugar acreages in the United States were necessarily diverted by Government programs to other crops which could not be grown in other climates. The Philippine sugar industry had been practically put out of business by the

ravages of war. And this was clear: That situation would change. Production in those areas would some day be restored. And Cuba, whose industry had reached an all-time high level of production, would soon be faced with the need of bringing her production down to realistic postwar levels.

So that Cuba's adjustment downward could be gradual, the domestic industry agreed that the United States Congress make some concessions to Cuba, giving up temporarily some of the domestic industry's historic rights.

It was agreed that Cuba would be authorized to market 95 percent of the amount by which the Philippine Islands could not meet their quota. Domestic producers also agreed that Cuba should have the right to continue to share with other domestic areas any deficits that might occur in domestic production. And domestic producers further agreed to waive their rights temporarily to share in future increases in demand in this country.

These special provisions—these concessions—embodied in the Sugar Act of 1948 have been extremely beneficial to Cuba. The Philippine deficits were large in the early years of the 1948 act and have given Cuba more than 2 million extra tons of sugar marketings in the United States. The sharing of United States deficits during the early part of the act, when farmers were adjusting beet acreages back to normal, gave Cuba marketing privileges for an additional million and a quarter tons of sugar. And the temporary waiver by domestic producers of their right to share in the growth of the American sugar market has enabled Cuba to sell another 2 million tons of extra sugar in the United States. All in all, Cuba has marketed some 5½ million additional tons of sugar in the United States as a result of the special temporary concessions made to her in 1948 with the express purpose of helping make her adjustment downward a gradual process.

It was certainly plain by 1951 that additional sugar marketings arising out of Philippine and domestic deficits were coming to an end, and with sugar production in other parts of the world stimulated by abnormally high world prices, Cuba's world sugar sales would be dropping off.

However, the record shows that these and other similar warnings went unheeded. Instead, 1952 production was allowed to skyrocket to 8 million tons—about 1½ million tons more than she had produced in 1947, when the 1948 act was passed, and 2 million tons more than anyone could see any possible market for anywhere in the world. Cuba still has a 2-million-ton surplus on hand, and it is this 2-million-ton surplus which has plagued us, our Cuban friends, and the world sugar market ever since.

The attitude of some Cuban interests in vigorously opposing any change in the Sugar Act which would correct the present emergency situations in domestic-beet and mainland-cane-sugar areas and restore to all domestic producers their right to share continuously in the growth of the sugar market in the United States is very surprising. It certainly is not compatible with the spirit which domestic producers displayed toward Cuba when the 1948 act was passed, when the law was extended in 1951, and more recently when the International Sugar Agreement was negotiated.

Actually, of course, Cuba wants and needs a strong and effective Sugar Act. Her leaders know what it has done for Cuba in the past, and what it can contribute to her continued economic stability in the future. In the face of this obvious fact, it is hard to understand the reasons behind some extravagant statements which have recently been made about the act and possible revisions.

Many interests have to be considered when sugar legislation is being worked out. The

way to get the job done is to work for equity and fairness, with full consideration for all interests.

As a long-time friend of Cuba, I cannot bring myself to believe that the real leaders of the great Cuban sugar industry subscribe to certain ill-advised positions which some interests are taking in the name of Cuba. I fully understand Cuba's basic needs and real interests, and I will always consider them sympathetically.

We all know, for instance, that Cuba is one of the best customers for United States products, and we want to continue to be Cuba's best customer. We need good neighbors—strong neighbors—and we will continue to do our part to help our sugar friends—Cuba, the Republic of the Philippines, Peru, the Dominican Republic, Mexico, and other Latin American countries.

The Sugar Act is the only foreign-trade legislation I know of which not only encourages imports but actually guarantees them by reserving a definite and large part of our market for them.

At the same time, however, a road must run both ways. The domestic sugar industry also has its interests and its needs. We must have recognition of the basic factors in the overall situation and fair play all around. Intemperate charges and obviously unsound proposals serve no constructive purpose.

The changes which the domestic industry seeks in the act would continue all the features of the present law which have prompted many people to call the Sugar Act the most successful of all farm legislation. It has brought reasonable returns to domestic producers. It has assured a large, profitable market for Cuba and other foreign countries. It has cost the United States Treasury nothing; in fact, it has brought a profit to our Government. And above all, it has assured an ample supply of sugar to the American housewife and industrial sugar users at a most reasonable price. Throughout the life of the Sugar Act, sugar has been the housewife's best food buy. No other food gives so much energy for so few cents.

Thanks to the operations of the Sugar Act, sugar has resisted more than most other foods the tremendous upward pressure of food prices which has occurred in the last 20 years. In that period sugar prices have risen 30 percent less than the prices of all foods and only 40 percent as much as consumer purchasing power. In terms of wages, sugar is a 25-percent better buy now than it was before World War II. The average production worker now has to work only 3½ minutes to earn enough money to buy a pound of sugar. I challenge anyone to show a lower price for sugar—in terms of working time required to buy it—anywhere else in the world.

The Sugar Act has also conferred additional benefits on industrial users of sugar. Sometimes some of them are temporarily attracted by prices in today's world market—only temporarily attracted, of course, because they remember that the Sugar Act kept domestic prices well below world prices as recently as 1951. They also realize that the stability of prices and supplies which sugar-quota legislation has brought about in the United States market has freed them from the financial hazards and capital costs involved in carrying large sugar inventories. Finally, the Sugar Act has made sugar the cheapest of all ingredients industrial users require.

Immediate revision and extension of the Sugar Act will do more than anything else to assure a continuation of these many benefits to American housewives and industrial users of sugar.

In reviewing briefly with you today the sugar legislative situation as viewed from the Washington scene, I have merely been

going over in some detail the general problems and issues which are involved in this matter and which you already know about. After all, it is the Congress of the United States that makes the laws for this country and it is the Congress that must decide when the Sugar Act should be extended and what changes should be made in it.

However, as you know, at the request of responsible congressional leaders, the domestic sugar industry has been discussing for some time desirable changes that should be made in the act. In these discussions you Michigan people are always ably represented by your fine Farmers & Manufacturers Beet Sugar Association, through its representation on the American Sugar Beet Industry Policy Committee. This committee is the instrument through which farmers and processors from all areas work together on industry legislative matters.

As you also know, President Eisenhower only recently, at the request of a bipartisan delegation of Members of Congress vitally interested in our problems, agreed that the Department of Agriculture, which is in charge of our Government sugar program, should take the leadership in securing an industrywide accord with Government, as was done in 1948 and 1951, with respect to the basic changes which should be made in the Sugar Act this year.

As we look ahead to the development of a sugar program which will merit the support of the Congress, we would do well to renew within ourselves the courageous spirit of the pioneers who over a hundred years ago launched this great college and planted the first seeds of the beet-sugar industry in this State. Those pioneers have given us a rich heritage. Let us be worthy of it. Let us have the pioneer's supreme faith to plan and work together toward a great and dynamic future, for a great and dynamic industry.

The Walls Have (Federal) Ears

EXTENSION OF REMARKS OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the Indianapolis Star dated February 7.

I have introduced H. R. 3084 to correct this unnecessary Federal control of States and local communities. It is hoped that the House Administration Committee and the Congress will take favorable action to correct the Federal legislation that plagues all of the 48 States:

The editorial follows:

THE WALLS HAVE (FEDERAL) EARS

Did you know that a State employee who writes a letter of a political nature to a newspaper is likely to provoke a Federal Government order that he be fired for so doing? That, at any rate, is the way the United States Civil Service Commission interprets its powers and responsibilities.

The State of Vermont is in the process of fighting a Hatch Act charge similar to the one which has been brought against Indiana on the basis of the activities of four Indiana State employees. The Vermont case involves only one employee, a department head. There are two Federal charges against him. One is that he presided at a session of the

Republican State convention in 1950. The other is that he wrote a letter of a political nature to the editor of a Boston newspaper. The latter count is a striking revelation of the extent to which laws controlling the lives of citizens have been carried by Federal bureaucracy.

Vermont's reaction to this attempt of the Federal bureaucrats to interfere in the affairs of the State on the basis of the Hatch Act has been what we hope Indiana's will be. The Federal Commission ordered Vermont to dismiss the accused official, and Vermont flatly refused to do so. Thereupon the Federal Government informed the State that it would be penalized by withholding of an amount equal to the official's salary for 2 years from Federal aid funds for welfare purposes. Vermont has appealed to the Federal district court, challenging the validity of the Federal action.

It is reported that Indiana will join Vermont in making this court test. New Hampshire has already done so. This court suit gets to the heart of the matter—the constitutionality of the Hatch Act.

In their initial reaction Vermont officials took the wrong course, as did Indiana officials. In both cases the first official State reaction was an attempt to defend the actions of the officials involved. But this is not the essential issue. The thing the States must do is to challenge the power of the Federal Government to concern itself with the political activities of employees of a State.

This Vermont has now done in its court suit. And it goes farther, challenging the whole principle of the Hatch Act. The State's brief in the test case says:

"We are menaced by philosophies of Government hostile to the republican form of government and the democratic way of life. There should be, there can be, no abridgement of free speech guaranteed under the first amendment to the Constitution of the United States so long as one does not advocate the overthrow of the Government."

The Vermont case shows that the Hatch Act can be interpreted—is being interpreted by the Eisenhower administration—to limit the simple freedom of a public servant to express his views on political matters. The newspaper letter bore merely the man's personal signature, not his signature as a State official. The letter merely expressed his personal opinion that the late Senator Robert A. Taft was not an isolationist. This, the Federal bureaucracy says, is cause to discharge him.

The right of the Federal Government to exercise such control over the personal expressions of its own employees is questionable enough. Its assertion of the right to extend such control to the employees of a State passes all bounds of reason. It is time for the States to stand and fight.

Thirty-seventh Anniversary of Lithuanian Independence Day

EXTENSION OF REMARKS OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FINO. Mr. Speaker, this is the 37th year since the people of Lithuania declared their independence of Russia. Unhappily, once again they are in the grip of the savage Russian bear. But his grip is not mortal. Throughout her history Lithuania has known foreign tyranny, and she has survived. The

tenacity of her people, their devotion to their culture and way of life, has been truly remarkable.

In 1919, by their own efforts, the Lithuanians drove Russian invaders from their soil. The Soviet Government then recognized Lithuanian sovereignty and independence, and renounced all rights there. But in a pattern that was to become all too familiar they unscrupulously broke their word, invaded the country, and incorporated it into the Soviet Union as the 14th Soviet Republic. A short period of German rule then ensued, and then the Russians returned in 1944. Since that time the Soviets have confiscated private property, they have persecuted religion, they have deported thousands of Lithuanians to Siberia, and killed thousands more. But they have not broken the spirit of the Lithuanian people, nor their desire for freedom and independence. The people of Lithuania look with hope, and we join them in that hope, that the day will come when Lithuania will once again be free, and resume her rightful place among the nations of the world.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following statement in opposition to the extension of the so-called reciprocal trade agreements:

TWELVE KEY FACTS ABOUT H. R. 1

H. R. 1, introduced by Representative JEROME COOPER, Democrat, Tennessee, proposes to extend the Trade Agreements Act. In the process it would grant the State Department, via the President, broad new powers for lowering United States tariffs and firmly committing the United States to GATT (the General Agreement on Tariffs and Trade).

This bill has unleashed an intense debate. For this debate to produce results in the national interest all the pertinent facts must be squarely considered. Herewith are summarized 12 facts which are compellingly pertinent.

NOTE.—The content of H. R. 1 may change or become entangled with other bills during the legislative process. The references here are current as of February 12, 1955.

I. RIGHT NOW UNITED STATES TARIFFS ARE AMONG THE LOWEST IN THE WORLD

United States tariffs, now at their lowest in history, average only 5.1 percent of the value of imports. This represents sharper reductions than have been made by most other industrial nations; a 68-percent reduction of the 1937 average.

By comparison, Switzerland's tariffs average 8.1 percent of imports, and have been reduced only 47 percent since 1937; France averages 10.6 percent, 43 percent of 1937; and Great Britain averages 25.6 percent, which is 20 percent above 1937.

Among the industrialized nations of the West only Denmark, Sweden, and Western Germany have reduced their average tariff level since 1937 by as large a percentage as the United States. However, even in 1937 the

United States had a lower average than Sweden and Germany. Denmark is the only one which was lower then and remains lower now.

NOTE.—Tariff comparisons tell only half the story. Import quotas, currency restrictions, monopolies, government trading, cartels, and other devices are far tighter barriers to free trade than tariffs. Because, except with respect to quotas on agricultural products subject to price supports, the United States does not engage in these practices; it actually permits freer trade than any other industrialized country in the world.

II. THE FULL IMPACT OF THE RECENT UNITED STATES TARIFF DECLINE HAS NOT YET BEEN FELT

The first cuts, following the original Trade Agreements Act of 1934, came while the world was still struggling with the effects of a worldwide depression. Since then World War II, the fighting in Korea and Indochina, the continuing cold war and repeated injections of economic aid by the United States have distorted the historical patterns of trade. Only now are other nations approaching full production.

But even during this disturbed period United States imports reached a sustained level of nearly \$11 billion—four times prewar value, twice prewar volume.

III. TARIFFS AFFECT LESS THAN ONE-THIRD OUR TOTAL IMPORTS

Foreign countries earn dollars, and the United States buys its needed imports, for the most part, without any tariff interference at all. In considering the effect of tariffs on imports it must always be remembered that tariffs affect less than a third—\$3 billion out of a total imports of \$10.8 billion. A pertinent section of the United States tariff policy statement by the Committee for Economic Development—November 1954—it follows:

"Only a part of our imports are subject to tariffs or other import restrictions. Of our total annual imports of approximately \$10.8 billion in 1951, some \$6 billion consisted of products which enter free of duty or quota restrictions. The rest—some \$4.8 billion annually—were subject to tariff duty or import quotas. This \$4.8 billion included some \$2.5 billion of finished and semifinished manufactures, \$1.8 billion of agricultural products and \$500 million of metals and minerals. Of this \$4.8 billion of imports, however, only about \$3 billion were subject to import quotas or to tariffs sufficiently high to have an appreciable effect on the volume of import. This \$3 billion consisted for the most part of agricultural products and finished manufactures."

IV. OTHER COUNTRIES HAVE NOT RECIPROCATED

Though foreign countries have made some nominal concessions American exporters still face such barriers as—

Automobiles, charged 63 percent duty in India, 30 percent to 40 percent in Japan, 15 percent to 33½ percent in the United Kingdom, and 15 percent to 30 percent in France.

Machinery, charged 10 percent to 25 percent duty in Britain, 6 percent to 30 percent in France, 15 percent to 30 percent in Japan, 5 percent to 40 percent in Italy.

Synthetic textiles (including rayon), charged 20 percent to 35 percent in France, 25 percent to 27 percent in Italy, 22 percent in Norway, 17 percent to 24 percent in Belgium, and 50 percent in India.

Cotton manufactures, charged 15 percent to 30 percent in the United Kingdom, 7 percent to 30 percent in Germany, 15 percent to 25 percent in Italy, 18 percent to 30 percent in Indonesia, and 15 percent to 27½ percent in Canada.

Grains, charged 15 percent to 30 percent in France, 15 percent to 20 percent in Germany, 25 percent to 30 percent in Italy, 10 percent to 15 percent in Sweden.

In addition, many countries employ side devices which effectively limit, or even ban, the import of United States goods into their markets.

These devices, perfected by the Nazi economist, Dr. Hjalmar Schacht, include: Import quotas, currency restrictions, state trading, monopolies, barter deals, and cartels. The use of such devices has increased markedly during the so-called reciprocal trade period.

There has been much talk about relaxing such restrictions but little "do."

For example, Great Britain has at last agreed to admit a few United States cars on trial—650 to be exact—but subject to duties and taxes which bring the price of an American-made Chevrolet in the British market to about \$6,000.

France recently announced liberalization for certain selected items—e. g., cotton yarns (but not fabrics), threshing machines (but not tractors), and so on. But at the same moment France turned around and imposed a special import tax of 10 to 15 percent on the items thus liberalized. And even these concessions did not apply to imports from the United States, only to imports from other European countries.

NOTE.—Although Great Britain employs such devices freely, and in addition maintains tariffs at a level 20 percent above 1937, the New York Herald Tribune for January 3, 1955, quoted R. A. Butler, British Chancellor of the Exchequer, as saying:

"We expect some improvement in their (United States) trade practices before there is any question of lowering our barriers any further or indulging in any further non-discrimination."

V. OUR FREE WORLD ALLIES DO NOT NEED LOWER UNITED STATES TARIFFS TO PROSPER

Congress was told a year ago that further cuts in United States tariffs were needed then to foster world trade and bolster the economy of our allies.

Congress refused. Instead it obtained an agreement by the State Department to make no further cuts for a year.

Here are examples of what actually happened in 1954, without the benefit of additional tariff cuts by us:

1. Italy's national income rose 4 percent, and its exports 10 percent.

2. Austria's income rose 10 percent as a result of increased trade and production.

3. The Netherlands' prosperity lured capital from all over the world; securities on the Amsterdam Exchange are now at their highest point since World War II.

4. West Germany anticipates an 8 percent rise in the gross national product in 1955, and a continuing expansion of exports. Between 1949 and 1953 exports more than quadrupled, while imports doubled; credit not tariffs has been the exporters' main problem.

5. "Britain Is Tasting New Prosperity As Exports Spurt"—headline from New York Times, January 3, 1955.

6. "Persisting Boom Is Seen by Swiss"—"Prosperity Based on Demand for Manufactures, Credit and Domestic Building"—headline from New York Times, January 9, 1955.

7. "Rise in Finn's Timber, Paper Exports Helps Puncture Pessimistic Forecasts"—headline from New York Times, January 9, 1955.

8. A flourishing export trade gave Portugal an exceptionally prosperous year; as expressed in a New York Times headline—January 4, 1955—"Nation Goes on Buying Spree."

In contrast, the United States experienced a temporary falling off in 1954.

VI. LABOR RATES IN OTHER COUNTRIES REMAIN AT ONE-THIRD TO ONE-TENTH UNITED STATES SCALE

Here are comparative average hourly earnings for industrial workers in the United States and other countries (1952-53 figures):

United States	\$1.79
Switzerland	.57
United Kingdom	.47
France	.46
West Germany	.44
Italy	.35
Japan	.19

Notes.—At one time better machines and more skilled workers enabled the United States to compete with low labor costs imports. Now—largely due to United States aid and assistance programs—other industrial nations have machines as modern and efficient as any we own, and for the most part their workers are as skilled as ours. A recent study by the National Industrial Conference Board indicates that at the same time the real wage gap is spreading, not narrowing.

VII. IMPORTS FROM CHEAP LABOR AREAS DO HURT

Industries already affected include coal, textiles, footwear, glass pottery, and china, electrical equipment, lead and zinc, ship building, fishing, and dozens of others. In the textile industry alone, which has been severely affected by competition from Japan and other low wage countries, the number employed declined by 260,000 in 3 years. New England mills took the brunt of this loss; but even in the South, where the most modern mills are located, there was a loss of 40,000 jobs.

State Department negotiators not long ago cut the rate on watches. Last fall the President had to restore the old rate. Too many workers in the United States watch industry, whose precision skills are needed for defense, were losing their jobs—and skills—because of imports.

Workers in the following industries are also threatened: chemicals, radio, and electronic equipment, machine tools, synthetic fibers, plastic materials, and—looking at the list proposed for the next round of negotiations by the State Department—literally hundreds of others.

N. B.: H. R. 1, in fact, excepts nothing. It invites a reduction of from 15 to 50 percent in every single rate now in effect, no matter how often or how deeply cut in the past.

VIII. THE "PERIL POINT" AND THE "ESCAPE CLAUSE" ARE VIRTUALLY MEANINGLESS

Under the "peril point" the United States Tariff Commission is required to determine whether or not a proposed cut will injure domestic industry. But such a finding does not bind State Department negotiators. In the past the Commission's findings have been ignored in favor of a hoped for and often meaningless concession from foreign governments. H. R. 1 would make possible the continuation of this practice.

Similarly, the much talked of "escape clause" is no sure remedy for injury to American producers and workers. The Tariff Commission's recommendations of relief can be, and usually are, rejected on advice of the State Department which fears the resentment of other countries.

IX. GOVERNMENT HANDOUTS ARE NO SUBSTITUTE FOR JOBS

Some H. R. 1 supporters have introduced bills to provide Government aid, at the expense of the general taxpayer, for workers thrown out of their jobs by import competition—after the injury has been done. Even the Randall Commission, which originated the H. R. 1 plan, could not go along with this idea. It substitutes a Government dole for

a man's wage, or requires workers to move from their homes to strange areas—much as is done in totalitarian countries. There is no way to estimate the cost in advance—it could and probably would run into billions.

X. H. R. 1 WOULD ESTABLISH AN ENTIRELY NEW NATIONAL POLICY ON TRADE AGREEMENTS—THE UNITED STATES MAKES CONCESSIONS BUT GETS NONE IN RETURN

Heretofore our trade agreements have required foreign countries to make concessions to us, no matter how nominal, in return for any concessions we make. H. R. 1 abandons this principle.

Right now the State Department is rushing plans for round-robin negotiations with 33 other countries beginning in Geneva next month. It has openly announced its intention to offer wholesale concessions in United States tariffs as a means of inducing these other countries to open their markets to Japan. H. R. 1 expressly permits this one-sided deal.

XI. H. R. 1 CAN INVOLVE THE UNITED STATES IN GATT (GENERAL AGREEMENT ON TARIFFS AND TRADE) WHICH SUBJECTS THE TRADE OF MEMBER NATIONS TO INTERNATIONAL CONTROL, DESPITE OPPOSITION BY CONGRESS

The General Agreement on Tariffs and Trade provides for a new international organization empowered to sponsor and police a comprehensive code of trade practices among member nations. These rules would cover the whole range of trade, including farm products and minerals as well as manufactured goods.

The Constitution assigns responsibility for the regulation of foreign commerce to Congress. By previous Trade Agreements Acts Congress has delegated a large part of this responsibility, via the President, to the State Department. It has always refused, however, to allow the State Department to redelegate such power to an international body, in which we would have only one vote.

H. R. 1, although amended by committee to appear neutral on GATT, still contains language which permits the State Department to commit the United States to GATT without congressional knowledge of that agreement's changing provisions.

XII. UNITED STATES TARIFFS DO NOT CONTROL UNITED STATES IMPORTS

The policies of foreign producers, much more than present United States tariff rates, determine when, what, and how much they export to the United States. Since the war, for example, British manufacturers have sent most of their exports to countries in the sterling area, where they are protected from outside competition by tariffs, import licensing systems, and currency restrictions.

In 1952, however, when some of the sterling area markets closed up following collapse of the Korean war boom, the British quickly shifted. England's exports to the dollar area jumped 50 percent almost overnight—without any United States tariff changes.

United States tariffs, in fact, are now the least obstacle to world trade. Changeable policies of other countries, reflected in changeable import quotas, changeable currency restrictions and the like, are the real difficulty.

NOTE.—More than a year ago Bernard Baruch said the agitation for lower tariffs in the United States is serving only to provide other nations "with an excuse for blaming their troubles on the United States and, by feeling sorry for themselves, to overlook what they must do on their own."

In his column on January 13, 1955, Walter Lippmann pointed out:

"I wonder whether this (the campaign for lower tariffs) puts the real problem in its proper focus. Perhaps we can reach a clearer definition of that problem by saying that the main trouble today is not the level of the tariff rates. In the United States they are

by and large not exorbitantly high any longer.

"The real problem is economic warfare. All the governments have armed themselves with legal powers which they use to interfere with the international markets for goods. They use them offensively and they use them defensively to cut down, to cut off, to divert, to penalize, to subsidize buying and selling so that the pattern of transactions is different from what it would be under the free operation of supply and demand. . . .

"The characteristics of these weapons of economic warfare is that that they are not fixed rules and laws of trade but are operated by administrative decisions made, often under political pressure, by bureaucracies. . . .

"The essential condition of economic peace is that trade among friendly nations should not be subject to the arbitrary acts of administrative and political officials, that trade should be subject to laws enacted deliberately and openly and after debate and not changeable except by equally careful deliberation."

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FORD. Mr. Speaker, today while Americans of Lithuanian origin are enjoying the pleasures and rights of a free society, their relatives and friends still living in the nation of their native rootage suffer under the leash of tyrannical communism. Approximately 5,000 miles, or 10 hours by modern jet time, separate those who exist in the little Baltic nation from those with similar national backgrounds living in the climate of free America.

Yet this separation of so few hours as judged by modern speeds is minute compared to the wide crevasse in their freedom and rights to live as men should. These people bearing the same nationality backgrounds, the same pride, ambitions and abilities which enable one to carve out the best life for himself and those close to him are yet so far distant in opportunity and human liberty.

I think Lithuania, so small geographically yet so big in spiritual determination, symbolizes the struggle against oppressive bullies. This isn't the first time or the first nation so tenaciously picked on by one so drunk with power and ambitious with designs as Communist Russia. I hope and pray it will be the last.

Only the people of Lithuania know the burdens, the heartbreak and suffering which have been endured since Soviet Russia lowered the yoke of oppression on their shoulders. Their story is too long to forget and too solemn to lack inspiration. Let us hope that soon the great Lithuanian nation can again be restored to their rightful heritage of liberty and independence which was theirs 37 years ago.

I am happy to join those who today are sending their warmest regards and sincerest sympathy to those persons who

through no fault of their own are not able to enjoy the fruits of individualism and independence.

Pay Raise Legislation

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following statement made by me before the Committee on Post Office and Civil Service on Tuesday morning, February 15:

STATEMENT OF THE HONORABLE JAMES M. QUIGLEY, MEMBER OF CONGRESS, 19TH DISTRICT, PENNSYLVANIA, BEFORE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, HOUSE OF REPRESENTATIVES, FEBRUARY 15, 1955

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before you and express my views on legislation affecting the welfare of Federal employees.

I submit these propositions:

Postal employees deserve an increase in pay.

All other classified employees deserve an increase in pay.

Neither pay bill should be dependent upon the other; neither should be dependent upon an increase in postal rates; and neither should be dependent upon action relating to reclassification.

Employees of the Federal Government, who must give up their right to bargain collectively when they enter the service, are dependent upon special wage legislation. As a result Congress has frequently looked upon Federal salaries as largess, rather than upon experience and the laws of labor supply and demand.

As a result, the wages of Federal workers have lagged behind the wages paid in private industry. For instance, in the case of postal employees, their spendable income is more than \$600 a year behind the 1939 level.

I could cite similar examples regarding the classified employees.

Therefore, I believe that an adequate salary increase is in order for all postal employees. On the basis of my study of the matter and in the light of the increase in the cost of living since the last general wage increase was given in 1951, \$800 per annum in base pay would be proper. I recognize, however, certain immediate factors which might tend to delay any early readjustment of postal salaries, so I therefore support, as a bare minimum, provisions of H. R. 1826 by Mr. Moss, and companion bills by Mr. Rhodes, my colleague from Pennsylvania, Mr. Morrison and Mrs. GRIFFITHS.

I believe that bills now before the committee granting similar minimum 10 percent pay increases for classified employees should also be acted upon favorably.

In connection with the postal pay increases, I should like to state emphatically that it is my firm conviction that the right of postal employees and their families to a decent standard of living should not be contingent on what it costs me to mail a letter or upon any other political consideration. Much as we might desire to see the postal system operated on a business-like basis, we should not overlook the fact that this means of mass communication is a service of the Govern-

ment to the people, necessary to human welfare and to the national economy.

While I recognize the need for periodic review of and, if studies justify, reorganization of the functions of the various governmental agencies, I would oppose any scheme whereby, in the name of efficiency, the fate of every civil-service employee is placed in the hands of Mr. Summerfield or any other politician.

Finally, Mr. Chairman, and this does not directly bear upon the issue immediately before the committee, I would like to see a law enacted under which the properly designated representatives of the Federal employees will be given recognition at the bargaining table under a workable arbitration system for settling grievances concerning wages, hours, and working conditions. My Pennsylvania colleague, Mr. RHODES, has introduced such legislation, and I was pleased on yesterday to join his effort by introducing a companion bill.

The Late Robert Peter Tristram Coffin

EXTENSION OF REMARKS

OF

HON. ROBERT HALE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. HALE. Mr. Speaker, I take this time to pay an all-too-brief tribute to Robert Peter Tristram Coffin, of Brunswick, Maine, who died suddenly on January 20.

Bob Coffin, as he was known to his friends, was born in Brunswick on March 18, 1892, and in Brunswick he was destined to spend in happiness the greater part of his life. He passed his youth on a salt-water farm on Sebascodegan Island in the town of Harpswell, which adjoins Brunswick. He commemorated his youth in *Lost Paradise*, published in 1934. He was graduated from Bowdoin College in 1915 with *summa cum laude* honors. After leaving Bowdoin he took a master of arts at Princeton; thence he went to Trinity College, Oxford, as a Rhodes scholar from Maine, where he spent the years 1916 to 1917 and 1919 to 1921. The intervening period he served in the American Army.

Life at the English university made a deep impression on him and his first books, *Christchurch and Crowns and Cottages*, reflect the influences of his English experience.

He taught in Wells College, Aurora, N. Y., from 1922 to 1934. Here he founded and carried on the Oxford idea of honor work in English literature. In 1934 he returned to Bowdoin College as professor of English literature. There he spent the remaining years of his life, though he lectured and taught from time to time in Harvard, Columbia, Johns Hopkins, and several other American universities. The academic year 1952-53 he spent as Fulbright special lecturer at the University of Athens, Greece.

In the interstices of his teaching career, Bob Coffin wrote and published more than 30 volumes of fiction, biography, autobiography, and verse. His *Strange Holiness* won the Pulitzer prize for poetry in 1935. It is as a poet that

he would doubtless choose to be remembered, and as such he will probably be best known. Like most poets, his work was uneven in merit. Had he been primarily concerned with his standing before posterity, he might have been more self-critical and published more sparingly. But he wrote incessantly whatever feeling prompted him to write and no one can fail to be moved by the sincerity of his feeling. His best poetry is not likely to be forgotten.

As with many other Maine writers, his creative faculties were shaped by the heritage of the country in which he was born. He was a son of Maine as Longfellow, Edwin Arlington Robinson, Edna Millay, and Sara Orne Jewett—to mention only a few—were the children of Maine. Like Caledonia, Maine has been a "meet nurse" for poetic children.

The odors of rockweed at half tide, bayberry, spruce, and fir spoke to Coffin in a various language, but a language constantly in praise of their Creator.

Some may compare Coffin to Carl Sandburg and the two men have a bardic quality in common, but Coffin couldn't have written the *Chicago Poems*, any more than Sandburg could have written *Kennebec and Saltwater Farm*. They were as different as New England is different from Illinois.

Bob Coffin was beloved by all who knew him and his death which follows closely on that of his close friend and fellow townsman, Kenneth Sills, is widely mourned in and out of Maine. He was a friend to me and I shall ever cherish his memory.

[From the Brunswick (Maine) Record]

BOWDOIN COLLEGE SUFFERS GREAT LOSS

Bowdoin College in particular, the State and all of New England in general, suffered a great loss this past week when Robert Peter Tristram Coffin, Pierce Professor of English at the college since 1934, died suddenly in Portland where he had gone to give a lecture at Westbrook Junior College, last Thursday evening. Born in Brunswick March 18, 1892, he had travelled extensively both here and abroad but his New England roots were deep—he was always a New Englander.

Professor Coffin was graduated from Bowdoin with the highest possible honors; he spent 3 years at Trinity College, Oxford University, England, receiving there the degrees of bachelor of arts and bachelor of letters (literature). His first book of poems was published in 1924.

This publication was followed by more than 35 others. In explaining his literary credo—whether it be poetry or prose—Professor Coffin once said, "The things that matter most, love, faith, babies, roses, pride, friendship, death, have not been submerged by science or the industrial revolution; they keep the old splendor like the stars. And we can still have the happiness of walking and being alone to think."

It was because of these beliefs, and his adherence to same in his writings, that he became so greatly beloved—his works having wide appeal. No one who had ever heard him read some of his poems could ever forget him. Professor Coffin was instructor of English at Wells College, N. Y., before his alma mater, Bowdoin, called him back in 1934; while there he was the recipient of numerous honors; in 1936 he won the Pulitzer prize for poetry; he was Phi Kappa Beta poet at many colleges including Harvard, the College of William and Mary, and Tufts.

Funeral services were held on Sunday in the First Parish Church in Brunswick.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. PATTERSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter from Arvydas Kudirka, president, Waterbury chapter, of the Lithuanian Student Association:

LITHUANIAN STUDENT ASSOCIATION,

Waterbury, Conn., February 13, 1955.

HON. JAMES T. PATTERSON,

Washington, D. C.

DEAR SIR: As you may know February 16, 1955, is the 37th anniversary of the Declaration of Independence of Lithuania.

The people of Lithuania have been fighting communism since 1917, when they had to defeat its new forces to establish a free country.

Again this fight in blood against communism was renewed when Russia occupied Lithuania in 1940. For 15 years now Lithuanians have been fighting the Red demon with blood and word and will continue to do so until the Red aggressor is destroyed. We all know that Communist goals are to destroy the free world and establish despotism throughout it.

We, therefore, join forces with the free world so that together we can defeat the evils of communism and again restore peace and freedom of our native country, Lithuania, and the world.

The Lithuanian students of Waterbury, Conn., would like to take this opportunity to thank you for all your past considerations you have given us and our native country Lithuania.

We would be very grateful if you would continue to remember us and our cause in the future.

Respectfully yours,

ARVYDAS KUDIRKA.

Mr. Speaker, I wish to take this occasion to say that any nation that has withstood for more than a century and a quarter continued foreign domination and oppression from a ruthless and tyrannical neighbor and still survive, certainly deserves the praise of mankind. Such praise Lithuania deserves; for in spite of the fact that Lithuania has been occupied and ruthlessly dominated by Imperial Russia and Soviet Russia for periods totaling over 125 years this nation still lives.

In many respects the Lithuanian people today are ruled by a far more ruthless master than in the days prior to the foundation of the Lithuanian nationality when it was relegated to an inferior status in the days of czarist Russia; but the suppression exercised by the czar might well be termed moderate when compared to the suppression imposed by the Soviets.

In this 20th century our language has taken on a new word "genocide," which means the willful destruction of a nation and people. Genocide is the long-range objective of the Soviet rulers; it is to destroy the Lithuanian nation. Deportations of thousands of Lithuanian people and the resettlement of Russians and other Soviet peoples in Lithuania have thus far done much to change the ethnic

character not only of that country but also of the other Baltic States, Latvia and Estonia. As part of its scheme of communization Soviet Russia had laid down a plan calculated to eradicate the Lithuanian national consciousness. Along with their plan to destroy the idea of Lithuanian nationality, the Communists are seeking to remold this once free and happy country in the image of the Soviet State.

That Lithuania is going through an epoch of great trial goes without saying. But the Lithuanian nation is a virile nation. It is a nation with a glorious historical past and a sense of national destiny for the future. It is a nation which has survived other oppressions and shall survive this one.

On this occasion commemorating the 37th anniversary of Lithuanian independence the message of America is a message of hope that one day the Lithuanian people shall fulfill their national destiny and that they shall again enjoy the natural right of every nation to be free, as they once were, so that they can once more resume their tasks of development and progress, and pursue the happiness they once enjoyed as a free and independent people.

When I contemplate the friends I have of Lithuanian origin and their loyalty to the causes of freedom and justice in the United States, I know that by personal example they keep burning the flame of freedom in their native land.

Federal School Aid Limited

EXTENSION OF REMARKS OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article by Doris Fleeson in the Washington Evening Star entitled "Federal School Aid Limited." I feel that this article warrants the attention of the Members of Congress regarding the national emergency in education.

The statement follows:

FEDERAL SCHOOL AID LIMITED—PROGRAM ASKS MILLIONS, BUT BILLIONS ARE NEEDED; CAN PRESIDENT SEE ITS EMERGENCY PROPORTIONS?

(By Doris Fleeson)

President Eisenhower's school-aid program does not represent a serious attempt to deal with the national emergency in education.

It is little more than a letter of condolence to the localities and school authorities which are struggling against an enormous and growing shortage of classrooms.

The President's own Commissioner of Education, Samuel Brownell, has placed the current need at 370,000 classrooms. Federal cost estimates indicate that the job well done would cost more than \$12 billion.

The President has suggested only \$200 million in direct aid for 3 years, which is about

\$65 million a year. Even if all went well and exactly as planned, it would build only a few thousand of the missing classrooms.

School authorities are equally skeptical about the proposed plans to help school districts and States. Twenty States are said to have constitutional debt limits which will prevent any new borrowing. In both Maine and Wisconsin, the courts have declared school construction authorities unconstitutional.

The school experts say also that it would be at least a year before any results would show from the Eisenhower plan. Meanwhile, school enrollment is going up at a rate of more than a million a year. This year it is 30.8 million—up 22 percent over 1950.

The President's philosophical approach provokes as much gloom in school circles as his practical suggestions. As they see it, he has dealt with what they regard as the gravest internal crisis in this democracy in the spirit of a Lady Bountiful who restricts her gifts to the worthy poor.

The reference is to the President's ban on outright grants except to communities too poor to build their own schools. There will be no States and few communities willing to take the pauper's oath on this or any other proposition. Actually, many of the wealthiest States which spend proportionately the largest share of their revenues on education are among the most hard-pressed.

The idea that some parts of this country should publicly admit to their poverty and throw themselves on the mercy of richer States or the Federal Government seems to have appeal in many quarters. It emerges regularly at the annual conference of the State governors and as regularly the overwhelming majority of the governors turn the cold shoulder.

This quarrel is basic. The original architects of the welfare state—most of which the President has accepted, at least in theory—believe in prompt and ample Federal action to meet national social emergencies like that confronting the schools. From their point of view the President's approach in the new message looks back—way back.

Perhaps one trouble with the present special school problem is that Washington draws to it for the most part the successful, the well-to-do, and the more mature citizens. Their children are not victims of the present cruel classroom shortage, and, as a French philosopher said, one bears with equanimity the misfortunes of others.

A Liberal Congress

EXTENSION OF REMARKS OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. HOFFMAN of Michigan. Mr. Speaker, if you have been thinking of a tax reduction, a balancing of the budget, a reduction in the national debt, the end of the broadcasting of your dollars abroad, forget it.

While my efforts to accomplish all of the above will not only be continued, but increase, the facts of life might just as well be recognized. Nothing will be gained by fooling ourselves as to what is happening here in Washington.

Postal employees have renewed their demand for an increase in compensa-

tion. Unless their union officers overreach themselves, they will get it. The only question is how much.

Other Federal employees have joined in the demand for an increase in wages or salaries. They will get it. Again, the only question is, how much. United States district attorneys, Federal judges, Senators, and Congressmen are insisting upon a pay raise. It will be given. How much, no one knows. The raise will be substantial.

Increases in industrial wages—and they are certain to be given—will be paid by consumers; and wage earners and salaried people—dirty overalls, white shirt, nylon waist, or silk-tie wearers—all will pay a part of all of the above.

The administration is asking for an increase in pay and special benefits for those in the armed services. That will go through. Again the only question is as to the number of dollars authorized.

Additional appropriations for the armed services will increase the total by billions.

The national debt will increase, as will the interest charge, which is now over 6 billion.

Russia has told us to get out of Formosa. Chou En-lai declares he intends to take it. President Eisenhower has said we will not get out, that Chou En-lai cannot have it. The situation makes easy another world war, which certainly no intelligent individual wants.

Will we all live better at less cost? Has everybody been taken care of?

No. Some have been forgotten. They are among the most worthy.

What is to happen to those past 45 who cannot get jobs in industry, who are barred from employment by the minimum wage, which is to be increased from 75 to 90 or additional cents per hour? What about those who have had no opportunity or are unable to provide for their own old age, who through no fault of their own are either unable or incapable of earning a living wage?

They have no politically powerful, well-financed lobby. Apparently they will find themselves taking what, if anything, is left.

The remedy? At home just a little more thrift on the part of the Federal and other governments. Just a little willingness on the part of each of us to, for a short time, do without nonessentials, no matter how enjoyable or desirable.

Abroad? The adoption of a foreign policy which will keep us out of wars in which we have no vital interest.

A little more willingness to give people in other countries the opportunity to "paddle their own canoes."

This, I think, is the greatest country on earth. We have more of everything, including leisure—spare time—than people throughout the world have ever desired, sought, or enjoyed.

Why thoughtlessly continue inflation—get a ruinous depression? There must be—there is—a way out of the trouble abroad other than through war.

Opposition to H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following statement in opposition to the extension of the so-called reciprocal trade agreements:

STATEMENT REGARDING H. R. 1 BY OTIE M. REED, WASHINGTON REPRESENTATIVE OF THE JOINT COMMITTEE OF THE NATIONAL CREAMERIES ASSOCIATION AND THE AMERICAN BUTTER INSTITUTE, BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, FEBRUARY 4, 1955

Mr. Chairman and members of the committee, this statement is submitted on behalf of the joint committee of the National Creameries Association and the American Butter Institute and the Dairy Industry Committee, and is in opposition to certain provisions of H. R. 1.

The joint committee is composed of the National Creameries Association and the American Butter Institute, with Washington offices at 1107 19th Street NW., Washington, D. C.

The National Creameries Association, with headquarters in St. Paul, Minn., is composed of some 950 dairy processing plants located in the States of Wisconsin, Minnesota, North and South Dakota, Iowa, Kansas, and Nebraska. About 85 percent of the membership of the National Creameries Association are locally owned and operated cooperative associations. These plants serve about 300,000 dairy farmers.

The American Butter Institute, with headquarters in Chicago, Ill., is composed of processors, both cooperative and private, with membership in 43 States. Taken together, these two organizations process and distribute most of the creamery butter produced in the United States.

This statement is made also on behalf of the Dairy Industry Committee, composed of the Milk Industry Foundation, American Butter Institute, National Creameries Association, International Association of Ice Cream Manufacturers, National Cheese Institute, American Dry Milk Institute, and the Evaporated Milk Association. Some of the members of the Dairy Industry Committee will also appear before your committee and deal more specifically with the products in which they have a direct interest.

This statement has been prepared in summary form for the convenience of the committee, as follows:

1. Prices of milk and butterfat to producers in the United States are supported pursuant to the Agricultural Act of 1949, as amended. In supporting these prices, butter, cheese, and nonfat dry milk solids are purchased on the open market by the Commodity Credit Corporation at prices announced by the Secretary of Agriculture.

2. During this last year, prices paid by the Commodity Credit Corporation for dairy products were calculated to return to producers 75 percent of parity for butterfat and for whole milk used for manufactured dairy products. Details as to the support prices that have been established since the end of the war are set forth in table 1 of the appendix.

3. On January 13, 1955, the Secretary of Agriculture announced the price support program for milk and butterfat for the coming marketing year, April 1, 1955, to March 31, 1956. The support prices announced by

the Secretary are the same as those prevailing for the marketing year ending March 31, 1955. Due to changes in methods of computing parity for manufacturing milk, however, the prices announced by the Secretary on January 13, 1955, probably will return to producers about 80 percent of parity for milk used in manufactured dairy products and about 77 percent for butterfat.

4. Prices under the support program are considerably above world prices even after making allowance for the tariff applicable on butter and the payment of transportation costs. Butter and other dairy products could be laid down in the United States at prices considerably below United States price support levels.

For a number of years and until quite recently, the price of most of the butter moving in international commerce has been governed by the government-to-government contracts entered into between the United Kingdom and Australia, New Zealand, and Denmark. Details of the prices specified in such contracts since 1948 are set forth in table 2. Such contracts have now been terminated. However, recent price quotations for butter at wholesale in New Zealand have averaged about 42 cents per pound. The wholesale price for comparable grade United States butter at seaboard cities in the United States has been averaging approximately 60 cents per pound.

The cost of importing butter into the United States from such areas as New Zealand is about 11 cents per pound, of which 7 cents represents the tariff applicable on the first 60 million pounds imported and 4 cents represents transportation and other shipping and handling costs. Thus, it is seen that butter could be laid down, all costs and duties paid, for 7 cents per pound less than the United States wholesale price based on our support price. Therefore, it would be very profitable for exporting countries to ship us the butter they would normally ship to their regular markets. Under our support program, the Commodity Credit Corporation would have to buy such butter, or an equivalent volume of domestic butter, in order to effectuate our support prices.

The volumes that would be imported under such circumstances could reach huge figures. On the average, about 900 million pounds of butter moves in interstate commerce each year, as well as huge volumes of cheese and nonfat dry milk solids, which also show a markedly lower price level in major exporting countries than under the price support program. For details as to the world trade in major dairy products, see table 3.

From the foregoing, it is obvious that any relaxation of our current system of import regulation under section 22, or any weakening of the basic law under which such import regulations are imposed, would result in the conversion of the price-support program for the American dairy farmer into a price-support program for the dairy farmer throughout the world.

The price-support program is costing vast sums of money, and may run as high as three fourths of a billion dollars (\$750,000,000) before the current heavy stocks in the hands of the CCC are liquidated. The purchase of additional large volumes of imported butter would increase the price-support program costs materially.

5. Since the war, imports of dairy products have been controlled first, under the Second War Powers Act; second, under section 104 of the Defense Production Act; and, since July 1, 1953, by Presidential proclamation issued June 8, 1953, pursuant to section 22 of the Agricultural Adjustment Act, as amended. For details regarding the controls that have been in effect in recent years and are currently in effect under section 22. See table 4.

6. Imports have been controlled and are now subject to control for the simple reason that it is necessary to control these imports

in order to effectuate the dairy price-support program for American dairy farmers. If imports were not subject to quantitative restrictions, exporting countries would divert large volumes from their normal foreign markets to this country which would have to be purchased by the Commodity Credit Corporation in order to support prices to American producers at the announced levels. Thus, if unrestricted imports were permitted, the cost of the price-support program to the United States would be very greatly increased or its effectiveness nullified.

Reference is made again to the fact that large volumes of dairy products move in international trade. (See table 3.) No precise calculation can be given as to the volumes of butter, cheese, and nonfat dry milk solids that would be imported under our price-support program if quantitative import controls were removed. However, they would undoubtedly be quite large.

7. Nothing should be done in extending the Reciprocal Trade Agreements Act to weaken section 22. As a matter of fact, it is our view that section 22 should be strengthened by providing for mandatory application of import controls whenever price-support programs are undertaken in this country. Further, the Congress should develop some rule in the control of imports which would be designed to correlate the goals of our domestic farm-price-support programs and our foreign trade program. We believe that this can be accomplished by developing the rule that imports should be limited to the average during some preceding base period until prices to American farmers reach parity levels after which import controls would be discontinued as long as prices to American producers remain at or above parity levels.

8. A rule such as is suggested in the preceding paragraph would have the tendency to maintain the average pattern of foreign trade until the goals of American domestic farm policy, namely, the development of conditions under which farmers will secure parity prices, are achieved. Once this domestic farm price goal is achieved imports would be permitted to come into this country in whatever volumes exporting countries desired to ship us as long as our domestic farm prices remained at parity or above.

As a suggestion for the committee's consideration, we have prepared a proposed amendment to section 22 and are including it in this statement as appendix A.

9. The United States has never been a very important factor in international trade except during wars and the unsettled conditions immediately following wars. Table 5 shows United States exports and imports of butter, cheese, condensed milk, evaporated milk, dried whole milk, and non-fat dry milk solids for the period 1939 through 1953. The very heavy exports during the war largely represented lend-lease shipments to our Allies, and in postwar years shipments of the United Nations Relief and Rehabilitation Administration and some shipments under the Marshall plan. Most of the war and post-war exports were financed by the United States Government, and in no sense represented normal commercial exports.

10. Although there have been some indications that a better balance between supply of and demand for dairy products may be developing, the outlook is for continued heavy production and surpluses in the American market.

Table 6 shows certain production trend factors such as milk cow numbers, total milk production on United States farms, production per capita of the population, and production per cow. Milk cow numbers are on an upward trend, and 1954 total production was the highest of record at 123.8 billion pounds. Production per capita of the population, however, is only slightly above the low 1952 rate of 733 pounds per capita.

11. Since the production per capita of the population is lower than many of the years since 1939, it might appear that there should be little, if any, surplus problem in the dairy field. This apparent inconsistency, however, is explained by the fact that there have been some serious declines in the per-capita consumption of some of the major dairy products. (See table 7.) Fluid milk and cream consumption per capita reached a high point of 399 pounds in 1945 but has slumped badly in recent years, being 352 pounds per capita in 1954.

Butter per capita consumption has decreased drastically from 16.8 pounds on the average during 1935-39 to 8.6 pounds in 1952 and 1953, with a slight increase to 9.0 pounds per capita indicated for 1954. Most of this loss is due to the rapid encroachment of oleomargarine on the table spread market due to wartime restrictions on butter, diversion of milk to other commodities used under the war food program, and legislation permitting oleo to imitate butter color and flavor.

Per capita consumption of cheese and nonfat dry milk solids is running considerably above prewar, but the surplus situation in these commodities remains serious due to the great expansion in production of these commodities that was brought about under Government auspices during the war.

12. The scope of price-support programs and disposition of commodities purchased thereunder is set forth in table 8 in summary form. Details as to purchase and disposition in 1953 and 1954 are shown in table 9.

In spite of markedly increased movement of dairy products from CCC stocks as compared to previous years, the CCC estimates that it had on hand as of December 31, 1954, 265.7 million pounds of butter, 334.8 million pounds of cheese, and 91.8 million pounds of nonfat dry milk solids.

By far the greater portion of the disposition of CCC stocks of butter during 1954 were accounted for by donations through domestic and foreign relief channels and section 32 outlets. These outlets also were most important for cheese, although during the year 116.4 million pounds of cheese were disposed of through commercial domestic sales. The largest outlet for nonfat dry milk inventories was 578.3 million pounds disposed of for animal feed at from 3 to 4 cents per pound.

From the foregoing, it is clear that (1) CCC still holds very large inventories of dairy products purchased under the price-support program, and (2) the supply-and-demand outlook suggests the strong probability of additional purchases under the price-support program during the year ending March 31, 1956.

13. In section 3 of H. R. 1 it is proposed that subsection (a) of section 350 of the Tariff Act of 1930, as amended, be amended in such a fashion that the safeguards now provided in section 22 would be materially weakened if not in actual fact rescinded. Thus, as it is proposed to be amended, section (a) (1) (A) of the act of 1930 would authorize the President to enter into foreign trade agreements with foreign governments or instrumentalities thereof, except that it is provided "that, except as authorized by subparagraph (B) of the section, . . . no such provision shall be given effect in the United States in a manner inconsistent with existing legislation of the United States."

Subparagraph (B), however, authorizes the President "to proclaim such modification of existing duties and other import restrictions, or such additional import restrictions, or such continuance, and for such minimum periods, of existing customs or excise treat-

ment of any article covered by foreign trade agreements, as are required or appropriate to carry out any foreign trade agreement that the President has entered into hereunder."

We submit that this language rather effectively vitiates subparagraph (g) of section 22, which states that "no trade agreement or other international agreement heretofore or hereafter entered into by the United States shall be applied in a manner inconsistent with the requirements of this section."

Subparagraph (g) definitely prohibits entering into trade agreements inconsistent with section 22, which is designed to permit regulation of imports if necessary to effectuate farm programs of the United States Government.

The proposed language of subparagraph (B), quoted above, would permit modifications in duties and other import controls in order to effectuate a trade agreement. Thus, under the proposed language, it would appear that, if the President enters any trade agreement under this proposed bill that would involve reductions in import restrictions on dairy products, he could then proceed, under subparagraph (B), to reduce or eliminate the restrictions he has promulgated under section 22. This broad language would also make many other provisions of law, such as the escape clause, countervailing duty, antidumping and pure food drug laws, vulnerable to modification or nullification by presidential proclamation under a trade agreement.

It will be recalled by the committee that the Secretary of Agriculture in his testimony before you January 18, 1955, took the position that subparagraph (B) was too broad. He stated that "We have noted the broad language of subsection B on page 3 of H. R. 1 could be applied in such a way as to render less effective many of the provisions of section 22 of the Agricultural Adjustment Act of 1933 as amended. So long as the United States has a domestic farm price support program which maintains domestic prices above the world level, it is essential that authority be retained to restrict imports into the United States under the domestic price support program."

It is also significant that no other administration witness appearing before the committee has indicated a desire that the President be given authority to override or modify the safeguarding provisions of existing law such as section 22. I understand that even the drafters of the bill have professed no intention to impair the full and effective operation of section 22.

However, the language in subparagraph (A) of section 3 (a) (1) beginning at line 20 of page 2 leaves doubt on this point as the Secretary of Agriculture has pointed out. If, as contended by the proponents, there is no intent to impair the effective operation of section 22 and other safeguarding provisions of existing law there should be no objection to a clarifying amendment so there can be no misinterpretation of the language later on.

We would suggest that all of the new language in subparagraph (A) following the word "thereof" in line 21 on page 2 of the bill be deleted and insert in lieu thereof a semicolon and the word "and". This would leave the language through subparagraph (B) ending on line 16 of page 3 the same as contained in the existing law and H. R. 1 would still give the President all of the authority that has been publicly requested or explained by administration witnesses supporting the bill. No administration witness has explained the intent behind the new language or expressed a desire for any new power that might be contained or later interpreted therein. Therefore it seems to us that there

can be no objection to deleting such new language. So amended, the bill would still give the President all the authority he has asked for.

Also, in order to avoid any subsequent interpretation that Congress has approved or ratified the general regulatory provisions of GATT or other trade agreements, many of which are contrary to existing safeguarding laws such as section 22, we strongly urge that any extension of the Trade Agreements Act again contain a saving clause to the effect that:

"The enactment of this act shall not be construed to determine or indicate the approval or disapproval by the Congress of the Executive agreement known as the General Agreement on Tariffs and Trade."

This language is contained in section 3 of the Extension Act of 1954 (Public Law 464) and a similar section has been included in every extension for the past several years. We urge this Congress to follow the same procedure. Such an amendment to H. R. 1 would not impair any authority requested by the President and there should be no objection thereto.

TABLE 1.—Prices paid by the Commodity Credit Corporation under price-support program, Mar. 1, 1949, to date

[Cents per pound]

APPENDIX A

PROPOSED AMENDMENT OF SECTION 22 OF THE AGRICULTURAL ADJUSTMENT ACT, AS DEVELOPED BY THE DIC SUBCOMMITTEE ON IMPORT CONTROL

SEC. 22. (a) It is the policy and the intent of the Congress that, notwithstanding the provisions of any other law and operations thereunder, imports of agricultural commodities or products thereof shall be controlled through import fees or quantitative limitations, to the extent necessary (1) to achieve the purposes of Titles I, II, and III of the Agricultural Act of 1949, or the Soil Conservation and Domestic Allotment Act, as amended, or Section 32, Public Law 320—74th Congress, approved August 24, 1935, as amended, or the Agricultural Marketing Agreement Act of 1937, as amended, or any loan, purchase, or other program or operation undertaken by the Department of Agriculture or any Agency operating under its direction, and authorized by the laws enumerated in this paragraph (a), or (2) prevent any substantial reduction in the amount of any product processed in the United States from any agricultural commodity or product thereof with respect to which any such program or operation is being undertaken. In no event shall imports of any agricultural commodity or product thereof be permitted to exceed, during the marketing year for which a program to support prices to producers directly, or indirectly is in effect under any of the laws enumerated herein, average annual imports of such commodity or product thereof during the 5 year period immediately preceding the current program year, unless and until the United States farm price of such commodity or product, except for milk and butterfat and the products thereof, in which case the United States farm price of butterfat shall govern, reaches (a) parity prices as seasonally adjusted for such commodity or product and remains at such level for 3 consecutive calendar months, or (b) such higher levels as the Secretary may determine pursuant to Section 402 of the Agricultural Act of 1949, Provided, however, That the volume restriction set forth herein shall apply during any period when farm prices are below parity; Provided, further, That the Secretary of Agriculture is authorized to impose such additional quantitative limitations of imports as the Secretary may find necessary, during the operation of any price support program for any agricultural commodity, to minimize the cost of such purchases, or losses that would be incurred in the disposition of any commodity in Government inventory; and, Provided further, That the procedure set forth in paragraphs (b), (c), and (d) hereof shall be applicable to the establishment of import fees, but shall not be applicable to quantitative limitations except in case the Secretary deems it necessary to limit imports to levels below the level established pursuant to this paragraph (a).

(b) Whenever the Secretary of Agriculture deems it necessary to apply import fees, or quantitative limitations designed to limit imports to lower levels than those authorized in paragraph (a) of this section, he shall so advise the President, and, if the President agrees that there is reason for such belief, the President shall cause an immediate investigation to be made by the United States Tariff Commission, which shall give precedence to investigations under this section to determine such facts. Such investigation shall be made after due notice and opportunity for hearing to interested parties, and shall be conducted subject to such regulations as the President shall specify.

(c) If, on the basis of such investigation and report to him of findings and recommendations made in connection therewith, the President finds the existence of such facts, he shall by proclamation impose such fees not in excess of 50 percent ad valorem or such quantitative limitations on any

article or articles which may be entered, or withdrawn from warehouse, for consumption as he finds and declares shown by such investigation to be necessary in order that the entry of such article or articles will not render or tend to render ineffective, or materially interfere with, any program or operation referred to in subsection (a) of this section, or reduce substantially the amount of any product processed in the United States from any such agricultural commodity or product thereof with respect to which any such program or operation is being undertaken: *Provided*, That no proclamation under this section shall impose any limitation on the total quantity of any article or articles which may be entered, or withdrawn from warehouse, for consumption which reduces such permissible total quantity to proportionately less than 50 percent of the total quantity of such article or articles which was entered, or withdrawn from warehouse, for consumption during a representative period as determined by the President: *And provided further*, That in designating any article or articles, the President may describe them by physical qualities, value, use, or upon such other bases as he shall determine.

(d) The fees and limitations imposed by the President by proclamation under this section and any revocation, suspension, or modification thereof, shall become effective on such date as shall be therein specified, and such fees shall be treated for administrative purposes and for the purposes of section 32 of Public Law 320, 74th Congress approved August 24, 1935, as amended, as duties imposed by the Tariff Act of 1930, but such fees shall not be considered as duties for the purpose of granting any preferential concession under any international obligation of the United States.

(e) After investigation, report, finding, and declaration in the manner provided in the case of a proclamation issued pursuant to subsection (b) of this section, any proclamation or provision of such proclamation may be suspended or terminated by the President whenever he finds and proclaims that the circumstances requiring the proclamation or provision thereof no longer exist or may be modified by the President whenever he finds and proclaims that changed circumstances require such modification to carry out the purposes of this section.

(f) Any decision of the President as to facts under this section shall be final.

(g) No trade agreement or other international agreement heretofore or hereafter entered into by the United States shall be applied in a manner inconsistent with the requirements of this section.

United States Should Pay All Channel Costs

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial:

UNITED STATES SHOULD PAY ALL CHANNEL COSTS

To residents of Delaware Valley, United States of America, the most important single aspect of President Eisenhower's budget message is the shattering blow it deals to hopes dredging a 40-foot channel in the Delaware River.

In general, the budget contains few surprises. Most Americans will applaud the continuing emphasis on economy, reflected in a reduction of the spending total to \$62,400,000,000. They will welcome a further cut in the anticipated deficit and recognize the need to carry on present taxes for another year.

But the administration's approach to the pressing problem of dredging the Delaware up as far as Trenton is both surprising and difficult to understand. It involves provisions which are not only of questionable wisdom, but also have been rejected by Congress.

The Delaware is one of those navigable waters over which the Federal Government has traditionally exercised control. Thanks to the location of the Fairless works of the United States Steel Corp., near Morrisville, it has become more important than ever before as an artery of commerce. To accommodate heavier ore boats and other traffic, it should have a 40-foot channel from Trenton to the sea.

Since navigable waters are historically the responsibility of the Federal Government, it was perfectly proper for local interests to ask that money be given the United States Army engineers to pay for the dredging. The total cost—about \$91 million—amounts to only about 2 years' customs receipts in Philadelphia, paid into the Federal Treasury.

Against this background, spelled out time and again by delegations from this area visiting Congressmen and members of the White House staff, the treatment of the channel project in the new budget is downright shameful.

An appropriation of only \$6 million is suggested for the first year's work on the channel. And this has a big "if" attached. For the administration will not request even this plainly inadequate amount unless local interests put up \$18 million for the first year.

Presumably the chief local interest is United States Steel, which already has poured \$500 million into the construction of its new plant, to the benefit of the area—and of the Federal Treasury. Additional local interests expected to share in the cost might be other industries located in Delaware Valley—or even those which might come here later.

But, as a practical matter, the Government wouldn't save the \$18 million. More than half of that amount would come out of corporation taxes now paid by United States Steel or other concerns to the Government. There would be a further revenue loss in the reduction of amounts available for dividends, in many cases taxed at the top rates. The Government would lose still more in higher prices it paid for steel or other products.

If the practical objections to this scheme are strong, those based on traditional principles are even stronger. What sort of rights in the Delaware River would United States Steel be establishing by paying for the dredging? How would the public's right to use the river be affected by the Government's insistence that dredging is a private responsibility?

The Federal Government already is benefiting handsomely and directly from the development of this entire area, given such a tremendous boost by the location of the new steel works. It will continue to benefit, in tax receipts and in the prosperity of the people, if the Delaware River is utilized to its fullest potentials.

Last year Congress turned down a proposal to require private interests to pay for the dredging. In spite of that, the Budget Bureau has stubbornly returned with exactly the same proposal.

Let us hope that Congress continues to write the laws of the land and, if necessary, forces the Budget Bureau to stop blocking this project and provide enough Federal funds to assure a 40-foot channel.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, it is most appropriate to have in conjunction with the time set aside in the House today for tribute to Lithuania, an expression by two fine Americans of Lithuanian extraction who have made known their views to the Editor of the Hartford (Conn.) Times. The letter by Albina and Joseph Belazaras is as follows:

LITHUANIAN INDEPENDENCE

To the Editor of the Times:

As the tide of communism continues its, thus far, successful progress toward world engulfment, let us pause in remembrance of Lithuania, one of the first victims of that scourge.

It is appropriate that on February 16, the 37th anniversary of the rebirth of the Lithuanian nation, we ask how long a nation must suffer for the wrongs of its oppressors?

On June 15, 1940, almost 15 years ago, Lithuania slipped beneath the sea of misery and death that is Soviet communism.

After the invasion of Soviet troops fake elections were held on July 14 and 15. E. J. Harrison, former British vice consul in Kaunas and Vilnius, in his book, "Lithuania's Fight for Freedom," describes what took place:

"It was announced that 95.51 percent of the electorate voted in favor of the Working People's Union candidates. It appears, however, that the votes were not actually counted and were destroyed immediately thereafter. This is supported by the fact that the results of the voting were announced in one of the London papers 24 hours before the polls were closed. Nor does the claim of 95.51 percent of the electorate voting appear to be true. As became known later, only some 16 to 18 percent of the electorate actually voted."

At the same time the United States State Department issued a statement in regard to the situation which remains in effect to this day:

"During the past few days devious processes, whereunder the political independence and territorial interests of the three small Baltic Republics—Estonia, Latvia, and Lithuania—were to be deliberately annihilated by one of their more powerful neighbors, have been rapidly drawing to their conclusion. The people of the United States have watched the admirable progress of these Baltic republics with sympathy and interest and are opposed to predatory acts, no matter whether they are carried out by the use or by the threat of force. They are likewise opposed to any form of intervention on the part of one state, however powerful, in the domestic concerns of any other, however weak."

On the 37th anniversary of the independence of this valiant nation, we extend our message of hope to the people of Lithuania. But we, the free, must do more than that.

It is our duty to keep before all nations of the world the tragic truth of Lithuania. It is not enough to offer them hope; we must show that we are resolute, as they are, in our fight against the scourge of communism.

The enslaved people of Lithuania can take heart in the policy of the American Government in continued recognition of the original legal government of Lithuania.

They can also find expression of our purpose in the work of the Baltic Committee of Congress which is seeking to find the truth behind the Soviet seizure of Lithuania.

As long as we keep alive the truth about Lithuania, we keep alive the hopes of the Lithuanian people for eventual freedom and independence.

A regime which is founded on lies and terror cannot last, for it bears the seeds of its own destruction.

In the same way, a democratic nation—whether as an idea or as a political expression—has inherent in it those qualities which insure its preservation.

As long as the Lithuanian people feel and think as a freedom-loving independent nation, Lithuania cannot and never will be destroyed.

ALBINA and JOSEPH BELAZARAS.
EAST HARTFORD.

Excerpts From Address by Frank A. Kemp, President, the Great Western Sugar Co., Denver, Colo., at Annual Meeting of California Beet Growers Association, Ltd., St. Francis Hotel, San Francisco, February 4, 1955

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. HILL. Mr. Speaker, I wish to include in the Appendix of the Record the following address by Mr. Frank A. Kemp, president of the Great Western Sugar Co., Denver, Colo., at the annual meeting of the California Beet Growers Association, Ltd., in San Francisco, Calif., on February 4, 1955:

With the possible exception of the capacity to raise hell, which appears not to be confined to any latitude, people or climate, the ability to raise sugar seems almost the world's most universal attribute. The fact is that the two plants involved, sugarcane in the tropics and the sugar beet in the temperate zones, are among nature's most efficient mechanisms. The student of sugar, if he is to understand its problems, must start with this fact. He must understand that over wide reaches of the tropics, an acre devoted to cane generally will bring in money enough to buy the staple foods that the same acre would produce if planted to them, and at the same time support a type of society, master and peon, which seems to be permanently imbedded in many Latin-American cane areas. The sugar beet, on its part, makes a significant contribution to solvent agriculture for which there is no substitute or replacement over wide areas, in bringing to the husbandman the benefits of an intensively cultivated crop, turning out a finished product on the one hand, with the byproducts making possible a farm-feeding, soil-fertilization cycle that produces an astonishing amount of meat and milk and restores to the soil most of the plant food used by the beet crop.

Except for the war period, there has not been a time in my sugar experience when it did not seem that the ability of the world to produce the commodity was greater than the demand. Therein lies both the seed and the fruit of a problem, that today in this year 1955, has been brought home to con-

front and perplex the operator of every present and potential sugar beet farm in this country, large and small.

If I talk about that problem this afternoon, you must understand that I do so with the knowledge that what I say is known to most of you, that many among you are equally or better acquainted with the facts. Nevertheless, every opportunity at which a group such as this can take time from other interests to talk and think about the sugar problem, should not be overlooked, and I shall not pass up the opportunity afforded me to speak about it.

What I shall say are largely my personal views. I submit them to you to stimulate thought and comment, to bring about a better understanding of some phases of the subject that often are hurried over, and to urge the industry in this great State to the continued earnest exercise of its good judgment and its potent influences. Beyond all that, someone in the domestic industry had better start talking or we will be judged by default.

The war ended with many of the participants in a state of near or total exhaustion. Nevertheless, experience after the First World War demonstrated that the recuperative power of the sugar industry, once set in motion, was very strong. Back in 1946 it seemed to many people that the situations, the experiences, and the needs of those most concerned in this market should be studied and an attempt made quickly to develop a pattern and a program that would make sense, that would be a reasonably fair and equitable compromise, that would call for what might be termed a real community of sacrifice, that would fairly protect the interests of consumers, and which would be in the national interest of the country.

You will note that I mentioned prominently in this list the need of compromise, of sacrifice by all. That need, of course, arose out of the readily recognizable fact that if the Philippine industry were to be rehabilitated, as seemed likely over a period of time, potential sugar production within the orbit of the American market was definitely greater than any total demand of that market up to that time.

Even then there arose in some quarters a hue and cry for foreign purchases. Cuba, it was said, had magnanimously increased during the war its sugar production at our request (there seemed then and now no willingness to credit Cuba's altruism to the great profits which she made out of the business), and it would be a shame, the same interests urged, not to allow Cuba time and opportunity gradually to recede from the peak of production that she had climbed.

The domestic sugar-producing areas took a look at the records of their own recent past, and without exception read from them too bearish a view of the future; with not enough weight given to the fact that in this country there had been a deliberate drive by the Government during the war by price support and other means to switch land from sugar into crops like cereals and beans; that land had been taken in Hawaii for military use; that our tractor men went off to ride Patton's tanks; that the rebound of demand from sugar rationing would be a very significant one.

At any rate, the domestic industry believed then, exactly as it should believe today, that part of the sugar demand of this country should be filled by imported sugar and part by sugar domestically produced. And to the everlasting credit of the domestic industry of that time, it participated and cooperated in a most generous and forthright fashion with other sugar interests and our Government in the measurement of the compromise and sacrifice that the facts and beliefs of the time suggested.

Unfortunately, the domestic people were not accorded in 1947 any share whatever in

the growth or progress of the country. We were given a fixed quantity. We accepted it, although we made it clear that if circumstances altered we would present the changed facts when the change took place. None realized the extent by which the country would grow, the percentage by which the population annually would increase. In the light of what has since transpired, it is incredible that no provision was made that we should grow as the country grew. After all, it is in part out of our own overall contribution as citizens that the country has grown as it has, yet we are denied any part of that which we ourselves have made possible. Foreign suppliers receive as an unexpected and unjustified windfall, every ounce of increased sugar demand.

From 1947, when the present quotas were enacted, to 1954, the annual sugar market in this country increased about 1,050,000 tons. Except for 176,000 tons, ceded to Puerto Rico and the Virgin Islands in 1951, every ounce of that increase has gone to Cuba and other foreign suppliers, and unless the law be changed, every ounce of all future increase in demand will further swell the foreign share. At the same time, the domestic cane and beet areas, cut back in acreage, denied the right to improve yields except by further acreage restriction, plagued by above-normal stocks in warehouse, look timidly over the fence and wonder, if growth is good for Cuba, should it not also be recognized to be good for California, and Idaho, and Colorado, and Louisiana?

But make no mistake about it, we owe, and the country owes, sincere and determined allegiance to the broad principles of the existing sugar program. It has been, as President Eisenhower declared last year, one of the most successful agricultural statutes. With the successive reductions in the sugar tariff that have been decreed since the first sugar law was enacted, the modest tax still imposed upon its manufacture has been offset several times by tariff reduction. The payment to each producer is largely financed out of the tax paid by the sugar he himself produced, and is in fact what was once described as "a redistribution of return in the industry." The Treasury makes a net profit from the sugar program—a consideration not to be lightly regarded in these days of unbalanced national budgets.

The President said more than once that he puts first on his list the need to keep the United States strong. I am very confident that he does not intend to lose sight of this for any reason. If the United States is to be kept strong, its important industries must be kept strong. Its agriculture must be kept strong. Our people must be permitted to make the most of their opportunities. Men making homes on American land must have the right to grow the crop best adapted to the soil and climate. These facts must be recognized. And if they are, there must be some expansion of the presently restricted right to produce sugar in this country.

Let me make it clear again, I believe that our sugar need should be filled in part by foreign and in part by domestic suppliers. As domestic producers, vitally interested in what is best for the country along with what we would like in our own behalf, we should support a fair and proper allocation to foreign sugar. In the first meeting representatives of the beet industry had with Secretary of Agriculture Ezra Benson, our spokesmen said that we had accepted a solemn duty to view our beliefs as to sugar in the light of the whole national interest as well as our own interest. I am proud to say that we have fulfilled that self-imposed obligation to the hilt and to this minute.

It is strikingly evident that there are many important influences at work behind the sugar scene and on the sugar stage. Unfortunately, close collaboration during the war between our Government and all sugar

groups, including the Cuban sugar industry, has prompted some of the Cubans to act as if they had acquired vested and preferential rights of citizens of the United States. The so-called Wall Street Cubans have a large publicity and propaganda staff actively at work. It is a new twist to the trade perspective that investment in a foreign country and the desire to enlarge profits on that investment would bring the investor into direct and open conflict with domestic interests.

A recent circular from Cuba addressed to every Rotary Club in this country requested consideration of a scurrilous propaganda piece containing this choice message from a foreigner:

"It does not appear sensible to hurt the countless concerns who have been able to make Cuba an excellent market for their wares and a solid source of money income, just in order to give additional advantages to a handful of already overprivileged sugar producers, artificially supported by a protective tariff plus subsidy payments."

That is an unprovoked aggression. The prejudice and falsity which it discloses would make any responsible propagandist hang his head. Naturally, it raised the gorge of a lot of people in the domestic sugar industry who more than once took Cuba's part—back in 1947, again in 1951, and again in the development and effectuation of the International Sugar Agreement.

Unfortunately, a recent circular addressed by the same Cuban interests to all county agents in this country in the same vein is an example, other publicity suggests that the quotation may be but a sample of the lengths some of the Cuban industry is prepared to go to refuse any sharing of the fortunate privilege that so accidentally fell into their laps.

The angry lament that rises in some quarters in Cuba on any suggestion of reconsideration of the situation in which the American domestic interests have been placed is intentionally misleading and unfair, among other reasons, because it gives the inference that Cuba has already suffered a grave loss of market because of increases in domestic production. That is not the fact. Let's look at the record: The production of the United States beet industry was 1,802,000 tons in 1938 and 1,872,000 tons in 1953—an increase of only 4 percent. But let's see what Cuba had done: Cuba produced 3,089,578 short tons in 1938 and 5,390,786 tons in 1953—an actual increase of over 74 percent.

And what happened elsewhere? Great Britain increased her beet-sugar production from 1938 to 1953, 148 percent; Holland, 111 percent; France, 90 percent; Mexico, between the same years, increased her cane-sugar production, 149 percent; the Dominican Republic, 45 percent; Brazil, 109 percent; Australia, 52 percent. The simple fact is that the rest of the world supported its domestic sugar industries, although as a consequence Cuba was deprived of some part of her so-called world market. Nothing is said by Cuba about these competitive increases by other countries, but cries arise to the high heavens at the slightest suggestion that some hope is to be held out to the American industry.

There is no clear view of what lies ahead of us. The mainland cane industry says it has been cut back 10 and then 8 percent in acreage; that in the light of the size of its inventory on January 1 last, it can market less than 20 percent of its 1955 production in 1955; that its last 3-year average yield of cane is nearly 13 percent higher than the 3-year average ending 4 years ago. It points to the reasonable conclusion from these facts that it faces a still further cut in acreage.

Our industry has increased its sugar yield per acre by around 20 percent since the pre-war period. We have been cut back in acreage from 1954 plantings 10 percent for the area as a whole, some States taking a cut of

over 13 percent. Our January 1 inventory will permit sale of less than 10 percent of the 1955 quota out of 1955 production. In many areas men on new lands, making new homes, cannot get the right to plant beets; in older areas acreage cutbacks endanger rotation plans and threaten uneconomical ownership of expensive beet machinery.

You men and the other members of the California association set new production records last year. To my knowledge no acreage of equal size in the world ever attained so great a yield of beets or of sugar per acre. It was an extraordinary record. It evidenced the benefits of fertile soil and a favorable season. But it also reflected improvement in farming methods, application of new skills, the adoption of scientific and research findings, for which you men and the industry alone are entitled to the credit.

One of the most unfortunate implications in the situation in which the beet industry finds itself, because of the present quota provisions of the law, is that everything else being equal, such a record of progress would have to be offset by a reduction in acres in order that the fixed quota would not be exceeded. That would deny you and the industry the benefit of improvement, the fruits of scientific progress. Is there any American who would contend that this is right, that America can be made strong by such restrictions?

Yet in spite of these appalling facts, there is a determined intent in some high places to refuse relief, to deny even consideration of relief for 2 years. I understand that on Thursday last a group of 26 Senators and Congressmen took personally to the President a rather simple and direct proposal; namely, that this year, not 1956, was the year to consider and act on sugar law extension and revision; that Secretary Benson would be a good man to designate as the right person to set in motion consideration of what should be done. I understand that no attempt was made to present or urge substantive proposals. I understand the President's attitude was interpreted as reasonably favorable to these simple suggestions. Yet within a few hours the eastern papers carried big headlines screaming of a threat to Cuba's existence.

I have great hope that Secretary Benson, who has demonstrated his complete dedication to highest principle, will not only interest himself in, but with the consent and authorization of the President, will move forward to find a sound, equitable, and forthright solution to all sugar claims. It has been done before; it was done in 1947 under Secretary of Agriculture Anderson. If the will exists it can be done again. For our industry, I hope most earnestly that we will contribute a sensible, moderate definition of our needs. I urge this in the interest of the industry and of the Nation.

The basic position of the industry has had some real and very welcome support; the National Reclamation Association, the American Farm Bureau Federation, the legislatures of a number of Western States have passed strong resolutions and memorials in our behalf, and there will be many more.

But to go back for a moment to the American sugar system, the Cubans themselves think very, very well of it. Within recent weeks the well-known brokerage firm of Luis Mendez & Co., of Habana, had this to say:

"We are extremely lucky that such a quota system exists, as otherwise domestic beet and cane producers and Puerto Rico would be dumping half a million tons more in the American market, and Peru, Formosa, Indonesia, and all other sugar exporting countries would compete with us in the United States market causing Cuba's financial ruin."

The fact is that there is no single interest that has not been benefited by the law, including that most important person without whom there would be no market, the

American consumer. Let us never forget to make it our duty to see that his reasonable interests are fully looked out for.

There is one other war cry I make every time I have the opportunity and that is to sound my conviction that this country must see to it that we maintain a solvent and prosperous agriculture, with conditions on the farm that will prompt men and women to make their homes on the land, conditions that will provide them with more leisure, more opportunity, and more time for the education of their children, more satisfaction for the whole farm family. All that must be achieved for the proper livelihood of our cities, our enterprises, all industry. No one should make any mistake about it; unless agriculture is solvent and prosperous, this country will go to pot.

If we can get the needed adjustments, we can look to the future with real confidence. We can breed still better seed; still further improve yields; cut farming costs; increase feeding grains and lower feeding costs; continue mechanization so that both the pay and the dignity of the field worker are increased. We can continue to produce honest products and to provide users of them with the variety and the service they require and want. The industry should continue to pay fair returns to the people who grow the beets and to those whose money is invested in the properties; continue to bear its fair share of American taxes; build its part of the roads; provide steady and desirable employment.

Golden Anniversary of Jewish Memorial Hospital

EXTENSION OF REMARKS OF

HON. HERBERT ZELENKO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. ZELENKO. Mr. Speaker, it is a great satisfaction to record a communal achievement in the congressional district that I have the honor to represent, which deserves to be known widely and which can serve as an example for similar institutions throughout the country.

I refer to Jewish Memorial Hospital, a voluntary supported, nonsectarian institution, with a staff and with patients from all races and creeds, located at Broadway and 196th Street, which has rendered invaluable communal services to one of the fastest growing areas in the city of New York. This year it is celebrating its golden anniversary, the 50th year of its founding, marking a milestone in its history. The hospital is noted not only for its unusually high standards in medical and nursing services, but also for significant researches in medicine, for its program of community health education, and as a pioneer in programs for children.

The hospital has developed from a small institution to one that now has over 200 beds and bassinets, with a program approved by the Hospital Council of greater New York to increase its capacity by 140 beds, based on increased requirements of the area served by the institution.

As I have indicated, the hospital is currently celebrating the 50th year of its founding. In the course of its history

it has secured approval of all of the important hospital and medical associations and has attained a distinctive reputation for its high standards, its unsurpassed administration, its fine medical staff, and its dedicated board of trustees, a group of philanthropically minded citizens, headed by one of our city's outstanding businessmen, Mr. David Schwartz, of Jonathan Logan, Inc.

Research at the hospital has included important work, including: Work on the Rh blood factor—a dramatic achievement some years ago was a complete blood transfer to save a new-born baby; on leukemia—you may recall the Louis boy story, a Sing-Sing prisoner who offered himself for experimentation to save the life of 6-year-old Marcia Slater and who was later pardoned by Governor Dewey; with radioisotopes—Jewish Memorial Hospital is one of the few in New York City authorized to work on radioisotopes by the Atomic Energy Commission; and on trypsin—again, you may remember the dramatic last-minute call to the Jewish Memorial Hospital from Australia in an attempt to save the life of Sister Kenny.

I particularly emphasize the extraordinary research done at this hospital, because it paves the way for what can be done in other parts of the country.

Research at Jewish Memorial Hospital expanded to such a point in recent years that it was necessary to add a new wing to the present hospital building. Last fall the new research laboratory was dedicated and provided an occasion for community celebration and for tributes from outstanding Americans.

It may be of interest to recall some of the statements made on that occasion.

One of the main speakers was Dr. Ralph Bunche, the distinguished Nobel peace prize winner, who said:

This dedication signals a new advance in the development of a distinguished institution which for nearly half a century has rendered invaluable service to the community. Its portals welcome the needy. Its staff and facilities are open to all races and creeds. Its standards are among the highest.

The new research laboratory building will augment the facilities and expand the horizon of service of this hospital. Within these new walls, over the years, will be carried on the work of dedicated men and women which inevitably will bring new and greater benefits to humanity in its constant struggle against disease and suffering and untimely death.

Mayor Robert F. Wagner, of New York, felicitated the institution in these words:

My congratulations to you, the board and all those who have made possible this auspicious occasion, the dedication of the hospital's new research laboratory building. The addition of this important new facility for the expansion of the many noteworthy services provided by the Jewish Memorial Hospital is in keeping with the magnificent tradition of progress and contribution to our community's welfare that has been continuous since the hospital's founding almost a half century ago. As I advised, I greatly regret I cannot be with you to express personally my warm admiration for your objectives, and how grateful we all are for your cooperation in providing the means to carry on important research so vital to the health and welfare of us all.

The president of the board of trustees, Mr. David Schwartz, explained the origin of the new Research Laboratory Building when he said:

From the first day of my association with Jewish Memorial Hospital I urged and fought for the extension of our research work. We, of this hospital, believe that our services to the community should consist not only of curing the sick but of doing what is possible to study and to prevent illness and disease. We achieved some success toward our goal within the limited facilities at our disposal up to this time. This is evidenced by a number of major contributions in the field of medicine and research by the members of our staff, as for example with radioactive isotopes, in the study of cancer, leukemia, and the Rh factor in the newborn. With the magnificent expanded facilities which we are dedicating today, we have every reason to hope for even greater advances and achievements in the field of research. This is not something abstract. It is of direct benefit to patients, patients in our hospital and in other institutions. This is our pride: That we are being of direct help to those who suffer from illness and disease. And we are also proud of the fact that no one seeking treatment in this hospital is asked about his race, religion, or origin. A disease germ does not recognize those distinctions. Neither do we. A glance at our staff and at our patients will show the nonsectarian, universal character of our hospital services.

Last, the building itself was dedicated by one of our city's most distinguished spiritual leaders, Dr. Israel Goldstein, rabbi of Congregation B'nai Jeshurun, who said:

It is a source of special pleasure to me that my participation in these ceremonies today is an encore to my participation in the ceremonies at the dedication of your main building some years ago. The participation of clergy of several denominations then as now is no doubt a triple-clad guaranty of your success. Actually, it is a tribute to the broad character of your ministry of healing which does not ask whether a person is Christian or Jew; black or white; but only whether he is in need of the service you have to offer.

It is a sign of strength and progress that, between the dedication of the former building and the dedication of this building, new forces have come into your work, and into the carrying of the responsibilities. This is a tribute to the older men who have recognized the need for new reinforcements and have made room for new people. It is also a tribute to the younger men who so ably and generously have stepped into the noble tradition of their forebears.

This building can be dedicated because men have been dedicated, giving their time, their energy, and their resources to this institution. Yet, in every group, there is always one who stands out among his colleagues—*primus inter pares*—the one to whom recognition gravitates because his colleagues recognize in him unusual endowments of heart and spirit, in sight and foresight, sound judgment seasoned with courage and a dash of daring, and extraordinary business success which has not spoiled the humanity of the man. The Jewish Memorial Hospital is fortunate in having such a leader in David Schwartz, its president.

Efficiency must not necessarily be accompanied by austerity. A stern manner is not necessarily a sign of great skill. Though I am only a layman in this field, I venture the opinion that the doctor's affability and the nurse's smile do not retard convalescence. A pleasant manner does not hurt even in international relations, witness the success of Dr. Ralph Bunche who honors us with his presence today. To doctors and nurses, of course, the illness and suffering of patients

are part of their daily routine, but not so to the patients themselves. Fortunate, therefore, is the patient who receives the ministry of skill seasoned with kindness. I trust that this community will always think of Jewish Memorial Hospital as the hospital with a smile, where skill is sweetened with kindness.

This building which we are dedicating today has untold possibilities for the well-being of men, women, and children everywhere. In the age of the atom, when we are hoping that the secrets of atomic energy may serve the purposes of peace and not of war, it may be that this building will have much to do with applying some of the results of these researches to the healing or the prevention of disease.

Thus we dedicate the research laboratory wing of the Jewish Memorial Hospital. Recalling the phrase of the prophet, Malachi, I pray that, like the son of righteousness, the Jewish Memorial Hospital may bring healing in its wings.

Mr. Speaker, this is a singular occasion for all of us to join in our tribute to this invaluable institution that for 50 years has striven earnestly and effectively to save lives, to restore health, to cure, and in other ways to serve the people in the community.

The hospital is marking its golden anniversary with a dinner, to be held on April 16 in the grand ballroom of the Waldorf-Astoria Hotel under the chairmanship of another distinguished New York philanthropist, Sol Rosenblatt.

I know that the community and my distinguished colleagues join with me in felicitations, in grateful appreciation for services already rendered and in hopes that the next half century will see a continued flowering of the precious values that Jewish Memorial Hospital is bringing to its community, to the city of New York, to America, and to all the world.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GARMATZ. Mr. Speaker, again this year, at the commemoration of the 37th anniversary of Lithuanian independence, the members and guests of the Council of Lithuanian Societies of Baltimore had the privilege of hearing from the counselor of the Lithuanian Legation, the Honorable J. Kajeckas; and, under leave to extend my remarks, it is a pleasure to insert his speech in the RECORD. It follows:

TRANSLATION OF SPEECH DELIVERED BY MR. J. KAJECKAS, COUNSELOR OF THE LITHUANIAN LEGATION, ON THE OCCASION OF THE 37TH ANNIVERSARY OF THE PROCLAMATION OF LITHUANIA'S INDEPENDENCE, AT LITHUANIAN HALL, BALTIMORE, MD., ON FEBRUARY 12, 1955

Today is the day of triumph for the Lithuanian Nation. The proclamation of Lithuania's independence, under the circumstances, was an heroic act. It marked the fulfillment of the hopes of the Lithuanian Nation through long years of oppression. It led her from oppression to freedom and its blessings.

There was eagerness to get things done and to progress. The people hastened to compensate for the time lost under oppression. The Lithuanian took his "plough, book, and lyre," and opened a new path to Lithuanian glory. A comparatively high standard of living was reached. Marvelous progress was achieved in all spheres of activity. Lithuania achieved that which can only be achieved under freedom. This is recognized by Lithuanians and foreigners alike. It is not without reason that even today Lithuania is referred to by its oppressors as Little America, and they hasten to it eagerly to garner the fruits thereof for their eternally empty beggars' pouches. It is not without reason that even today in the Caucasus and elsewhere in the Soviet Union an American is mistaken for a person from the Baltic States.

This anniversary is also our Thanksgiving Day. It is proper and right that we should remember, though briefly and only in part, those to whom we owe gratitude for Lithuania's independence.

In the first place to God. To Him who gave the command to love one's fatherland as one's mother. To Him who for centuries did not forsake the suffering Lithuanian Nation but extended solace and hope to the weary and terrorized serf. To Him who inspired the hearts of those who risked deportation to Siberia for a printed word, for a prayer book, and for clinging to the language those in a school of despair. To Him who brought to their knees neighboring giant states that sought Lithuania's enslavement and endowed freedom on the humbled Lithuanian Nation. If God had not blessed the efforts of the Lithuanian Nation to be free, they would have been in vain, as in vain they were in the case of much larger and stronger nations.

We are grateful to the signatories of the act of independence. Some of them paid for it with their lives to the present aggressor.

We are grateful to friendly countries, but most of all to these United States of America. America never has forgotten the enslaved peoples of the world, wherever they may be. Lincoln, whose birthday we also commemorate today, stressed that the American Declaration of Independence promised the hope of freedom to the whole world for the whole future. President Wilson raised the right of self-determination of nations and created proper conditions that freedom might also be Lithuania's rightful lot.

We are grateful to the simply-clad but determined Lithuanian volunteers, to the Lithuanian Army.

The role of Lithuanian-Americans in the achievement of Lithuanian independence and the strengthening of its foundations is great. Their efforts are both varied and imposing. I do not attempt to enumerate them. Honor and gratitude are due to the numerous known and less known supporters and friends of Lithuania.

This anniversary is also the day of mourning, solace, hope, and determination.

The storm raised by tyrants crushed Lithuania. She fell a victim in an unequal struggle. We mourn because of her present fate. Nevertheless, her spirit is still gloriously alive.

In the summer of 1941 everyone rose up against Lithuania's enslavers. When the Red Dragon returned a second time, it was confronted with a most remarkable and formidable underground resistance organization. The congressional committee presided over by the Honorable Charles J. Kersten registered numerous heroic episodes of that underground struggle. After the death of Stalin even the enslaved Lithuanians in the Vorkuta slave-labor camps in Siberia arose. Over there even Heaven is being stormed by secret and collective prayers under far more terrible circumstances than those of the darkest times of the catacombs of Rome.

We are deeply grateful to the American Government and the American people for the condemnation of Soviet aggression in the Baltic States and the nonrecognition of their occupation. Soon after General Eisenhower became President, he stated that he will never give into bondage any nation. In spite of the Soviet offensive of so-called peaceful coexistence, he stressed that: "the peace we seek is . . . not bought at the expense of others, of principle" (New York Times, October 21, 1954). In his Christmas address he again reiterated: "Let no one think that we want peace at any price, that we shall forsake principle . . . or that we may pawn our honor for transitory concession" (Department of State Bulletin, December 27, 1954).

We rejoice at the great work accomplished last year by the Baltic Committee, later known as the Select Committee on Communist Aggression, with the Honorable Charles J. Kersten at the head, and to Honorable Senator DOUGLAS for his sympathetic resolution.

We rejoice at the repeated sympathetic statements in regard to Lithuania expressed by the Honorable Governor of Maryland, by its senators, congressmen, the house of delegates and the Honorable Mayor of the city of Baltimore. Lithuania is also deeply honored by the presence of the distinguished guests gathered here tonight.

To all of them the Lithuanian nation owes a deep and lasting gratitude.

Thus, we are not forgotten and we are not alone. Our enemy is the enemy of both the free and the enslaved world. The Red Dragon seeks to "liberate" all: in other words, to enslave, annihilate, dehumanize, and steep in misery. Nevertheless, justice will prevail. Let us do our part. If a Lithuanian in his fatherland and an exile in Siberia do not break down, a free Lithuanian should never waver in his determination and hope to see Lithuania free again. Let us remain united and determined. Tyrants are not eternal. According to Valgantas:

"As soon as the hands of the strangler open, the nation will immediately revive with the first breath of its own precious air, and cry out: 'I am still alive.'"

Mr. Speaker, in the belief that the Members of Congress will also find very interesting the brief outline of Lithuanian history which emphasizes that nation's constant struggle to maintain its independence and freedom, sometimes successful, sometimes unsuccessful, I include it at this point:

THE OUTLINE OF LITHUANIAN HISTORY THE KINGDOM-GRAND DUCHY OF LITHUANIA, 1200-1795

Two hundred years of struggle against the German knights and the crusaders from all of Europe. Expansion of Lithuanian borders to vast regions of eastern Europe.

1251: Coronation of Mindaugas as King of Lithuania.

1236 and 1260: Two decisive battles in which invading Teutonic Order and crusaders were defeated and Germans' blitz conquest of Lithuania and whole eastern Europe was averted.

1362: The battle in Ukraine where Lithuania defeated Tartars, won Ukraine and checked the expansion of the Tartars to the west.

1387: Baptism of Lithuania.

1392: Vytautas the Great became the ruler of Lithuania. Lithuania became the largest empire in eastern Europe.

1410: Tannenberg. The combined armies of Lithuania and Poland under the direct command of Vytautas the Great crushed the Germans and stopped "Drang nach Osten" for several centuries.

1462-1795: Lithuania resisted the Russians "Drang nach Westen."

1400-1500: The pinnacle of Lithuanian power.

1528: Land census in Lithuania, the first comprehensive census undertaken in Europe.

1529: The first Lithuanian statutes, the first real code of laws in Europe since Justinian.

1550-1569: Agrarian reform.

1569: Treaty of Lublin created a confederation of Lithuania and Poland. Decline of Lithuania began.

1579: The Academy of Vilnius established. Later transformed into University of Lithuania.

1605: Lithuanian forces defeated Sweden at Salaspilis.

1620: Polish-Lithuanian Armies under the command of Lithuanian Marshal Katkus defeated huge Turkish Army in Moldavia.

Sixteenth, seventeenth, eighteenth centuries: Continuous wars with Russia and Sweden.

1795-96: End of Polish-Lithuanian Commonwealth; Lithuania occupied by Russians.

1812: Temporary reestablishment of Lithuania during Napoleonic War with Russia.

1831: First insurrection against Russia.

1863: Second insurrection.

1905: Third insurrection.

1918-40—REPUBLIC OF LITHUANIA

1918: February 16—Proclamation of reestablishment of Lithuania as an independent republic.

1919-20: War for independence against Russians, Germans, and Poles.

1923: Return of Klaipeda Memel region from Germany to Lithuania.

1922: Agrarian reform.

1920-39: Rapid growth of Lithuanian economy and cultural life.

1939: Lithuania regained the capital Vilnius.

1940: Occupation of Lithuania by huge Russian Army.

1941: The first deportation to Siberia.

1941: Revolt of Lithuania against Russia at the beginning of German-Russian War. The Government of Lithuania reestablished. In short time the independence was suppressed by Nazis.

1944: Russians reoccupied Lithuania.

1944: Underground resistance against Communist Russia and continuous heroic fight of Lithuanian partisans for freedom of Lithuania and also of all freedom-loving people in the world.

Also for the information of the Members, I am including the text of the resolution adopted by those present at the banquet, relating to the fate of Lithuania and recommending certain action to be taken by our Government:

At the 37th commemoration of the Declaration of Independence of the Republic of Lithuania, sponsored by the Council of Lithuanian Societies of Baltimore, Md., held at Lithuanian Hall, 851 Hollins Street, the following resolution was unanimously adopted:

"Whereas nearly 10 years have passed since the liberation of Europe from the Nazi yoke; and

"Whereas in excess of 100 million people of the Central and East European countries, among which is Lithuania, are still enslaved by ruthless Communist Russia; and

"Whereas the Lithuanian people are faced with the extermination of their race by mass deportations and slaughter; and

"Whereas under the Potsdam agreement, part of East Prussia was taken from Germany and turned over to Soviet Russia for temporary administration and taking advantage of this opportunity Soviet Russia for its own imperialistic purposes has colonized this region with people from Soviet Russia to the end that the Lithuanian nation will be encircled by a hostile Russian-Asiatic population; and

"Whereas this part of East Prussia from time immemorial was inhabited by Lithuanians and in later years by planned colonization it was partially Germanized and settled by Prussian Junkers; and

"Whereas since World War II this aforementioned area is no longer inhabited by Germans; and

"Whereas in the future formation of the political destiny of this territory it would be totally unwise to reestablish a settlement of militant Prussian Junkers and to again set up a Polish Corridor problem and so create the risk of another future war between Germany and Poland: Now, therefore, be it

"Resolved, That we, Americans of Lithuanian descent, professing grave anxiety over the fate of our fatherland, Lithuania, appeal to the Government of the United States—

"1. To continue its policy of nonrecognition of the incorporation of Lithuania into the Union of Soviet Socialist Republics.

"2. To exert its strong influence in the United Nations in order to prevent the annihilation of the Lithuanian people.

"3. To incorporate the liberation of Lithuania and other Soviet-enslaved countries as an integral part of United States foreign policy.

"4. To urge that the area of East Prussia, which is now under the administration of Soviet Russia, shall be ceded to Lithuania at such time as the East Prussian question shall be proposed for determination."

THOMAS G. GRAY,
President.

MARTIN RAILA,
Secretary.

Opposition to H. R. 1

EXTENSION OF REMARKS OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following statement in opposition to the extension of the so-called reciprocal trade agreements:

STATEMENT OF E. L. TORBERT, VICE PRESIDENT, ONONDAGA POTTERY CO.; CHAIRMAN, FOREIGN TRADE COMMITTEE, VITRIFIED CHINA ASSOCIATION, INC., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, JANUARY 27, 1955

I am E. L. Torbert, vice president of Onondaga Pottery Co., Syracuse, N. Y., and chairman of the foreign trade committee of the Vitrified China Association, Inc. In addition to the members of the Vitrified China Association, Inc., I am authorized to represent other manufacturers of vitrified china tableware, in all fully 80 percent of the vitrified china production of the United States.

We in the American china tableware industry have been struggling with ever-increasing burdens placed upon us by our Government. Aside from the imposition of domestic taxes and other burdens common to most American industries, we find ourselves in an industry that apparently is considered by some people as expendable in the interest of furthering certain foreign relations.

As each new load has been placed upon us we have listened to soft words and offers of relief if our industry was harmed. In an interview with Mr. Paul Hoffman, then Administrator of ECA, he stated that "some industries will be hurt, perhaps it will be your industry. If so, we must arrange for a subsidy."

When we turn from such assurances to look at the record we will, I am sure, be considered justified in suggesting that the time has come for our Government to show some interest in our increasing problem.

It is now well known that the china tableware industry is by nature dependent largely on handcraft artisans. Notwithstanding mechanization within our industry in this country, which is the most streamlined, the most proficient in the world, labor still accounts for nearly two-thirds of total production costs.

The American standard of wages in the pottery industry in 1952 was about 4 times that of England, 4½ that of Germany, and 9 times that of Japan—United States Tariff Commission.

Just as American agricultural industry needs to be protected (mostly by quotas on imports) against destruction by competition from low foreign prices, so American wages in industries whose product has a high-labor content, need protection from destruction by competition based on low foreign wages.

The foreign china tableware wages and selling prices being so low, the American Tariff Act of 1930 carried on decorated china an ad valorem rate of 70 percent plus 10 cents per dozen pieces.

Beginning in January 1939 and the trade agreement with the United Kingdom and continuing through the Geneva negotiations of 1948 and the negotiations at Torquay in 1951—nine separate reductions have been made in the 1930 rates of duties on chinaware in some classifications to the full limit allowed by the law.

Further inroads on this reduced protection were accomplished by increased exemption granted returning tourists, in 1948 and again in 1949.

During the period in which this whittling away at our industry has taken place imports of decorated household china tableware from all foreign countries have increased from 2,070,000 dozens in 1948 to 4,940,000 dozens in 1953, an increase of 138 percent—United States Tariff Commission, November 1954.

In contrast to the growth in imports of china tableware sales in the United States market, study of Tariff Commission reports show that domestic manufacturers in 1948 supplied 29.7 percent of the United States market, in 1952, 15.8 percent.

Injury to domestic manufacturers of vitrified china household tableware is confirmed by the Tariff Commission's reports which show the total United States production decreased 10.3 percent from 1949 to 1952, inclusive (U. S. Tariff Commission, November 1954). Since 1952 was the last year reported by the Tariff Commission it has been ascertained by recent independent survey that there was a further reduction of 10.1 percent in domestic production from 1952 to 1954.

Injury to the domestic china household tableware industry is further shown by a study of the profits of four of the larger producers of vitrified household china tableware. This statement of the combined operations of the four companies shows a drastic decline and trend from a profit before taxes in 1948 of 13.79 percent to a loss of 1.47 percent in 1954.

During this same period 4 vitrified china plants in this country, 3 of which had been in business a total of 184 years, have been forced to liquidate. In terms of those 4 companies only, the livelihood of over 1,000 persons and their dependents was wiped out in a little over 4 years.

It is a matter of the greatest concern to us that in three additional units of our industry, employment, which stood at over 3,800 in 1948, has dropped to less than 2,100 today.

There has been no compensating growth among the remaining units of our industry. To the contrary, the balance of 14 potteries

have also, in total, experienced this attrition, if to a lesser degree.

This evidence and other facts cited earlier in this testimony show clearly that the china tableware industry in the United States is in precarious straits. Under these conditions, the further reduction of already inadequate tariff protection could have but one outcome.

We can see no practical alternative to the setting up of import quotas as a means of creating equity and stability where neither now exists.

During the time this serious situation was developing we sought relief through the escape clause and the cost-equalizing provisions of section 336 of the Tariff Act of 1930.

As to the escape clause:

Our situation fulfilled each of the basic injury criteria as set forth in section 7B of the Trade Agreements Act of 1951—

"A decline in sales, an increase in imports, either actual or relative to domestic production, a higher or growing inventory, or a decline in the proportion of the domestic market supplied by domestic producers." The Commission was against us unanimously.

Since the escape-clause procedures have been available to American producers 53 appeals have been considered by the United States Tariff Commission. In only five of those cases has relief been granted. Is it probable that in the other 48 cases no injury or threat of injury was present?

In discussing H. R. 1 with Members of the present Congress, we have pointed out the ineffectiveness of the escape clause and have been told that such ineffectiveness was the result of "improper administration"; that it was the intent of the Congress that the escape clause should provide relief to industries that have been harmed.

Our circumstances require fair legislation with respect to escape clause, so drawn as to insure proper administration.

We favor the withdrawal of the discretion granted the President by the Congress in putting the findings and recommendations of the Tariff Commission into effect. The Commission is not a Cabinet department but a bipartisan, semijudicial body. After a matter has been considered and decided under the law, it should not be subject to review or change by any other department.

It is futile and without real value to have a Commission, and for industry to take part in the arduous and expensive proceedings, if those proceedings are then to be set aside.

Let me emphasize that this is not an infringement of Presidential powers, inherent or otherwise, but a simple withdrawal of congressional powers abdicated to the President to be exercised without public hearings and without recourse.

When we suggest return to Congress of its constitutional rights as to tariffmaking we are told that logrolling will result. We suggest that it would be far wiser to do our own logrolling if any is required than permit such logrolling to be done for us by 30 to 40 foreign nations constituting GATT.

I now wish to raise questions having to do with preserving the livelihood and jobs of hundreds of thousands of honorably employed citizens of this country. One question examines the intent of this bill, H. R. 1; another is directed to the intent of this committee with respect to that matter.

In a day when nearly every lawmaker and court of this land is on guard against special interest legislation, it is almost incredible that we should read the following excerpts from H. R. 1:

"For the purpose of expanding foreign markets, so that foreign markets will be made available to those branches of American production which require and are capable of developing such outlets by affording corresponding market opportunities for foreign products in the United States, etc."

Have we so drifted from our basic concept of equal rights for all people of this Nation that it is proper to propose that the interests of selected industries of this country should be promoted even to the extinction of other industries and the employment which they now afford?

This proposition is implicit in the preamble of H. R. 1 and, if I were a Congressman of the United States, I would consider it an affront to democratic justice.

Is it better to attempt to hold and enlarge foreign markets which were never ours traditionally than to retain for ourselves our own markets and thereby safeguard employment in domestic industries which helped to create those markets?

During this past week and for some time precedent to it, you have been told and the public has been told that this bill provides for a gradual reduction in tariffs. It has not been advertised that this bill also provides for a drastic reduction in tariffs and I am confident that many who have spoken in favor of it were not aware of this feature.

The radical tariff-reducing provisions of H. R. 1 are vital to the pottery industry. This bill has been carefully examined by expert counsel and I am advised that, under it, existing tariffs on critical categories of china tableware and items other than pottery could be reduced by 50 percent by June 30 of this year and by a total of 58½ percent within 25 months of its passage.

I should also like to refer to those provisions of the Tariff Act of 1930, as amended, which relate to "unemployment of or injury to American workers, miners, farmers, or producers, producing like or competitive articles" and "unemployment, injury, or impairment, or threat thereof."

Was it the intent of Congress to safeguard established employment and wages in this country against the insurmountable competition offered by products of low-cost labor from foreign countries?

I think it was—clearly.

Has the will of the majority of the Members of Congress, who voted in approval of those safeguards, been observed in the administering of this legislation?

Why have so many applications for relief been denied? A partial answer may be present in the findings of the United States Tariff Commission handed down to our industry in July of last year in compliance with Senate Resolution 253, adopted May 12, 1952.

Under the provisions of section 336 of the Tariff Act of 1930, the Tariff Commission is empowered to determine the differences in costs of production of items (certain household chinaware in the case in point) imported into the United States and like or similar domestic items, and to make recommendations for suitable relief.

The study indicated that the cost of like and similar articles, laid down at the same point in this country, was \$1.30 for Japanese ware and \$3.69 for American. (U. S. Tariff Commission Investigation No. 118, June 24, 1954.) The rate of duty found necessary to equalize the United States and Japanese costs of production was 284 percent ad valorem based on foreign values plus 15 cents per dozen separate pieces. The rate in effect was and is 70 percent ad valorem plus 10 cents per dozen pieces.

Imports of this ware from Japan alone had captured 30 percent of the United States market by 1948 and 65 percent by 1952. In the same period the share and volume falling to American producers declined and profits plunged drastically to approach the vanishing point. Yet no relief was granted.

Why?

Four members of the Tariff Commission¹ reasoned that, because prices of Japanese

¹Chairman Brossard and Vice Chairman Talbot dissented.

ware were so much lower than those of nearly identical American ware, these items were not commercially interchangeable. Since they were not commercially interchangeable, this logic ran, they were, therefore, not like and similar. Not being like and similar, section 336 could not apply. Case dismissed.

Is it the intention of this group that the problems of an American industry that is older than this Nation—that is doing everything in its power to insure employment to honorable and respected citizens—should be treated in this manner?

I consider H. R. 1 to be a request for authority by an administration that has abused similar authority in the past and which administration declines to commit itself on its considerations in using such authority in the future.

In the words of Secretary Dulles, "it is the administration's intention to exercise powers contemplated by the bill in such a manner that the legitimate concerns of United States business will be fully taken into account."

What is meant by the phrase "legitimate concerns"? Would his definition of that term be your definition?

When Mr. Dulles refers to United States business is he speaking of all United States business, or is he setting apart producers for export and United States companies with plants and investments abroad who would export to this country the products of cheap labor at the expense of American employment?

What sort of assurance is Mr. Dulles giving when he says these matters "will be fully taken into account"? The act of "taking into account" is no guaranty that judgment and decisions based thereon will conform with the intent of Congress and its concept of the true interests of this Nation.

In its way this administration has "taken into account" the escape clause procedures of this act. And in its way it has chosen to do as it well pleases, ignoring the will of Congress by refusing to invoke those provisions when, in all justice, the relief provided by them should have been granted.

We, who have suffered from the inroads of imports, who have had to throw on relief rolls hundreds and thousands of loyal employees, who are now operating at a loss because of this vicious foreign competition and who can see in prospect only dwindling markets for our industry, hear with amazement the trade proposals of this administration.

While the Secretary of Labor takes the pulse of national unemployment, carefully ignoring conditions in the growing list of industries vulnerable to imports, and reports all is well—reciprocal trade is a success—the Secretary of State pleads for consideration of foreign manufacturers who must be assured that American markets will be theirs to exploit at will.

All concern in H. R. 1 is for our export industries, for capitalists who have investments abroad. Not one word of comfort is there in H. R. 1 for workers in our industries that, if they are to live, must have protection from the imported production of cheap labor of other countries. Not one word. Only a promise of slow death while our economy adjusts itself to the assumption of our markets by industrialists of foreign nations.

The issue is quite clear. Are we to live or are we to die?

If we are to live, if our industry is to be restored to its rightful place—a position of equality of competition—then adequate safeguards must be written into H. R. 1 and we must be sure those provisions will be applied promptly and with the full force and effect intended.

The 57th Anniversary of the Sinking of the "Maine"

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. VAN ZANDT. Mr. Speaker, each year on February 15, we observe the sinking of the battleship *Maine* which cost the lives of 2 officers and 253 men and resulted in the war with Spain in 1898.

This is an occasion when we pay annual tribute to the gallant Spanish-American War veterans who defended the Stars and Stripes, fighting in the cruel heat of San Juan and battling pestilence and disease in the steaming jungles.

When President McKinley issued the call for volunteers, the United States had an Army and Navy of only 2,143 officers and 26,040 enlisted men; while Spain had one of the largest navies in the world and an army of 500,000 with over 192,000 in Cuba alone.

There were some 483,000 American youths who served in the Spanish-American war and of this number nearly 20,000 lost their lives either in battle or by yellow fever contracted in the disease-infested jungles.

The feat of Admiral Dewey on May 1, 1898, when the Spanish Fleet was destroyed is one of the glorious pages in American naval history.

Yet while we salute the United States Navy for its stellar role, let us not forget that the valiant foot soldiers and daring cavalymen fought against great odds in heavy clothing in hot weather that sapped the vitality of the sturdiest men.

Let no man underrate the soldier of the Spanish-American War. Facing the perils of yellow fever and with poor rations and contaminated water, his life was made more difficult by disease-carrying insects that 57 years ago were uncontrolled and a plague to mankind.

Medical progress has made stupendous strides in the past 57 years yet the boys of '98 had no miracle or wonder drugs with the result they were virtually guinea pigs in the desperate attempts made to halt epidemics of every known variety.

These were the young men who carried the American flag in America's first crusade for the liberation of mankind.

Many of them again served their country on foreign soil together with their sons in World War I; while in World War II and the Korean war their sons and grandsons carried on in the noble cause of defending humanity by thwarting the ambitions of power-crazed dictators.

Truly, the American Nation owes an undying debt to those who fought in the Spanish-American War for they were pioneers in the battles waged on foreign soil in defense of liberty and freedom.

Today, on the 57th anniversary of the sinking of the *Maine*, I should like to

describe briefly the battleship *Maine* and the scene of that eventful evening February 15, 1898, when two terrific explosions sank the ship in Havana harbor resulting in a terrible disaster.

To begin with, in the winter of 1897-98 mobs of Spanish loyalists, namely, those inimical to the United States and fiercely resentful of the well-known sympathy of the American people for the oppressed Cubans, became so formidable that the American consul general at Habana, Fitzhugh Lee, appealed to this Government for moral support in the shape of a naval force in Cuban waters. This request, made often before, was at last heeded. In January 1898, orders were issued to the North Atlantic squadron to assemble at the Dry Tortugas, within 6 hours' steaming distance of Habana. On the 25th of the month the *Maine* was ordered to Habana itself. A second-class battleship, she had, nevertheless, for that day, certain formidable aspects. She had an extreme length of 324 feet; beam, 57 feet; displacement, 6,650 tons; indicated horsepower, 9,290; and trial speed, 17.45 knots. In addition, she had an armored belt extending 180 feet at the waterline on each side, over which was a flat, armored deck. Joining the two forward ends of the belt was a heavy steel bulkhead, at the bottom of which was an armored deck which continued to the stem. The flat steel deck above armor dipped down abaft the belt, and was continued to the stern, one deck below, with a slightly diminished thickness. The barbettes and turrets were of heavy steel.

As for armament, the *Maine* had two "winged" turrets, each containing two 10-inch breech-loading rifles. She carried six 6-inch breech-loading rifles, besides seven 6-pounder and eight 1-pounder rapid-firing rifles. Finally, she had four above-water torpedo tubes on her berth deck, all in broadside.

On the morning of January 25, 1898, the Spanish authorities having been previously notified of her advent, the *Maine*, Capt. Charles D. Sigsbee, steamed into Havana Harbor and was duly assigned a berth 500 yards off the arsenal.

No United States vessel had visited Havana during the previous 3 years and meanwhile tension had been steadily mounting between the Spanish and American Governments.

There was much doubt as to the nature of our reception—

Wrote Captain Sigsbee—

for I was not aware of the character of the diplomatic exchanges. I was sincerely desirous of a friendly reception, but it was my affair to be ready for all emergencies. The *Maine* was in such a state of preparation that she could not have been taken at much disadvantage; nevertheless, she presented no offensive appearance, and meant no offense. On board United States men-of-war—

The Captain added thoughtfully—

It is commonly only a short step from peaceful appearance to complete readiness.

The Spanish port officials behaved with punctilious courtesy and the social amenities between American and Spanish authorities proceeded according to naval protocol. Then at 9:40 p. m., on the

night of February 15, the blow fell. At that fateful moment two terrific explosions threw parts of the *Maine* 200 feet in the air and illuminated the whole harbor.

The first dull explosion had been followed by a second, much more powerful, probably that of the forward magazine. The forward half of the ship was reduced to a mass of twisted steel; the after part slowly sank. The *Maine* carried 26 officers and 328 men, all of whom were on board when the explosion took place, except an assistant engineer, 2 naval cadets, and a gunner. Two officers and 250 men were killed at once and 8 men died afterward.

Captain Sigsbee's own immediate impressions, set down in his book, the *Maine*, are of interest. I quote:

At taps ("turn in and keep quiet"), 10 minutes after 9 o'clock, I laid down my pen to listen to the notes of the bugle, which were singularly beautiful in the oppressive stillness of the night. The marine bugler, Newton, who was rather given to fanciful effects, was evidently doing his best. During his pauses the echoes floated back to the ship with singular distinctness, repeating the strains of the bugle fully and exactly. A half hour later Newton was dead.

I was enclosing my letter in its envelope when the explosion came. The impression made on different people on board the *Maine* varied somewhat. To me, in my position, well aft, and within the superstructure, it was a bursting, rending, and crashing sound or roar of immense volume, largely metallic in character. It was followed by a succession of heavy, ominous, metallic sounds, probably caused by the overturning of the central superstructure and by falling debris. There was a trembling and lurching motion of the vessel, a list to port, and a movement of subsidence. The electric lights, of which there were eight in the cabin where I was sitting, went out. Then there was intense blackness and smoke.

The situation could not be mistaken—the *Maine* was blown up and sinking.

Within half an hour, having ascertained that the ship was doomed, Captain Sigsbee sent his famous dispatch to the Secretary of the Navy from the steamer *City of Washington*. After reporting the terrible disaster he added sober words of caution that public judgment should be suspended until further report. The rest, as the saying goes, is history.

As to the final chapter of the story of the *Maine* herself, I take the liberty of quoting William B. Norris' brief but admirable summary in his article, *The Destruction of the Maine*, which appears in the *Dictionary of American History*:

Investigations were soon made by the American and Spanish authorities separately. Their decisions differed. The Spaniards reported that an internal explosion, perhaps spontaneous combustion in the coal bunkers, had been the cause; the Americans that the original cause had been an external explosion, which in turn had set off the forward magazines.

News of the disaster produced great excitement in the United States, and accusations against the Spaniards were freely expressed by certain newspapers. Without doubt the catastrophe stirred up national feeling over the difficulties in Cuba, crystallized in the slogan "Remember the *Maine*." The wreck remained in Havana harbor until 1911, when United States Army engineers built a coffer dam about the wreck, sealed the after hull

of the ship, the only part still intact, and floated it out to sea. There, on March 16, 1912, appropriate minute guns boomed as it sank with its flag flying. The remains of 66 of the crew which were found during the raising were buried in the National Cemetery, Arlington.

During the removal of the wreck a board of officers of the Navy made a further investigation. Their report, published in 1912, stated that a low form of explosive exterior to the ship caused the first explosion. "This resulted in igniting and exploding the contents of the 6-inch reserve magazine, A-14-M, said contents including a large quantity of black powder. The more or less complete explosion of the contents of the remaining forward magazine followed." The chief evidence for this was that the bottom of the ship had been bent upward and folded over toward the stern. European experts, perhaps influenced by several internal explosions in warships in the intervening years, still, however, maintained the theory of an internal explosion. No further evidence has ever been found to solve the mystery.

One visible token of the *Maine* still remains. Before her shattered hull sank forever in 1912, her remaining mast was removed, and now it stands in Arlington Cemetery, its conning tower and shrouds still in place, watching over the gallant old ship's honored dead who lie all around its base until the next and last reveille.

Impressions of Our Nation's Capital

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Miss Jeannie Hughes, high school senior, of the Shawnee High School, route 1, Lima, Ohio, from the Chief-school publication—of January 28, 1955. This article resulted from her impression of our Nation's Capital. Miss Hughes, in company with the members of her Girl Scout troop, visited Washington the week of January 3.

The article is as follows:

(By Miss Jeannie Hughes)

During a recent visit in our Nation's Capital, which several of us were fortunate enough to be able to make, I was impressed with how little an average United States citizen knows about his Government. How little we appreciate its functions and the privileges it offers.

When you stand gazing at the Capitol at night with its beautiful dome lighting up the sky, you feel the greatness of our Nation. The building seems a symbol of unity and of all our country is and will be.

Watching men and women of every State working together for every individual in our country, regardless of race, color, or creed, makes one feel a little special, as if you do count very much.

We barely recognize the thousands of people from our President, Congressmen, and Cabinet down to secretaries, judges, and page boys who keep our Federal Government ticking, making it the greatest on earth. Instead we sit at home complaining about income taxes and other taxes, or when elec-

tions come around we don't take time to go to the polls.

That isn't our kind of country, we aren't that kind of people, but we—each one of us—make it what it is. What will you make it?

The 37th Anniversary of the Independence of Lithuania

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. VAN ZANDT. Mr. Speaker, February 16, 1955, marks the 37th anniversary of the national independence of Lithuania, and I join with 1 million Americans of Lithuanian descent in saluting and encouraging the 3 million Lithuanians in that distressed country as they suffer under the iron heel of their Russian masters.

Lithuanians down through the centuries have dearly loved liberty and freedom, but it has been their unhappy lot to be deprived of such God-given rights under the mailed fist of one conqueror after the other as they were ruthlessly subjected to partition, devourment, and bitter persecution during the centuries of the existence of their beloved Lithuania.

History is replete with bloodcurdling accounts of the cruel persecution of the Lithuanian people who through their long and admirable history as industrious and peace-loving people have exhibited at all times a burning desire to live their lives in liberty and freedom.

In the great State of Pennsylvania, we have thousands of Americans of Lithuanian descent. Many of them, especially in my congressional district, have parents living here who have become naturalized citizens and with their American-born offspring constitute a virile and vibrant segment of the America we all love. Therefore, it is only natural that all Americans sympathize with the plight of the Lithuanian people in the homeland because our hearts are attuned to the spirit of liberty and independence purchased for us by the blood of our forefathers.

Mindful of the turbulent conditions of world affairs we join our prayers with those of the patient, brave, and persevering Lithuanian people in commemorating the 37th anniversary of their independence—an independence that was short-lived and wrested from them by cruel tyrants.

We realize that the future of all liberty-loving nations is threatened by the ruthless forces of world communism. Nevertheless, we know that all of us must cling firmly to our unshakable belief in almighty God and His mercy, confident that He will not desert us but will grant our supplications that the scourge of communism be erased from the earth so that human dignity among men and nations may be restored and that all God's children may live in

the peace and harmony embodied in His teachings and reflected in His daily salutations while He dwelt on this earth—"Peace be to you."

Expose Truth About Communism

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MADDEN. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Cleveland Plain Dealer, Cleveland, Ohio, of February 5, which has come to my attention. The editorial refers to the work and reports of the Select Committee to Investigate Communist Aggression during the 83d Congress.

This editorial points up the timeliness of the reports of the committee, particularly the findings, conclusions, and recommendations set forth in the committee's summary report. It makes an analysis of these findings in terms of the present crisis in the Far East, and emphasizes the great vulnerability which besets the leaders of the Soviet Union as they plan for further world conquest.

This editorial pays tribute to a distinguished member of the Committee, Congressman MICHAEL A. FEIGHAN of the 20th District of Ohio. Congressman FEIGHAN was one of the hardest working members of our committee, and his untiring efforts and keen understanding of the nations enslaved by communism is well reflected in the reports made public by the committee.

I feel editorials of this type which bring home to the American people the true facts concerning communism, make an immeasurable contribution to our national security and well-being. Truth is the greatest weapon we have against the Communist conspiracy. I hope there will be more editorials and newspaper articles in the immediate days ahead, like the one which appeared in the Cleveland Plain Dealer entitled "A Timely, Significant Report":

The House select committee, of which Representative CHARLES J. KERSTEN, of Wisconsin was chairman, has issued its report on Communist aggression and the forced incorporation of Baltic States into the Soviet Union. It is of especial interest to our readers, as Representative MICHAEL A. FEIGHAN, of Cleveland, was a member.

It is of especial interest also in the light of the major events of recent days, the passage by Congress of the Formosa resolution and the ratification by the Senate of the Southeast Asia Defense Treaty. The report bears out the wisdom of this course of action.

The select committee took testimony from more than 300 persons who were eye witnesses to Communist aggression in Central and Eastern Europe and amassed 1,500 depositions, documents, and other authoritative evidence in the course of 50 public hearings at home and abroad.

The committee, in conclusion, asserts "that communism is a criminal conspiracy purposely designed for and deliberately directed at the enslavement of all mankind and the establishment of a world colonial empire."

It shows that "no nation, including the Russian Federated Soviet Socialist Republic, has ever voluntarily adopted communism," that all have succumbed to force or the threat of force. And in 37 years it has enslaved 800 million people and extended its sway over one-third of the earth's surface.

It becomes very clear, therefore, that the task of America and her free-world allies is twofold: To draw a military line beyond which the Communists shall not pass, and to propagandize the peoples on the fringes of the Iron Curtain and within.

The ruthless oppression of the people by the state behind the Iron Curtain makes them our most effective potential allies, as the fomenting of revolution within the Communist nations would most quickly break their military strength and expose the hypocrisy of their propaganda.

Great strides forward were made in a military sense by the Formosa resolution and the Southeast Asia Defense Pact, as all doubts were removed at home and abroad as to our willingness and ability to utilize our Navy and Air Force to stop aggression.

We have not been as effective in propaganda as we might have been. The select committee recommends that the President launch a positive bipartisan program and take the initiative in calling an international conference of free nations for propaganda purposes.

The members of the committee are to be commended for the tremendous amount of work they performed and for producing significant factual evidence.

Pay Adjustments and Reclassification for Employees in the Postal Field Service

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LESINSKI. Mr. Speaker, I have today introduced legislation to provide an immediate 10 percent salary increase, with a minimum of \$400, for all officers and employees in the postal field service. The amount of each employee's salary will be rounded out to the next highest \$100 figure, so that as a practical matter in most instances the minimum increase will be \$430.

My bill also will provide for a reclassification of positions in the postal field service, thus establishing a modern classification and pay structure suitable for present and future needs of the service. The reclassification provisions of my bill incorporate the essential principles recommended by Postmaster General Arthur Summerfield, modified to the extent which hearings before our committee have indicated is necessary to insure adequate protection for all officers and employees while at the same time allowing management full latitude to operate the postal service with maximum efficiency.

The reclassification provisions in my bill eliminate the so-called nullifying clause which appeared in the administration's proposal in some 21 places. This clause would have allowed workers to be assigned, without limitation, to perform work at a lower level than the level of their jobs, thus leaving the way open for downgrading and loss of pay.

The clause also would have permitted assignment to higher level work without increase in pay.

In my judgment, a 10 percent immediate increase, to be followed by reclassification, is the absolute minimum increase which our postal employees have earned. Representatives of employee organizations have conclusively proved that postal salaries lag far behind increased living costs and pay rates in private industry, and that no recognition whatever has been given to tremendously increased productivity and efficiency by these employees. As a matter of fact, if proper recognition were given to these factors, a greater increase would be provided.

I have introduced this bill in a spirit of friendly compromise and cooperation. It is my belief and hope that it will provide a common ground for a meeting of the minds between the employees and the Postmaster General. It will be a very fair and effective pay and reclassification statute, under which the Department can operate with maximum effectiveness and all employees will be assured of fair treatment and of real incentives for ever greater productivity.

H. R. 3828

EXTENSION OF REMARKS

OF

HON. OLIVER P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BOLTON. Mr. Speaker, I will not be present on the floor of the House today during this debate because of my incarceration in the hospital. Nevertheless, because I feel so strongly on this subject, I do want my thoughts included in the Record of the debate. It will be impossible for me to vote on the various amendments which are made on the floor, but I know that when the bill comes to a vote the basic question will be whether or not Congress and judicial salaries shall be increased, for if this bill is defeated, the question will die for at least another session of Congress.

I must say at the outset that I hope that an amendment will be offered and adopted which will make this pay raise not applicable to the present Members of Congress, but rather to become applicable to the members who will be elected to the 85th Congress and those who follow.

I will grant there is much logic in the position that if the Members of the next Congress are worth an increase, so are we. Nevertheless, it goes against my grain to some extent to vote an increase in my own salary when I went before the people of my district willing to take office, if elected, at the present salary rate.

Nonetheless, Mr. Speaker, even though this provision may remain in the bill and the raise become effective immediately, I have requested my whip pair me, if possible, in favor of this legislation for several reasons.

It has been my privilege to be closely associated throughout my adult life with Members of Congress. I knew before I was privileged to join this body of the sacrifice required. I do not feel that to all the other sacrifices and pressures which the job entails should be added an impossible financial burden.

Certainly the people of my district and of my State do not want independent means to be a prerequisite of service in the Congress. Regardless of race, creed, color, or station in life, the only criterion of service here should be ability. Members of Congress should not be forced to rely on outside sources of income, whatever they may be, to make ends meet.

I know \$15,000 a year sounds like a tremendous amount of money and yet, I wonder how many of our constituents realize that our trips home to report to them come out of our salary; that the cost of living here in Washington is higher than in almost any other area of the country; that there are a myriad of little expenses that build up to a large tab which we must pay, and above all that we must not only move our families back and forth but also maintain 2 homes at the same time, 1 here and 1 back home.

Unless this legislation is passed, I sincerely believe that in all too few years we may well see the time when the Members of this body are either bachelors, men or women of independent wealth, or men or women who are forced to obtain additional income from some other source.

The job of a Congressman today is far different than it was 20 years ago. No longer is it a part-time avocation. Rather it is a full-time, complete year-around job for most of us. If we are to continue in the years ahead to attract men of ability from all walks of life in all types of background and experience, it is imperative that we pay a salary which will permit each Member to give service to his district and to do his job as well as that of a man with independent means.

The Torch of Liberty

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SADLAK. Mr. Speaker, under further leave to extend my remarks in connection with today's observance of Lithuania's Independence Day, I include an excellent editorial appearing in today's New York Times, entitled "The Torch of Liberty," which follows:

At a moment when, with President Eisenhower's endorsement, a nationwide Crusade for Freedom is underway to keep the torch of liberty burning behind the Iron Curtain, the American people will gladly join in spirit and in sympathy the Lithuanian Nation, which though under the Soviet heel, still observes today the 37th anniversary

of its independence. The Lithuanians, 3 million strong at home, with 1 million descendants in the United States, are part of the 70,000,000 people whom Soviet Russia has subjugated in Eastern Europe during and after the war in defiance of the Atlantic Charter, the United Nations Charter, and all other wartime agreements, from Teheran to Potsdam. But, though subjected, they have not succumbed.

Like all other subjugated peoples, the Lithuanians, and their leaders in exile in particular, realize that liberation will not come overnight, and that until it does come resistance will exact a fearsome price in death and mass deportations. They also realize that the time for small nations as self-contained entities is over, and that they must seek salvation in a wider all-European organization. But for the present the fight for liberation must invoke all the values that go with nationhood and independence, and the observance of a national independence day is part of that struggle.

In this struggle the subjugated peoples need and deserve the moral support of the free world, which, by extending such support, also serves itself. For, as President Eisenhower said, the masses imprisoned behind the Iron Curtain will remain potential deterrents to Soviet aggression as long as they know that the outside world has not forgotten them.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. KEARNEY. Mr. Speaker, on this day, February 16, 1955, which is the 37th anniversary of the Independence of the Republic of Lithuania, it is fitting that we pause to pay tribute to the freedom-loving spirit which has always motivated that small nation, and give voice to our belief that such a spirit has not and will never be crushed by foreign tyranny.

Lithuania's independence came as a blessing for its people won after centuries of subjugation under a staggering succession of alien despotisms. For 22 years thereafter, the people of Lithuania knew the, to us, commonplace pleasures of self-government and experienced the pride which citizens of a state entitled to an honored place among other free nations may justly feel.

In 1940, however, as a result of a secret conspiracy with Nazi Germany, and taking advantage of the collapse of political and military order in Europe, the government of the U. S. S. R. forcibly invaded the Republic of Lithuania. Following the Soviet imperialistic plan, the legal government was supplanted by Communist-controlled puppets, and in due course Lithuania was incorporated into the Soviet Union. Thereby began a new and more infamous era of foreign tyranny and oppression for this heroic people.

The Government of the United States has steadfastly refused to recognize the cowardly usurpation of the sovereignty of Lithuania by the Soviet Union, and in so doing we continue to reaffirm our

belief that the many years of struggling and suffering which the people of Lithuania have endured without abandoning their hope for the eventual restoration of their nation's independence have not been in vain.

Equality for Scientists

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. METCALF. Mr. Speaker, the following editorial from the Industrial and Engineering Chemistry News, August 9, 1954, deals with an inequality that affects many scientists now rendering excellent service to our Government:

EQUALITY FOR SCIENTISTS

Our tale today deals with those Government chemists and other doctor of philosophy scientists whose salaries are lower than several other groups of professionally trained men in allied fields but whose work and experience are identical. In some instances the situation is so absurd that a chemist project officer receives less money than professional men working under his supervision.

The story behind this Alice in Wonderland situation has its inception in the period following World War II. At that time (1947) the armed services were encountering great difficulty in obtaining and retaining personnel for the Medical Corps and Dental Corps of the armed services and the Public Health Service. The reason given was that physicians and dentists felt that they were better off financially in civilian life.

To overcome this problem, the Secretary of Defense requested legislation authorizing additional pay of \$100 a month for all medical and dental officers on active duty. A law including this provision was passed in September 1947 and was to be effective for 5 years. A similar provision was enacted in the Career Compensation Act of 1949.

In the summer of 1953 the Universal Military Training and Service Act was amended (Public Law 84). This amendment not only extended the extra-pay provisions for physicians and dentists to July 1, 1955, but also blanketed in veterinarians.

There are good arguments, pro and con, with respect to the question of whether preferential treatment should be given to one or more groups of professionally trained people. We do not wish to argue this point. We do feel, however, that our laws should be fair.

In this case we feel that all arguments advanced to support extra pay for physicians and dentists and, particularly, veterinarians apply equally well to chemists and other scientists. These include higher costs of education. To obtain a Ph. D. in science takes as long as to attain the education required of physicians, dentists, and veterinarians by the present law. The argument concerning personnel shortages is still acute with respect to scientists. A few months ago, the Secretary of Defense said that there was a surplus of medical personnel in the armed services.

Another supporting argument advanced is the contribution to national defense. We feel that scientists contribute as much as those covered by the law.

One reason that veterinarians were included was because of inequalities in pay structure and professional standing. This

argument certainly applies to doctor of philosophy scientists.

The law does not specify that recipients must be doing work in their own field but only that they hold degrees in that field. In Government facilities such as the public health service's, National Institutes of Health, physicians and dentists are often engaged in research projects exactly the same as those carried out by chemists, biologists, and other scientists. In some such cases project directors are scientists and some of the subordinates are physicians and dentists. Yet the latter get \$1,200 a year more than their project supervisors.

It is to be noted that this bonus pay provision applies only to those men who are on active uniformed duty and not to physicians and dentists who may be employed as civilians.

We believe that in all fairness Congress should give equal treatment to Government employees with comparable education training and experience. This could be done by extending the provisions of Public Law 84 to cover scientists who hold earned doctor's degrees and who hold active commissions in the armed services or the Public Health Service.

School Aid: Method Counts

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an editorial from the Christian Science Monitor of February 14, 1955, entitled "School Aid: Method Counts":

METHOD COUNTS

Few are questioning that there is an acute need which must be met in the Nation's school system. Criticism of the President's message on Federal aid to education comes chiefly from those who agree with him that something must be done, but disagree that his plan will meet the situation sufficiently and in time.

Senator LISTER HILL, Democrat, to whom we listen respectfully, is introducing a bill on this premise authorizing the Federal Government to grant outright \$1 billion in 2 years. On the other hand, Mrs. Oveta Culp Hobby, Secretary of Health, Education, and Welfare, has told newsmen that the administration plan offers the quickest way, and would make possible \$7 billion of construction by Federal-State cooperation.

If one believes that the school need is so great and so urgent that little else counts, then direct Federal grants on the scale Senator HILL proposes must seem justified. But there are other values to be preserved.

The first of these lies in preserving the maximum of initiative, responsibility, and control to the States and local communities. This means that the role of the Federal Government must be that of supplementing, not preempting, the effort.

Preserving the second value complements the first: That Federal aid be not dealt out on considerations of geography, political weight, or even of a share for everyone, but that it be apportioned according to volume of local need and lack of volume of local resources.

Many school districts, to be sure, will have to work with State school construction agencies in order to finance their part. And a number of States will have to authorize

setting up such borrowing and renting authorities. All of this can be done. And the President proposes a grant fund of \$200 million to bring relief to exceptional cases. The administration's aid-to-borrowing program simply requires that each locality and each State make use of the resources and devices available to it.

It may be that this plan will have to be tailored here and there to fit the contour of the actualities. But we believe that both the need can be met and basic values preserved, and that the President's plan is headed in the right direction.

Security Is Everybody's Business

EXTENSION OF REMARKS OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MACK of Illinois. Mr. Speaker, never before in our time have we had such a need for an adequate air arm as we have in this atomic air age of today.

The Vice Chief of Staff of the Air Force, Gen. Thomas D. White, recently made a very worthwhile report on this subject to an outstanding patriotic organization assisting the Air Force in its current recruiting efforts, the junior chamber of commerce. I am proud of General White, who happens to be a constituent of mine, as he is recognized as one of the greatest authorities on air power in our country. General White called his address Airpower: Everybody's Business. But his theme was not merely airpower, it was security. There is nothing that should be of greater concern to all Americans today than security. It is the business and the responsibility not only of the Congress, but of the entire body of American citizens. But only superior airpower can give such security to us.

The Jaycees—the members of the junior chamber of commerce—are assisting the Air Force to recruit the men needed to man the 137 wing, 975,000-man Air Force which we are told is the minimum Air Force necessary to guarantee the security of the United States, and which we hope to have by the end of fiscal year 1957. General White stressed public understanding of the Air Force and its needs as fundamental to any effort to enlist the men, and to create such a framework for their activity as will persuade them to make a career out of service with the Air Force.

In times of war the American people are wonderfully patriotic and willing to make any sacrifice to insure victory. Today, with the threat to our cities and people and our civilization many times greater than it ever was even during World War II, the American people are not showing the same kind of fervent patriotism. They do not see the dangers in the current perilous peace, which are just as real, though not as apparent as the dangers in war.

During this period of so-called peace, the Soviets have made amazing progress in the building of nuclear weapons and long-range bombers. We were surprised

to learn during the Korean war that the Russian built MIG-15 was almost as good as our F-86 Sabrejet; we must realize, before another war emphasizes the fact, that Russian technology is excellent, and quite capable of engineering our destruction. As General White says:

The Soviets are building a stockpile of tremendously destructive nuclear weapons. They have built the world's largest air force, including a sizable fleet of long-range bombers. They have built several hundred light jet bombers, and are producing a new jet bomber similar to our B-47. Aimed directly at our sources of strength at home is a new, heavy jet bomber similar to our B-52. They designed and built this bomber for one primary purpose—to be able to strike this continent. * * *

It would be thoughtless of anyone to needlessly scare our people. Nevertheless, we would be remiss in our duty if we did not call attention to the urgency and terrible reality of the situation. Only if our people are intelligently aware of the threat, can they share our security burden. Ignorance leads to ultimate panic and confusion.

We find it easy to accept the new concepts of war brought on by the nuclear-air combination. But one of our main problems is that nuclear weapons mean not only a new kind of war, they mean a new kind of peace. This is a peace that can be kept only through strength.

Acceptance of this fact and an understanding of Air Force needs will help the Air Force to get the men it needs, and the legislation it needs in order to retain those men after they have been trained, and become experienced, and developed their greatest usefulness to the Air Force.

The ultimate goal of the Air Force is not 137 wings, or 975,000 men; it is public understanding of the true nature of airpower, and appreciation of the inexorable need for air superiority over any possible enemy. Unless we hold the lead we now have, numbers of wings or men will have no meaning. If we are to hold the lead, who can say now how many wings or men we may require tomorrow? But understanding is the fundamental thing. We must have it because security is everybody's business, security for ourselves and our institutions, and our beloved United States.

Mr. Speaker, under leave to extend my remarks, I include General White's stirring call for understanding in the CONGRESSIONAL RECORD. The text of his address follows:

AIRPOWER: EVERYBODY'S BUSINESS

(Address by Gen. Thomas D. White, Vice Chief of Staff, USAF, before the junior chamber of commerce, Air Force recruiting assistance kick-off dinner, Dayton, Ohio, January 26, 1955)

Thank you for those kind words, Milton Caniff. I also want to thank you for something else. On behalf of the United States Air Force, I want to thank you for getting Lieutenants Pipper and Murphy off the ice. Along with your millions of other readers, I was getting worried about those boys. Your rescue plan showed imagination.

Seriously, I want to thank Milton Caniff for the job he is doing. Through Steve Canyon, he is telling the Air Force story and paves the way for greater public interest and understanding of the Air Force.

Tonight the United States Junior Chamber of Commerce is launching a nationwide campaign to bring the Air Force and our citizens more closely together. This campaign will strengthen the link between the

man in uniform and his civilian supporters. The stronger this link, the stronger our national security.

I am certainly happy to be here with you tonight and to have the opportunity to participate in this kick-off ceremony. I can think of no better group than the Jaycees to conduct this program. You have a reputation for dynamic action and for getting results. Your goals are cast in terms of general good, and not in terms of individual gain. As a result, you have gained wide public acceptance and nationwide support.

Your organization is composed of young men and is devoted to the development of young men. For this reason you share with the Air Force an intense interest in training and equipping our young Americans to keep our country safe and strong.

Just last Saturday the junior chamber of commerce paid a unique tribute to one of our better known, young Air Force officers and in doing so you honored the Air Force. I refer to your including Maj. Chuck Yeager in your list of the 10 outstanding young men of 1954. We in the Air Force are very proud of Major Yeager—not only because he has flown faster than any other man in the world, but also because he typifies so many others like him in the Air Force. They do their jobs as a matter of duty. They do these jobs whether they be dangerous or routine, dramatic or dull, exciting or safe. We are particularly proud of the fact that there are thousands of young pilots in the Air Force who literally envy the opportunity Yeager has had. They would give their eyeteeth to have the job he had as a test pilot.

I have reviewed your program and I am glad to see that you have recognized the need to make it much broader than a mere recruiting drive. Your objective is to develop a better understanding of our Air Force and to acquaint the public with the men and women who are playing such a vital role in keeping our Nation free.

This is exactly what needs to be done. Success will not only result in helping to solve our reenlistment problem, but will also result in better guided, understanding support of Air Force objectives.

Why is understanding so important? We are an air-minded Nation. Very few people in the Nation would disagree that our Air Force must be supported as a matter of high priority. What more do we need?

The Air Force needs a lot more than mere acceptance. It needs the kind of active support that, in a democracy, comes only after real understanding. In fact, in the United States, getting understanding is the key step to getting support.

The fact that our military forces must have the support of the people is one of America's most important democratic characteristics. It is one we are very proud of.

There is a related characteristic of which we are equally proud. It is that during a war the security of our Nation is everybody's business, and not the exclusive province of people in uniform.

The American people are doing a magnificent job of maintaining strong armed forces during these days of tension. However, World War II and Korea are fresh in our minds. Our people, like all others in the free world, are sick of strife. Recognizing the need for security, they are willing to pay the cost of preparedness by taxes; but they are reluctant to contribute to preparedness by personal interest and participation.

This attitude certainly has been normal in the past. For centuries each nation of the world has had its citizenry and its armies. The citizenry paid the cost of the armies, but stayed aloof. The army was paid to worry about wars as well as to fight them. Wars were strictly the army's business.

Our revolution and evolution as a democracy tended to change those old concepts. We could not afford an army of mercenaries, nor did we want one. The citizen soldier

had won his freedom and the citizen soldier would safeguard it. But as time went on he developed this inevitable and understandable attitude:

"All right; I will be a soldier when there is a war on. But in peacetime I am strictly a civilian."

The citizen soldier, with this attitude, became the basis for the American tradition of nonaggression, small forces in peacetime, and so on. When we became involved in war, no nation's people ever responded more magnificently. However, when peace was won again, no nation's people ever were quicker to lose interest in their armed forces.

For this reason the history of our armed services in America has been one of high peaks of strength followed by almost bottomless valleys of weakness. The last valley we passed through was right after World War II.

These peaks and valleys of strength and weakness were tremendously expensive and wasteful, not only in money but in lives. Had we been ready for World War I and World War II, we might have prevented them entirely. It is certain that we could have ended them much sooner with far fewer casualties. However, we seemed willing to pay a high price for the privilege of ignoring danger until it was upon us.

The last valley we passed through could have been disastrous, because World War II ushered in a new weapon, the atomic bomb. This new weapon, combined with the capabilities of long-range airpower, has revolutionized warfare.

We felt fairly secure as long as we held a practical monopoly in long-range bombers and an absolute monopoly in nuclear weapons. However, there can be no monopoly in science and this has been demonstrated by the remarkable progress the Soviet Union has made in the building of nuclear weapons and modern long-range bombers. Communist possession of this combination has put us in what our President has termed "an age of peril."

The Soviets are building a stockpile of tremendously destructive nuclear weapons. They have built the world's largest air force, including a sizable fleet of long-range bombers. They have built several hundred light jet bombers, and are producing a new jet bomber similar to our B-47. Aimed directly at our sources of strength at home is a new, heavy jet bomber similar to our B-52. They designed and built this bomber for one primary purpose—to be able to strike this continent.

The masters of the Kremlin have not deviated one whit from their goal of communism worldwide. The United States is the principal obstacle which confronts them in their path to this goal. The Reds are well known for their utter ruthlessness in removing obstacles.

It would be thoughtless of anyone to needlessly scare our people. Nevertheless, we would be remiss in our duty if we did not call attention to the urgency and terrible reality of the situation. Only if our people are intelligently aware of the threat, can they share our security burden. Ignorance leads to ultimate panic and confusion.

Our traditional attitudes must change. As long as this threat exists, security can never again be considered as solely military business. This threat is not in the future, it is here today and it is real. Today security is everybody's business, not just during an actual war, but all the time.

We find it easy to accept the new concepts of war brought on by the nuclear-air combination. But one of our main problems is that nuclear weapons mean not only a new kind of war, they mean a new kind of peace. This is a peace that can be kept only through strength.

This means that we cannot continue any old habits of huge build-ups followed by

drastic cuts in the Armed Forces. We can no longer wait until we are sucked into a whirlpool of war to begin building our strength. Our new weapons can give us the strength to prevent a war if we will but develop them, but to be effective they must be maintained. We can no longer derive any strength from a program characterized by fits of stops and starts resulting from shifting political and diplomatic sands.

I mentioned America's magnificent responses in times of war. It seems paradoxical to me that our people are willing to sacrifice less now than they were during a period when our land was in little danger. During World War II, no enemy had any great capability of damaging the United States. Our children, our schools, our hospitals, and our cities were not attacked. Yet even when it was clear that we were winning, all our men, women, and even children were still pitching in cheerfully. Even after V-E Day they continued to give up their butter, their meat, their tires, and their gasoline. Our women stayed on their jobs as war workers. Our sons and fathers stayed on duty as servicemen. There were inconveniences, shortages, and tragedies, but no reluctance.

There was also no serious threat to our homeland.

Today the threat to our cities and people is many times greater than it ever was during World War II. Yet among our people there is little evidence of the same kind of fervent patriotism that there was 10 years ago.

The reason for this, as I indicated before, is that the dangers in this new kind of peace are not as apparent as the dangers in war, but they are just as real. As I see it, this job you have set for yourselves is to explain how the Air Force fits into this kind of new peace and how it can guard that peace.

We have a head start. Most of our people realize modern technology has made the Air Force truly the first line of defense and our hardest-hitting, longest-reaching arm of protection. The defense program now before Congress clearly shows the Nation's emphasis and reliance on airpower. This program shows that our planners have recognized the real nature of the threat and the most effective counter to it.

This is one kind of support which is certainly essential. Legislation and appropriations can solve our weapons and equipment needs. Congressional action can go a long way toward helping us to get the other vital element—men. But to get and keep good men, we must have more than laws and money. An additional essential is public understanding and public support.

Last week we held our yearly conference of all the top Air Force commanders. We discussed many problems, but one was common to all. Each commander asked this question:

"Where am I going to get the men to keep my organization going?"

Our number one problem within the Air Force is the current and future shortage of trained, experienced men. At the present time our reenlistment rate is down below 30 percent. This figure does not reflect the worst part of the situation. Among the men we need the most—the trained, skilled, experienced technician—the rate has sunk below 15 percent. We cannot hire ready-made radar technicians. We have to train them ourselves and it takes a lot of time and costs a lot of money. This problem is not confined to technicians. We are also losing veteran pilots and experienced staff officers.

We need the kind of support that will help our young men to realize that an Air Force career is a valued opportunity. We have high hopes that Congress will approve a substantial pay raise this year, as well as other legislation designed to improve service attractiveness. Considering what it costs this

nation to train a man, his pay could be increased by many, many dollars before it would equal the cost of losing him.

In addition to pay raises and improved conditions, we need the same kind of support for the airman that he enjoyed during World War II. He must be encouraged to serve. His community must be proud of him for serving. The Air Force job is so big and our equipment is so complex that we need numbers of career men to man our units. Only in this way can we get the best out of the weapons and resources provided us.

To achieve the kind of support that will solve our personnel problem, the public must understand much more than the mere details of this one problem. They must understand air power and the Air Force. I will mention a few of these goals of understanding.

First, our people must realize the part that nuclear weapons play in our defense. There is still some resistance to their use and this is understandable. Nevertheless, they are the results of progress and are the weapons of today.

We can solve no problem of national security by ignoring them. Instead, we should be thankful that we have them in ever-increasing numbers. These weapons are the sole means we have to counter the overwhelming Communist superiority in manpower. So far they have deterred the Communist from all-out war but for only one reason. The Communists have felt that if necessary we would use our most effective weapons against them. Our power will be no deterrent at all if the Communists ever get the idea that we will hold back.

However, despite all our efforts to prevent war, the Reds may strike. We must prepare against that possibility. The two main elements in our preparations here at home for a possible attack are civil defense and air defense. Public support of civil defense is lagging. I emphasize that this is through no fault of our Civil Defense Administration. They have found it almost impossible to jar the general public out of its complacency.

Again I draw a parallel to World War II. Then, when no enemy had long-range bombers, we cheerfully cooperated in blackouts and civil-defense drills. Today when the enemy is capable of launching large-scale attacks on this country, the majority of our people pay lip service, but no effort, to civil-defense preparations. However remote we may believe the possibility of an attack to be, we must be ready. In case of attack, how could we hope for military success if our home front collapsed?

Our air-defense picture is brighter. Our warning systems are progressing. Our airplanes are getting better, and our network of air-defense bases is spreading. There has been one bothersome byproduct of our air defense. This byproduct is noise. To defend an area, the interceptors must be based centrally in the area they are to protect. This is one of the reasons that some of our jet bases are near cities.

Although our scientists are searching for ways to eliminate or reduce disturbances of high-performance airplanes, it looks as if we must face the fact that jets are loud. Our people must also realize that this is one of the minor, but troublesome prices of security.

We are doing all we can to avoid bothering the people whose lives we must protect. We have changed flight patterns, and approach altitudes, and in some areas, we have relocated airbases. Nevertheless, our people must learn to be grateful for the whine of our jets, it means protection.

This is, of course, only one of many small irritations that the Air Force unavoidably inflicts upon our public.

We crowd the public schools, we glut the roads around the bases. Seldom do we have the opportunity to live in one community long enough to be accepted as solid citizens.

All of these things are elements of what we call public relations. The Air Force realizes how important these relations are, and so do you. Your project "top flight" is evidence of that. All the things I have talked about are goals of understanding that we must shoot for. We must achieve these goals if we are to remain strong enough to keep our freedom and honor.

The kind of help your project brings to the Nation means a great deal to us all. This is exactly what we need.

I hope that this kickoff dinner tonight is typical of what will be happening in cities and towns across the Nation throughout the next year. It is a great thing you are doing. I wish you all the success in the world.

Opposition to H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the Record the following statement in opposition to the extension of the so-called reciprocal trade agreements:

STATEMENT OF CALIFORNIA FISH CANNERS ASSOCIATION, INC., BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS IN CONNECTION WITH H. R. 1, JANUARY 26, 1955

My name is Donald P. Loker. I am president of the California Fish Cannery Association, Inc., the members of which account for 87 percent of the total United States production of canned tuna. They also process sardines and mackerel.

Our industry is opposed to H. R. 1 for two reasons:

First, we believe your committee is interested in knowing how the canned tuna industry, which we believe is a typical American industry, has been affected by the operation of the trade agreements program over the years since the program has been in effect. We can illustrate best the difficulties caused us by contrasting what has happened to us under the program with the situation prevailing in prior years.

The tuna industry first began to feel the impact of import competition in the year 1933. In that year Japan exported to this country canned tuna in an amount equal to 34 percent of domestic production. Because of the effect of these imports on our domestic industry, an application was made to the Tariff Commission for an investigation under section 336 of the Tariff Act which resulted in a finding that an increase in the tariff was necessary because of differences in the cost of production between this country and Japan. President Franklin D. Roosevelt accepted the Tariff Commission recommendation and increased the tariff to the extent found by the Commission to be necessary to equalize cost of production; that is, from 30 percent to 45 percent. Thereafter imports remained at this level enabling our industry and the Japanese industry to progress together in the development of the United States market for canned tuna.

That was the old system, Mr. Chairman, before the reciprocal trade agreements program went to work on our industry. When we had trouble we went to one agency of the Government. That agency made an impartial investigation and the President acted as he was permitted to under the law. There-

after our industry and our foreign competitors knew exactly where everyone stood.

It was just as simple as that.

But what do we find when once the operation of the so-called reciprocal trade agreements program cast its eye upon us?

We find, Mr. Chairman, an entirely different picture. Here is what happened:

In November 1941 the Secretary of State issued a notice of intention to negotiate a trade agreement with Iceland. There was nothing in that announcement or in the trade agreement subsequently negotiated which seemed to have any bearing on the tuna industry. If anything, tuna was clearly eliminated by the announcement as we read it. Nor, in fact, did the agreement have any importance to the tuna industry at that time. In May 1942, while the negotiations with Iceland were still proceeding, the Department of State issued a new announcement of intention to negotiate a trade agreement with Mexico in which tuna was mentioned. That, however, was during wartime when all of our people were contending with far more serious problems than nonexistent imports so that we took no steps to protest. At any rate, our people probably reasoned, since we were fighting a war against Japan, our principal competitor, it was inconceivable that our Government would permit Japan ever to drive us out of the tuna business. That, Mr. Chairman, is where we made our biggest mistake.

While tuna, of course, has been our biggest concern, our industry also packs sardines, mackerel, the tuna-like fish "bonito," and other species.

Since the end of the war we have been plagued by a series of trade agreement negotiations, commencing with the Geneva negotiations in early 1947, and continuing up to this very minute.

We have not been able to escape participation in a single trade-agreement negotiation from 1947 to the present. In every one tuna, bonito, or sardines have figured and we have been required to appear, file statements, and go through all of the redtape usual to such proceedings before a governmental agency.

I need not remind you that such activities are expensive, both as to time and money.

The aforementioned trade agreement with Mexico became effective in 1943 and, among other things, provided for the reduction of duty on tuna canned in oil from 45 percent ad valorem to 22½ percent ad valorem, the maximum reduction permitted under law at that time. We have no knowledge of why canned tuna was considered in a trade agreement with Mexico, inasmuch as Mexico was no factor in the export of canned tuna to the United States. Accepted practice for the granting of trade-agreements tariff concessions is to negotiate with the principal exporting country.

However, let's take a look at how imports of canned tuna from Mexico related to that practice. For the 3-year average prior to the negotiations of the trade agreement, imports of canned tuna from Mexico averaged slightly over \$15,000 a year in value, or 2½ percent of total United States imports of canned tuna.

Now, let's look at what happened to imports of canned tuna from Mexico after the trade agreement became operative. In the 3-year period immediately after the trade agreement became effective, imports of tuna from Mexico averaged less than \$51,000 a year in value, or 1½ percent of the value of total imports from all sources, and since that time imports of canned tuna from Mexico have been so inconsequential that they have not been sufficiently important to set out separately in official United States statistics.

As of June 30, 1950, Mexico abrogated the trade agreement for reasons totally unrelated to tuna. Six months' notice of this abrogation was required before the duty reverted to its former 45 percent ad valorem. During

this 6-month period, imports of canned tuna from Japan reached unprecedented proportions in order to get in before the increase in duty, and the year's imports constituted 34 percent of the United States market as opposed to a normal share of 10 percent that imports previously took of the United States market. It took the domestic industry 2 years to recover from the shock of this volume of imports.

The Icelandic trade agreement also became effective in 1943. It is contended, wrongfully we believe, by administrative governmental agencies that this trade agreement reduced the duty on tuna canned in substances other than oil from 25 percent ad valorem to 12½ percent ad valorem.

In that particular agreement, a catch-all or basket category was established, which is interpreted by some to include the product "tuna packed in substances other than oil." But we vigorously contend that it was not pointed at tuna. We further contend that the wording of that agreement represented a sin of omission on the part of the persons from the United States Government responsible, and that such an omission was perhaps responsible for what we further contend is the misinterpretation of this agreement by the administrative governmental agencies. It is important for you to know that Iceland has never processed tuna, her fishermen have never caught any tuna and consequently her exports of tuna are nonexistent.

That is where Iceland fits with relation to the accepted practice of negotiating with the principal producer in reducing tariffs through the instrument of the Reciprocal Trade Agreements Act.

In addition, the loophole created by the Icelandic trade agreement and its erroneous interpretation have resulted in the very opportunity the Japanese tuna industry sought and found. They immediately switched their production of tuna canned in oil subject to a 45 percent duty to tuna canned in brine at 12½ percent ad valorem. By this device Japanese exports of tuna to the United States have increased from their prewar 5-year average volume of 337,000 cases per year to more than 1,500,000 cases currently. It is underselling American-produced tuna on the grocer's shelves by as much as 10 to 12 cents a can. The domestic industry has been seriously harmed and the threat of further injury is most substantial.

The domestic tuna industry has sought every means available to it, through administrative channels, to rectify the damage done to it through the great disparity in tariff rates applicable to tuna canned in oil and tuna canned in brine. These efforts to date have been to no avail.

Let's look at the reciprocal features of the Reciprocal Trade Agreements Act. In the "Summary of Foreign Control Regulations Applying to Imports From the United States" which appeared in the June 7, 1954, issue of Foreign Commerce Weekly, published by the United States Department of Commerce, there is a tabulation of imports and exchange permits required in foreign countries as of May 1, 1954.

This tabulation shows that out of some 88 countries or customs areas in the world, 66 require prior import permits, while 41 require exchange permits for goods imported from the United States or other dollar countries.

It will be noted that in many cases the import permits automatically assure foreign exchange, while in other cases it is necessary for the importer to have both documents authorized by the respective governments.

These import restrictions can be used very handily to nullify or impair concessions that have been granted the United States in trade agreements under which we also made concessions but do not nullify.

To illustrate how foreign countries are continually changing import regulations and

erecting further restrictions against imports from this country, we would like to give you as examples some typical changes which have been published during the past 3 months in Foreign Commerce Weekly:

On July 16, 1954, Ecuador revised 30 import tariff items (Oct. 18, 1954, p. 9).

Mexico during September and October 1954, raised import duties on a long list of items (Oct. 25, 1954, p. 10).

Guatemala imposed a new import duty of 10 cents per gallon on gasoline which was formerly free of duty (Nov. 29, 1954, p. 14).

Iceland placed a special import tax on passenger automobiles in addition to the 35-percent permit fee. The new tax amounts to 100 percent of the f. o. b. price when the country of origin is the United States or Western Europe (Nov. 22, 1954, p. 13).

Import duties for the greater part of the Mexican import tariff have been modified by a decree published on November 18 apparently for the purpose of incorporating directly into the tariff the 25 percent general duty increase of February 15, 1954 (Dec. 6, 1954, p. 13).

The Irish Government set quotas for various imports (Dec. 27, 1954, p. 11).

Syria changed a number of import tariffs (Jan. 3, 1955, p. 11).

So much for that. I now would like to make an interesting observation concerning cause and effect. On page B-6 of the Long Beach Press-Telegram of Monday, January 17, 1955, two articles of news interest appeared. One was an account of the appearance before this Committee of the Honorable John Foster Dulles, Secretary of State, advocating H. R. 1. On the same page a news story appeared under a San Diego, Calif., dateline, which announced the closing of the San Diego cannery of the Van Camp Sea Food Co., packers of Chicken of the Sea brand, and 1 of the 2 largest producers of canned tuna in the United States. The eight-hundred-odd employees of this cannery and many employees of suppliers are direct casualties of our trade agreements program.

If there remains any further question as to why the United States canned tuna industry opposes a further extension of the Reciprocal Trade Agreements Act, I will revert to the vernacular and say, gentlemen, we've had it.

While the whole matter of extension of the Trade Agreements Act is disturbing, we find that section which deals with Japan particularly distasteful.

The language in this paragraph goes far beyond a simple extension of the Reciprocal Trade Agreements Act requested in the President's message to Congress on January 10. It would seem that instead of the primary purpose of the act, that is, the encouragement of reciprocal world trade with all its virtues, we are now substituting especial consideration to Japan, dictated by the expediency of her economic plight, in the form of tariff reductions, instead of direct aid or other forms of subsidy. Apparently, in the minds of those who wish it, the Trade Agreements Act of 1934 can be stretched to cover a multitude of situations not contemplated by the architects of the program—adherence to the general agreement on tariffs and trade, for instance, and now this.

We are quite aware of the position of the administration in aiding the expansion of trade with Japan in order to retain the country within the orbit of free nations and we endorse that position wholeheartedly. However, if this is in the national interest—for the good of all our people—we wonder why a handful of American industries should be required to foot the bill.

Now, as to the second of our reasons for opposing H. R. 1:

We are advised by counsel that this legislation and all previous reciprocal trade

agreements legislation is probably unconstitutional.

The Trade Agreements Act of 1934 is unconstitutional—hence all trade agreements negotiated under it are unconstitutional—the Tariff Act of 1930 is the law of the land and its rates should apply.

Regardless of what the administration has elected to call them, every agreement negotiated under this act is in fact a treaty between the United States and a foreign nation.

Our Constitution requires that treaties with foreign nations be negotiated by the President and ratified by a two-thirds vote of the Senate:

"The President . . . shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; . . ." (art. II, sec. 2).

To date, all so-called trade agreements have been negotiated by our State Department behind closed doors and as far as we know the contents have never been submitted to the Senate or to the Congress, nor have they ever been disclosed to the public until after the agreement was consummated.

Each and every one of these actual treaties has reduced tariff rates on articles and commodities when imported into the United States. Under our Constitution the right to impose import and export restrictions is expressly reserved to the Congress as is the right to regulate interstate and foreign commerce:

"The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States; . . ."

"To regulate commerce with foreign nations, and among the several States, and with the Indian tribes" (art. I, sec. 8).

Our Constitution also expressly says that all legislation which provides revenue must originate in the House of Representatives:

"All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills" (art. I, sec. 7).

Up until 1934, the raising and lowering of tariffs, since the very first Congress, has been recognized as revenue legislation. Yet the House of Representatives has not seen nor had an opportunity to pass upon a single one of the revenue-lowering agreements which have been negotiated and put in force. Call them what anyone will, agreements, treaties or negotiations, the incontrovertible fact remains that they are revenue measures—United States revenue measures.

Now as to a constructive suggestion on how to remove the basic reason for our dissatisfaction and discontent:

We recommend a return to the constitutional method of adjusting tariffs by negotiating treaties with the advice and consent of the Congress. We see no reason why Congress should now be considered unqualified to protect the international trade interests of the United States. It may be desirable to provide more adequate machinery to study the effect of tariff adjustments on the United States economy by strengthening the Tariff Commission, but we feel certain that such action can very easily be accomplished by the Congress. If it is considered that this would place too great an obstacle to successful prosecution of our foreign relations program, we strongly recommend that these treaties arrived at under the Trade Agreements Act be submitted to the Congress or at least to the Senate for ratification before they become operative. In such a way the various domestic industries which have a history of hardship under the trade agreements program would have an opportunity to place their problems before the Congress whose Members come from the country as a whole and who are both responsible and responsive to the people.

I thank you.

The Need for Increasing the Salaries of Postal Workers and Other Federal Employees

EXTENSION OF REMARKS OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I am inserting a copy of my statement which was submitted yesterday to the House Committee on Post Office and Civil Service. I believe it to be imperative that we immediately pass legislation which will provide an increase in the salaries of postal workers and classified Federal employees. The facts and figures contained in my statement will support my contention that such action should be taken now. The statement follows:

Mr. Chairman, I am very grateful for this opportunity to appear before your distinguished committee today. I am making this appearance in behalf of increased salaries

for postal and classified Federal employees. These deserving people cannot be here to speak for themselves and we, as their Representatives, bear the responsibility of presenting and studying their problems and arriving at solutions thereto.

Almost 4 years have passed since postal and classified civil-service employees have received their most recent pay increase. During this period the faithful and loyal Government employees have seen their take-home pay eroded by increasing costs of living and rising tax burdens. While the earnings of postal and Federal employees have been deteriorating, the living standards of practically all other groups of the economy have been rising. Construction workers have increased their hourly rates since July 1951, when Federal employees received their last increase, by 20 percent, and employees in trade and manufacturing have enjoyed average hourly increases amounting to 14 percent. Workers in agriculture have also received wage increases which compensate for the rising cost of living.

It may be well, in considering a salary increase for postal and Federal employees, to study the average hourly earnings in certain selective industries.

AVERAGE HOURLY EARNINGS, SELECTED INDUSTRIES

Hourly earnings of production workers in manufacturing industries averaged \$1.83 in December, the same as in November, and 3 cents more than in December last year.

For production workers or nonsupervisory employees

[Current prices]

Period	All manufacturing	Durable goods manufacturing	Nondurable goods manufacturing	Building construction	Retail trade
1939.....	\$0.633	\$0.698	\$0.582	\$0.932	\$0.542
1944.....	1.019	1.117	.861	1.319	.731
1946.....	1.086	1.156	1.015	1.478	.893
1948.....	1.350	1.410	1.278	1.848	1.088
1949.....	1.401	1.469	1.325	1.935	1.137
1950.....	1.465	1.537	1.378	2.031	1.176
1951.....	1.59	1.67	1.48	2.19	1.26
1952.....	1.67	1.77	1.54	2.31	1.32
1953.....	1.77	1.87	1.61	2.48	1.40
1954:					
January.....	1.80	1.91	1.65	2.58	1.43
February.....	1.80	1.90	1.65	2.59	1.43
March.....	1.79	1.90	1.65	2.59	1.43
April.....	1.80	1.90	1.65	2.58	1.43
May.....	1.81	1.91	1.66	2.53	1.45
June.....	1.81	1.91	1.66	2.58	1.46
July.....	1.80	1.91	1.66	2.58	1.47
August.....	1.79	1.91	1.65	2.60	1.47
September.....	1.81	1.93	1.66	2.62	1.47
October.....	1.81	1.93	1.66	2.63	1.47
November ¹	1.83	1.94	1.67	2.62	1.46
December ²	1.83	1.95	1.67	(³)	(³)

¹ Data beginning with January 1948 are not strictly comparable with those for earlier periods.

² Preliminary estimates; only manufacturing for November charted.

³ Not available.

Source: Department of Labor.

Postal and classified civil-service employees depend upon us for an increase. They cannot bargain collectively on salaries and other working conditions as do workers in private industry.

Last year I supported the legislation providing a salary increase for these faithful workers, even though I felt that the increase Congress recommended was inadequate. I voted for the increase as a stop-gap measure with the hope that the present Congress will deal with the problem justly and fairly.

The Presidential pocket veto of our pay-increase measure was a shocking disappointment to me as it was to most of you who voted for the bills.

We must correct the pay inequity to which the loyal postal and classified Federal employees have been subjected as expeditiously as possible. The efficiency, hard work, and sincerity of purpose which the distinguished members of this committee have shown toward solving the problem since the opening of the 84th Congress is most gratifying, and

I am sure that this committee will recommend a fair and equitable bill. Obviously, a just bill will require more than mere compensation for increases in cost of living since July 1951. Sound public policy would require that the faithful servants of the people should share in the rising standards of living and increased productivity of our economy.

No study of this problem would be complete without taking a look at Consumer Price Indexes over the 1939-54 period. These figures are given in the accompanying table.

Consumer price indexes, 1939-54, for city wage-earner and clerical-worker families

[1947-49 = 100]

Monthly average:	All items
1939.....	59.4
1940.....	59.9
1941.....	62.9
1942.....	69.7
1943.....	74.0
1944.....	75.2
1945.....	76.9

Consumer price indexes, 1939-54, for city wage-earner and clerical-worker families

Monthly average:	All items
1946.....	83.4
1947.....	95.5
1948.....	102.8
1949.....	101.8
1950.....	102.8
1951.....	111.0
1952.....	113.5
1953.....	114.4
1954.....	114.8

Productivity measurements of white-collar and professional workers are difficult to obtain. But where measurements are available, there is incontrovertible evidence that the productivity of postal employees has increased over the years and is constantly moving upward. During the past 15 years, employment in the postal service has increased by about two-thirds but the volume of pieces of mail handled has almost doubled. This means that the average post-office employee handles about 20 percent more mail today than he did before World War II. The 1956 budget indicates that the trend in rising productivity is expected to continue. In 1954 the average mail clerk handled 142 units per man-hour. The Bureau of the Budget estimates that during the current year the average will increase to 146 units, and in fiscal 1956 to 150 units per man-hour. Similar increases are expected in the productivity of collecting and delivery of mail.

Sound public policy as well as fair play would dictate increases for postal and classified Federal employees. Turnover in Federal employment is exceedingly high, and training of new employees is costly. Passage of a fair wage increase to these employees is, therefore, in the public interest, because it is becoming increasingly difficult for the Federal Government to retain the most qualified employees and to attract the promising young men for a career in Federal employment.

A fair and justified increase for the devoted and faithful postal and classified civil-service employees would have to consider the increases in cost of living since July 1951, the prolonged period during which no increase was granted, the increased productivity and the general rising standard of living in our great country. Furthermore, owing to the fact that the salary increase has been long overdue, it should be made retroactive to the date when the wage increase, voted overwhelmingly by the 83d Congress, was unjustly vetoed in August 1954.

Faithful men devoted to duty and their country have been considered rare. In the Bible the wise man asked: "A faithful man who can find?" Our country is fortunate to find them in abundance in the postal and Federal employment. We should recognize their faithfulness and loyalty by granting them the pay increase which is long overdue.

Mr. Chairman, I respectfully urge your committee to report legislation which will provide for at least a 10-percent salary increase for these workers. I believe that Congress would look with favor upon such a measure.

The Federal Retirement System

EXTENSION OF REMARKS OF

HON. JOHN LESINSKI, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LESINSKI. Mr. Speaker, in years gone by the civil-service retirement system was considered a model and as such

was used as an inducement to attract the better qualified citizen to choose the civil service as a career.

Recent official research proves that on the average the Federal employee contributes more to his pension fund than is exacted by private industry; that the retirement benefits enjoyed by people belonging to private pension funds are superior to those enjoyed by civil-service employees; and that an increase in benefits is practical.

So as not to befuddle any issue and allow for free discussion of individual inconsistencies, each inequality is being corrected by an individual bill. If adopted, the bills will not make the Federal retirement system a new model for private industry but will increase benefits commensurate with employee contributions and put the governmental retirement system more in line with that of private industry.

Opposition To H. R. 1

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the RECORD the following statement in opposition to the extension of the so-called reciprocal trade agreements:

STATEMENT OF SAMUEL LENHER, PRESIDENT, SYNTHETIC ORGANIC CHEMICAL MANUFACTURERS ASSOCIATION, BEFORE THE COMMITTEE ON WAYS AND MEANS, HOUSE OF REPRESENTATIVES, ON H. R. 1

I am Samuel Lenher, president of the Synthetic Organic Chemical Manufacturers Association. We represent 92 chemical companies who produce organic chemicals in 248 plants located in 35 States.

Our industry is the sector of the chemical manufacturing enterprise in this country which is most vulnerable to import competition. Little more than 30 years ago, America had no organic chemical industry. The shortage of key organic chemicals for explosives, dyes, medicinals, and industrial uses in World War I led to a determination by the Government to see that a strong and flourishing industry was built. President Wilson sounded the keynote and the Congress drew up a tariff policy for synthetic organic chemicals to meet that need.

Our association was formed in those troubled days, and it has patiently worked for the fulfillment of the objects of that tariff policy: to build a vigorous, expanding organic chemical industry whose growth through the years would protect the national security, strengthen our national health resources, provide for new industries through organic chemical research, and attract students to chemistry so that the Nation would have an adequate reservoir of skilled scientific personnel in time of war. These efforts have often brought our association before your committee, where we have unfailingly been received with courtesy and consideration.

Strong national movements have strong proponents. Not all proponents are disposed

to yield that respect for differing views which our American tradition would recommend. I am sure, however, that this will not be the case of your committee as we very candidly state our views on H. R. 1 in as constructive a spirit as we can.

Our industry is a classic example of the constructive results which can be achieved by a wise tariff policy. Brought into being through such a policy, we believe we have measured up to its clear responsibilities. We were ready for the totally absorbing role which the Nation's war production effort required of our industry in World War II. We have been well above average in rate of growth, wages paid to workers, and earnings put back into the business to finance expansion. Our research budget, 5 percent of sales, is outstanding. No other industry using its own funds devotes so much to research.

Because ours is not a mass-production industry for the most part, the tariff is an important economic factor in the stability of our operations. The industry produces a great many chemicals (more than 7,000 commercially) for the most of which the total demand is relatively small. Hundreds of chemicals will make up the product line of an organic chemical plant. There is little of the dedication of an entire plant to the continuous or automatic production of a high volume chemical in our industry. We make our various chemicals in batches using techniques very much like those used abroad. The high labor content of our chemicals is measurably no different from that in foreign chemicals. The skills and techniques were born in Germany and the other foreign nations who were dominant in organic chemicals long before we became proficient in their use. Differences in foreign wage costs ranging from one-fourth to one-seventh our wages spell the difference in cost of production here and abroad which requires the tariff to equalize landed costs with ours.

We are proud of the vigor of our industry, its trailblazing research activities, and the steady expansion which has invested nearly half a billion dollars a year postwar in plant and equipment. Much of this has been carried out with the Government's encouragement to strengthen the mobilization base for organic chemicals. Much of it is now, and has been for more than a year, idle in at least substantial part. This is not in itself a mark of weakness in economic conditions in our industry. It is to be expected that capacity for defense will generally exceed capacity needed for peacetime production. It is, nevertheless, a significant economic problem for our companies. Production of organic chemicals in 1953 was about 7 billion pounds below the capacity required for defense mobilization.

It is our belief that tariffs can and should fulfill two distinct functions, so far as a basic industry is concerned. They should prevent the impairment of defense mobilization capacity by import competition. They should also, where necessary, preserve the economic conditions which contribute to the vigor and dynamic rate of growth of the industry. The first function serves our national interest by strengthening the industrial sector of the mobilization base. The second serves the national interest by strengthening the domestic economy.

It would be unwise to assume that continued expansion of international trade and the realization of these two tariff functions are incompatible. We owe it to ourselves as a nation, and to our workers who earn their livelihood in the non-mass-production industries to strive for a foreign economic policy that will avoid the impairing of defense capacity or sapping the strength of those industries. We should until we have given such an approach a fair trial forego the temptation to enter into a program of

tariff cutting which selects arbitrary percentage levels as an objective.

A foreign economic policy which avoids vicarious injury to our Nation's defense capacity while preserving the vigor of our own industries would be consistent with our current national objectives. Further extension of the trade agreement authority is being sought as a means of strengthening the economies of our allies, and thus their defense potential. In itself this is a laudable objective. But our Government has other laudable objectives with which it must be reconciled. As part of our policy of opposing aggression and promoting peace in the world, the Congress has declared the Nation's determination to develop and maintain our own military and economic strength. The national objective is a defense mobilization program of such magnitude to deter an aggressor, or if we are attacked, to enable us to fight to win. We must have the capacity to shift on a moment's notice to all-out mobilization. As the Joint Congressional Committee on Defense Production very recently stated, "time has been eliminated from the arsenal of democracy." Should enemy attack precipitate a full emergency, we will not have the time for large expansion of plant capacity, as we did after Pearl Harbor and Korea.

A deep realization of the soundness of our mobilization policy has led the Nation in partnership with private industry to make an enormous investment in additional capacity and to maintain it in readiness. The difficulty imposed on private industry with capacity in excess of normal peacetime needs is very great. In the view of the joint committee, maintenance of the mobilization base and avoidance of the loss of existing capacity is a major problem. The Director of Defense Mobilization in his 1954 report also emphasized that the development of an adequate, secure mobilization base depends on the understanding and conviction of the Government and the people as a whole that these things are necessary and offer the best assurance of surviving in an age of peril.

If industries such as ours which are vulnerable to import competition are to receive such understanding and help in keeping surplus capacity in readiness for mobilization, the implications for our foreign trade policy are clear. Enthusiasm for strengthening our allies must not lead us into the error of overestimating what reduction of our tariffs can contribute to that objective or of underestimating the impact which increased imports can have on our industrial capacity required for national defense. We must not add strength abroad if it means subtracting strength at home.

How are we to secure this balance in our trade program? Present trade agreement procedures are not keyed to the selective revision of tariffs from the viewpoint of our national security interests. To be sure, the peril point and escape clause are important procedures for balancing economic strength at home with expansion abroad. But they are limited in concept to the avoidance of serious injury to the domestic industry. Without the domestic industry concerned being seriously injured under traditional peril point or escape clause criteria, the mobilization capacity projected through expansion can be hurt if increased imports thwart the needed expansion.

There is needed a positive policy and procedure under which tariffs could not be reduced below a point which the Tariff Commission finds would threaten impairment of the domestic productive capacity declared by the Office of Defense Mobilization to be part of the mobilization base. An essential corollary to that policy and procedure would provide for the withdrawal of concessions which in whole or part have resulted in a volume of imports which

threaten impairment of the domestic productive capacity programed by the Office of Defense Mobilization as part of the Nation's mobilization base.

This type of policy and procedure could be established by amending the peril point and escape clauses to add the concept of "impairment of the national security" to the existing situation which those remedies are designed to prevent. Under such an amendment, the President could establish a procedure by Executive order to provide for mobilization status determinations on particular products by the Office of Defense Mobilization. Those determinations would be the reference points used by the Tariff Commission in finding whether past or proposed tariff action would impair mobilization capacity.

We respectfully urge the committee's consideration of these amendments to the peril point and escape clauses regardless of the final conclusion it may come to on the merits of H. R. 1.

We see seven basic issues in H. R. 1 itself.

First, we do not oppose a 3-year extension of the Trade Agreements Act.

Second, we do oppose the bill's threefold approach to tariff reduction. We cannot avoid the feeling that tariff-cutting objectives have been chosen which have little independent reason for existence. If the 15-percent authority were intended as an outside limit rather than an objective, we should feel more enthusiasm for it.

Assuming that the 15-percent authority will be granted, we can see no justification for the additional tariff-cutting authority on so-called negligible import items or on the over-50-percent group. There is no particular validity to an arbitrary demarcation point such as 50 percent. It would be rather contemptuous to assume that the 1930 rates had no relationship to the differential in foreign and domestic costs. With 20 years of rather zealously applied trade-agreement authority intervening, it assumes far too much to say that any rate now over 50 percent ad valorem ought, irrespective of the product to which applied, to be reduced to that level.

So, too, the concept that items being imported at a particular moment of time in negligible quantities ought to be reduced by 50 percent of the 1945 rate is objectionable. By what prescience can it be said that an increase in imports from negligible to substantial quantities on any item requires a great reduction or a slight reduction? Would it not be more consistent with the promised modernization and gradualness to approach the reduction on any item with a single standard, 5 percent a year?

Third, we are opposed to the new substantive authority which the bill would give the President to include provisions pertaining to nondiscriminatory standards, quantitative restrictions, customs formalities and similar international trade matters in trade agreements. We are concerned that such sweeping authority could be offered amid such deep silence as to its intended purpose. From our own analysis it would appear that under this grant of power the President could sign a revised General Agreement on Tariffs and Trade with its extensive substantive provisions and proclaim it effective. Many substantive provisions, such as those pertaining to quotas, countervailing duties, anti-dumping duties, and even perhaps valuation procedures contained in GATT could become law without Congress ever having an opportunity to look into the matter. There is considerable doubt that such a broad grant of power without any intelligible principle to limit the Executive to congressional purposes could be constitutional. Were such authority to be granted, the divestment by the Congress of its constitutional responsibility to regulate foreign commerce would have run its full course. With this silent ac-

quisition of great power, the temptation would be strong to bring the substantive provisions of a revised GATT into full force without submission to Congress. Significantly, there are no announced intentions to lay other than the organizational provisions of the agreement before the Congress.

There are some who speak in self-appointed roles as friends of the Congress to decry the prospect of Congress ever again going through a complete tariff revision such as it is said occurred in 1929 and 1930. This ordeal, imagined or real, is said to require that Congress never again undertake to legislate in tariff matters. Conveniently, as it serves their purposes, these proponents would leave such tedious detail to the Executive. This, we are told, forbids Congress looking legislatively into tariff rates. This it is which now in a new boldness should prevent Congress from attending through the exercise of its own judgment to changes in the substantive provisions of the tariff act quite apart from the rates.

Surely the Congress will not thus at a stroke immunize the laws pertaining to foreign commerce from its care and attention. It is preposterous to compare the attention required in reviewing substantive provisions such as GATT contains to the much different task of creating an entirely new tariff act with its hundreds of individual classifications and rates. Many who are opposed to the latter are also opposed to tariff ratemaking by the Tariff Commission, which was formed to relieve Congress of much of that tedium. Their objective is not so much easing the cares of Congress as insuring that Congress and its agent for tariff matters are taken as far out of the picture as possible in the regulation of foreign commerce. In brief, they see tariff policy solely as a gambit in foreign diplomacy.

Section 3 (a) (1) (A) of the bill is an unwise proposal, foreign to our traditions. It should be omitted from the bill.

Fourth, we oppose the changes which have been made in the procedural authority conferred upon the President by the bill in comparison with its predecessor, H. R. 8860 of the 83d Congress. The earlier bill required the President to make his determination of negligible imports on the basis of Tariff Commission information. H. R. 1 removes this basis, and leaves the President discretion at large to make the determination. It is the Tariff Commission which has the greater expertise and independence of judgment in tariff matters. It can hardly be sound policy for Congress to delegate power to the Executive to act in accordance with a particular standard, and at the same time be unwilling to confine the exercise of that power to those instances in which its own expert agency finds the prescribed standard is met. Moreover, the bill brings the finding of negligible imports down to the point of time coincident with entering into the trade agreement. Such a limitation would seem unsound, for it would ignore the historical situation on imports, and turn solely to a moment of time which foreign nations intent on securing a favorable concession could influence by shutting off exports for a limited period.

Fifth, we oppose the authority which the bill would give the President under the over 50-percent provision to use any value basis he finds practicable in computing ad valorem equivalents of specific or combination duties. The heart of our industry's production is of coal-tar chemicals which are protected by duties based on the American selling price value basis. The earlier Kean bill required that value to be used as the basis for computing ad valorem equivalents on items dutiable under the American selling price. Through the use of different language, H. R. 1 would seem unintentionally to eliminate that requirement. The concept of the bill is that all dutiable commodities should be subjected within certain safeguards to fur-

ther rate reductions within established percentage limitations. These limitations are based either upon the rates of duty presently in existence or those in existence in 1945. In the case of items subject to the American selling price, the rates of duty now in existence or in existence in 1945 were premised upon the use of that value basis. If the items dutiable on the American selling price basis were to be subjected to treatment in which the ad valorem equivalents are computed on the basis of some lower value than American selling price, such as foreign value, the effect would be a reduction in the amount of protection available for those items quite apart from any reduction in duty. Then if the rates of duty itself were reduced within the percentage limits of the bill, a further reduction would be imposed on those items. The bill in this manner would permit American selling price items to be subjected to treatment which would result in a greater loss of protection than any other class of commodities could be subjected to under the bill. There is no justification for this type of discrimination. We feel sure you would not wish to subject our products to a greater reduction than other commodities could receive under the bill.

As indicated, we oppose the negligible quantities and over 50-percent reduction provisions in the bill. We sincerely hope that they will be eliminated. If they are not, the changes made in the procedural provisions referred to above should be abandoned, and the comparable provisions of the earlier Kean bill, H. R. 8860, adopted in their stead.

Sixth, we oppose the provisions of the bill which would ratify the multilateral grant of concessions which the administration intends to make in the Japanese trade agreement negotiations. Throughout the history of the Trade Agreements Act the authority of the President has been confined to bilateral negotiations in which concession is traded for concession on a reciprocal basis. Though negotiations with a number of nations have been carried on under the auspices of GATT, they have heretofore consisted of a series of bilateral negotiations conducted simultaneously. Never before has the United States considered offering a concession to one country on condition that the country make a concession to a third country. We think the planned course of action in the Japanese trade agreement negotiations is illegal under the present trade agreement law, and oppose its ratification in H. R. 1. It should be evident that the historic function of the law of regulating the admission of foreign goods into this country in accordance with the needs of our producers in exchange for corresponding market outlets for United States goods in foreign countries can never be achieved if we give our concessions in order to afford market opportunities for third countries in the country to whom we grant the concession.

The other provision of H. R. 1 pertaining to the Japanese trade agreement would permit the reduced rates negotiated with Japan and third countries to be proclaimed after July 1, 1955, and still serve as the basis from which a further reduction of 15 percent could be made under the bill. There is no justification for exposing the products covered by the Japanese agreement to double reductions. The Executive is getting a last minute cut on the duty for hundreds of items in the Japanese agreement. This is scarcely a logical basis for changing the rules on those items from that applying to all other articles under the bill so as to make them vulnerable to greater reductions than other tariff items. Section 3 (c) (2) (C) should be eliminated from the bill.

Seventh, we oppose the proposal in the bill that the President have the power unilaterally to reduce duties on the negligible imports items. This provision is understandable only if it be assumed that America has high-tariff walls which are barriers to trade. This,

as in the case of other premises upon which the argument for tariff reduction is built, is simply not true. There is no reason why our own Government cannot be realistic about this matter and acknowledge that the United States is, by comparison with its commercial rivals, a low-tariff country. You are familiar with the fact that the ad valorem equivalent of our dutiable imports has been cut sharply from 46.7 percent in 1934 to 12.4 percent in 1953, while the ad valorem equivalent of both dutiable and free imports has dropped from 18.4 percent to 5.6 percent in the same period.

While we have been busily engaged in cutting our tariffs, our foreign friends as often as not have been moving in the opposite direction. Their concessions have frequently been withdrawn or nullified by quantitative restrictions. Too, we have often accepted the binding of existing rates in exchange for our duty reductions. These experiences should teach us that it is difficult enough to secure realistic concessions from foreign countries without proposing unilateral reductions. If I may borrow President Washington's words, the Nation is in the position "of having given equivalents for nominal favors, and yet being reproached with ingratitude for not giving more."

The mere existence of unilateral authority would expose our executive department to unrelenting pressure from our foreign friends under varying pretexts to get us to cut our duties without their giving up anything. After the lengths to which the United States has already gone through tariff reduction, grants, aid, offshore procurement, and dilution of the Buy American Act by Executive order, it is surely the coup de grace to load on the backs of American industry a program of one-track tariff cutting.

We conclude with this summary: We do not oppose a 3-year extension of trade agreement authority so long as its exercise is limited to reduction of tariffs on a genuinely selective basis up to 5 percent a year during that period under procedures which will prevent impairment of defense mobilization capacity, present or projected, and which will preserve the vigor and strength of our domestic industries.

Thank you for your attention.

Lithuanian Independence Day

EXTENSION OF REMARKS OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. CRETELLA. Mr. Speaker, it is a privilege for me to extend my greetings in honor of the 37th anniversary of the independence of Lithuania this February 16.

The plight, the privation, and the hardships endured by those nations swallowed up in the shadows of the Iron Curtain remind all of us in the free world that we must continue to recognize the Soviet plague for the cruel design it cuts in the face of humanity and decency. No one knows better of these tyrannies than those enslaved in such countries as Lithuania.

The reports we receive from these countries tell us of forced labor, murdering of anti-Soviet resistant forces, the collectivization of prosperous farmland,

and in short, man's inhumanity to man. Truth again becomes stranger than fiction in this tragic russification of the brave once free Republic of Lithuania.

As a Member of this great Congress, I joint with others paying tribute to the cause of freedom and independence and in the prayer that Lithuania, through the continued spirit of her citizenry and the unwavering voice of America and the free world, will once more cast off the shackles of this bondage.

Aliens: Americans in Heart, Spirit

EXTENSION OF REMARKS OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. SADLAK. Mr. Speaker, a very timely and worthwhile article appeared in the Connecticut Sunday Herald on January 30, 1955, which is commended to my colleagues. Under leave to extend my remarks, the article follows:

ALIENS: AMERICANS IN HEART, SPIRIT

There is man who has a business and has raised a family in New Haven. He is active in many community groups. He loves the United States.

He likes to talk politics, but he has never voted.

He is an alien.

There is in Hartford a woman who has raised a son who as an American GI died in World War II. Her husband is a good Republican. Her son-in-law is a good Democrat.

She listens to their arguments, but she has never voted.

She is an alien.

These are 2 of about 70,000 persons who have come from every corner of the world to live in and work in Connecticut and who the law requires must go to the post office and register as aliens.

Some of these people have been here for only a few months; others have been here for more than 50 years.

Almost all of them want to become American citizens.

Some of them have been trying for years, but are still unable to achieve United States citizenship.

The alien population can be split up into two main groups—the oldtimers and the newcomers.

The oldtimers make up nearly one-half of the alien population. Many of them have been here since before World War I.

They have children who are citizens and they have lived here so long that they think of themselves as Americans.

Most of this group are women who have had to work hard all their lives and have had little opportunity to learn the language and study the formal requirements for citizenship.

Lack of time and timidity have been the chief obstacles to their becoming citizens.

Recent legislation has made their goal easier to reach.

Aliens who are over 50 years of age and have been here for more than 20 years can obtain citizenship by merely answering a few simple questions once they can prove their date of entry into the United States.

The entry problem is the toughest nut to crack.

Many of these aliens came here when they were children and don't remember the name

of the boat they came on, or the exact date of their arrival.

Even when they do remember, the steamship company records which they would need as evidence are no longer in existence.

The alternative to proving date of entry is to prove legal residence in the United States for a period of 20 years.

This means poring through battered city directories, or trying to find old bills and receipts. Or getting specific affidavits from former neighbors.

It takes time and energy and enormous patience, and usually yields as much satisfaction as pounding one's head against a stone wall.

It's surprising, not that some of these people give up in discouragement, but that so many persist in their search.

For the second group of aliens, who have arrived since the close of World War II, the prospects for citizenship are brighter.

Most of these people have had their lives disrupted by war. They shifted from one country to another, and spent time in concentration camps and displaced person camps.

Because they have had to learn how to take care of themselves in order to survive, they can better cope with the problem of achieving citizenship.

The alien goes almost shamefully to sign up at the post office, but most are loyal Americans in everything but formal citizenship. He contributes and acts as a good citizen.

Whether barred from citizenship by technicalities or by simple negligence on his own part, the chances are that your alien neighbor is a real American in heart and spirit.

Thirty-seventh Anniversary of Lithuanian Independence

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. ANFUSO. Mr. Speaker, the 37th anniversary of Lithuanian independence is being observed on February 16. The little Baltic state was established as an independent nation in 1918, only to have its freedom and existence snuffed out in 1940 by the Soviet Union which has since enslaved its people and destroyed every vestige of their independence.

In the years since 1940, the people of Lithuania have paid a tremendous toll in human suffering and destruction at the hands of a ruthless oppressor. The culture of this little Baltic country is gradually being wiped out, its churches destroyed, and its people are subject to mass purges and deportations. Yet, despite all this suffering and subjugation, the spiritual and moral resources of the Lithuanian people have not been exterminated, nor has its indomitable desire for national freedom been extinguished.

The fake annexation of Lithuania and the other Baltic states has never been recognized by the United States. The American people have followed with great sympathy the plight which has befallen the Lithuanian people and we have on numerous occasions raised our voice in their behalf.

On this occasion, the 37th anniversary of their independence, we extend our greetings and encouragement for their righteous cause. The American people hope and pray for their early liberation from Communist tyranny. We renew our solidarity with this heroic people in their struggle against the forces of evil.

Resolution Adopted at the Memorial Service and Rally Sponsored by the American Zionist Council of Los Angeles at Hollywood Temple Beth El, February 13, 1955

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. DOYLE. Mr. Speaker, unanimously having heretofore been given consent so to do, I present to the distinguished Members of this great legislative body the following resolution which I this day received from Dr. Max Nussbaum, chairman of the American Zionist Council of Los Angeles, Calif., whose address in that city is 590 North Vermont Avenue:

We, the 1,000 citizens of Los Angeles assembled at Hollywood Temple Beth El on Sunday afternoon, February 13, for a memorial service, voice our shock and indignation at the brutal murder of 2 Jews by the Egyptian military dictatorship and the torture of 2 more, resulting in their death.

This action was taken in wanton disregard of the forceful representations for clemency made on the grounds of moderation and humanity by many governments, including our own.

Together with the entire civilized world, we express our sense of outrage at the inhuman trials and executions which are a mockery of justice. The Egyptian Government stands condemned in the eyes of all mankind for its brutal disregard for human decency. Events in that country in the past year have shown a striking resemblance to the bloody path by which other dictators have maintained power through a totalitarian regime.

Moreover, we are deeply disturbed by this evidence, pointing to an intensification of the bitter tensions existing between Egypt and the State of Israel. It must be feared that unless the conscience of the civilized world can be aroused to deter the criminal intent of the Arab rulers, they will be emboldened to intensify their attacks upon their own Jewish community and possibly to undertake a full-scale attack against Israel.

This sacrifice of Jewish martyrs will not long appease a government which is intent upon diverting the peoples' attention from economic misery and social despotism at home. We shall hold the Egyptian Government eternally responsible for the blood bath which can ensue if scapegoats are to be the technique for appealing to mob passions and for maintaining in power a military dictatorship.

We do urge the continued vigilance of our Government in cooperation with the other governments which view with moral indignation and horror this tragic hanging, in order that the adherence to the principles of justice and respect for civil rights and international law be strengthened in Egypt and throughout the Arab world.

Soviet Faithlessness at Yalta

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. RODINO. Mr. Speaker, basic to the ultimate success of any agreement or contract is the existence of the will to fulfill in good faith what has been stipulated. The will to act honestly and faithfully is the heart and core of any agreement in international relations.

At Yalta in February 1945 an agreement was reached between the late Franklin Delano Roosevelt, President of the United States; Winston Churchill, the present Prime Minister of Great Britain; and the deceased Soviet dictator, Marshal Stalin. This agreement concluded in the Crimea contained many elements that were intended to insure lasting world peace. Among these elements were: The projection of the basic concept of the United Nations Organization; a declaration on liberated Europe, based upon the principles of the Atlantic Charter and the declaration by the United Nations; the occupation and control of defeated Germany; war reparations; treatment of major war criminals; an agreement relating to prisoners of war and liberated civilian nationals; agreement on policy toward Japan; settlement problems in Eastern and South-eastern Europe bearing upon Poland, Yugoslavia, Bulgaria, Italy, Greece, and Rumania; consideration of the question of Iran; the establishment of permanent machinery for periodic conferences between the foreign secretaries of the three powers; and, finally, consideration of the question of the Turkish Straits.

In the conclusion of the Crimean Agreement President Roosevelt exercised the constitutional power invested in the office of the presidency. And in like manner Prime Minister Churchill exercised the equivalent constitutional power invested in his office. As a supreme dictator Stalin was not governed by any such constitutional principles. Both President Roosevelt and Prime Minister Churchill entered into this agreement in good faith, and with the will to carry out the stipulations laid down. But, unfortunately, Stalin, the third party to this agreement, had no intention of fulfilling his obligations.

As a consequence of Soviet bad faith we have seen time and again willful violations of the Crimean Pact. No violation, however, could be more distressing to witness than the one that bore upon Poland.

At Yalta, the Polish eastern frontier was delineated roughly along the old Curzon line. Thus, Poland lost a large amount of her eastern territories. But further stipulations provided that Poland must receive substantial accessions of territory in the north and west. Another stipulation was made in the agreement calling for the holding of free and unfettered elections as soon as possible on the basis of universal suffrage and secret ballot.

At the Potsdam Conference, the western frontier of Poland was moved to the Oder-Neisse line in Eastern Germany pending final delimitation at the peace conference which, incidentally, was never held. However, free and unfettered elections were never held in Poland, and here in this display of bad faith on the part of the Soviet Union, the hopes of President Roosevelt and Prime Minister Churchill for a free, independent, and democratic Poland vanished.

Seldom before has the world seen such a display of bad faith as in the farcical elections that brought Poland under Communist domination. Every device of terror, imprisonment, and intimidation was used to destroy the effectiveness of the Polish democratic forces. Such were the free and unfettered elections that Yalta promised for Poland. We have long since discovered, much to our woe, how little good faith and good will we can ever expect from the Soviet Union.

On this 10th anniversary of the Yalta Agreement let us, therefore, recall to mind the diabolical dishonesty of the Soviet Union; let us remember the terrible consequences that this breach of faith has brought to the world; let us remember also the unhappy fate of Poland as a result of this breach of faith.

In the Polish people, who stand today before the world swathed in chains but with souls unconquered, there is exemplified the spirit of heroism in resistance, resolution in adversity, and faithfulness to the cause of freedom.

H. R. 1

EXTENSION OF REMARKS

OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following quotation from a letter I have received from Mr. James D. Francis, president of the Powellton Coal Co., Huntington, W. Va.:

H. R. 1 affects the oil only. Most people think this affects a few coal miners and a few coal operators. It is not generally recognized—and Congressmen and members of the Ways and Means Committee probably do not know—that for each man employed in 1 of our coal-producing counties there is 1 additional man employed servicing the needs of each man and his family in the community and that when there are 100,000 coal miners idle, or partially idle due to heavy imports of residual oil, there are also another 100,000 unemployed or largely unemployed and living partially on relief in the same immediate sections.

In addition to these men, for each 100,000 men in the mines there are approximately 25,000 railroad, transportation, and dock and vessel employees engaged in giving railroad and transportation service to the coal mined by these miners and in maintaining the cars and locomotives used to haul this coal; and for each of these men out of income in their

communities, approximately an equal amount of men and women are out of employment in servicing transportation, dock workers, and steamship men handling this volume of coal.

It should also be realized by the committee that for each 100 million tons of coal lost due to this form of competition, the manufacturers and suppliers of mine supplies and mine equipment lose sales on mine supplies and equipment of approximately \$1 a ton and causes a very substantial unemployment in the industries furnishing these supplies.

The wholesalers, retailers, and jobbers in our community suffer in their loss of business and their income; and schools, churches, and all public welfare organizations are likewise greatly injured.

Yours very sincerely,

JAMES D. FRANCIS,
President.

Education Is Our Job, Not Washington's

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Greensboro (N. C.) Daily News on Sunday, February 13, 1955. I am in thorough agreement with the views expressed in this editorial:

EDUCATION IS OUR JOB, NOT WASHINGTON'S

Although we are keenly troubled about the plight of the schools in the Nation and the South today, we do not like President Eisenhower's proposal to help solve it with a \$7 billion Federal-aid program.

In the first place, we look on education as primarily a State or local duty and responsibility. If the Federal Government subsidizes schools, we fear that in the long run it will try to tell teachers what they can or cannot teach. Already there are ominous threats of Federal interference with the operation of our schools. The initiative and responsibility for the schools should always remain in the States or localities. Their control should never be vested in Washington. That way lie all sorts of dangers of thought control or worse. No free country should undergo that risk.

In the second place, the President's proposal is not for outright grants of money but for loans, except in the case of some States which might get direct grants on a matching basis but would practically have to take a pauper's oath to obtain them.

North Carolina is not a pauper State. Its credit is excellent. If it has to borrow money to educate its children it can get it from other sources than the Federal Government at reasonable rates, without the risk of thought control or interference with the operations of the schools implicit in Federal subsidization. No State is too poor to educate its young people—it is absurd to think so in a period of prosperity when we universally spend more for joy riding, cosmetics, and drinks than we do for education—and no State is rich enough to neglect their education.

North Carolina, half a century ago when it really was poor, undertook the high task of educating all its children; we knew it would entail sacrifices and we undertook them gladly because we knew the end would justify the cost. The results speak for themselves. We have done a reasonably good job and we know we can do better. It is our job and we will stick with it.

The Real Quemoy Story

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, I include in my extension of remarks an article written by Joseph Alsop, appearing in the Washington Post and Times Herald of February 16, 1955, which, if true, is an amazing disclosure:

THE REAL QUEMOY STORY

(By Joseph Alsop)

TAIPEH, FORMOSA.—The controversy now raging in Washington about the real status of Quemoy and the Matsu Islands is easily understandable.

The confusion grows directly from the curious, tortuous, and even somewhat shabby dealings of the American Government with the Chinese Nationalist Government on this vital issue. The real history of those dealings (which leaves the true status of Quemoy and the Matsus as dubious as ever) can be summarized as follows on high and undoubted authority.

Originally, as the whole world knows, President Eisenhower's policy, adopted against the recommendation of 3 of the 4 Joint Chiefs of Staff, was to defend none of the offshore islands that constitute the Formosa approaches. This decision was taken last September, at the famous Security Council meeting in Denver, after the first major Communist shelling of Quemoy had brought the problem of the offshore islands to the forefront.

How or why this original decision was changed in January is not known here. It is suspected, however, that the lever of change was a growing conviction that the Chinese Communists seriously intended to attack the Pescadores and Formosa proper, which in turn made the defense of the more advanced positions seem more logical and important. At any rate the original decision was changed, and the new policy was adopted of abandoning the Tachen Islands but assisting, if need be, in the defense of Quemoy and the Matsus.

This led directly to the President's request to Congress to pass the so-called Formosa resolution, and to the key scene in the discussions of the problem of the offshore islands between the Chinese and American Governments. This key scene was a meeting between Chinese Foreign Minister George Yeh and Secretary of State John Foster Dulles while the Formosa resolution was pending and shortly before Secretary Dulles' departure for his Caribbean holiday.

At this meeting, Secretary Dulles informed Foreign Minister Yeh, without qualification or equivocation, that President Eisenhower would issue a statement in effect guaranteeing Quemoy and the Matsus as soon as the Formosa resolution had passed the Congress. The statement, Secretary Dulles asserted would specify Quemoy and the Matsus as being related areas essential to the defense of Formosa. It would thus put the Chinese Communists squarely on notice that an attack on these islands would bring the United States into the fighting.

There was no possibility of misunderstanding about this promise made by Secretary Dulles to Foreign Minister Yeh. Official State Department minutes were taken of the meeting between the two men, and a copy of these minutes was given to Foreign Minister Yeh. The minutes clearly recorded that Secretary Dulles said the President would issue a statement effectively guaranteeing

Quemoy and the Matsus in the manner described above.

On the basis of this apparently solid commitment, Generalissimo Chiang Kai-shek then agreed to the evacuation of the Tachen Islands, as Secretary Dulles had requested. The plan here was to coordinate the Generalissimo's order for evacuation of the Tachens with President Eisenhower's expected statement on Quemoy and the Matsus. As late as a week ago Friday, United States Ambassador Carl Rankin had no idea that Secretary Dulles' promise to Foreign Minister Yeh was about to be broken. He even held a press conference cheerfully stating that Quemoy and the Matsus were now covered by an American guarantee.

At this very late date, however, Assistant Secretary of State Walter Robertson informed Foreign Minister Yeh, one assumes with some embarrassment, that there had been a little misunderstanding between the State Department and the White House. The President was not prepared to keep the promise that his Secretary of State had made.

Foreign Minister Yeh produced the minutes of his meeting with Secretary Dulles. Assistant Secretary Robertson showed the minutes at the White House. But all to no avail. Apparently the President had hedged his position, in order to undercut the Senate opposition to the Formosa resolution, in a way that made it impossible for him to do what Secretary Dulles had said he would do.

On receiving this news, Generalissimo Chiang Kai-shek refused to keep his part of the bargain either, with the result the world knows—the long delay in the Tachen evacuation. These days of delay were occupied by the Chinese in pressing the President to keep the Dulles promise, and by the Americans in fending off the Chinese with one hand and pressing them to evacuate the Tachens with the other.

This curious impasse ended, partly because Chiang Kai-shek had no easy alternative except to bow to the will of the American Government, and partly because President Eisenhower finally consented to toss President Chiang a diplomatic biscuit. This took the form of a communication relayed by Ambassador Rankin assuring the Chinese President that the American President was still undyingly determined to defend Formosa and all related areas "he deems necessary" for the defense of Formosa, "including Quemoy and the Matsu Islands."

If these were not the precise weasel words, they are said by high authority to reproduce the sense with complete exactness. They can, of course, be read any way you choose to read them. For President Eisenhower did not deem Quemoy and the Matsu Islands essential to the defense of Formosa in September. Then he deemed them very necessary in January. And who can tell what he will deem them next month?

The Chinese hopefully believe that there has not been a second change in American policy, and that Quemoy and the Matsus will in fact be defended with American help if attacked. But there was a commitment, which turned into a noncommitment, and it is hard to forecast what transformations this noncommitment may be subject to. And that is where this strange matter now stands.

Lithuania's Independence Day

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I wish to

call attention of the House to the fact that today is the 37th anniversary of Lithuania's independence.

The small but fiercely proud Baltic country won her independence after World War I, to the plaudits of the whole world. For 22 years her people enjoyed the fruits of freedom, and under freedom Lithuania became an outstanding member of the family of free nations. A successful land reform program, coupled with the intelligence and industry of her farmers, converted the country from a merely self-sustaining nation to an exporting nation; universal education swiftly reduced illiteracy from 64 percent to 15 percent, as the number of children in grammar schools rose from 45,000 to 300,000. Her state opera, the theater, and the ballet added cultural luster to her economic and commercial development.

In 1940, the Soviet Government drew the Iron Curtain down on Lithuania, thinking to snuff out the people's will to freedom.

It has not succeeded. The Lithuanians, like their Baltic neighbors, the Latvians and Estonians, have never ceased to resist subjugation. It was a proud day for our own country when we determined not to recognize the conquest of these three republics by the voracious Soviet bear, but to sustain the spirit of freedom within them by continuing recognition of the republics. All of us share with them the hope that the spirit of freedom will not die, and that the day of liberation is not too far distant.

The National Right To Work Committee

EXTENSION OF REMARKS

OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. JONAS. Mr. Speaker, a few days ago public announcement was made of the formation of the National Right To Work Committee. Mr. E. S. Dillard, an outstanding citizen of Charlotte, N. C., was elected chairman of this committee and issued a public statement outlining the aims and principles of the committee. Under leave to extend my remarks in the Appendix of the RECORD, I include the statement issued by Mr. Dillard on this subject, as follows:

The National Right To Work Committee declares its keynote belief to be that unionism by compulsion is utterly wrong and is a rising menace to the future of the United States.

This organization will strive diligently to accomplish a single major objective, which is to establish in the United States the principle that Americans must have the right, but not be compelled, to join labor unions.

Labor unions hold in their membership hundreds of thousands of American citizens against their will. Furthermore, thousands of persons have lost their jobs because they would not bend the knee to such compulsion.

Emphasizing these and the many related facts and the injustices inherent in them is the determination of this committee. Further, the committee intends to defend the

right to work principle against all who would invade it, whether unions or employers.

A basic fundamental of American democracy is for every individual to have the right to earn one's own livelihood without being compelled to join, and pay money to, any organization. The National Right To Work Committee expects to carefully avoid injecting itself into the many complicated problems of labor-management relations. The committee will not oppose the expansion of voluntary unionism.

The committee's conviction is that, in keeping with American guarantees of personal liberties, unionism must be voluntary, devoid of compulsion.

Intentions of this committee are to sponsor a program sufficiently broad and adequate to accurately present this whole problem in its many details not only to the American people but also to those men and women who exercise the authorities of government.

When analyzed, this right to work problem presents political and economic issues which are of deep and far-reaching importance.

Ranking first among these issues is whether or not justice is violated when a one-sided state of law protects the individual's right to join a union while providing no protection whatever for the right not to join a union.

Another of these issues is this: Shall the Federal Government be allowed to strike down all State laws which seek to give the individual free choice as regards labor-union membership?

American policy is positively set against the evils of monopoly in business and yet the question arises whether labor unions shall be permitted to achieve monopoly over the working forces of the Nation.

A basic principle of our Republic is to protect civil liberties and minority rights against majorities. Shall this principle have no effectiveness in the basic realm of working and earning a living?

The National Right To Work Committee hopes to convince the American national and State governments and the whole populace that failure to eliminate unionism by compulsion will represent a triumph for collectivism. Already widespread unionism by compulsion has drastically encroached upon, and has severely damaged, various American individual rights.

The foregoing paragraphs present broadly the fundamental policy and objective of the National Right To Work Committee.

Overnight Experts

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. OSTERTAG. Mr. Speaker, the Washington woods are suddenly full of armchair experts in military matters, who know, better than the Joint Chiefs of Staff, the National Security Council, and the President of the United States, what our military manpower needs are.

The new emphases in military manpower are, of course, the result of extended consideration by the best military minds of our times. Moreover, the President has explicitly taken full responsibility for the judgments that have been made. In his state of the Union message last month, President Eisenhower discussed the new directions which

our defense planning is taking, and said: "These emphases in our defense planning have been made at my personal direction, after long and thoughtful study. In my judgment, they will give our Nation a defense accurately adjusted to the national need." Nevertheless, the armchair experts continue to wage a war of nerves against the public by seeking to undermine confidence in these judgments, including that of President Eisenhower. For my part, Mr. Speaker, I shall support the judgment of the man in the White House in this matter.

Under leave to extend my remarks, I include in the RECORD the following editorial from the Rochester (N. Y.) Democrat and Chronicle of February 14, 1955, with reference to this matter:

OVERNIGHT EXPERTS

Some of the Democratic critics of President Eisenhower's projected cutbacks in military manpower have become, overnight, military experts.

Their hullabaloo stems from Defense Secretary Wilson's announcement of December 20 that the Armed Forces would be reduced from 3 million men now to 2,850,000 by mid-1956. On January 5 the reductions were somewhat modified.

To do less than the minimum in the way of defense, said the President, would "expose the Nation to the predatory purposes of potential enemies." "But," he added, "to build excessively under the impulse of fear could, in the long run, defeat our purposes by damaging the growth of our economy and eventually forcing it into regimented controls."

The Army will bear the brunt of the projected manpower slashes; the Navy will be cut slightly; the Air Force, in line with more apparent needs, will be enlarged slightly. Draft calls, starting this month, have been cut from 23,000 to run indefinitely from 10,000 to 11,000 per month.

The heart of the administration's plan is the Reserve system. Under it 100,000 young men each year would get 6 months' training followed by 9½ years in the Reserves. General Ridgway, Army Chief of Staff, now believes National Guard and other Reserve units could be prepared for combat in 5, rather than 10 months. Thus, three main sources will feed manpower into the services—the Reserves, the draft, and volunteer enlistments.

The cutback decision was not a snap judgment. The President was advised by the Joint Chiefs of Staff and the National Security Council, although, in a press conference, he said he takes full responsibility. Democratic sniping has contributed little except the conviction the snipers are scared civilians attacking plans drawn by unscared military experts.

The President's steadiness in this as in other high-level decisions speaks for itself. He has access to more facts than any of his critics. Until some more convincing adverse evidence comes along, we'll stick with his judgment.

Lithuania's Independence Day

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, today, February 16, 1955, marks

the 37th anniversary of the independence of Lithuania. Although the freedom that once belonged to Lithuania has been taken from her by Soviet Russia, the Lithuanian people are united in their determination to again establish their complete independence.

There are 3 million Lithuanians living in their rugged and admirable homeland. Here in America we have over 1 million Lithuanian citizens who have greatly proved their quality, their fineness, and their strength as citizens of our American Republic. All Lithuanians are united today, including those in the homeland and those here in America, in the celebration of this 37th anniversary of their independence.

During her independence, 1918 to 1940, Lithuania was an exemplary nation and an honored member of the family of free nations, honorably fulfilling all her obligations. Her land reform act of 1922, the first in all Europe, was one of the most important events in her history as 73 percent of her population was engaged in agricultural pursuits. This land reform act lessened greatly the influence of Communist propaganda. Universal compulsory education—1930—reduced the illiteracy from 64 to 15 percent. From 1919 to 1939 the number of pupils in grammar schools alone rose from some 45,000 to nearly 300,000. Economically, her great progress in dairying and hog production transformed Lithuania from a self-subsisting nation to a commercial type one. Her rapidly developing cooperatives raised the standards of commerce, agriculture, and industry. Lithuania's state opera, the theater, and ballet attracted internationally famous conductors and artists and added luster to the culture of this ancient nation.

Then came the Soviets on their drive to world domination. Today a rigid censorship conceals from the world the continuing deportations under the guise of volunteer work elsewhere, collectivization, the slave labor camps, the russification and colonization by Russian elements, the systematic efforts of the Soviet occupational regime to merge Lithuania organically into the Soviet system, the extermination of the hostile native anti-Soviet element by killings of the resistant groups.

In this great struggle for independence, Lithuania has not given up. She still fights on. Little does Communist Russia realize the strength of heart and determination of the spirit of the Lithuanian people. These stalwart people know they have a friend in America. They know the Government and the people of the United States are with them all the way. Never has the Government of the United States recognized the annexation of Lithuania by Communist Russia, just as the United States Government has never recognized the annexation of Latvia or Estonia under their rule and domination. It is my view that the United States Government will stand firm in this position, and that the people of Lithuania and her Baltic neighbors may rest assured the United States will never recognize the incorporation of these wonderfully fine small Baltic

countries into the Soviet Communist Union.

On this anniversary day I extend my congratulations to the people of Lithuania. In doing this I say to them, "Hold fast to your faith, and hold fast to your hope and courage, for with these necessary qualities I am positive the sun will again shine on an independent Lithuania and a happy nation of Lithuanian people living in freedom."

Help for Coal

EXTENSION OF REMARKS OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. KELLEY of Pennsylvania. Mr. Speaker, it is refreshing to read an editorial which is sympathetic to our coal industry, one that recognizes one of the difficulties lies in the dumping of residual oil from Venezuela to our eastern-shore States.

It is also, at the same time, difficult for those interested in the coal industry to impress sufficient Members with the necessity for nurturing this basic industry.

It might be pointed out that in case of war we would be in difficulty. We would be in a coal economy overnight.

With permission to extend my remarks, I am including this editorial which appeared in the Pittsburgh Press on Monday, February 14:

HELP FOR COAL

There has been so much head shaking of late about the troubled condition of the coal industry that it comes as something of a shock to realize that the Federal Government still is taxing the transportation of coal at the rate of 4 cents a ton.

This is a tax that was laid on in World War II to help pay the huge expenses of that war, and at a time when it couldn't possibly have hurt the coal industry.

But that time is past. The coal industry is in trouble now and the transportation tax is unwise and unjust. It helps to nibble away more of the vanishing market for coal and adversely affects the transportation industry.

Representative DANIEL J. FLOOD, Wilkes-Barre, Democrat, points out that other industries afflicted with wartime taxes that handicapped them in peacetime have obtained relief. He wants the coal tax repealed, too, and he points out that coal is more essential to our national economy and our national security than other industries which have been given relief from taxes.

Most of the unemployment in this part of Pennsylvania stems from the coal slump, plus the advance of mechanized mining, and its effects on the railroads. Any move that would help coal to compete in price with other fuels should help employment.

The loss of tax revenues to the Federal Government in repealing the coal tax would not be serious, and if greater employment in the mining industry resulted, Uncle Sam could make up his losses in collections from other taxes, such as the income tax on corporations and individuals.

The coal industry, in fact, appears to have a sort of stepchild status with the Federal Government. One of its standard complaints

is that the importation of residual fuel oil (a heavy oil remaining from refinery operations) has robbed it of much of its eastern seaboard industrial market.

Nothing much comes of these complaints, even though the dumping of this oil in eastern markets means loss of jobs for coal miners and railroadmen.

Another blow was reported over the weekend by Press Washington Correspondent Chester Potter. The State Department and the Foreign Operations Administration plan to buy one million tons of coal from Formosa for the use of United States military forces in Japan and Korea. Such a purchase would provide a full year's work for 800 United States miners.

Perhaps there are good reasons for this plan—although they haven't been made public. But we can't help remembering that during last year's election campaign, Foreign Operations Administrator Harold E. Stassen announced a plan to buy 10 million tons of United States coal for economic aid to foreign countries.

Someday, we hope, Washington will wake up to the fact that it makes sense—both economically and from a defense standpoint—to help keep the coal and railroad industries in shape to meet any emergency demands that may be made on them.

The Marble Industry of the United States

EXTENSION OF REMARKS OF

HON. M. G. BURNSIDE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter from Mr. Roger W. Howdysell, vice president of Marble King, Inc., of St. Marys, W. Va.:

DEAR MR. BURNSIDE: The writer would like to bring to your attention the seriousness of the situation which is facing the marble industry in the United States. The industry is facing complete ruin unless something can be done about the importation of Japanese marbles. The Japanese can deliver into San Francisco, Calif., marbles which compare to size and count of our own including handling, freight and ad valorem at a price which we cannot meet.

The difference in prices of the Japanese is from \$1.30 per gross to \$4.04 per gross delivered in San Francisco under our delivered price to the same point. For approximately \$0.30 more in freight they can deliver to New York. In addition to the two mentioned above, they are using the following ports of entry: Boston, Philadelphia, Baltimore, Norfolk, Charleston, Jacksonville, New Orleans, Galveston, Los Angeles, Portland and Seattle.

We have been advised that hundreds of thousands of dollars worth of business which we previously enjoyed, has been placed with the Japanese concerns. Unless we receive help immediately, it will be disastrous to the industry. This does not only mean the companies in the industry but also for the employees; involuntarily forcing us to close our factory July 1, 1955.

In our plant alone we employ 10 percent of the families living in our community. Most of them are of the age and qualifications that they could not find employment elsewhere.

I would also like to mention the fact that we are one of the most highly mechanized industries in the United States.

Yours very truly,

MARBLE KING, INC.,
ROGER W. HOWDYSHHELL,
Vice President.

Why President's Opponents Are Not So Sure

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial which appeared in the New York Sunday News on February 13, 1955, which is very much to the point:

DEMS NOT SO SURE NOW

Just a couple of months back it was a truly cautious Democrat who didn't feel the election was in the bag. We mean, of course, the November 1956 national balloting—the big apple of American politics.

There were some solid-looking reasons for that optimistic attitude. First, of course, Vox Pop had just spoken, and had popped more than a few half-surprised Dems into gubernatorial and congressional seats.

Also, Ike hadn't balanced the budget as promised; and the McCarthy feud, in some precincts, had chased an estimated sixth of the normal GOP vote away from the polls.

So what's erasing those donkey party smiles now?

Ironically, the Dems own scouts and pollsters are spreading that gloom. Off the record, realistic Democrats are admitting that probable 1956 candidate Dwight Eisenhower is far from licked. In fact, his personal popularity may be nearing its peak.

Why? First, we'd say, the people like the firm way in which Ike handled the Formosa menace. No jitters; no hysterical midnight declarations of police actions. Just a non-bluffing statement of our position versus the rampaging Chinese Reds—and no shooting war came tumbling down.

On the domestic front, political professionals are admiring the way in which Ike has handled the touchy issue of racial discrimination in jobs covered by Government contracts.

When Congress failed to cooperate on this one, Ike quietly set up his own shop. His President's Committee on Government Contracts, at last count, had checked into and taken fast, realistic action on 104 discrimination complaints.

As of January 15, some 37 of the offending employers had been persuaded to comply voluntarily with those nondiscrimination clauses. Direct violations were found by Ike's men in 13 cases; contractors hastened to correct the situation. Some 42 bias cases are in the works now. The committee found it had no jurisdiction in the other 25.

Not much publicity has been given this. But our so-called minority and labor groups know what's been going on, and are telling pollsters they appreciate it. As far as can be foreseen, they'll still have that gratitude come 1956.

Meantime, Ike's most likely rival for next year's race is reputed to be the no-longer-reluctant political dragon and jokester from Illinois. So—

HOW ABOUT ADLAI?

Nothing's truly certain in politics. But Mr. Stevenson probably lost considerable prestige during the hottest Formosa crisis days. The Nation then was rooting fervently for Ike and our boys with the 7th Fleet. At about that time, Adlai opined wishy-washily that the United States, really, ought to "exercise restraint," at least until the ownership of Formosa could be "adjudicated peacefully." Very high-sounding words, those, but plenty of Democratic professionals wished that their fine-feathered orator had chosen that particular moment to keep his trap shut.

It's possible, though, that Adlai's political kiss of death may be the one bestowed on him by some fervent admirers in London, England. We quote from The Listener, a weekly publication of the British Broadcasting Corp.

"Mr. Adlai Stevenson gave three erudite and thoughtful lectures on foreign affairs at Harvard University in March this year (1954). He is the least American of American politicians; if he lived on this side of the Atlantic his temperament and outlook would carry him far in English public life. He sees America with a detached as well as a patriotic view and he is clearly not happy at the impression she creates among her allies. These lectures, now printed, are an explanation to Americans of the complexities of international affairs and a warning against exaggerated black and white judgments and pronouncements. Be patient, is the message that Mr. Stevenson gives to his fellow countrymen and in doing so he draws illuminatingly upon the experiences of his recent world tour. It is a comforting thought that approximately half of America looks to this calm and wise counsellor for leadership."

Well, as we were saying to you common American Americans, it's looking more and more like Ike.

Resolution on Civil Defense

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following resolution adopted by the American Veterans Committee at the eighth national convention held in Boston, Mass., on December 4, 1954:

RESOLUTION ON CIVIL DEFENSE

Whereas in the age of atomic warfare and the hydrogen bomb, it is manifest that an adequate civil-defense program is essential to the country's safety; and

Whereas the Federal Government has failed to assume its proper responsibility to set up an effective program of civil defense; and

Whereas the State and municipal governments are incapable of financing or planning the necessary national program of civil defense.

Now, therefore, the delegates of the eighth national convention of the American Veterans Committee call upon the Federal Government to assume its responsibility for the financing, planning, and supervision of a proper and integrated civilian-defense program.

Congress Should Lead Crusade Against Crime

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. ANFUSO. Mr. Speaker, at the request of the International News Service, one of the leading news-gathering agencies in this country and abroad, I have written an article dealing with the problem of crime and the need for Congress to lead a crusade against this evil. The article was published in various newspapers serviced by this agency. The New York Sunday Mirror printed the article in its issue of February 13, 1955. It reads as follows:

A CRUSADE AGAINST TEEN-CRIME URGED

EDITOR'S NOTE.—Representative VICTOR L. ANFUSO, Democrat, of New York, has been a widely acknowledged expert in the study of juvenile delinquency. As a New York City magistrate he dealt with young offenders. He is also the founder of a New York City Crime Prevention Institute. Representative ANFUSO introduced two bills in Congress designed to help ease a crime problem he says has assumed alarming proportions. How Representative ANFUSO would deal with the problem, and what his two bills would achieve, are described by him in the following article.

(By Representative VICTOR L. ANFUSO)

WASHINGTON, February 12.—The growth of crime in the Nation must be checked and it's up to Congress to lead the crusade.

Our newspapers daily report all sorts of serious crimes, juvenile delinquency cases, youths equipped with deadly weapons, youthful narcotic addicts, and other gory tales. Since the end of World War II this situation has assumed alarming proportions throughout the country.

Evidently, we have failed somewhere along the line. But where? How?

I am the parent of five growing children and, like every other parent, anxiety often grips me concerning their future, their associations, their interests.

For many years I have studied the problem of juvenile delinquency and crime prevention. Back in 1936 I founded a Crime Prevention Institution in New York City which is still in existence and is doing a magnificent job in its locality.

As a city magistrate in New York, I dealt with youthful offenders, not interested merely in meting out stern punishment but in rehabilitating character and young lives.

From my experiences, I have reached the conclusion that crime is not confined to any particular race, nationality, or religious group. I regard crime as a social disease which stems from many causes, such as extreme poverty, slums, poor environment, neglect by parents, lack of family discipline, breakup of family units, and emotional disturbances.

Teen-age criminals and juvenile delinquents are the outward manifestations of this social disease. Because of the large number of these offenders and the serious crimes committed by them, it has become a problem of grave national concern.

Our Government has been derelict in dealing with this problem from a preventive standpoint.

I often ask myself, as undoubtedly millions of our citizens do:

What is wrong with our educational system that it is helpless in eradicating this evil when our children are still in an impressionable age? What is wrong with the communities in which we live that our young people are attracted by evil forces? What is wrong with the churches that their influence upon our youth is so negligible? Where have we fallen down on the job of raising the young generation to be law-abiding, respectable and responsible citizens?

Many also ask this question: We are spending hundreds of millions of dollars to fight crime by means of large prosecuting staffs, huge police forces, criminal courts, and penal institutions, but what are we doing to prevent crime and to curb juvenile delinquency?

Arrests and court warnings, evidently, are not enough. Police protection is not enough. Even jail sentences do not curb this evil.

The American public must be thoroughly aroused to this menace which is affecting us all.

It is my view that Congress should give leadership and guidance to our people in dealing with this problem.

For this very reason, I introduced two measures in the 84th Congress. One is a resolution to create a fact-finding committee of five Congressmen to conduct, without regard to politics, an investigation of the causes of crimes committed in violation of the laws of the United States, as well as the methods for the prevention of such crimes.

A study of this nature should include an examination of criminal records as well as the relationship of neighborhoods and schools with the causes of juvenile delinquency. The committee would later submit a program of legislation to Congress.

The other is a bill which calls for the creation of a Bureau of Crime Prevention in the Department of Justice as a permanent agency to conduct a continuous study of methods to prevent crime and curb juvenile delinquency.

The bureau would be required to have offices in each State and to cooperate with Federal and State agencies in initiating crime-prevention programs.

I am not so naive to think that this is the whole solution. I prefer to regard it as a beginning that may perhaps snowball as we go along, until we succeed in getting control of the situation.

It is of utmost importance to imbue our youth with a better understanding and appreciation of our way of life and everything that is fundamental and constructive in the makeup of America.

Our young people must realize that crimes committed against society will affect their own future lives and undermine their opportunities to become useful members of society. It must be made crystal-clear to them that they themselves will be the greatest victims of their criminal acts, that they themselves stand to lose most by their folly.

The dollars we spend today to prevent crime may be repaid a hundredfold, not only in saving the taxpayers' money for fighting crime, but in helping our youth become better citizens tomorrow.

great legislative body so to do, I am pleased to here place to the attention of all the Members of this 84th Congress an editorial dated February 1, 1955, in the Los Angeles Evening Herald-Express.

It is another of the pertinent and timely treatments of this subject which has come to my attention for I have many years been interested in the problem of the elder citizens and am frankly worried about the conditions and facts which this editorial calls to our attention.

I agree with the last paragraph of the editorial wherein it says, "It is a problem that must be tackled, and tackled soon."

EMPLOYMENT AGE BARRIER

What are we going to do about our older workers who are seeking employment?

By older workers we do not mean necessarily the aged. In most cases, the latter are taken care of, at least partially, by old-age pensions.

But millions of would-be workers from the ages of 35 for women and 45 for men are finding great difficulty in obtaining employment in Los Angeles and throughout the Nation.

It is because in a larger percentage of cases employers insist on hiring the younger men and women and turning away those older.

In many instances, this is due to pension and insurance systems which make it too costly to employ older persons as beginners. Where they already have been working in firms for many years, of course, this would not apply.

But also in many cases it is due to the desire of companies and corporations to employ "young blood", forgetting the importance of having more mature workers with years of responsibility and experience behind them.

Many letters have been received by the Herald-Express from unfortunate older workers who cannot get jobs in Los Angeles because of this age bar.

Our eminent columnist, George Sokolsky, whose columns appear daily on the editorial page, has written about the problem frequently.

James P. Mitchell, United States Secretary of Labor, has pointed the problem up as extremely serious in an article in Collier's magazine.

In fact, he cites figures of the Census Bureau stating that by 1975, there will be 63 million persons over 45 in the United States, half of our adult population.

Unless industry itself will go to work on the problem to solve it, the labor secretary says, these people eventually will force some kind of public program for their survival, which probably will mean pensions or "middle-age" insurance and an almost unbearable load on the taxpayers.

And yet the President of the United States, his cabinet members, and members of Congress are almost all of them past this young-age barrier.

It is a problem that must be tackled, and tackled soon.

Sun. I should like to quote just briefly from this advertisement:

I like living in the United States. I like living in Massachusetts. I like my home and job here in Lowell because these are matters of my own choice. But here is a point which bothers me and my wife. It's this rumbling in Washington about a new bill coming up Thursday of this week in the House of Representatives which will lower the tariff. It seems to me this is going to make a big difference in my job, my home, and my future.

If you vote to pass this bill to lower the tariff, it means that people in England who work for 45 cents per hour; also people in France who work for 43 cents per hour, Italy at 30 cents, and Japan at 14 cents, they will all be working steady but I won't.

It's just as simple as that.

I'm just one of many workers all over the country, whose homes and jobs will be affected by the passage of this bill. If you are interested in me, my family, my home, and Lowell, please do not approve this bill.

Respectfully yours,

A WORRIED WORKER.

Then it is signed by many of the biggest manufacturers of the cotton-woolen textile industry in Massachusetts.

It says:

If you work for wages, own a store, run a business, or are a housewife, you have a deep interest in affairs in Washington during the coming few days. Along about Thursday your Congressmen will be asked to vote on a bill to lower the tariff. Congressmen are sent to Washington to represent the people back home. But you've got to let them know how you feel.

Once again our jobs and homes are in danger because of the tariff. They are in danger because some people—the free traders—are trying to pass a bill in Congress to cut United States tariffs 15 percent in the next 3 years. The free traders don't worry about your job.

Tariffs actually are supposed to even up the big wage gap between your pay and that in foreign mills. Our tariffs now are too low as it is. That is why imports coming to the United States can undersell the goods we make here.

You are competing with England, where mill pay is about 45 cents an hour. You are competing with France, where it is about 43 cents; with Italy, where it is 30 cents; and with Japan, where it is only 14 cents an hour. Our low tariffs now are no bar to imported goods, yet the United States Government is willing to cut tariffs again on many kinds of textiles to aid Japan.

The people who want to cut tariffs say you can learn a new kind of work if imports kill your job. They say you can move some place else and try to find work.

Bear in mind, and tell your Congressman, that if H. R. 1 becomes a law, it means Congress once more, and to a greater degree than ever, will have given up its constitutional obligation to control our foreign trade. The State Department will continue in the saddle. If H. R. 1 passes, there is nothing your Congressman and Senators can do to help you combat imports. They might protest to the State Department, but it would be too late, because the Department again would have the power Congress surrendered.

All of the people in the city of Lowell and the surrounding towns are asked to write to their Congressmen. The gentleman from Massachusetts (Mr. PHILBIN) and I have had several letters on this subject. I am glad to have the additional letters coming in. I saw some workers today from Pennsylvania, and they made some very fine statements.

Mr. PHILBIN. Mr. Speaker, will the gentlewoman yield?

Employment Age Barrier That Must Be Tackled, and Tackled Soon

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. DOYLE. Mr. Speaker, having been accorded unanimous consent of this

The Textile Industry

SPEECH

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mrs. ROGERS of Massachusetts. Mr. Speaker, I have asked and received unanimous consent to insert in the Appendix of the RECORD a full-page advertisement which appeared in the Lowell

Mrs. ROGERS of Massachusetts. I yield to the gentleman from Massachusetts.

Mr. PHILBIN. I want to compliment the gentlewoman on the excellent speech she made and particularly upon those splendid, pertinent remarks she read from the paper that she is evidently going to include as part of her remarks.

Mrs. ROGERS of Massachusetts. Yes.

Mr. PHILBIN. It was stated very succinctly and vividly sets forth the true situation that is presented to the country. There is no way to meet the situation that confronts the people as the result of these tariff cuts.

Mrs. ROGERS of Massachusetts. I thank the gentleman.

And, they talk of a number of other related industries in our district and all over the country that will be affected and closed down when our textile mills close down. Many do not seem to realize what it is going to do to the farmers who will not have their local markets to sell their agricultural products, their butter, their eggs, their cheese, and other commodities. It is going to ruin a lot of those farmers. Also, there are a good many farmers who have mortgages at the banks, and if the money is not forthcoming on the sale of their products, they will not be able to pay off their mortgages. I do not think some of the farmers realize that.

Thoughts From the Grassroots

EXTENSION OF REMARKS OF

HON. JOHN C. WATTS

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial appearing in the Rowan County News, of Morehead, Ky., on Thursday, February 10, 1955.

Titled, quote properly and appropriately, "You Can Develop a Fever Buying Stocks," it treats on a subject matter that has been of deep concern to each of us, the depth of which is so definitely evidenced by the creation of the so-called Fulbright committee for the purpose of studying and exploring the recent trends and developments in the stock market and ascertaining the cause.

Well and intelligently presented, the article suggests the need for the exercise of extreme caution and care in playing the stock market. It should serve as a timely flashed yellow light, especially to the small investor—the group whose continued financial stability is so important to the preservation of a healthful overall economy.

It emphasizes the urgency with which the Fulbright committee should get under way with its work.

Because of its general pertinency and poignancy, I sincerely urge each of you to read seriously and digest this splendid editorial:

YOU CAN DEVELOP A FEVER BUYING STOCKS

One of the ironies in the great game of buying stocks, and playing the stock market, is the fact that the people sometimes develop a fever to buy stocks as a result of an extended bull market. The best authorities on the market cannot explain this phenomenon precisely but they admit it exists.

It certainly developed in the twenties and led to reckless speculation on the part of millions of citizens. The result of this buying mood is usually seen in a continuation of the bull market. In other words, if a normal bull market comes along, and stocks rise for a reasonably long period, and then the number of citizens investing in the market begins to increase noticeably, the bull market can be extended.

Quite often a bull market does not attract the interest of the attention of the people as a whole, but sometimes it does. The bull market which has now been on since 1953 apparently is beginning to catch the eye of the average citizen. Although stocks are not paying dividends to make them better buys than they have been on many other occasions, in other bull markets, today there is certainly more speculation and general talk about the market among the average citizen.

The Government, somewhat realizing this, recently increased the cash margin for buying stocks and, as a result, the market suffered for several days. But the losses caused were wiped out in a short time and the market again seemed firm and inclined toward a steady rise.

In times such as this, when the market has been rising for over a year, stockbrokers have a very fine advertising theme to utilize. Many brokers are now sending representatives around to various groups and clubs, and these brokers explain to citizens how they can invest in the stock market.

While the great majority of these brokers are honest and do not attempt to encourage the people to speculate recklessly, they do create new enthusiasm and attract new investors, and thereby increase citizen participation in the stock market.

It should be kept in mind that the country is now experiencing a surge of interest in the stock market and that stocks are not any better buys today than they have been on many occasions in the past, and, in many cases, they are not the buys they have been in recent years.

While we do not attempt to advise any citizen what to do in his own particular circumstances, we believe that the country is now experiencing one of those cycles when the citizenry shows unusual interest in the stock market and we believe this is connected to the fact that a bull market has extended over the last year and a half.

The Eisenhower School Program

EXTENSION OF REMARKS OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MASON. Mr. Speaker, the President in his message to the Congress outlining a school-construction program took note of the fact that our system of public schools has always been—and we hope it always will be—a school system based upon State and local control. Then the President proceeded to assume that certain States and local communities were unable to raise the money neces-

sary to provide adequate schoolrooms to properly take care of the children; and, therefore, such States and local communities required Federal aid in the shape of Federal funds, aid to help pay the building costs of the new buildings or to underwrite local school building bonds.

Of course we all know that there are certain impacted areas, where defense plants have been built, that have more children than schoolroom space. Since these impacted areas were created as a result of Federal action and Federal needs, then of course such impacted areas should be given Federal aid—and that has already been provided for in previous legislation.

For the President to propose Federal aid for school buildings on a national scale is something else. In the first place, is it necessary? Why is such a step needed today more than it was 20 to 30 years ago, before Uncle Sam became such an all-wise, beneficent person to whom States and local communities might turn for fiscal aid for any and all purposes?

Mr. Speaker, in the first place Uncle Sam has no money to give out that he does not first get by levying taxes upon the State and local communities. Twenty years ago the Federal Government was satisfied by taking 25 cents out of every tax dollar paid in the United States, leaving 75 cents for the support of the States and local communities. Today, the Federal Government takes 75 cents out of every tax dollar paid in the United States, leaving only 25 cents for the States and local governments to exist upon. If the Federal Government did not rob the States and local governments of their tax dollars they could and would provide proper school facilities for their children without calling upon Uncle Sam for help.

Another point, Mr. Speaker, that should be given serious consideration before the Congress approves the President's request for school construction funds is the fact that our schoolrooms today are not as crowded as they were 20 or 30 years ago. They got along then without Federal aid; why can they not get along now without Federal aid?

In 1920-21 the average teacher load—number of pupils per teacher—for the Nation was 31.7. In 1950-51, according to United States Department of Education figures, the average teacher load was 24.1—7.6 fewer pupils per teacher than 30 years ago. The situation, therefore, so far as crowded classrooms are concerned, has actually improved. It has definitely not become worse. Why, then, all the furor? Why must the Federal Government rush to the aid of the States and local communities?

Mr. Speaker, a careful analysis of the school situation is contained in the following editorial taken from the Chicago Tribune of February 11, 1955. I include it as a part of my remarks and recommend it to my colleagues for careful consideration:

THE EISENHOWER SCHOOL PROGRAM

President Eisenhower's message on Federal aid for building schools sets forth sound principles and then proposes action that

flies directly in the face of the precepts he has just uttered.

"Diffusion of authority among tens of thousands of school districts is a safeguard against centralized control and abuse of the educational system that must be maintained," he told Congress. "We believe that to take away the responsibility of communities and States in educating our children is to undermine not only a basic element of our freedom but a basic right of our citizens."

Having voiced these traditional arguments against Federal aid, the President asked Congress to vote for more than a billion dollars' worth of undermining. His proposals for Federal participation in financing of local school construction took three forms, under each of which States whose districts were helped would have to match Federal funds, dollar for dollar.

The first category of districts to be aided would be those that cannot sell their building bonds at a "reasonable" rate of interest. A White House aid put the limit on "reasonableness" at 3½ percent. To buy these bonds the Federal Government would put up \$750 million and the States the same sum, to be used within 3 years.

The Dow-Jones index of school-bond yields stands at 2.42 percent. Probably then, only a small proportion of school districts have been unable to sell bonds yielding 3½ percent or less. But Mr. Eisenhower would provide funds to buy a half billion dollars of these bonds annually, one-fourth of the cost of all school construction in the Nation during this school year.

The second form of aid would go to districts that cannot borrow because of constitutional or statutory debt limitations. Federal and participating State governments would put up a total of \$300 million. This would be used, Mr. Eisenhower proposed, as a revolving fund to advance the first year's rent until the districts could levy and collect taxes for the purpose. So used, the fund would permit the construction of \$6 billion worth of schools within 3 years.

The Nation is building \$2 billion worth of schools in the present school year. This rate of expenditure is the highest in history. In the last 5 years the country has built \$7 billion worth of schools to accommodate 6,750,000 pupils. The increase in pupil population has been only 5,500,000; so the country has, until now, kept well ahead of the growth in school population. But by the President's calculations, school districts unable to borrow another cent need as much money annually to build new schools as all the districts in the country have ever spent in a year.

In the final category of districts that supposedly need Federal aid most desperately are those that can neither sell bonds nor raise taxes to rent a Federal-State school building. For these, Federal and State governments together would provide \$400 million in outright gifts, spread over 3 years.

Illinois has distressed school districts. The legislature seems likely to adopt a scheme for a school building authority almost identical with that in the second Eisenhower proposal, except that no Federal aid is contemplated. The suggested capitalization for this authority is \$15 million. This sum, it is expected, would provide building funds for all the districts unable to sell their own bonds. By comparison, this State's share of the \$6 billion Eisenhower build-rent scheme would be \$114 million, half contributed in Federal income taxes and half raised by the State.

The poverty of school districts portrayed by Mr. Eisenhower doesn't exist anywhere in the Nation in the proportions he alleges. It will no doubt manifest itself if the Federal purse is opened. Why should States that have been stingy with their schools tax themselves to make amends when they can

pass half the bill on to taxpayers in States that have made more nearly adequate provision for educating their children?

Mr. Eisenhower relied, for proof that a serious shortage of classrooms exists throughout the Nation, on a survey prepared by the Federal Office of Education. Its figures have already been exposed as unreliable.

The Eisenhower message also expressed concern over the low compensation of school teachers. The local taxpayer is charged for paying off school bonds and for paying teachers in the same tax bill. Encouragement of extravagance in construction would be the unkindest act possible to underpaid teachers. It would leave that much less for salaries.

Testing United Nations and Shrine to American Indians

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. BURDICK. Mr. Speaker, I have here an address by Mr. Thomas Dixon, national commander, United American Veterans, which I wish to insert in the CONGRESSIONAL RECORD. The subject of Commander Dixon's address is a most worthy one, and I hope it will meet with a gratifying response.

The address follows:

ADDRESS BY THOMAS DIXON, NATIONAL COMMANDER, UNITED AMERICAN VETERANS, OVER FACILITIES OF WPIK, WASHINGTON, D. C., FEBRUARY 12, 1955

Patriotic Americans, this month we celebrate the birthday of two outstanding Americans, George Washington and Abraham Lincoln.

It is important indeed that we pay respectful tribute to those Americans who laid the solid foundation for our great country, the United States of America.

There are many dark clouds of war today hovering over the security of our democratic form of government. I feel hopeful that our present-day leaders will have the wisdom to meet these vital issues in the same manner in which George Washington and Abraham Lincoln met the issues of their times.

It's a pleasure indeed to note that Congress gave the green light to President Eisenhower so that he may use every facility at his military command to stop the spread of that damnable philosophy of communism.

It is certainly to be hoped that we can avoid another shooting war. But should a shooting war be forced upon us, this will give the United States a chance to put the members of the United Nations to test. Those members, especially of the free countries, should be called upon to take up arms as they did during the Korean war.

If other members of the United Nations refuse to go to war to protect world freedom, then Congress should enact H. R. 3296, which was introduced by Congressman USHER L. BURDICK, of North Dakota. This resolution calls for the withdrawal of our membership from the United Nations. Then we should expel the United Nations from this country, because it would have proven itself absolutely worthless as an effective instrument to bring about world peace.

Just look at the trouble and unrest which we are having in our educational institutions. This unrest can be laid right at the doors of the United Nations. American chil-

dren deserve to be taught the outstanding advantages of American ideals and to be proud of their American patriotism.

Well, here is some good, really American news. A group of World War I veterans has started a movement to build a shrine honoring the American Indians. This shrine will be located here in our National Capital, and will be known as the Temple of the Great Spirit.

Good people all over the world have awakened to the fact that the need of today is moral rearmament. Consequently, the building of this temple fits into the movement of moral rearmament.

First and most important, the paleface fathers must remember that we owe a debt to the American Indians for the many injustices which the white man has inflicted upon them, and this debt cannot be paid in cash.

Therefore, the financing of this temple by the paleface fathers would at least show genuine acknowledgment of the sacrifice, injustices, and moral destruction which the American Indians have been, and are still subjected to.

We should always remember that the American Indians were the original owners of every inch of land in these United States of America. And we should also remember that this Indian land has produced more paleface millionaires than any other country.

The record of services rendered, in deeds and action, by the American Indians to the white man and to the Government of the United States of America is so numerous and outstanding that it is impossible to cite all of them on this broadcast. However, if you will listen in on this station next Saturday, same time, I will refresh your memory on many other contributions made by the American Indians for the welfare of this country.

The building of this shrine, financed by public subscription from the paleface fathers, will have a twofold effect. First, and most important, it will show the Indians that their paleface fathers have finally recognized a debt of gratitude which justly should have been paid many, many years ago. Second, the building of this shrine will also put a stop to the propaganda used by the Communists to poison the minds of the Indians, so as to win them over to communism.

It is public knowledge that communism has made great progress on Indian reservations. What is the principal argument which the Communists use? This is their main argument: "What has the white man done for the Indians?" "Nothing, absolutely nothing!" "The white man has stolen all of your land, and also deprived you of your original forms of worshipping."

During this great surge of moral rearmament, what could be better than to extend an invitation of the Great Spirit to come back to the land of his origin—America.

And what better invitation could there be than to erect a temple to The Great Spirit here in our National Capital? Why, many small foreign countries have constructed beautiful temples in Washington!

The temple which the founders have planned will have small chapels to accommodate as many as five tribes simultaneously, and they will be able to worship in their own dialects, and in accordance with their original methods of worshipping, while visiting Washington. There will be, of course, a principal chapel where regular services will be held, and these services will be open to anyone who may wish to attend. A regular ordained minister of Indian parentage will be in charge of this temple. This main chapel upon proper application also will be open to any visiting ordained minister who desires to preach the word of God.

However, the general public will not be permitted to attend the tribal rituals without a written permit from the tribal leaders.

Another restricting and proper feature of this temple and its pulpit is that it will be used for sacred rituals only, and will not be used for secular or political propaganda.

It will add to the historical background and ecclesiastical beauty of Washington, and will be a center for visiting students and sightseers.

All of the God-loving people who appreciate this great movement and would like to learn more about it are requested to send their names and address to post office box 2518, Washington, D. C. Your personal ideas on this long overdue recognition of our first citizens—the American Indian—will be appreciated.

I thank you.

Producers Have Big Stake in Exports

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published by the Bureau of Foreign Commerce of the United States Department of Commerce:

PRODUCERS HAVE BIG STAKE IN EXPORTS

United States exports of merchandise in 1953, totaling approximately \$16 billion, amounted to about 4½ percent of the gross national product, or over 8½ percent of the value of movable goods—at early stages of distribution—produced in this country.

These ratios were similar to those for the preceding year and only slightly lower than the average for the entire period since World War II.

In recent years, some 3 million workers have been employed in the production of United States exports and in service activities associated with them. Nearly all United States producers have some stake in export markets, many selling abroad much larger percentages of their goods than the national averages indicate.

Exports of leading agricultural products traditionally have represented exceptionally high percentages of production, but exports of machinery and a wide range of other products also comprise very substantial proportions of production.

Agricultural exports declined appreciably in the 1952-53 marketing year as compared with those of the preceding year, stemming primarily from declines of about one-third in exports of wheat and over two-fifths in cotton. Despite this shrinkage, however, the proportions of wheat and cotton exported from the 1952 crops remained quite sizable—about 25 and 20 percent, respectively.

Tobacco and soybean exports decreased only moderately, and rice exports remained close to the level of the preceding year, so that the ratios of exports to production of these commodities were little changed. About 56 percent of the rice, about 22 percent of the tobacco, and 14 percent of the soybeans were exported in the 1952-53 marketing year.

Exports of cotton, tobacco, and soybeans have increased in the current marketing year, and thus the proportions of the 1953 crops exported will be somewhat larger than those of the 1952 crops.

Exports of machinery and vehicles, which represented over one-third of total exports in 1953, include many products for which foreign markets are of great importance.

In 1952, for example, exports of track-laying tractors comprised 37 percent of their production; exports of construction machinery and textile machinery represented over 20 percent of production; and exports of wheel tractors, agricultural machinery, motor trucks, machine tools, office appliances, and refrigerators made up between 10 and 15 percent of production.

Exports of all these products, with the exception of tracklaying tractors, declined in 1953, and the ratio of exports to production also appears—as far as production data are available—to have fallen slightly. Track-laying tractor exports, however, increased more than two-fifths, and the percentage of output exported rose to 45.

In addition to the agricultural and machinery products already mentioned, export sales of a variety of other products amount to 20 percent or more of output. This group

includes lubricating oils, sulfur, resin, and such chemicals as DDT, copper sulfate, carbon black, and penicillin.

Even where the ratios are much lower, the significance of exports as a vital marginal element of sales and profits is considerable. This is true, for instance, of passenger automobiles, steel, and many textile manufactures, for which the proportions of output exported fall in the 3-7 percent range.

In table 3 production and export data are shown for an extensive list of commodities, representing half of United States exports in 1953. The report covers many of the leading products and some of the principal product groups in United States exports, and also shows data for numerous items included in other important broad classes of export goods which are not covered comprehensively because of a lack of directly comparable data on both exports and production.

The relative importance of the various classes of goods in total United States exports in 1953 and the extent to which each class is represented by data in table 3 are shown in table 4.

TABLE 1.—United States production of movable goods and the proportion exported, 1929, 1933, 1937, 1939, and 1947-53

[Value in millions of dollars]

Year	Agricultural products ¹	Manufactures ²	Mining ³	Freight receipts ⁴	Total ⁵	Exports United States merchandise ⁶	Exports as percent of total
1929	13,003	30,591	4,908	5,100	53,602	5,157	9.6

1947	32,372	74,426	9,610	9,200	125,608	15,160	12.1
1948	32,842	82,000	12,273	10,800	137,915	12,532	9.1
1949	30,133	75,367	10,580	10,000	126,080	11,936	9.5
1950	30,335	89,750	11,855	11,000	143,540	10,142	7.1
1951	35,042	102,086	13,524	12,900	163,552	14,879	9.1
1952	34,517	108,477	13,430	13,300	169,724	15,039	8.9
1953	33,056	117,500	14,346	14,200	179,102	15,626	8.7

¹ Cash receipts from crops and livestock and products, and value of home consumption as reported by Department of Agriculture.

² Value added by manufacture; data as reported in the Census of Manufactures through 1947; estimates for later years.

³ Value of crude or prepared minerals at the mine, well, or plant: Bureau of Mines data.

⁴ Estimate of cost of moving goods from place of production to points of distribution or exportation: based on freight revenue of steam railroads, of intercity motor carriers of property, and of pipelines as reported by the Interstate Commerce Commission.

⁵ Total of items shown representing a rough estimate of the value of production of movable goods at point of distribution or export. Figures are not adjusted for price changes.

⁶ Shipments to foreign countries as recorded by the Bureau of the Census. In recent years the data include, besides commercial goods, foodstuffs and other supplies sent to civilian populations through the U. S. Armed Forces stationed abroad, shipments under the ECA (Economic Cooperation Administration), and mutual security program and other aid and relief shipments whether financed by Government or by private agencies. Shipments to U. S. Armed Forces abroad for their own use are excluded from export statistics.

TABLE 2.—United States merchandise exports and imports and export surplus in relation to gross national product, 1929, 1933, 1937, 1939, and 1947-53

[Value in millions of dollars]

1952	347,956	15,806	4.5	11,503	3.3	4,303	1.2
1953	367,247	16,437	4.5	11,904	3.2	4,533	1.2

¹ Department of Commerce estimates.

² Merchandise trade as recorded in balance-of-payments statistics, representing all transfers of ownership of movable goods between the United States and foreign countries.

TABLE 3.—United States exports of leading commodities in relation to production, 1939 and 1949-53

Export figures include foreign-aid shipments. (See footnote 6 to table 1.) Figures for most agricultural commodities are for crop-years as explained in footnotes 7 and 19. All other figures are for calendar years except as noted. For certain agricultural commodities (as noted) export figures include estimates of the more important processed forms, but for other crude and semimanufactured goods, such as raw cotton and

steel, no attempt has been made to include their equivalents sent out as finished products. Values of production are f. o. b. factory, while values of exports are f. a. s. port of export, and, therefore, percentages based on values may somewhat overstate the part of production exported.

[Letters in parentheses refer to sources of data; explanation of sources follows footnotes]

¹ Data on which percentages are based for 1939, 1949, and 1950, are available in the June 30, 1952, and July 27, 1953, issues of Foreign Commerce Weekly.² Carcase weight equivalent.³ Production data include only factory production and exclude tallow produced on farms or by local butcheries or small renderers.⁴ Excludes dry cream, buttermilk products, and milk products for animal feed.⁵ Solid nonfat content, converted from gross product weight.⁶ Not available.⁷ Gross weight.⁸ Production data are for crop harvested in the preceding calendar year. Exports cover the approximate period in which the crop was marketed, that is, a fiscal year ending in the year shown, as follows: Year ending June 30: Barley, wheat, dried ripe peas, apples, apricots, fresh grapes, peaches, pears, prunes, plums, canned fruit, dried fruit, peanuts, flaxseed, and cottonseed. Year ending July 31: Rice and cotton. Year ending Aug. 31: Dried ripe beans, raisins, peanut oil and hops. Year ending Sept. 30: Corn, grain sorghums, and soybeans including soybean oil. Year ending June 30, Sept. 30, and Dec. 31: Leaf tobacco, depending on marketing periods for the several types.⁹ Export data include grain equivalent of malt.¹⁰ Export data include grain equivalent of meal and grits.¹¹ Export data include brown, broken, and brewer's rice, rice screenings, and rough rice in terms of milled rice.¹² Milled rice equivalent.¹³ Export data include grain equivalent of flour made wholly from United States wheat.¹⁴ Excludes soybeans, mung beans, garbanzos, and California blackeyes.¹⁵ Cleaned equivalent.¹⁶ Excludes cowpeas and chickpeas.¹⁷ Includes apples, applesauce, apricots, berries, cherries, grapefruit segments, peaches, pears, plums, prunes, fruit salad, and fruit cocktail.¹⁸ Cases of 24 No. 2½ cans.¹⁹ Excludes dates.²⁰ Production data are for crop from bloom of preceding year, harvest completed in the year shown. Export data cover fiscal year ending August 31 for fresh grapefruit, and fiscal year ending October 31 for fresh oranges and canned citrus fruits and juices.²¹ Export data include juice, juice concentrates and grapefruit segments in terms of fresh fruit.²² Includes tangerines. Export data include juice and juice concentrates in terms of fresh fruit.²³ Export data include canned and dried fruit in terms of fresh fruit.²⁴ Production data cover only commercial apple areas.²⁵ Export data include oil in terms of oilseed equivalent; data for 1952 and 1953, however, exclude some secondary oils not reported by kind.²⁶ In the shell equivalent.²⁷ Export data for 1952 and 1953 exclude secondary oil.²⁸ Export data for 1952 and 1953 exclude secondary oil, except deodorized and hydrogenated.²⁹ Farm sales weight.³⁰ Production data are for pack of preceding calendar year.³¹ Includes footwear and house slippers of leather and other materials except rubber. Manufacturers' shipments data represent production.³² Data are for cotton broad woven goods, excluding specialty items, such as tire fabrics, tapestry, upholstery, and drapery fabrics, pile fabrics, table damask; blankets towels and toweling; bedspread fabrics; and knit goods.³³ Export data include knit fabrics in 1951.³⁴ Data are for rayon broadwoven goods, excluding specialty items, such as tire fabrics, pile fabrics, and drapery and upholstery materials.³⁵ Data include hosiery of silk, synthetic fibers cotton, and wool, except exports exclude the small item of wool hosiery. Manufacturers' shipments represent production.³⁶ Data are for crop year ending Mar. 31.³⁷ Export data include sawed ties and beginning 1952 also include bawn ties.³⁸ Data exclude bristles, Bristol board, and building board.³⁹ Production and export data for 1952, and exports for 1953 exclude papereries.⁴⁰ Data include motor fuel, natural gasoline, blending agents, naphtha, solvents, and other light finished products.⁴¹ Export data include heavy road oil not included in production.⁴² Export data include some finishing cements not included in production.⁴³ Mine shipments represent production.⁴⁴ Manufacturers' shipments represent production.⁴⁵ Net shipments excluding intraindustry transfer, represent production. Castings are excluded. Large shipments to United Kingdom, mainly in the form of ingots, account for most of the increase in exports in 1952.⁴⁶ Exports include long ternes and waste-waste tinplate.⁴⁷ Excludes fittings.⁴⁸ Total shipments (shipments for use by the same company, or an affiliate, subsidiary, or parent company, and for sale to other companies) represent production.⁴⁹ Shipments for sale of commercial steel forgings represent production.⁵⁰ Shipments (in terms of steel consumed in the manufacture of cans) represent production. Exports are packers for cannery type cans.⁵¹ Export data include hand-operated dies which are not included in production.⁵² Exports exclude the small item of ores and also manufactured products.⁵³ Total production includes primary production from domestic and foreign ores and secondary production from old scrap including imported scrap.⁵⁴ Primary production from domestic and foreign ores.⁵⁵ Exports consist largely of imported copper which has been refined in the United States; data exclude insulated copper wire and other manufactured products.⁵⁶ Refined primary production from domestic and foreign ores.⁵⁷ Total production includes primary production and pig lead recovered from scrap, largely from old scrap; antimonial lead is excluded.⁵⁸ Primary slab zinc production from domestic and foreign ores; secondary production from old scrap zinc is relatively small.⁵⁹ Manufacturers' sales of standard-size appliances represent production.⁶⁰ Production data exclude rebuilt machines and machines designed primarily for home workshops, laboratories, etc. Exports exclude "special category" items.⁶¹ Export data exclude food wrapping and packaging machinery.⁶² Export data include used and rebuilt typewriters.⁶³ Production data include fare boxes and registers; these are excluded from exports.⁶⁴ Production data include a small quantity of engraver's materials and equipment; these items are not included in exports.⁶⁵ Production and export data represent factory sales other than to Federal Government agencies. Export data include complete vehicles whether shipped as such or as parts for assembly abroad and do not take account of the considerable item of "parts for assembly abroad" which are used in combination with parts made outside the country, especially in Canada.⁶⁶ Export data exclude commercial cargo transports.⁶⁷ Production and export data include railway, switching, mine and industrial types, new and rebuilt; exports include used locomotives also.⁶⁸ Production data exclude rebuilt cars; exports include used and rebuilt in 1951.⁶⁹ Sales represent production.⁷⁰ This figure somewhat understates the percentage exported. The total obtained by adding the value of shipments of the biological, medicinal chemical, and pharmaceutical industries, on which this percentage is based, overstates the actual production to the extent that the biologic and medicinal chemical industries furnish materials for the pharmaceutical industry.⁷¹ Export data include weed killers in 1951; including this item the percentage exported in 1952 would be 20.9.⁷² Production data exclude relatively small amounts produced by the electrolytic process.⁷³ Phosphate rock sold or used by the producers represents production.⁷⁴ Includes asphalt prepared roofing and saturated felts, excludes tar saturated felts.⁷⁵ Export data exclude "special category" items.

SOURCES OF DATA

Export figures except those covered by notes (a), (k), and (r) are from foreign-trade reports of the Bureau of the Census.

Production figures except those covered by notes (a) to (j) and (l) to (t) are from Bureau of the Census. Monthly figures for many of the commodities appear in the Survey of Current Business.

(a) Agricultural Marketing Service. Export figures are based on data reported by the Bureau of the Census.

Washington: Cultural Center of the World

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. THOMPSON of New Jersey. Mr. Speaker, in his program Person to Person, Edward R. Murrow interviewed, last November, the distinguished American, Lillian Gish. She devoted practically all of her time to advocacy of the establishment of a Ministry of the Fine Arts as a department of the Federal Government with a Secretary of Cabinet rank. She argued that we are now coming of age in cultural matters, and such an agency is a part of the government of practically all British and European countries.

In his message on the state of the Union the President declared that—

In the advancement of the various activities which will make our civilization endure and flourish, the Federal Government should do more to give official recognition to the importance of the arts and other cultural activities. I shall recommend the establishment of a Federal advisory commission on the arts within the Department of Health, Education, and Welfare, to advise the Fed-

eral Government on ways to encourage artistic and cultural endeavor and appreciation. I shall also propose that awards of merit be established whereby we can honor our fellow citizens who make great contributions to the advancement of our civilization and of this country.

A number of bills have been introduced in the 84th Congress to advance the proposals outlined above, some of which have already reached the hearing stage. The gentleman from New York, EMANUEL Celler; the gentleman from Montana, LEE METCALF; the gentleman from New York, ADAM C. POWELL, Jr.; the gentleman from Pennsylvania, GEORGE M. RHODES; and myself have offered the American National Arts Act, which was referred to the House Education and Labor Committee for its consideration.

A second bill, creating a Federal commission to formulate plans for the construction in the District of Columbia of a civic auditorium, including an Inaugural Hall of Presidents and a music, theater and fine arts, and mass communications center, was referred to the Committee on the District of Columbia of the House of Representatives. Hearings have already begun on this bill before a special subcommittee whose chairman is the able gentleman from Louisiana, JAMES H. MORRISON.

The broadest kind of support has developed for this bill which would give the Nation's Capital the cultural facilities it has lacked for 155 years, facilities possessed by large and small European cities and by many cities in our own country.

Legislation to make Washington the cultural center of the world has been introduced by the gentleman from New York, EMANUEL Celler; the gentleman from Pennsylvania, GEORGE M. RHODES; the gentleman from Minnesota, ROY W. WIER; the gentleman from Connecticut, ALBERT P. MORANO; the gentleman from New York, ADAM C. POWELL, Jr.; the gentleman from Minnesota, JOHN A. BLATNIK; the gentleman from Arkansas, OREN HARRIS; the gentleman from New Hampshire, CHESTER E. MERROW; the gentleman from New Jersey, HARRISON A. WILLIAMS, Jr.; and myself.

Among the many distinguished witnesses who have testified in support of the proposed legislation are Mrs. A. Paul Hartz, legislative chairman, General Federation of Women's Clubs, and Robert W. Dowling, chairman, board of directors of the congressionally chartered American National Theater and Academy. I include excerpts from their testimony here for its great informational value:

EXCERPT FROM THE STATEMENT OF MRS. A. PAUL HARTZ, LEGISLATIVE CHAIRMAN, GENERAL FEDERATION OF WOMEN'S CLUBS, WAVERLY, VA.

If the cultural endeavors of a people are a measure of their stature, the passage of H. R. 1825 brooks no delay. This bill which would create a Federal commission to formulate plans for the construction in the Nation's Capital of a civic auditorium with connected facilities making it a center for music and the fine arts is a first step toward overcoming a serious cultural lag.

Appreciation of fine arts knows no national boundaries. It is in this realm that we can hope for the greatest understanding among the peoples of the world. A building dedicated to the purpose and living expression of fine arts in the District of Columbia might well symbolize the cultural bonds which give the greatest promise of lasting peace.

In this day of uncertainty there is a continuing battle for the minds of men and we must properly gage not only our military and economic strength but our cultural strength as well. If the final victory is to go to the forces of freedom, we must not ignore this significant endeavor. Our failure to project to other countries our appreciation of our cultural heritage is a serious handicap as we compete with the Soviet Union in the cold war.

The General Federation of Women's Clubs urges the passage of H. R. 1825.

STATEMENT OF MR. ROBERT W. DOWLING, CHAIRMAN, BOARD OF DIRECTORS, AMERICAN NATIONAL THEATER AND ACADEMY

Mr. Dowling. It is a privilege to speak with you about this. It has been very dear to my heart and to the interests of ANTA for many, many years.

I would like to call attention to something pertinent to the question of whether we cannot have a place where foreign visitors, painters, sculptors, and others can exhibit their works here in America.

This year the State Department gave me the privilege of organizing an exhibit of American art in Paris during April, May, and June.

The French Government put at our disposal 5 national theatres, their opera house, Comedie Francaise and others, where we display American painters' works and sculpture and where our Philadelphia orchestra will perform in the opera house, the ballet of New York and 2 plays and the musical comedy "Oklahoma."

There is no proper place for such a performance in Washington. If we were to have reciprocal visits—and I am frequently asked when I have visited national theater groups from Salzburg, Austria, and all the way to Scandinavia and through the rest of Europe, "Where would we play if we came?" or "Where would our works be shown—our paintings and sculptures?"

We have the privilege of owning some theatres in New York and I am familiar with the problems of booking and I think we plan to bring the Shakespeare Theatre from Stratford next fall.

It is very difficult to know whether we can play them. They cannot play in Washington because the National Theater has an open system of booking which takes place for 2 weeks at a time but when they come to us they will have performed in New York where theaters are customarily booked from October or November to June and July and sometimes longer.

It is very difficult to hold out the 2 or 3 weeks that a national company visiting from Europe can perform. We brought the Greek National Theater to New York and we would like to get a theater—the right kind of a theater—and every single seat was taken for every performance.

I call your attention to the fact that although we may have 30 theaters in New York and 2 in Washington and other cities have 1 or 2 or 3 theaters, there is no com-

parable place where foreign artists and companies and national theaters can visit and perform. And as our State Department has now placed in the hands of "ANTA" the International Exchange Program in which we are sending performers to Asia, South America, Central America, and Iceland, and European countries, we have no place to invite them in returning our visits. It is very vital to our cultural exchange program that we have such places.

Therefore, we urge you gentlemen to guide this bill through to a point where it can have the benefit of the Commission's more thorough study of the problem.

I have no other point to raise unless you have some questions.

Mr. MORRISON. I understood you to say there was a private program the United States was putting on in Paris and that they wanted to reciprocate and wanted to come to Washington but that the facilities were not here to receive them.

Mr. DOWLING. That is true. Not only for Paris but for European countries, countries even that are semibehind the Iron Curtain—Yugoslavia, where we are now sending our ambassadors and culture. If they were to come here we would have no place for them to use.

Mr. MORRISON. I was quite impressed with the point you raised that we were sending entertainment to different parts of the world. It is just as important in one sense to have them go there and to have theirs come to the United States. You made that point and they cannot come here because we do not have the facilities to house them here?

Mr. DOWLING. That is right. They always ask me when I visit those countries. While we would like to play in your National Theater and I have to say, There is not any except one we lease in Washington which is not a national theater but just a commercial venture.

Mr. MORRISON. It is national in name only.

Mr. BROYHILL. No questions.

Mr. MORRISON. Thank you very much for your contribution to the committee.

Progress Has Its Problems in Ozarks

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. TRIMBLE. Mr. Speaker, I have been raising a rumpus from the beginning about the closing of so many of our fourth-class post offices. I thought I had used some good language in my protest and still think I have. However, it cannot compare with that of my friend, Otto Ernest Rayburn, of Eureka Springs, Ark., in the district which I am honored to represent, who has this to say in the Arkansas Gazette of February 13, 1955:

PROGRESS HAS ITS PROBLEMS IN OZARKS

(By Otto Ernest Rayburn)

ONLY TRADITION SUPPORTS THE COUNTRY POST OFFICE

The little country post office of the Ozarks is passing out of the picture and it is with deep regret that we see it go. The Government at Washington contends that the fourth-class offices in isolated areas do not pay off. That is true. But it is also a fact that no post office—first, second, third, or fourth class—pays its way. All must be subsidized for the convenience of the people. The tendency at present is to replace the

little fourth-class offices with motorized rural routes. This may be a progressive step from the standpoint of economy, but it is a blow at tradition, and the folks back in the hills don't like it.

Several years ago a poetic tribute to the country post office, by J. A. Dunlap, was printed in Ozark Life magazine. It has nostalgic appeal to all who know this rural institution as a social center. Here is the poem:

"The post office stood in the back of the store Behind the old stove and the crude cuspidore, The old stove was burnt to a dull, dingy brown, And the cuspidore welcomed the men of the town. When mail time arrived, the whole town was there, The matron, the merchant, the maiden, so fair, Then back in the office distinctly we'd hear, Them sorting the mail full of trouble and cheer. And when the old window went up with a wham, We crowded around in a sociable jam, All eager to hear from the folks that we knew Or hoping perhaps for a check overdue; A place for a smile, but no place for a frown The post office stood in the dear old home town."

The little post office in the Ozarks serves the people in many ways. It is frequently located in the back of a general store where folks come to trade and loaf, to swap news and tell tales. It is convenient to stop at the store for a twist of tobacco or a poke of salt and pick up the mail. If one wishes to send a money order to the mail-order house is isn't necessary to stand out in the weather and wait for the carrier. The post office does not have a big turnover, but it helps the merchant in his struggle to make a living and serve the people. The rural route may save the Government a little money, but it is "robbing Peter to pay Paul." The convenience of the people should be Uncle Sam's concern.

In many sections of the Ozarks, motorized rural routes are impracticable because of the condition of the roads. Many of the smaller streams are not bridged. During the rainy season and in winter sleet and snow, the carrier is slowed down and the patron may have to stand by his mailbox for hours to get a money order or to sign for a registered letter. Parcel-post delivery is impractical because the mailboxes are not large enough to accommodate large packages.

The social setup of our rural communities has been greatly disturbed in recent years by modern innovations. First came the consolidation of schools and the community center was destroyed. Many rural churches are now struggling to survive as a lot of people prefer to drive to town to attend services. Now the post office must go in the name of economy. Progress has its price and the oldtimers who hate to see tradition disturbed wonder if it is worth it.

The 37th Anniversary of Lithuania's Independence

EXTENSION OF REMARKS

OF

HON. WILLIAM E. McVEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. McVEY. Mr. Speaker, today, February 16, marks the 37th anniversary

of Lithuania's independence, and I am happy to have the opportunity of paying tribute to the people of that gallant little nation. During her brief period of independence, from 1918 until 1940, she made great progress in economics and education, and outstanding achievements in commerce, agriculture and industry. It was with a deep sense of satisfaction that we watched this young republican government honorably fulfill her obligations as a member of the family of free nations.

Unfortunately, this period of freedom came to an abrupt end when, on June 15, 1940, the Soviet Army marched in and took over. Since that day, her people have endured untold hardships at the hands of the aggressor. The American people have never recognized the incorporation of the free Republic of Lithuania into the Soviet Union. We have the highest respect for this noble people who are deprived of so many freedoms as a country behind the Iron Curtain and a genuine interest in her welfare. Her spirit has not been crushed, and her present bondage will be an inspiration for future generations to carry on with that indomitable spirit that has brought her through so many trying situations in the past. It is the hope of all of us that one day soon Lithuania will again throw off the yoke of the oppressor and take her rightful place among the freedom-loving peoples of the world.

Juvenile Delinquency and the American Clergy

EXTENSION OF REMARKS OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 26, 1955

Mr. YATES. Mr. Speaker, Judge Julius H. Miner is a distinguished member of the circuit court of Cook County, Ill., who has made an excellent study of the problem that has been troubling the Congress and the Nation for many years. His address recently given entitled "Juvenile Delinquency and the American Clergy" will be of much value to the Members and accordingly, I am pleased to include it in my remarks. The address follows:

JUVENILE DELINQUENCY AND THE AMERICAN CLERGY

(Address delivered by Judge Julius H. Miner, circuit court, Cook County, Ill., before the Chicago Methodist Ministers Association, at the Chicago Temple, October 4, 1954)

I am grateful for the privilege of addressing you on the subject of juvenile crime. It is our major national problem. It is so menacing our general welfare that the American clergy of all denominations should help to mobilize every resource to alleviate this critical condition.

Crime in the United States is perilously on the upswing. Year after year the appalling tide of criminality continues to rise. Mr. J. Edgar Hoover reported that 1,788,612 serious crimes were committed in 1950; 1,882,160 in 1951; 2,036,510 in 1952, and 2,159,080 in 1953. He also reported recently

an 8.5 percent rise in the national crime rate in the first 6 months of 1954 as compared with the same period in 1953. He estimated that during the first 6 months of this year the crime of murder, manslaughter, rape, and assault to kill was committed every 4.3 seconds. These figures indicate that 1954 will be a record crime year. Criminologists predict 4 million major crimes annually by 1960.

Mr. Bertram B. Beck, director of the Special Juvenile Project in the United States, said: "The problem of juvenile delinquency has been underestimated, not overestimated. The juvenile crime rate is one of the most alarming threats in our Nation today." He likened it to "cancerous cells on the social organism which, unless combated, can spell destruction for the entire being." There has never been a parallel to this depravity in the history of our Nation.

It was reported at the Mid-Atlantic Conference on Correction, held in New York, that this country leads the world in crime. The population of State and Federal prisons has increased 7 times as fast as the national population in the last 25 years. This calamitous condition approaches national disgrace and disaster.

According to FBI reports, law enforcement and all phases of crime costs our Nation \$20 billion annually, an average of \$495 yearly per family. Mr. Robert H. MacRae, director of the Welfare Council, figures that Cook County, Ill., spends \$2,958,000 a year to maintain juvenile delinquents in corrective institutions. Mr. Hoover declared that for every dollar we pay for education we spend \$1.82 to combat lawlessness, and for every dollar contributed to churches \$10 goes to fight crime.

United States Senator ROBERT C. HENDRICKSON, chairman of a subcommittee to investigate juvenile delinquency, reported on November 11, 1953, that "1 million children between the ages of 10 and 17 will get into trouble with the police this year, and by 1960 that figure may well reach 1,500,000 each year." He said that in Washington, D. C., juvenile delinquency has risen 60 percent in 1 year, and in the Nation 30 percent since 1948. The rate of offenses by juvenile criminals in Manhattan is more than three times that of the average for all cities in the Nation, according to reports by the National Federation of Settlement and Neighborhood Centers.

We read daily of teen-age sluggings, auto thefts, mob riots, sex orgies, narcotic addictions, and other grave offenses. Juvenile crime appears no longer confined to any social class or type of neighborhood. It has spread everywhere. Last year an estimated 500,000 boys and girls were brought to the attention of American juvenile courts. At least twice as many were handled by police without being referred to the courts, and no one can estimate the number of thousands who escaped the attention of legal authorities. According to the Illinois State Bureau of Identification, out of a total of 80,772 crimes, juveniles committed 36 percent of the murders, 67 percent of the robberies, and 69.5 percent of the burglaries.

Mr. John Meegan, superintendent of the Chicago Parental School, reported recently that local juvenile delinquents today are comparatively younger and are committing acts of greater violence than ever. According to FBI records, this is true everywhere. Younger patients are going into clinics for treatment of venereal diseases, and sex problems now are found in the 7th and 8th grades. The number of young unwed mothers has increased 88 percent since 1945. A youngster recently arrested in Manhattan was asked how many of his young friends were using drugs. He replied, "Forty or fifty, about half girls."

Four Chicago youngsters admitted stealing 14 cars in 2 weeks. One pleaded guilty before Judge McSweeney for snatching a

purse to settle his gambling debts. More than 500 teen-age hoodlums broke loose in 1 of New York's worst riots, terrorizing passengers and ransacking subway stations. A Chicago juvenile was shot and others were injured as 50 youths wrangled in a brawl between 2 neighborhood gangs. Two young girls, 14 and 16, admitted to the West North Avenue police 47 burglaries, robberies, and sluggings. One of them pulled a pistol on her stepfather. Seven New York young boys were jailed for whipping and burning a 14-year-old girl. Four Brooklyn youths, 15 to 18, committed two vicious murders for the thrill of it. I sentenced two juvenile rioters to the penitentiary for murder. These few cases are cited merely to illustrate the general run of juvenile delinquencies.

Senator HENDRICKSON said that in reply to a questionnaire circulated by the sociology department of a prominent college, many of the students said they believed that stealing and robbing may be anti-social, but did not constitute grave crimes; that there is nothing particularly wrong in violating sex codes, and they brushed aside lying and cheating as not delinquent.

It is generally conceded that our educational system needs a complete revision in the light of criminal tendencies among youngsters, particularly in its disciplinary policies. There has been much too much pampering of children by teachers as well as by parents. Many a hot seat applied in time over a parent's knee might have forestalled a hot seat in the electric chair. In a recent article Mr. Hoover urged increased parental responsibility and augmented disciplinary power of schoolteachers.

A variety of causes and reasons are assignable to this deplorable situation—too few and underpaid police and teachers—illegal sale of liquor and dope—war tension and hysteria—overindulgence of children—racial differences—salacious literature—inadequate housing—immorality and intemperance at home. Mr. Hoover also emphasized, "There can be no real doubt, it seems to me, that the movies, television and comic books are purveying violence and lust to a vicious and intolerable degree."

Juvenile delinquency and adult crime cannot be solved independently of each other. Corruption in high office and general lack of respect for law and order are top contributors. Joseph D. Nunan, Jr., formerly our Nation's head tax collector, was sentenced to prison for 5 years for income-tax evasion. Scores of congressmen, mayors and other prominent public officials have been convicted for flagrant violations of their respective trusts. Many exclusive clubs and organizations operate with immunity slot machines and other gambling devices. Gambling is illegal wherever it is practiced.

Whatever the reasons, our social forces have failed. While there is an overpowering realization nationally of the juvenile crime trend, authorities do not know how to meet the challenge. Justice Robert H. Jackson, of the United States Supreme Court, charged that "our Nation is plagued with unprecedented juvenile delinquency, gangsterism, and shocking crimes followed by long-delayed punishment, or by none." It is generally conceded that increased crime has overwhelmed and overcrowded our corrective and law-enforcing agencies. The apathy and indifference of our citizens toward the ever-mounting crime rate has been most disheartening. A United States Senate subcommittee investigating juvenile crime admitted publicly, "The Nation is losing its fight against juvenile delinquency."

What a tragedy. Is the American clergy also willing to admit defeat?

Our Nation is being crushed by crime. With all the well-intentioned committee investigations, with all the genuine efforts by schools and civic and social agencies, lawlessness continues to skyrocket. We are all faced with the challenge of finding a solu-

tion. Laws alone will not check teen-age crime. We cannot investigate, legislate, or adjudicate crime out of existence. What constructive preventive measures are there then to check the moral decadence of our youth? It troubles every parent, every judge, every educator, every criminologist, and every member of the clergy. The solution, if there is one, lies in the home and with the churches. Its prevention looms up as a religious enterprise.

One thing is certain. These millions of criminals, adults, and juveniles alike, are victims of spiritual starvation. All their evils, cruelties, and injustices are violations of the fundamental principles of God whom they have either abandoned or failed to know and worship. The laws of God and men are inextricably entwined. Consequently, they flaunt His commandments and violate our codes. They scorn tradition and defy society. Irreligion has obviously become the major contributing factor to our national juvenile crisis.

Having sat in judgment on thousands of offenders in the criminal court, murderers, robbers, rapists, burglars, etc., I have observed that over 85-percent of the criminals were nonchurchgoers. Six of them made peace with God as they mumbled prayers on their way to the electric chair. I have also presided over the divorce court for 5 consecutive years and have commiserated with more than 120,000 litigants over their domestic difficulties and those of their children. Here, too, I have found the same high percentage of nonchurchgoers. Mr. Hoover reports even a higher rate. Out of 8,000 delinquent children called to his attention only 42 attended Sunday school regularly. This is not a coincidence. Other judges as well as the files of reformatories corroborate these ghastly statistics. Jails are crowded when many of our churches are not.

Criminals are not born. They are reared in an era which has discarded morality. We worship the golden calf and ignore the Golden Rule. We place too much emphasis on material and too little on spiritual values. While our economy is busily attuned to the art of mass production, we are permitting mass youth destruction. As our scientists and engineers are making amazing progress in their fields, we are lagging in ethical understanding.

The Reverend Luther B. Osborne, of San Antonio, Tex., whose son was charged with murder, told his congregation last May, "I think more in terms of parental delinquency than of juvenile delinquency. Everyone of us, including myself, was too busy, too preoccupied with material things and selfish motives, to give youngsters the attention, care, and love they needed." He omitted even then religious inspiration.

Although public opinion is inclined to indict youth alone, the real fault lies elsewhere. Before a youngster has committed a crime, some adult has been guilty of a worse offense in neglecting to guide him properly. The flood of crime is the inescapable result of someone's failure to teach God's word to these potential juvenile delinquents, and to the current young violators doomed to be our next bumper crop of hardened prisoners. A study of 1,336 records of juvenile delinquents in Cook County revealed that 979, or 73.3 percent had subsequent criminal records. Mr. James V. Bennett, Director of Bureau of Prisons, told a senatorial subcommittee that 70 percent of the population of Federal prisons have a history of past offenses, and more than 50 percent of the prisoners have been juvenile offenders. He said, "Beyond every adult prisoner there is a shadowy image of a juvenile delinquent."

The American clergy is deserving of high tribute for many glorious achievements. It is difficult to pinpoint the responsibility for the neglect in teaching religious precepts, but the church cannot deny a share in the

failure. If it has not failed, it has not taken advantage of opportunities to fulfill its mission. Certainly, the duty initially rests upon the parents, but someone had previously overlooked training the parents in their own youth, and here again the finger points in some degree at the church. Our public and private schools are constitutionally relieved of any responsibility for religious training.

Naturally, it is essential to build up a spiritual structure at home. The parents are culpable when they fail to provide the right moral and religious atmosphere in their home. A home built on religious concepts is a fortress against crime. It has been frequently emphasized that families who pray together stay together. In religious homes children learn the necessary virtues of honor, decency, respect, and love of God and country. A child who is not disciplined at home, and does not learn obedience and authority from his parents, is ready prey for most evil influences.

What is needed uppermost is more enlightened parents to create better homes and take proper care of their children. The deplorable conduct of many parents is directly responsible for the breakdown of their children's morals and character. An 11-year-old boy who confessed starting a fire in a tenement which killed 7 persons and injured 9, admitted to me in my chambers that his father gave him cigarettes and whiskey. In New York, two lovestruck teenagers were turned over to forgiving parents after a wild spree on which they squandered almost \$10,000 in one week. In Milwaukee, a 14-year-old girl, masked and armed with a pistol, calmly helped her brother rob the Laona Wisconsin State Bank of \$11,000, and then escaped in an auto driven by her mother.

In Evanston, the young son of the president and dean of a theological seminary, confessed burglarizing a gasoline service station and stealing \$125. When informed, the reverend dean said his son had previously moved to the YMCA because "he thought he would be better off if he did not live at home."

What is more sorrowful, American home life is breaking down. About 3 out of 10 marriages wind up in divorce courts, and the rate is climbing shockingly. The March 1948 Report of the National Conference on Family Life at the White House said, "Our divorce laws are a mess. They are rotten. They aggravate a condition that is already cancerous. No language can be too strong. The judges are bitter about their impotence under existing procedures. Social workers view the legalisms and fictions of divorce with an unconcealed scorn; the press and periodicals treat the divorce laws, including the decisions of the Supreme Court of the United States with outspoken contempt."

The major causes of juvenile delinquency are emotionally demolished homes. According to Mr. John Meegan of the Chicago Parental School, 85 percent of his wards come from broken homes. Other juvenile institutions report from 62 percent to 87 percent. More divorces are granted in America per capita than in any other nation on earth, an average of 500,000 annually, not including at least as many separate maintenance decrees, and even more casual separations. In 1953, 31,980 marriage licenses were issued in Los Angeles County, while 15,668 divorces became final. We must stem this rising tide of divorces. Broken homes are the cesspool of juvenile crime. More than 380,000 youngsters are orphaned annually by our obsolete and brutal divorce laws which have not been changed materially in a century.

There are too many homes where religion is regarded as outmoded. There are too many parents who lack the educational and moral qualifications for bringing up families; too many fathers and mothers who have drifted away from religious services and into taw-

erns; or they seek other personal pleasures, without serious regard for their children's interests. There are 19 million working mothers in the United States today, and naturally, many of their children are exposed to temptations toward delinquency and crime.

The challenging need for aggressive inspirational leadership by the church in these absentee and unqualified homes is both incalculable and imperative. It is not enough to stand aghast and to say the fault lies solely with the parents. The clergy must help equip and inspire parents for their crucial role. Many parents need help with each other and with their children. Home training can never offer an adequate substitute in the religious education of a child for the planned instruction of the Sunday school, and every parent will acknowledge it.

Although the home is the most effective bulwark against delinquency, it must be reinforced by the church. Children of these millions of spiritually collapsed homes need help, and the churches can serve them well by instilling integrity and religion into their spiritually starved souls. Religiously trained children do not readily succumb to criminal temptation. Religion inspires love, not hate; integrity, not dishonesty; truth, not falsehood; law obedience, not crime.

The strengthening effect of religious training is indispensable, we know, if our children are to be law abiding. An ounce of religious direction is worth a pound of penal correction. Religion promotes that sense of moral obligation, the lack of which causes our high rate of delinquency. Warden Joseph Ragen of the Illinois State Penitentiary at Stateville, admonished, "We must return the youth to a knowledge of his proper relationship with God, and we must teach him how this relationship can be established in his daily life." Mr. Hoover, our greatest authority on crime and delinquency, makes similar recommendations, and even more emphatically, he said, "When we live close to God and believe He guides us, we get a deep and genuine conviction."

Irreligion is definitely undermining the American family. Religion is a vital factor in happy homes. The parents need spiritual guidance. Love of God holds the family steadfast. Religion demands stability in marriage. It inculcates tolerance and understanding so vital to successful home life. It embraces atonement for sin and respect for our fellow men. In the church the members of families generate love, character, sacrificial service, and self-discipline. There we find an inward reinforcement, a clearer vision of duty, a fresh faith, and renewed courage. We go into church wavering and walk out strengthened and inspired.

Church attendance is the last glimmering hope of America in its battle to curtail crime and juvenile delinquency. According to the Yearbook of American Churches for 1954, although 99 percent of the American people believe in God, only 59 percent of all Americans are church members. Conversely and tragically, 41 percent have no church affiliations. Benson Y. Landis, editor of the Yearbook, notes that statistically there is one church for around every 325 members, but only 1 clergyman for some 500 members. "This points up a continuing shortage of pastors and a lag in effort to fill thousands of vacant pulpits." Many clergymen confide that the church attendance is much smaller than the 59 percent membership indicated. Records disclose that 27 million American youths receive little or no religious training. Is it any wonder that 85 percent of our law breakers and 85 percent of our home breakers are strangers at the house of worship?

There is a woeful lack of constructive direction in family and youth problems. What an opportunity for all faiths to launch a crusade on a nation-wide scale to lead all our people to God and prayer! On this fundamental

principle we all can and should cooperate. It would bring about a greater sense of harmony among all religious forces, and impress upon them that they must stand together in this common cause to assure the survival of religion itself.

It will require more than an engraved invitation to bring the absent parents and children to the churches. We all resist insurance salesmen, but we buy insurance by the billions to protect our families. Devout parishioners and clergymen will have to sell their most attractive policy to insure the preservation of homes and the saving of youngsters from lives of crime. Religion should be easy to sell because the premium is purse cheap and the benefits are boundless, yet requires modern scientific salesmanship with an organized and intelligent appeal. Having ideals is not enough. They must be put into practice to build better citizens. Our present plight will not resolve itself automatically. We must take the offensive. This battle will be won if we have the determination to win.

Of course, we cannot expect a comprehensive change in our moral concepts within a year or two, but the trend must be established if the change is ever to be brought about. The task may not be as difficult as it first sounds. Faith is a contagious thing. Nothing can beget faith as effectively as seeing it all around us. The reward is priceless—the ultimate reconversion of America into a God-fearing and law-abiding homeland.

The clergy must impress indelibly that there is more to life than expensive cars, fancy clothes, horseracing, and nightclubs. There is conscience, brotherly love, integrity, and devotion. We must once more gage success in terms of services to our fellow men. Prevention of delinquency involves community concern for the needs of all children, on both sides of the tracks; the poor, the crippled, the white, the black, and those on relief. They are all God's children. The fundamental way to check delinquency is to help children to be healthy, happy, secure, and occupied. Youth is our greatest national asset. It must be guarded and developed for carrying on the ideals and the faith of our fathers.

Religious leaders must take advantage of the opportunity to fulfill His divine purpose. They must constantly inspire, direct, and guide our creative instincts into desirable channels. Far too many churches are used only 1 day a week, instead of being converted into carefully planned and well organized music, education, and community centers. They should provide, on a year-around schedule, constructive and attractive programs, and extend their facilities to parent-teacher and other group meetings. They should organize youngsters' summer camps, athletic leagues, wholesome competitive indoor and outdoor sports, debates and cultural events. They must serve wavering families through premarital and postmarital counseling, friendship clubs, conferences, and so forth. Yes, some few churches do, but too many consider the efforts too involved, futile, or beneath their dignities. It is one thing to talk of ecclesiastical principles, another to put them into daily dynamic action.

The clergy has the responsibility for seeing that religion takes a determined stand in the work of all organizations dealing with juveniles and families. There is a craving hunger for moral leadership, and it is both logical and essential for the churches to assume it. They should initiate, develop, inspire and cooperate with all groups for the betterment of community efforts to attract and protect youth, and counsel parents. They should not only inspire but demand appropriate and beneficial legislation and administration toward that end. They must

urge their parishioners to elect honest and competent public officials to help restore respect and confidence in Government. Who has a greater right than the clergy? Who is better qualified? Who has a more vital interest in youth and the family? Who can better organize public opinion against destructive influences, be they comic books, movies, etc. Who will dare challenge your leadership? You hold a mandate. Use it. Democracy and religion go hand in hand.

Ours is a Nation founded in the glorification of God. The Bible has been the creative force from which has sprung the freedom of our people. If we neglect that, we lose the source of our liberty. We must initiate a revival and an expansion of faith and spiritual values.

Communism has definitely sought a total demoralization of our youth. Its evil aim is to destroy the moral and spiritual fiber of our younger generation. It incites them to gross immorality, to practice sabotage and to establish a revolutionary system. It encourages them to repudiate their superiors and directs them to renounce their patriotism. It is inconceivable that 21 American prisoners of war turned their coats to show a red lining and thereby abandoned their native land. All religiously trained youths must have rebelled against them.

The difference between the two systems is not only a faith in individual enterprise, but also faith in God. Mr. Harrison Salisbury reported recently in New York Times that Russia is still telling its people that it is a waste of time to go to church, and that man can acknowledge no God but the State. Does not that make it your fight for the survival of all religions? May we never wonder, through complacency, how we lost our religious freedom. William Penn said, "Those people who are not governed by God will be ruled by tyrants."

Only cooperation among religious groups, standing together against faithlessness, can meet the threat of atheistic communism. Communism can be offset by the intensified awakening by religious leaders to reach out to every American. Religion has heretofore permeated our way of life and has guided the actions of our greatest leaders. In a plea to the entire world to pray for peace, President Eisenhower said 2 weeks ago, "We are firm in the belief that faith is the mightiest force that man has at his command." History has proved that over a long period of time, a people's vitality and strength are in direct proportion to their morality and religious practices. Many nations have recovered from economic depressions, but none have survived moral disintegration. As long as the teachings of the Bible are practiced by our people, we can be confident of our future.

There is an urgent need for the mobilization of the American clergy of all faiths. A spiritual resurgence is our greatest hope. I plead with you to summon an American Council of Churches of all faiths in this perilous hour when our concepts of freedom and of God are being savagely challenged. It is momentous for you to organize a religious crusade here at home. No church can shirk this God-given duty. It will make a profound impact upon all of us. It will inspire people in all walks of life. The American clergy must influence thinking in a world saturated with a distortion of truth, demagoguery, and rampant crime. On this national conference may well depend our future. In the words of the Great Emancipator, "We hold the power and bear the responsibility. We shall nobly save or meanly lose the last best hope on earth."

I fully believe that we can and will meet the difficult tests which lie ahead. Ours is still the greatest and noblest land with a glorious destiny, if we retain our faith in God.

Two New Ladies in the House

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include herewith the following article by William E. Bohn, from the New Leader, New York City, of February 14, 1955:

TWO NEW LADIES IN THE HOUSE

(By William E. Bohn)

We have long been accustomed to a small and decorous delegation of women in Congress. In the Senate, MARGARET CHASE SMITH has established a reputation as our most energetic and independent female legislator. In the House, Mrs. EDITH NOURSE ROGERS, of Massachusetts, and Mrs. FRANCES P. BOLTON, of Ohio, have long since won reputations for quiet effectiveness. But, as an old advocate of woman suffrage, I must confess that I have been disappointed with the modest part which women have played in our national parliament.

When I was told that there are 16 Congresswomen in the present House, I naturally sat up and got interested. This is the most numerous delegation ever sent to Washington. Nine out of the group are Democrats and seven are Republicans. I have become acquainted with only two of them—and it has proved an interesting experience. The boys who drew the cartoons of the suffragettes in the old days would feel ashamed of their performance if they could see these two legislators. Both of them are good looking, charming, well dressed, and gay.

I asked both whether the women Members have a tendency to flock together. They smiled and denied any special preference for female society. But they reported that they had often been entertained as a group since coming to the Capital, and they had found the other women agreeable and interesting. They naturally do not try to avoid them.

Mrs. EDITH GREEN, who represents the Third District of Oregon (Portland), graduated from the State university, did graduate work at Stanford, and taught school for 11 years. But when she comes around the desk in her sunny office to welcome you, you would not believe it. Since she left the classroom in 1941, she has been head over heels in educational promotion activity. Most of the time, she has been legislative representative for either the Parent-Teachers Association or the Oregon Teachers Association, the State section of the National Education Association.

Getting into politics from the school-teacher angle proved a useful experience. Mrs. GREEN learned all the quirks of politics and politicians, but, at the same time, she got acquainted with leading citizens all over the State. She found out, too, the economic interests of various groups and sections. Though she developed the broadest sort of interest in all phases of the State's welfare, I suppose it is only fair to say that the drive for more and better education is still basic in her mind. There will be a White House conference on education next fall, and this lady from the Northwest is setting her sails for it right now.

She said: "We have talked and talked and talked. We have had conferences and conferences and conferences. It's about time to get some action." I mentioned the fact that Mrs. Oveta Culp Hobby, Secretary of Health,

Education, and Welfare, is preparing a bill to appropriate \$25 million of Federal money to aid the educational systems in the 48 States. The lady's lips curled a bit derisively. "That would be just about enough," she said, "for Multnomah County." There is one thing which we can be sure of. On this issue of Federal aid to education, the new legislators—and not only the women—will be heard from. "More than a hundred billion for roads," said the lady from Oregon, "and 25 million for schools, I think we will have to do that problem over again. Maybe some people will have to be kept after school till they learn what it is all about."

Like her fellow Oregonian, Senator NEUBERGER, Mrs. GREEN is determined to do what she can for the development and public control of waterpower. As she puts it, "The very life of our people depends on the development and industrial use of power. The lumbering industry is seasonal. We have no coal. It has been impossible for manufacturing to develop. We have all sorts of unused natural resources. People in other parts of the country hear about Oregon and move out there—only to find that there is not enough for them to do. Waterpower is the very basis of our life. We must know under just what conditions it will be produced and how much it will cost."

Mrs. GREEN's PTA experience proved to be first-class training for her political campaign. The main feature of it was a distinctly feminine stunt. She delivered addresses, of course, to all the regular organizations in her district—trade unions, service clubs, chambers of commerce, churches, etc. But a good deal of her time and effort was spent on coffee hours. Women all over the district would invite 25 or 30 of their friends in for coffee and cake. The candidate would attend a half dozen or more of these meetings each day, mornings as well as afternoons.

The great advantage of this type of campaigning, Mrs. GREEN reports, was that it gave the voters a chance to talk back. They would get acquainted with their candidate, object to her ideas, tell her about their own, and question her about her plans. It is a really honest and democratic way to do things. It is small wonder that Mrs. GREEN is taking her place in Washington with a feeling of confidence. She knows the folks back home.

It was on the advice of the lady from Oregon that I visited the lady from Michigan. They form a mutual-admiration society—and they are both right. Mrs. MARTHA W. GRIFFITHS, who comes from Detroit, is taller than Mrs. GREEN, dark, striking, and distinctly persuasive. She is a successful lawyer, and in every move and word distinctly represents the businesswoman type. She was born in Missouri, graduated from the State University, and then took her law degree at the University of Michigan Law School. As was natural in the Detroit area, her first job was with an automobile-insurance company. And it was natural, too, that with the outbreak of World War II she should shift from this occupation to a place as contract negotiator for the Army.

She held this job until 1946. Then she opened her own law office and was soon joined by her husband, Hicks G. Griffiths, and by G. Mennen Williams, now Governor of Michigan. But she remained head of the firm. In 1953, she served for a time as judge in one of Detroit's criminal courts. The police and court attendants were troubled lest the lady be bowled over by the kind of people and language with which she would have to deal. But she came through with flying colors.

The new Congresswoman has served two terms as a member of Michigan's lower house. In 1952, she was defeated in a race for Congress, but the experience gained in that campaign led to her later success. It was in 1952 that she gained a national reputation for her house-trailer campaign. With a staff

of young ladies who were changed every day, she drove a large trailer from block to block, inviting the neighbors in to partake of soft drinks and talks things over. The itinerant meeting place seated about 25 people—and it was nearly always filled.

Mrs. Griffiths was astonished at the number of men whom she found at home during the morning and afternoon hours. And they all seemed pleased to take part in curbside talkfests. Often they would ask: "Who drives this big, awkward thing through this city traffic?" When Mrs. Griffiths modestly replied that she did, almost all of them would answer: "Well, you can have my vote."

These meetings were very much like the coffee hours which played such a part in Mrs. GREEN's campaign in Oregon. They gave the candidate and the citizens the chance for intimate give and take. During the campaign this energetic woman met and talked with 40,000 residents of her district. This sort of campaigning makes for honesty. Mrs. GRIFFITHS refrained from promising great things. Conscientiously, she emphasized that there are 435 Representatives in the House, each one anxious to do something for his home folks, so that each one cannot expect too much.

But Mrs. GRIFFITHS' constituents know that she is energetic and will work hard. They are well acquainted with what she did in the legislature and they take it for granted that she will go on pulling for the same sort of things. She worked, for example, for a law to insure better flour for the people of her State. She has fought for the conservation of natural resources, for the improvement of the courts, and for better control of public utilities. Though people do not expect any miracles, they feel sure that she will work effectively for every sort of progressive measure.

After talking with only two women Members of the House, I have no right to make sweeping statements about what our lady legislators will do. But I may be pardoned if I indulge in a little speculation. After hearing Mrs. GREEN talk about her coffee hours and Mrs. GRIFFITHS describe her neighborhood adventures with the trailer, I wonder whether these ladies are heralding a new political technique—a way of getting elected that is more honest and decent than the old ways—and I feel tolerably sure that these 16 women in the present House will cut more of a figure than their predecessors ever have in times gone by.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. FORAND. Mr. Speaker, today is a memorable day for all people of Lithuanian descent. It is Lithuanian Independence Day.

It is a day of mixed emotions for these gallant and freedom-loving people.

They are happy at the thought that on February 16, 1918, after 123 years under Russian rule, the people of Lithuania cast off the Russian yoke and proclaimed Lithuania an independent kingdom, and proceeded to organize their own government.

Nine months later, in November 1918, Lithuania became an independent republic and continued to enjoy happiness and freedom for more than a decade.

All this was accomplished as the result of a great nationalist political and cul-

tural revival which took place in spite of all Russian efforts to obliterate Lithuanian national sentiment.

The people of Lithuanian descent are sad today because Lithuania's hard-won freedom was again taken from her in 1940 when Soviet troops marched in and, again by force, placed Lithuania under the Russian yoke and have held her people in practical slavery ever since.

We in America, and I am sure all other freedom-loving people, have not forgotten the unfortunate plight of the Lithuanian people.

We want them to know that we support them in their fight for freedom. We are not unmindful of the fact that under present circumstances they can do little for themselves; that the present government of their country is not one of the will of the people but rather one that has been imposed upon them by force.

We have not forgotten their valiant fights of the past against tyranny and dictatorship and we entertain a fervent hope that the day will soon come, as it did in 1918, when the great people of Lithuania will rise in their wrath and again break the Soviet yoke that has been placed around their necks.

It is up to us, who enjoy freedom and liberty, to do all we can to help Lithuania regain her independence; to ratify the Genocide Convention without further delay; to help her displaced people find asylum in the United States and other free countries; to bring them hope through the Voice of America and other available means; and to continue investigation by congressional committees of Soviet seizure of Baltic States and Soviet crimes against the Baltic peoples.

This we should do as all of these means lead ultimately to the restoration of Lithuanian independence.

Trade Barriers Abroad

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. REED of New York. Mr. Speaker, we hear a great deal about United States tariff restrictions. The truth of the matter is that the other countries of the world impose far more onerous restrictions, particularly on United States goods.

The following tabulation of import and exchange permits required in foreign countries, prepared by the Bureau of Foreign Commerce as an aid to exporters, has been revised as of January 1, 1955.

These regulations apply primarily to goods of United States origin and to other goods payable in United States dollars.

In many countries foreign goods may not be imported unless they are covered by import licenses, which must be obtained by the importer. In some cases the import license must be granted before the order for goods is placed. In various countries the importer also is required to obtain an exchange permit before payment for the import may be made.

Country	Is import license necessary?	Is exchange permit required?
Afghanistan	No; but a declaration or customs permit must be obtained from border officials.	No; but permission to remit foreign exchange to exporters abroad must be obtained from the Government bank.
Anglo-Egyptian Sudan	Yes	Yes.
Arabian Peninsula areas: Saudi Arabia	No; except for International Wheat Agreement (IWA) shipments.	No; except for IWA shipments.
Aden, Bahrain, Qatar, Trucial Oman	Yes	Yes.
Kuwait, Muscat and Oman, Yemen	No	No.
Argentina	No; except for certain products subject to import quota.	Yes; permit granted only for "listed" products. Application should be filed prior to confirmation of purchase order.
Australia	Yes	No; import license carries right to foreign exchange.
Austria	Yes; for most commodities.	Yes.
Belgium-Luxembourg	Yes; either a regular import license or a declaration license.	No separate permit required.
Belgian Congo	Yes; combination import license and exchange authorization is required for all imports except shipments valued at \$100 or less, provided goods are not intended for resale.	Yes.
Bolivia	Yes; copy of permit or its number must be given to consul to obtain legalization of documents.	No; import license authorizes purchase of exchange but is not a guaranty that exchange will be granted.
Brazil	Yes	No; exchange for imports is sold at auction.
British colonies, not specified elsewhere	Yes	Yes; import license generally assures release of foreign exchange.
Bulgaria	Yes	Import license automatically assures foreign exchange.
Burma	Yes; except for Government imports.	Yes.
Cambodia	Yes	Yes; import license carries right to foreign exchange.
Canada	No; except for a few commodities.	No.
Ceylon	Yes; either a general license for commodities under open general license, or an individual license for other commodities.	Yes.
Chile	Yes; must be obtained prior to shipment of goods and copy must be sent to exporter.	Yes; in form of notation on import license.
Colombia	Import license takes the form of registry certificate issued without quota or other form of restrictions. In addition, certain food products and raw materials are subject to a prior import license from the Ministries of Agriculture and Development.	No; registry certificate carries the right to foreign exchange.
Costa Rica	No	Yes; for imports with official exchange. No permit required for imports with free-market exchange.
Cuba	No; except for wheat and wheat flour, rice, tires and tubes, red and pink beans, potatoes, condensed milk, and butter.	No.
Czechoslovakia	Yes	Import license automatically provides for allocation of necessary foreign exchange.
Denmark	Yes; with few exceptions.	Yes; for goods subject to license, copy of license with customs certification of importation takes place of exchange license.
Dominican Republic	No; except for wheat and wheat flour, rice, fertilizers, radio transmission apparatus.	No; but all applications for foreign exchange require Government approval, which is granted automatically for bona fide commercial transactions.
Ecuador	Yes; one copy must be presented in order to obtain consular legalization of prescribed documents.	No; import license carries the right to foreign exchange (Central Bank of Ecuador).
Egypt	Yes; unlicensed imports are subject to confiscation.	Yes.
El Salvador	No	No.
Ethiopia	No; except on products subject to export license in country of origin.	Yes.
Finland	Yes	No separate permit required; import license carries right to foreign exchange.
France	Yes; obtainable for "essentials" only.	No separate permit required; import license carries right to foreign exchange.
French overseas territories, not elsewhere specified, except French Somaliland.	Yes	Yes; import license carries right to foreign exchange.
French Somaliland	No	No.
Germany, Federal Republic (including Western Berlin)	Yes; also procurement authorization except for items on dollar import free list.	Yes; import and payments license combined on one document.
Germany, Soviet-Occupied Zone	Yes; the Government monopolies for foreign trade are the only importers.	Yes.
Greece	No; except for a few luxury items.	No; but applications for foreign exchange must be approved by the authorities who determine whether imports will be financed by procurement authorizations of the Foreign Operations Administration or by the dollar resources of the Bank of Greece.
Guatemala	No; except for wheat and wheat flour, strong boxes, and certain safety vault doors.	No.
Haiti	No; except for wheat quota imports and tobacco products.	No.
Hashemite Jordan Kingdom	Yes	Yes.
Honduras	No; except for alcohol.	No.
Hong Kong	Yes; for dutiable, strategic, or short supply goods.	No.
Hungary	Yes	Yes.
Iceland	Yes; except for items on "special conditional free list" and a limited number of staples.	Yes; except for "special conditional free list" imports.
India	Yes; either a general license for commodities under open general license, or an individual license for other commodities.	Yes; however, foreign exchange is automatically released upon presentation of validated import license to exchange bank.
Indonesia	Yes	No separate permit required; combined import license-foreign exchange permit necessary.
Iran	Yes; but only to release goods from Customs; prospective imports must come within annual or supplemental quotas.	Yes.
Iraq	Yes; goods exported before license is obtained are confiscated.	Yes; permits are obtained through licensed dealers.
Ireland	For a few products only.	Yes.
Israel	Yes	Yes; import license usually carries right to foreign exchange.
Italy	Yes; from Italian Exchange Office except for list A goods (mostly industrial raw materials which require only bank "benestare").	No separate permit required.
Japan	Yes	Some commodities as announced by Japanese Government from time to time, require allocation certificate; in other cases import license carries right to foreign exchange.
Korea, Republic of	Yes	Application for import license must be accompanied by certificate from Bank of Korea stating that applicant has sufficient foreign exchange cover on deposit.
Laos	Yes	Yes; import license carries right to foreign exchange.
Lebanon	Yes	No.
Liberia	No; except for arms, ammunition, used clothing, pharmaceuticals, and rice.	No.
Malaya, Federation of	Yes; only certain items may be imported directly from hard-currency sources. Licenses to import nonsterling area goods via Hong Kong are issued provided certain exchange regulations are observed.	Yes; for direct imports. For imports from hard-currency areas via Hong Kong, no permit is necessary, but payment must be made in a sterling-area currency and shipment effected on a bill of lading issued in Hong Kong.

¹ Includes Bermuda, British West Indies, British East Africa, British West Africa, British Guiana, British Honduras, Northern Rhodesia, Southern Rhodesia, and minor colonies, protectorates, and trusteeship territories.

Country	Is import license necessary?	Is exchange permit required?
Mexico.....	Yes; for an extensive list of articles.....	No.
Morocco.....	Yes; with exception of goods imported "sans devise," i. e., shipments financed by importer with his own funds held abroad.	Yes; except for goods imported "sans devise."
French Zone.....	Yes.....	Yes; import license carries right to foreign exchange.
Spanish Zone.....	No.....	No.
Tangier (International Zone).....	Yes.....	No separate permit required.
Netherlands.....	No; except for certain luxury items.....	Yes.
Netherlands West Indies.....	Yes.....	No; import license carries right to foreign exchange.
New Zealand.....	Yes.....	No; import permit authorizes purchase of exchange.
Nicaragua.....	Yes.....	No; foreign exchange is automatically made available in currency specified in import license.
Norway.....	Yes.....	Yes; however, foreign exchange is automatically released upon presentation of validated import license to exchange bank.
Pakistan.....	Yes.....	No.
Panama.....	No; except for tomato paste, tanned cattle hides, wheat flour, baby chicks, hatching eggs; a few items are, however, subject to quota restrictions.	Yes.
Paraguay.....	No.....	No.
Peru.....	No.....	No permit as such; exchange allocated to importers semi-annually for each of 5 classes of imports. Letters of credit opened against allocation considered as exchange licenses.
Philippines, Republic of the.....	No.....	Yes.
Poland.....	Yes.....	Yes.
Portugal, including the Azores and Madeira.....	Yes.....	Yes.
Portuguese Colonies.....	Yes.....	Yes.
Rumania.....	Yes; only certain items may be imported directly from hard-currency sources. Licenses to import nonsterling area goods via Hong Kong are issued provided certain exchange regulations are observed.	Yes; for direct imports. For imports from hard-currency areas via Hong Kong no permit is necessary, but payment must be made in a sterling area currency and shipment effected on a bill of lading issued in Hong Kong.
Singapore.....	Yes; limited largely to essential raw materials.....	Yes; special exchange rates are fixed for many import products.
Spain, including the Canary Islands.....	Yes.....	Yes; import license carries right to foreign exchange.
Spanish Colonies.....	Yes.....	No; import license carries right to foreign exchange.
Surinam.....	No; on majority of goods imported from United States; import license still required on such commodities as automobiles, coal, and certain agricultural products.	No separate permit required. Foreign exchange, including dollar exchange, is automatically made available if the import license specifies payment in such currency, and if the license is registered with a foreign-exchange bank within 2 months after issuance.
Sweden.....	Import licenses are required for certain agricultural products, various industrial raw materials, and some types of vehicles and machinery. Also, special import authorizations must be obtained for most animals and fowl, shellfish, and bees, beeswax, and honeycombs.	No.
Switzerland.....	Yes; for hard-currency imports.....	No.
Syria.....	Yes; except none for mining supplies.....	No; but a "certificate of payment" issued by Bank of Thailand or authorized bank or company is required.
Taiwan (Formosa).....	Yes.....	1 application suffices for both import permit and exchange control purposes.
Thailand.....	Yes.....	No; import license carries right to foreign exchange up to amount expressed in local currency in relevant import license.
Turkey.....	Yes; with exception of few specified goods, all imports are subject to license. Imports from all countries of a long list of "unessential" items are subject to special licensing restrictions.	Yes; granted automatically following issuance of import license.
Union of South Africa, including Southwest Africa, Basutoland, Bechuanaland, and Swaziland.....	Yes; except some foodstuffs, raw materials, fertilizers, etc.....	No; import license carries right to foreign exchange.
United Kingdom.....	Yes.....	Yes; all exchange is allocated by U. S. S. R. State Bank upon receipt of import license.
Uruguay.....	Yes; Importing Government agencies are responsible for securing own permit.	No.
USSR.....	No; except for approximately 25 tariff items.....	Yes; import license carries right to foreign exchange.
Venezuela.....	Yes.....	No; but Government maintains strict control over foreign exchange allocations.
Vietnam.....	No; individual import license abolished July 1, 1952; since that time only licensed import firms are allowed to carry on import operations.	
Yugoslavia.....		

Address by G. Joseph Minetti, Member,
Maritime Board, Before the 36th Annual Meeting of the Mississippi Valley Association in St. Louis, Mo., February 7, 1955

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by G. Joseph Minetti, member of the Federal Maritime Board:

Flying from the eastern seaboard of the United States into the rich Mississippi Valley is a thrill never to be forgotten.

From the clouds one can view the great drainage system of the Mississippi River, one of our Nation's basic resources, an asset of fabulous worth, whose great value defies estimate. This majestic river links this great grassroots heartland of America with the rest of the world.

In the history of our country, the territory of the Mississippi was once considered a distant area of little concern to people elsewhere. It was a pioneer place, many days away from the early eastern coast colonies, along pathways beset with peril. Not so today, for the problems of the Mississippi Valley, its trade, its commerce, its production, its people, are of national concern to every citizen.

As a member of the Federal Maritime Board, I come to you charged under the law to be diligent in the development and maintenance of an American merchant marine adequate for commerce and national defense. I shall discuss today the broad aspects of the American merchant marine and what it means to the trade and the security of America with particular emphasis on international trade and its effect on the areas within the valley where this mighty river flows. I shall explore with you the possibilities that atomic propulsion holds for our ships of the future, and will report in brief on the program of the Federal Maritime Board for the year 1956.

I am much impressed with a recent study made by the Committee of American Steamship Lines which shows that workers, farmers and industrialists in Illinois, Wisconsin, Missouri, Ohio, Indiana, and Michigan, in the entire Mississippi Valley, depend upon foreign trade and the American merchant marine that makes this trade possible. This

maritime study, as do all economic studies of recent years, points up one fact about this world in which we live, that "no man lives alone." Isolation from the influences of international trade is not possible in this modern world.

The job of the worker, whether he be skilled or unskilled, depends upon imports and exports that must be handled by ocean-going ships. The prices a farmer receives for his crops are sensitive to international trade volumes. The sales revenues of the industrialist are directly reflected in overseas business. Our raw material supplies and prices are affected by imports aboard ocean-going vessels.

This study has uncovered some very interesting and startling facts about the dependence of the Midwest on the ships of our merchant marine. Let me cite a few:

There are about half a million autoworkers in Ohio, Indiana and Michigan, many others in Illinois, Wisconsin and Missouri. In 1952, exports of automobiles, trucks, unassembled cars, parts and accessories totaled nearly \$1 billion, a great portion of which ended up in the form of wages and salaries for the autoworkers. Michigan, Ohio, and Indiana, as you know, account for about two-thirds of all motor vehicles manufactured, and their share alone of the total auto exports ran to something like \$650,000,000.

One passenger car and truck out of every 20 that came off the assembly line in America

went to a foreign country. Certainly it is important to the American auto workers on the assembly line that ships stand ready to distribute our finished products abroad.

Also, we must depend on ships on the other end of the assembly line to bring an astonishing number of different raw materials from foreign lands that go into the construction of the modern automobile. The list runs into the scores and includes everything from the rubber in the tires on which your automobile rests to the chrome and fixings which make the modern auto the beauty it is. Altogether, between 250 and 300 materials from 60 foreign countries go into the gleaming vehicle you drive today across the Nation's highways.

This Mississippi Valley area is one of the world's great dairy centers. Do ships mean anything to dairy farmers? Let us look at the record.

More than \$11 million in processed milk left Wisconsin, Illinois, and Missouri farms and traveled across ocean trade routes. Cuba and the Philippines imported the bulk of this amount, buying almost all of the evaporated and condensed milk shipped abroad by United States farmers. Venezuela purchased 75 percent of American farmers' dried milk exports. It is expected that this trade will increase. The biggest markets for processed milk are to be found in the tropical areas of the world. The vital link to these areas for American farmers and dairymen is the American-flag merchant fleet.

Let me point out other vital areas of agricultural export. Over one-half of our rice crop, two-fifths of our wheat crop, and one-quarter of all the cotton and the tobacco that is grown in this country are exported annually. Exports are also important for soybeans, barley, lard, tallow, raisins, prunes, grain, and many other farm commodities. Statistics show that the value of American agricultural exports, since the year 1945, has been equal each year, to about one-eighth of our annual cash farm income. These exports account for the disposition of the commodities produced on over 40 million American farm acres each year, this means that one-tenth of our croplands, 1 acre in every 10, is producing for foreign consumption. The services of the American merchant marine are certainly required to deliver these goods.

Here I should like to discuss with you a matter of vital importance, a matter of survival to the American merchant marine, the matter of subsidy to put the American merchant marine on a parity with foreign operators. It is of immediate concern to everyone in the Mississippi Valley, its plants, its farms, and its factories. It is of vital concern to everyone in the United States and to our allies and friends abroad for without a subsidy our American merchant marine would be driven off the trade routes of the world.

The American merchant marine is an American business that sails the seven seas of the world. As it plies the routes of the globe, it comes into competition with the ships of other nations. It must find a way to meet that competition or it must cease to exist, and we cannot, at our peril, permit the American merchant marine to be driven off the high seas.

Our ships are American products, built to the exacting standards of American engineering. They must meet rigid Coast Guard regulations. The conditions under which the crews live and operate the ship are American standards, the highest in the world. We want our American seamen to earn decent American wages and to take a proud part in the affairs of our American communities that call for the highest standard of living on the face of the globe.

No enemy of our country has ever been able to drive the American merchant marine off the ocean. However, we know from sad

experience that the competition of ships sailing under standards which are not equivalent to ours, manned by underpaid and underprivileged crews, operated at un-American standards of feeding and living, can bring about an economic situation in which it would be impossible for the American merchant marine to profitably operate.

On a trans-Atlantic run, a C-2 vessel flying the American flag will pay out in wages some \$25,913 per month while a Norwegian ship on the same run will have a payroll of only \$5,741 for the same period.

Likewise in the matter of crew feeding. The daily cost of meals on an American vessel is \$1.75 per man. On the competing Norwegian freighter it amounts to only \$1.44.

In the matter of repairs, for each dollar that an American operator must pay out to keep his ship safe and in proper running order, his Norwegian competitor is called upon for only 61 cents in expenditure.

The matter of shipping subsidy is much akin to the problem of parity that is so well known in your Mississippi Valley farming communities. I am sure that there are many here present who recall the days when the American farmer was forced, by economic necessity, to sell the product of his sweat and toil at a price below the cost of production. When we indulged in such economic suicide, it was not the farmer alone who suffered—our Nation went on the economic skids and depression blackened the face of our fair land. Our Nation cannot live without the product of its fields and farms. We must assure that output, as we assure water, fuel and transportation. In the field of our farm economy we have adopted the principle of parity and it has been a sustaining influence upon the entire American business community.

Under the provisions of the Merchant Marine Act of 1936, there are two types of subsidy, the operating-differential subsidy and the construction-differential subsidy.

The adoption of the principle of subsidy assures that American ships, built in American shipyards, manned by loyal American crews and operated by American citizens, will continue to serve American trade and industry. The Congress of the United States has weighed this grave problem and in its wisdom passed the Merchant Marine Act of 1936 and established therein the principle of subsidy to meet the situation forthrightly and realistically. Let me discuss with you first the phase of this subsidy problem that falls into the category of operating-differential subsidy.

Let me make one thing crystal clear. There is nothing in the subsidy laws that assures a profit to any ship operator. This is a common misconception that is too widespread. Under the laws of subsidy, the Government enters into a contract with an American ship operator and says to him, if you will serve an essential foreign-trade route of the United States, sail on it with regularity, and foster the commerce and trade that the American business community finds necessary, then we will take certain steps to see that you will not be driven off that route by the competition of foreign ships, paying lower wages, feeding cheaper food, and providing living quarters that do not come up to American standards.

The Government says to the American shipping operator: If you will fulfill your part of the contract, we will figure the difference that it costs you to operate your ship at the American standard and the lower price that it costs to operate a ship that competes with you and does not meet that standard, and we will pay the difference on the subsidized items of wages, subsistence, insurance, maintenance and repairs, and stores and supplies.

That makes it possible for the American merchant marine to operate over routes that are essential to our trade and commerce and bring in the raw materials that are needed

in our industries and in the maintenance of our defenses. It means that American ships will be ready to deliver the finished products that we must sell abroad.

But the subsidy contract is not a one-way street. Since the shipping company that is operating under subsidy will receive tax dollars, it must guarantee certain things and meet certain conditions that are of benefit to all the citizens of the United States. First, the shipping line must agree to offer a regular service over the route it serves that meets the needs of American businessmen engaged in international trade. Next, the line must operate over the route with vessels that are a credit to the American merchant marine and meet the specific needs of the trade area. For example, if there is need for tanks to bring back liquid latex, then a vessel must be provided that has such tanks. If the need of the trade calls for refrigerated space for the shipment of meat or other perishables, then the vessel must have the necessary reefer capacity.

And that is not all of the obligations to the general welfare that the subsidized operator must undertake. He must make provision for the replacement of his vessels so that the American merchant marine will continue to serve our Nation on the high seas in the years to come. Therefore, the subsidized operator is required to set up special funds for the purpose of replacing the vessels he is operating when they become obsolete, usually within 20 years.

There are at present 282 vessels of all types sailing under the American flag that are the recipients of subsidy benefits. Conservatively, it has been estimated that their replacement cost would be about \$2.8 billion.

The Maritime Administration looks to the operators to see that the replacement provision is carried out.

That is still not all of the story. When the subsidized operator earns in excess of 10 percent on the capital necessarily invested in his business, he is "in a recapture position." That means, in simple English, that when the subsidized operator prospers to the extent of 10 percent of the earnings on his capital, the operator returns to your Government the money that was paid out in subsidy. It is a too little known fact that in the first period of 10 years in which subsidy was paid, 5 shipping firms were in a 100-percent recapture position and repaid into the Government all of the subsidy funds that they had earned in serving America's essential trade routes.

Another phase of subsidy is in the field of construction-differential subsidy. Here we face another complex problem directly related to shipping and the coastal States but with implications that stretch into the Mississippi Valley and into every hamlet and town of our great Nation.

The specialized tools and skills of brain and brawn that must be assembled for the purpose of producing a modern ship represent a great national asset in much the same way that the fertile fields of this lush valley represent national wealth which we must not allow to erode. The skilled shipwrights, architects, builders, welders, cutters, and outfitters who have the know-how to turn metal into a living ship are men of specialized skill who draw good American wages and live at the high American standard that is today the envy of the world. It costs more to build a ship in an American yard, much more than the same tonnage would cost if produced in Japan, in England, or in Germany. Since the oceans of the world are a broad highway, a ship could be built anywhere and floated to delivery. If we permitted the dollar sign to be the sole criteria of where ships were to be built, unfortunately the American shipbuilding industry would be forced to shut down. Our concern for the defense of our country would not permit us to allow such a turn of events to

take place. We must maintain in America the skills and tools that are necessary for the production of ships, and the device to accomplish that is the application of the principle of construction-differential subsidy.

Under this principle, the Government says to people who wish to build merchant ships, "If you will have your ships built in an American yard, rather than a foreign shipbuilding center, the difference in cost will be met by the Government." In this way we keep our shipyards open and active against the eventuality that we may once more be forced to call upon them to expand their production for the purpose of protecting all that America holds dear and cherishes.

To maintain in peacetime a nucleus of shipyard workers capable of expanding to meet planned mobilization demands in the event of a national emergency, we must provide continuous employment for a labor force of approximately 36,000 shipyard workers. To assure that its skills will not be dissipated, our shipyards should construct at least 60 seagoing merchant-type ships or their equivalent each year. The new ships resulting from such a program will replace the existing merchant fleet in about 20 years and remove the threat of block obsolescence.

For the fiscal year 1956 we have asked Congress to authorize a shipbuilding budget of \$102,800,000, most of which is aimed squarely at overcoming this threat of block obsolescence. This would be the first phase of a 10-year move to overcome that very real "bogey man" which haunts our maritime future.

We hope to sign contracts for the construction of five such replacement ships over the coming fiscal year. We have already made a successful start in working out agreements with steamship operators who hold subsidy contracts to spread out their ship replacement schedules so as to help overcome block obsolescence and to insure far more regular shipbuilding activity. We are prepared to encourage replacement by adopting for dry cargo operators similar inducements now being offered tanker operators, whereby it would be possible to trade-in to the Government some of the usable present freight vessels to improve the quality of our Reserve fleet. We hope to build 5 such replacement freighters this year, and take into the Reserve fleet 5 older but valuable ships in return.

Our current plans also call for four more passenger ships, all scheduled for service in the Pacific.

Another portion of our proposed shipbuilding budget for 1956 will be earmarked for a very significant new move in the defense plans of our Nation. We have designed three "mobilization type" ships—to be producible in large numbers in the event of mobilization needs.

As I stand here in this Mississippi Valley and think of its great wealth, I recall the historic days when this was a pioneer area. It took courage, fortitude, and faith in the future of America to come out here through the wilderness to build and farm, to plan and dream. Although we respect tradition at the Federal Maritime Board, we refuse to be bound entirely to the past, and we persist in demanding advance and progress for the American merchant marine.

I expect that many of the ships of our merchant marine, to be constructed between 1960 and 1965, will be propelled by atomic power. It has been authoritatively reported to the Congress that the day of the atomic-powered surface vessel will come very fast, and that the potential of the maritime application of atomic power is far beyond anything we've ever dreamed. Tests of the world's first atomic-powered submarine *Nautilus* have been outstanding.

Here in a nutshell the panorama of American maritime progress is spread out for us. Last year, the finest submarine we could pro-

duce had limited range and cumbersome refueling problems. Today, the *Nautilus* is able to girdle the globe without refueling. Who knows what the morrow may bring?

In our lifetime we saw the T-2 tanker, with its 10,000-ton capacity and its 14-knot speed, hailed as an advance. Today we talk in terms of 35,000-ton supertankers, with a minimum speed of 20 knots. Our tankers of the future can be expected to be large and capable, through atomic application, of steaming extremely long distances without refueling.

In the coastwise trade we will see a tremendous growth of special purpose ships. Plans are being pushed for the completion of first roll-on roll-off ship for the military. This will permit vehicles to come aboard and stow themselves under their own motive power. The ship will take on and discharge rolling vehicles through a ramp in the bow of the ship and through special ramp-ports in the side of the vessel.

The application of this principle will find wide commercial use. Plans are being made now for vessels that will carry upward of 220 truck trailers along our coasts. This means of transportation is expected to reduce the mounting operating costs of truckers over the coastal highways.

The Federal Maritime Board feels that one of the great contributions it can make to the future of the American merchant marine lies in the field of experimentation with advanced forms of propulsion and with new devices for handling cargo to speed turnaround and increase the earning ability of ships. In keeping with the American spirit of pioneering, we will leave no stone unturned in giving full consideration to what the atom can mean to the American merchant marine.

In the cargo handling phase of marine transportation, there will be considerable improvement in ship to shore cargo handling facilities with special emphasis on speeding special types of cargo. Correlation among all phases of transportation and modernization of port facilities can be anticipated which will lower cargo handling costs and decrease port time.

The future will find ships becoming much more specialized to suit trade requirements. I foresee an increase in the construction of large bulk carriers to take care of the increasing needs of our industries for the import of large quantities of ore.

As we stand here in this Mississippi Valley, we, as Americans, must turn our eyes abroad for the sources of supply that permit us to live in the complex civilization we have built. The United States is the world's largest consumer of raw materials, so large that we can no longer supply our own needs. Grim as it may seem to a people long accustomed to abundance of natural resources, we are now dependent upon foreign imports not only for luxuries but also for vital necessities.

The United States is the world's largest user of basic resources. With only 7 percent of the world's population and the same proportion of the land area of the free world, we consume about two-thirds of all the petroleum, almost 60 percent of the rubber, more than half of the magnesium, iron ore and zinc, and almost half of the copper and lead. More than 2½ billion tons of materials are used every year to support our high standard of living, an average of almost 18 tons of material a year for each person in the United States.

Our country's import balance of raw materials exceeded its export balance for the first time in the 1940's—a milestone in our development as a Nation. In 1945 we began to import petroleum. In 1935 we began to import zinc, and in 1936 copper.

Indeed, upon close examination, the idea of American self-sufficiency has always been, to a considerable extent, a myth. The magnitude of this myth is clearly shown in the case of metals—the base of any industrial

civilization. We are, in part at least, dependent upon foreign sources for every metal which we use, except magnesium and molybdenum, and, gentlemen, only the American merchant marine can assuredly keep this vital beltline of supply open across the oceans of the world.

Growing dependence upon imports has brought with it concern over the prospect of an emergency in which we might be cut off from resource countries. It is this concern that gave rise to our stockpiling of critical materials.

America has been a land of ever-expanding frontiers. As a young and vigorous Nation, our industrial and economic futures still lie ahead of us. We who guide the destinies of the American merchant marine must keep in mind that we are planning and providing for an America of tomorrow which will be a greater America than the Nation we know today. The United States at this point has 161 million people. There are more than 200 million Americans in sight for 1975. The America of the future is to be an America with rising needs of all kinds; and that means rising opportunities for the farms and the factories of the Mississippi Valley and for the American merchant marine.

Your Government stands ready to encourage businessmen and consumers, to help create the favorable atmosphere of confidence in the country's economic growth and future to which the American merchant marine wishes to make its contribution in prosperity and security.

Once more we stand on the banks of the Mississippi as pioneers, not in the same sense as the early settlers who came here to conquer territory, but as adventurers and explorers of a dawning era we are pioneering in the application of atomic energy to fulfill the dreams and the needs of mankind.

It is an era of still undreamed hazards, vast adjustments and momentous decisions but we are sure that within the lifetime of those of us within this room we shall see, in this field of the atom, the application of American genius equal to that of the Wright brothers in the air. New Edisons and new Moses, Whitneys, and Fultons shall find the ways and means to successfully and economically apply to the best interests of mankind this new basic power of the universe that now lies slumbering within our hands.

I am sure that the faith of America will find a way to make our new era one of peace and plenty and the American merchant marine will be in the vanguard of that era.

Featherbedding and Railway Loss

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 8, 1955, issue of *Christian Economics*:

FEATHERBEDDING AND RAILWAY LOSS

During the 2 years ending May 1953 the railroads obtained permission to stop operating 314 passenger trains ending annual operating losses of approximately \$17,500,000. During the 15-month period ending August 1954 an additional 183 losing trains were discontinued at an annual saving of \$5,200,000.

It is often difficult for a railroad to obtain permission to discontinue a train. Labor and

the local communities served usually oppose it, and losing trains and small branch lines are often compelled to continue operation year after year at heavy loss to the railway company.

According to a report of a special committee on cooperation, formed in 1949 and representing the National Association of Railroad and Utilities Commissioners of the 48 States, some seven or eight hundred additional railway trains are operating at heavy loss and should be discontinued.

Little can be done about solving the railway problem unless and until Government intervention is eliminated and the cooperation of labor is secured. Among other things the "Special Committee on Cooperation with the I. C. C. in the Study of the Railroad Passenger Deficit Problem" above referred to, has the following to say about labor's attitude in connection with lower cost operation of this essential service:

"Although the current average speed of passenger trains—including all stops at intermediate points—is almost 40 miles per hour, the daily rates of pay continue to be based on an assumed average speed of only 20 miles an hour—thus materially increasing the cost to the railroad of the actual work performed. This type of wage agreement has loaded wage costs so heavily on the passenger trains that these costs alone have often been the decisive factor necessitating the discontinuance of operation of trains which could have continued to run with a crew cost more reasonably related to the service rendered. Many passenger trains on which the railroads were required to maintain 3 crews under the provisions of these agreements (or pay as though 3 crews were used) could have easily been operated with only 2 crews without any of such crews being on duty longer than 6 hours. Yet, because of the flat refusal of the railway operating brotherhoods to consider any modification of these obsolete contract terms, the trains were forced into discontinuance with the resultant loss of the jobs of all 3 crews where 2 of such crews could have remained in service. . . .

"Even worse has been the attitude of railway labor in connection with the proposed operation of individual self-propelled cars in substitution for regular trains. In certain instances where our state commissions have been forced to permit the total discontinuance of standard trains, it would have been possible for this type equipment to take over and adequately provide the service needed by the public. However, the extraordinary demand of railway labor for a full crew on this one car so inflated the indicated direct operating expenses that the proposed substitute service was rendered economically impossible."

Such practices reduce railroad service, greatly increase its cost, stimulate other forms of transportation and in the end reduce the number of people gainfully employed in the industry and raise the cost of living for us all.

Efficient railway transportation at prices the people are willing to pay is essential not only for prosperity but for national defense. Years ago many of our railroads were injured by abuses in connection with their capital structure. This has long since ceased. Today, featherbedding such as that quoted above and of many other varieties, is greatly increasing the cost of railway transportation and injuring these common carriers which are so essential to the life of the Nation.

An alert public opinion and the willingness of men to live and work in accordance with higher moral standards seem to be the only way of solving this vexing problem. "Whatsoever ye would that men should do to you, do ye ever so to them" (Matthew 7: 12) is the only way that men can achieve economic well-being and retain and improve their freedom and self-government.

A Decent Break for Postal Workers

EXTENSION OF REMARKS

OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MAGNUSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement presented by me to the House Committee on Post Office and Civil Service, Tuesday, February 15, 1955:

I appreciate this opportunity to present my views to this committee in support of a substantial pay raise for postal employees.

I have introduced a bill, H. R. 2158, which would provide for an increase of 10 percent or \$400, whichever is greater, for all employees in the field service of the Post Office Department retroactive to August 23, 1954. This bill, as you know, is similar to H. R. 1592, introduced by Congressman MORRISON, and a number of other bills introduced by Members of Congress both on and off this committee.

I do not believe anyone seriously can question the need for adequate pay increases for employees in the postal field service at this time. The simple fact is that they are underpaid. They are underpaid in contrast with employees in private industry discharging similar duties. They are underpaid in contrast with the rates of pay prevalent in the postal field service prior to the Second World War. The pay scales of the loyal, hard-working men and women carrying out the vital but unsung tasks of the Post Office Department have not kept pace with the rapidly rising cost of living. In fact, postal workers have fallen further and further behind in the struggle to have and enjoy decent food, decent housing, and all of the many things that go into the standard of living of the average American of which the Nation justly is proud.

I have read persuasive statistics describing the plight of the mail clerk, the letter carrier, and all of the many other postal workers endeavoring to make ends meet, and the figures are impressive. But, more than that, I have talked to many of them personally, and I have received their letters by the hundreds, each telling a personal story of the ever-pressing grip of financial need. In my own State of Washington the fact is that almost two-thirds of rank-and-file postal workers are so hard put to make ends meet that they either hold outside part-time jobs or have found it necessary to put their wives to work.

Postal workers, like other Government employees, cannot strike to back up their claims for adequate pay scales, as can employees in private industry. They cannot go to work for a competing firm which offers higher salaries, because no such firm exists. They must come to us, the Members of Congress, lay their case on the table, and ask for fair treatment. This they have done. This committee held extensive hearings last year, in which every phase of the postal-pay problem was explored thoroughly. Additional hearings are now in process this year, and again the story is being told. I think it incumbent on us to act, and act promptly; each day's delay merely prolongs the need. We know the facts; we have only to make up our minds as to what rates of compensation are fair in the light of the facts and act accordingly.

I support the formula of a 10-percent increase or \$400, whichever is greater. And I think the increase should be made retroactive to the end of the last session of Congress, which is when a pay-raise bill should have taken effect.

A higher increase than this formula provides could easily be justified by any standard normally used in determining a reasonable wage rate—by comparison with workers in other industries, by contrast to the relative purchasing power during some earlier period, by studying the change in productivity and average workload. Application of the formula would not restore, for example, the purchasing power of the average postal employee to the level of 1939. A higher increase could be justified in good conscience; to grant less, in my opinion, would be unjust.

The principal alternative proposal before this committee is contained in H. R. 2987, introduced by the distinguished chairman, and similar bills. I think the increase in salary scales which would be provided by this bill are not enough, particularly in the lower grades, where the need is greatest. While I recognize the need for increasing the level of remuneration for those assuming the greater responsibilities for the operation of the postal service, I think that our first and basic obligation is toward those in the lower grades who are struggling to keep up the pace. I think the formula I support will help to accomplish both objectives.

My principal concern today is with the problem of providing adequate pay scales for postal workers, but I should like to add the additional comment on H. R. 2987 that I feel it hands over to the Postmaster General too sweeping an authority in the matter of postal reclassification, job assignment and the employment of substitute and replacement personnel. Congress has, in my opinion, certain obligations in these areas which cannot be abdicated in favor of the judgment of the politically-appointed head of the Post Office Department, whoever he may be.

We often are inclined to take the postal worker for granted. The letter we drop in the mail chute or deposit in the convenient corner box always reaches its destination. The letter carrier always delivers our mail and our periodical reading matter. The clerk always is at the window to sell us stamps or to provide any one of a hundred other services. Their very competence puts them out of mind. They come to us now asking for a decent break. I think they have earned it; I think they deserve it; and I think in good conscience we have no choice but to give it to them as rapidly as possible.

Is Our Constitution Subordinate?

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 8, 1955, issue of Christian Economics:

IS OUR CONSTITUTION SUBORDINATE?

Is our American law on contracts superseded and invalidated by the Charter of the United Nations? Four judges of the United States Supreme Court say yes, and 4 say no. The vote of one judge is all that saved this body of American law from becoming subordinate to the U. N. Charter.

We are not here concerned with the merits of the case. We are greatly concerned over the imminent possibility that American law and the Constitution of the United States may be, indeed perhaps already have been, set aside, nullified and superseded by the

U. N. Charter, and such agreements as hereinafter may be made under it.

A cemetery had refused an Indian woman the right to bury her late husband in one of its lots. These lots had been sold under a contract, including a clause restricting their use to people of the Caucasian race. The widow contended that this clause had been voided by article 55C of the U. N. Charter. This article provides that member nations shall "promote universal respect for, and observance of, fundamental human freedoms for all, without distinction as to race, sex, language, or religion."

One may sympathize with the position of the widow without jumping to the conclusion that all American law and the American Constitution should be made subordinate to the U. N. Charter. In some instances court decisions have already sustained the superiority of the U. N. Charter over American law. Only the opinion of one justice prevented the confirmation of this precedent by the Supreme Court.

Not many Americans seem to realize that unless we adopt the Bricker amendment or its equivalent we have ceased to be a sovereign nation, have lost our Constitution and our system of jurisprudence.

Veterans of Foreign Wars and Daughters of the American Revolution

EXTENSION OF REMARKS OF

HON. GEORGE A. SHUFORD

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SHUFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the speech of Mr. Jack F. Dusenbury, commander of the North Carolina Department, Veterans of Foreign Wars, made on January 7, 1955, before the Joseph McDowell Chapter of the Daughters of the American Revolution at Hendersonville, N. C. Mr. Dusenbury points out the similarity of the history and ambition of the Veterans of Foreign Wars and the Daughters of the American Revolution. I feel it will be of interest to the Members of the House as well as to the respective memberships of the two organizations:

It is my pleasure and privilege to address this regional conference of the Daughters of the American Revolution.

I speak in behalf of more than 23,000 men and women who are members of the Veterans of Foreign Wars of the United States and their Ladies' Auxiliaries in North Carolina. As department commander of the VFW, I extend to you heartiest greetings from all our members.

And joining me in those greetings is Mrs. Dovie L. Penney, of Wallace, N. C., president of the Ladies' Auxiliary to the Veterans of Foreign Wars.

Your organization and ours have many parallel interests. Our histories are quite similar.

The DAR is 9 years older than the VFW. Your first chapter was organized at Washington, D. C., on October 11, 1890, with 18 members. Your first president-general was Mrs. Caroline Scott Harrison, wife of United States President Benjamin Harrison.

The Veterans of Foreign Wars was founded 9 years later—in 1899—when 12 men who had come out of the Spanish-American War, organized their first unit in Columbus, Ohio,

followed closely by others in Denver, Colo., and other States.

The DAR purposes and those of the VFW, are expressed in the constitutions of our two organizations. They are very much alike.

The objects of the DAR are to perpetuate the memory of the spirit of men and women who achieved American independence. Also you are dedicated to the preservation of American patriotic traditions, also to extend the institutions of American freedom and to foster patriotism and aid in securing for mankind the blessings of liberty.

The Veterans of Foreign Wars and its ladies auxiliary likewise are pledged by their constitution to function as patriotic, historical and educational organizations—to foster true patriotism and to maintain and extend the freedom institutions of our country.

Furthermore, we obligate ourselves to champion equal rights and justice for all men and women, and to preserve and defend the United States from all her enemies in time of peace or war.

Membership in your organization and mine is limited. The DAR requires that its members be the direct descendants of the men who saw active service in the American Revolutionary War.

Membership in the VFW is limited by congressional charter to the men who have served with the United States Armed Forces in combat zones outside the continental limits of our country. Each of the 1,200,000 Veterans of Foreign Wars members has been decorated by the Federal Government for his foreign service.

In our ladies auxiliaries there are more than 400,000 wives, mothers, daughters, and sisters of those men. Together these VFW and auxiliary members total more than a million and a half persons living in every State of the Union, also in Alaska, Hawaii, the Panama Canal Zone, and elsewhere.

You who belong to the Daughters of the American Revolution and we of the Veterans of Foreign Wars see eye to eye in many respects. We are aiming at the same goal. That goal is preservation of American history and ideals—the strengthening of American liberties—and the defense of our way of life in every way possible through the patriotic leadership of our respective organizations.

Fulfilling those purposes requires all of us to keep mighty busy. Since the founding of our organizations we have had many things to do. We have had to keep vigilant, flexible and constantly working. Action has been the keynote because there have been many, many challenging changes since the 1890's.

The tempo of our lives has speeded up immeasurably. The requirements of everyday living have multiplied and quickened. The relationship of our Nation to other nations has grown more complex. International tensions are far greater today than in the 1890's. Our national security is in more critical balance today and—perhaps most important of all—our freedoms are threatened now as never before.

What does all that mean to us? Well, one thing is certain—it means we cannot afford to settle back into any rocking chair complacency. We dare not relax into any degree of smug satisfaction of being venerable patriotic leaders by virtue of our long service.

I mean that the Daughters of the American Revolution—although 64 years old last October—can afford to be that old only in experience and wisdom.

The same rule applies to the Veterans of Foreign Wars. We cannot maintain leadership among veterans organizations solely on the strength of our 56 years experience.

No; this is not an era in which age and experience alone counts for very much. Everything is developing too rapidly and the pace set by the younger generations

press too closely to allow much consideration for mellowed age.

If we should settle back to reminisce we would quickly find ourselves alone. The world would leave us behind. Today's young people are marching steadily forward. Also events are developing and moving on. If we dared to rest the DAR and the VFW would very quickly fade and be forgotten.

Therefore, we must keep up with contemporary events and peoples. We have to. There is an awful lot of very urgent work for us to do today. The ideals we represent—although rooted far in the past—must be kept alive. They must be nurtured. They must be kept as new, as vigorous, and as attractive today as they were in 1776 and 1899. Yes, there is much work for us today, tomorrow, throughout 1955, and on into the years to come.

Now, I'm not inferring that either the Daughters of the American Revolution nor the Veterans of Foreign Wars is actually falling behind the procession. In fact there is little danger of that if your organization and ours continue keeping their memberships ever green. That means we must enlist every eligible in each succeeding generation. Then we must impress upon those new members the great need of their help toward interpreting our proclaimed ideals and our objectives into practical application.

There are strong evidences that you are well aware of your patriotic obligations. Latest records show that the Daughters of the American Revolution sponsors outstanding Junior American Citizenship Clubs in the schools of 25 States. Also you list many other equally important patriotic projects in the DAR pamphlet entitled "Highlights of Program Activities."

You are driving vigorously to impress upon the minds of all Americans—young and old—the full significance of our Nation's initial struggle to gain and maintain its freedom way of life.

That is also true of the Veterans of Foreign Wars and its ladies' auxiliary. Our members are likewise driving hard—here in North Carolina and across the country—to create stronger appreciation and a more widespread, positive practice of the basic American freedom principles.

We can sum up those principles very briefly as freedom of opportunity for all, right of individual enterprise, and the united defense of all we have inherited by virtue of the heroic men and actions which your organization and mine commemorate.

We honor the patriots who have defended America. The Daughters of the American Revolution keep alive the stubborn fires of independence. You declare that the men—and women, too—of the American Revolution are worthy of perpetual honor—and you give that thought action by reflecting honor upon those who are the descendants of the first American war veterans.

My organization makes the same declaration—and for the same purpose—with respect to all those who have fought for American independence in many wars during the past 179 years.

The VFW is truly an ever-green organization because its membership includes the young veterans of each succeeding generation. It may not be an enviable position to proclaim, but it is true nevertheless, that as long as men must take up arms in defense of American freedoms there will always be more young members in the Veterans of Foreign Wars.

You are all aware how drastically times have changed. The pace and pressure have increased greatly. Three big wars within the past 38 years have imposed a costly price for freedom. The price has been paid in lives, anguish, and money.

More than 2 million men have been battle casualties in all wars since the American

Revolution. The First and Second World Wars and the Korean conflict took the heaviest toll.

Today more than 20 million war veterans are living in the United States. They represent a goodly proportion of our entire population. They are the frontline reserves of American manpower. They are trained and ready to again answer the call to arms—if that becomes necessary.

Meantime those living war veterans are busily working for the peacetime strengthening of America. Here in North Carolina and throughout the Nation VFW men and members of their ladies' auxiliaries are cooperating to make effective a multitude of community-building projects.

They are working on the theory that democracy begins at home and that home means the cities, towns, and neighborhoods wherein we rear our families, conduct our business, enjoy our social contacts and develop our characters.

Proceeding on that premise the Veterans of Foreign Wars men and women have created 1,000 types of community service. Last year their posts and ladies auxiliaries sponsored more than 504,000 programs in 9,000 cities. During 1955 the VFW workers expect to sponsor close to 1 million community-service projects.

Those community-service activities are designed to broaden the education of our children, help schools, colleges, and churches, initiate patriotic activities and to assist needy persons. Those are some of the ways the Veterans of Foreign Wars work for a stronger nation during peacetime.

Peacetime? Yes; technically we are at peace now. No major battles are being fought. However, with communism just beyond the horizons around us we cannot afford to relax in any comforting belief that there is no danger. The threat to American security is definitely present and pressing.

There is imperative need today for clearer thinking—more level-headed analyses—more careful planning and much positive action by every loyal citizen—especially by such patriotic leaders as the DAR and the VFW. Today's challenge is greater than it has been at any time in our national history.

Your organization and mine are directly challenged because we have proclaimed our purposes. We're squarely on record as obligated to provide the all-important leadership in the very necessary campaign for stronger allegiance to our Government, our Constitution, our laws, and to our flag.

That is your job and ours today and tomorrow.

I pledge to you who are members of the Daughters of the American Revolution the full and earnest cooperation of all VFW men and women here in North Carolina. Whenever we can help for our Nation's sake, we who are the Veterans of Foreign Wars offer ourselves and our patriotic services.

The Failure of the So-called Reciprocal Trade Agreements

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. REED of New York. Mr. Speaker, the Reciprocal Trade Agreements Act has been in operation now for 20 years, and the devices to obstruct the flow of American exports into 40 nations has increased and not reduced these barriers.

There are more barriers today than ever before.

I am inserting in the CONGRESSIONAL RECORD an article by Henry Gemmill, which appears in the February 16, 1955, issue of the Wall Street Journal:

TRADE WAR: FRIENDLY NATIONS FIGHT EACH OTHER WITH EXPORT SUBSIDIES AND STIMULANTS—ILL WILL OVER YANKEE SALES OF BUTTER, ORANGES—FRENCH SUBSIDIES HIT \$235 MILLION—IS IT A SENSELESS RACE?

(By Henry Gemmill)

PARIS.—America is locked in a war with its own allies—a war of export subsidies and stimulants.

The Netherlands and Denmark dispatched sharp notes to the State Department a few days ago, declaring that United States efforts to dispose of 10 million pounds of surplus butter by cutrate auctioning to foreign bidders is nothing less than dumping—likely to cause "grave" damage to other butter-exporting countries.

But both the Dutch and the Danes are themselves showing out exports with a variety of government aids. The Netherlands Government, for instance, more than a year ago decided to give its exporters this guaranty: If they would tackle the United States and Canadian markets with sales campaigns, the government in return for a small premium would pay as much as half of advertising and market analysis expenses not covered by profits on ensuing exports.

And the Danish Government has promised its exporters who participate in an insurance scheme that it will bear up to half of any loss in the global export of goods on consignment. Last year the Government increased the total liability it is willing to incur under this and other export guaranties to 350 million kroner, or about \$52 million.

A RECENT RUSH

Governments have rushed into subsidization—or schemes very similar to it—during the last 2 years as world markets have become saturated with manufactured goods and farm commodities, on the theory that any little extra kick might help to close an export sale. These programs wear a hundred disguises, appearing as tax rebates, governmental money lending, guaranties against trading risks, currency-retention devices, barter deals, double-price systems, provision of cheap raw materials to manufacturing exporters—and, in the case of the United States, "foreign aid."

Each government usually insists that most of its own particular contrivances are not subsidies at all—so the diplomats who haggle over them customarily avoid use of that ugly word; the presently accepted jargon is "artificial aids to exports."

These experts, and there are a number of them professionally occupied in Paris, say it is impossible to calculate the global cost of this warfare, for too much of it is concealed. But France alone in 1955 is budgeting about 100 billion francs (better than \$285 million) for some of the more obvious aids; this sum represents about one-quarter of the anticipated deficit in the ordinary French budget this year.

Every auto shipped out of France carries with it a subsidy. The French steel industry, though now one of the most modern in the world, collects its export subsidies on a monthly basis. When the French farmer exports a bushel of wheat and gets, say, \$1.70 for it, he collects in addition a subsidy of something like \$1.25.

But before sneering at the fiscal ineptitude of the French, Americans are warned by the experts, it should be recalled that the United States Government is also running a deficit—influenced a bit by the fact that every bushel of wheat shipped out of the States carries with it a subsidy paid by the taxpayer. At

the moment this runs around 60 cents a bushel.

WE MUST

Each government is inclined to believe that its own artificial aids are required by special circumstances. When challenged, as they have been by the Organization for European Economic Cooperation headquartered here in Paris, the French officials contend they have given their workers so many social-security benefits that their producers' costs and prices are entirely out of line with the rest of the world, and they must subsidize to export at all.

When challenged, as they have been at the current Geneva session of GATT (General Agreement on Tariffs and Trade), the United States contends its farm program has lifted its agricultural prices entirely out of line with the rest of the world, so it too must subsidize to export at all. And so it goes—even the Greeks and the Turks insist they must subsidize, explaining to questioning governments that otherwise they could not possibly sell their dried fruit in competition with the subsidized exports of America.

But many of the private producers whose wares are getting all this governmental help have grown weary of it, even fearful. The International Chamber of Commerce has told GATT a "general condemnation" should be adopted. On this far side of the Atlantic the most outspoken critic of artificial export aids is the Council of European Industrial Federations, which represents national business groups similar to America's National Association of Manufacturers.

A SENSELESS RACE

"We are unanimously agreed upon the undesirability of a senseless race between countries for ever bigger incentives which are concealed subsidies," the Council formally resolved as long ago as 1953, when the surge was already quite apparent. The Council argued that competitive subsidization cancels out the advantages expected by each of the warring nations, and the result is only "increasing prices or taxation in the producing countries."

Last year the Council, under British impetus, adopted a resolution expressing even greater alarm, warning of great dangers to the improvement in the economies of European countries. It declared ominously that it may not be possible in certain countries to delay pressure for the introduction of new countermeasures for more than a very limited time.

Global use of subsidies is still increasing. Just this month, for instance, Brazil announced a boost in payments to its coffee exporters, so that for every dollar earned they now get not only the official exchange rate of 18.36 cruzeiros but also a larger sum, 18.70 cruzeiros, as bonus. The reason: Colombian coffee was underselling Brazilian.

The Geneva GATT conversations on export subsidies seem to be getting next to nowhere, and the American position as stated by Assistant Secretary of State Samuel Waugh appears in opposition to banning them. The United States Government, he says, is merely prepared to discuss the desirability of appropriate limitations. As for America's own subsidies of agricultural shipments, he says they should not unduly interfere with normal marketings.

EUROPE MAKES A TRY

But within Europe, at least, the first really strenuous effort is now being made to hold the synthetic export-boosting to present levels and, in time, to reduce it.

Through the Organization for European Economic Cooperation, most West European lands have agreed this year that until September 1956 they will "refrain from further extending or introducing any other measures of artificial aid to exporters," or at least those deemed to "have the effect of distort-

ing normal conditions of competition"; and by the end of this year they promise to discontinue certain specified practices such as direct subsidies, currency retention schemes which involve a bonus on exports, and kickbacks on the social-security taxes of exporting industries. Many stimulants, such as the British remission of its purchase tax for off-island shipments, are not outlawed under this pact. But some countries—notably Germany—will be making a real retreat.

A major holdout, however, is France. Other continental nations are watching her competitive trade policies and those of the United States, so it is considered quite possible that most all the Europeans may re-enter the subsidy sprint when their agreement expires in September of next year.

Meanwhile, the United States is doing some watching of its own. Its customs officers are empowered to take punitive action against dumping of goods in the United States by foreign countries; a Treasury representative has just returned to Washington after taking a hard look at the French subsidies, but his recommendations are not yet known here.

America's own subsidies are so carefully handled that they do not constitute dumping, the Government insists. But other countries are not always convinced. For instance, American subsidies on just one commodity—oranges—have been denounced during the current GATT session in Switzerland by representatives of Italy, South Africa, Greece, Australia, Cyprus, and the British West Indies. Efforts of the United States Foreign Operations Administration to relieve miner unemployment at home by heavy foreign-aid shipments of coal have drawn frowns from some of Europe's coal producers.

THE WEAPONS OF WAR

What are the weapons in this war of artificial export aids? Here are some of the principal ones, with a few recent and current illustrations:

Simple subsidies: These are less used than one might expect, especially by the subtle Europeans. The Germans have been paying an "ausfuhrvergütung" on exported brandy. The Canadians have been doling out \$1 per ton on shipments of Alberta and British Columbia coal to all lands except the United States. Belgium has been advancing funds for traveling expenses, offices, the sending of samples, and other costs that Belgian exporters and manufacturers incur in prospecting distant foreign markets in North and South America, Asia, and the Congo. The Turks have been using a two-price system for raisins, with those sent abroad being cheaper.

The United States has been paying subsidies off and on for many years; the International Wheat Agreement, which bestows a certain blessing upon them, goes back well before World War II. But most of the United States wheat shipments now subsidized are outside that pact, and a variety of new subsidies have recently been put in motion—some of them not so simple after all.

For example, the last session of Congress ordered the Commodity Credit Corporation to start selling its surpluses abroad—not for dollars but for whatever foreign currencies might be offered. In the process, the legislators decreed, losses to the American taxpayer can be run up to \$700 million. A month later they decided to authorize another \$350 million worth of such transactions, as part of a military measure, the Mutual Security Act of 1954.

Such subsidies are now getting rolling. Last month, for instance, 15.6 million bushels of wheat and 50,000 bales of cotton were peddled to the Yugoslavs for dinars; it was a \$41 million deal—with the Commodity Credit Corporation agreeing to pay, among other things, a \$3 million shipping bill. A few days later the Turks were told they could have \$12.4 million worth of oats, bar-

ley, and wheat, and pay for it in lira. The British have been dickering to get some tobacco and pay for it in sterling.

What does the Government do with these foreign currencies? It can spend them, under the law, for everything from munitions to the financing of international educational exchange.

Tax rebates: Huge incentives are granted in this fashion. The Germans have been offering a whole series. There is the "ausfuhrhandlervergütung," returning to the producer the turnover tax he has paid on export goods; there is the "umsatzsteuergleichsetzer," which refunds a compensatory tax; and there are other kickbacks from income and corporate taxes.

Italy has been granting rebates of its general tax on earnings to exporters of a long list of items, including typewriters, sewing machines, motorcycles, autos, accordions, machine tools, ironwork, and hats. Belgian export producers have been exempted from cumulative sales and production taxes running as high as 12 percent. Stiff purchase taxes are remitted on export goods by Britain and Holland.

France is probably the leading tax rebater, giving back to many of its export producers the production taxes, sales taxes, and staggering social welfare taxes which they otherwise must pay.

Some American exporters manage to cut their corporate income taxes by 14 percentage points after qualifying as "Western Hemisphere Trade Corporations," as defined by the United States Revenue Code, and this undoubtedly helps them to battle European competitors in markets south of the border. The American Government, like most European ones, refunds the tariff paid on raw materials which go into exported wares. Even these customs kickbacks can become intricate; Belgium gives free admission to dies imported on loan for the manufacture of export goods.

Loans and guarantees: The most familiar example is the United States Export-Import Bank, established two decades ago but increasingly active in lending money for export deals which private lenders steer clear of. During the last couple of years it has also begun guaranteeing loans made by private financial institutions, and issuing insurance against such dangers to exports as revolutions and expropriation. It boasts of operating at a profit.

Most European lands have adopted similar schemes and institutions to push exports with governmental credit. The Swedes, for instance, have their Exportkreditnämnden. The Dutch have a private but Government-backed Nederlandsche Credietverzekering Maatschappij N. V., and the Belgians have both a Cofinex and an Institut de Reescompte et de Garantie.

Some systems give guaranties which go far beyond orthodox credit risks. The French Government guarantees its exporters against internal price changes. The Irish Government has established a special company called Coras Trachtála Teoranta to make promotional guarantees on exports to the dollar area. Promotion guarantees, covering the risks of developing markets through costly advertising and market research, are issued also by such nations as Norway and the United Kingdom.

Barter deals: The Germans employ these when trading with underdeveloped countries and in opening up new markets. The United States Secretary of Agriculture last year was empowered to barter surplus crops abroad for strategic and other materials.

Raw material supply: The French have a scheme known as IMEX which funnels imported raw materials to firms which will make them up into goods for export. British domestic steel prices are fixed by the Iron and Steel Board at levels lower than export steel prices; some foreign critics complain

this helps British makers of autos and other wares produce and export cheaply.

Currency retention: This form of export stimulant is one which has diminished in importance here in Europe, partly because the International Monetary Fund has worked against it and partly because the free market value of currencies has come closer to official exchange rates. When the idea was at its height, the dollar was worth far more than it was rated under official exchange rules, and any exporter granted currency retention rights could keep the dollars he earned from his sales and use them to great advantage. Some of these schemes have lingered on longer than most.

The Italians have been letting their exporters retain use of half the dollars and free Swiss francs they bring in. The French have been using two different systems permitting, rather indirectly, the retention of some hard-currency earnings.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. KLUCZYNSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address given by the Honorable Petras Dauzvardis, consul of Lithuania at Chicago, on February 13, 1955:

STATEMENT BY PETRAS DAUZVARDIS, CONSUL OF LITHUANIA, ON THE OCCASION OF THE 37TH OBSERVANCE OF THE INDEPENDENCE OF LITHUANIA, FEBRUARY 13, 1955, CHICAGO, ILL.

The 37th anniversary of the Republic of Lithuania (February 16), and the 12th year of the occupation and domination of Lithuania by Soviet Russia affords an opportune time to present the case of Lithuania to the people of the United States, and to ask a pertinent question of the Soviets: Did you (Soviets), make false representations at the time of signing the treaties of peace and nonaggression with Lithuania and the other Baltic states, or are you making false representations now in proposing "peaceful co-existence" with America and other countries? Or are you renouncing Czar Ivan's and dictator Stalin's aggressive imperialism and returning to the domain of law and justice?

The Soviet rationality and respect for law and decency was manifested in the treaties of the early 1920's: the Peace Treaty (July 12, 1920) with Lithuania states in article I:

"Russia, without any reservation whatsoever, recognizes Lithuania as a self-governing and independent state with all juridical consequences that follow from such a recognition and in a spirit of free and good will renounces all sovereignty rights of Russia concerning the Lithuanian nation and Lithuanian territory which previously belonged to her."

The nonaggression pact of September 28, 1926, articles 2 and 3, provides:

"ARTICLE 2. The Republic of Lithuania and the Union of Soviet Socialist Republics mutually undertake to respect in all circumstances the sovereignty and territorial integrity and inviolability of each other.

"ART. 3. Each of the two contracting parties undertakes to refrain from any aggressive action whatsoever against the other party."

The Mutual Assistance Treaty of October 10, 1939, reaffirms the principles of the above two treaties and ostensibly speaks for co-

existence between Lithuania and the Soviet Union; the preamble states:

"For the purpose of developing the friendly relations established by the peace treaty of July 12, 1920, and based on the recognition of an independent state existence and non-intervention in the internal affairs of the other party:

"Recognizing that the peace treaty of July 12, 1920, and the pact of nonaggression and peaceful settlement of conflicts of September 28, 1926, continue to form a firm basis of their mutual relations and undertakings."

The seventh article of the treaty provides "realization of this treaty should not affect in any way the sovereign rights of the contracting parties, in particular their state organization, economic and social system, military measures, and generally the principle of nonintervention in internal affairs."

In addition to the above, shortly after the signing of this treaty, Soviet Commissar for Foreign Affairs Molotov, in presenting the treaty to the Supreme Soviet of Soviet Russia for ratification, said:

"This treaty of mutual assistance in no way implies any interference of the Soviet Union in the affairs * * * of Lithuania, as some foreign newspapers are trying to infer. On the contrary, this treaty strictly stipulates the inviolability of the sovereignty of the signatory states and the principle of non-interference in each other's affairs."

The term of the treaty was 15 years. And yet, before 8 months had elapsed, it was flagrantly violated—Lithuania was seized by the Soviet Union in June 1940. Law and decency were superseded by aggression, destruction, and genocide.

After seizing Lithuania, Russia deposed Lithuania's legal government, replaced it with an illegal puppet regime. That puppet regime was and is illegal and without authority from the people or the Constitution of Lithuania. It reigns by terror and through the Soviet armed forces. The people are deprived of human and property rights—they have been degraded to the level of horses or oxen.

Despite all this, the Lithuanian nation did not and will not approve the anti-Lithuanian and illegal acts of Russia and her puppets. Citizens of Lithuania and the entire Lithuanian nation have demanded and are demanding total independence for Lithuania—factual as well as juridical. The legal representatives of Lithuania, the Supreme Committee for the Liberation of Lithuania, the underground, various Lithuanian immigrant organizations, about three million people in Lithuania and more than one million abroad—in fact all patriotic Lithuanians—denounced the Soviet occupation and spoliation of Lithuania, and are working for the freedom of Lithuania.

The United States Government and the American people have defended and are defending Lithuania in every way. The State Department made its forceful and honest declaration the second day (July 23, 1940) after the treasonous and illegal vote of the so-called People's Diet to incorporate Lithuania in the Soviet Union. This declaration states:

"The devious processes whereunder the political independence and territorial integrity of the three small republics—Estonia, Latvia and Lithuania—were to be deliberately annihilated by one of their more powerful neighbors, have been rapidly drawing to their conclusion."

Note that it clearly states that Lithuania's independence and territorial integrity are being annihilated by a neighbor—not by the Lithuanian nation, as the Soviets and their agents claim. The declaration states further:

"The people of the United States are opposed to predatory activities no matter whether they are carried on by the use of

force or by the threat of force. They are likewise opposed to any form of intervention on the part of one state, however powerful, in the domestic concerns of any other sovereign state, however weak."

America adheres to this policy and demands freedom for Lithuania and the other Soviet-enslaved nations. The Soviet Union, on the other hand, is destroying Lithuania and the other two Baltic States, is deporting and liquidating their peoples because they are not Communists, do not want to be communized and enslaved, because they want to be free and independent, as states and as peoples: with their own governments, homes, farms, businesses, national institutions, and the right to the pursuit of happiness, without the intervention of foreign police or regimentation; because they want to exist and coexist as free and independent nations.

Lithuanians and the other Soviet-oppressed peoples regard America as their eventual liberator, and the Soviet Union as their present enslaver. They are ever grateful to America. They despise their enslaver, Soviet Russia.

The Soviet Communist boss Nikita Khrushchev recently said: "We believe, as Lenin said, the solution of disagreement of two systems lies in coexistence." A few days later, Foreign Minister Molotov spoke in Hitlerlike fashion, assailed the United States of America and its allies as "blood-saturated imperialists," threatened them with atom bombs, and demanded that "the United Nations condemn the United States as an aggressor and call for the withdrawal of its troops from the Formosa strait area." The speech was virulent, militaristic, and slanderous. We trust that, in due course of time, it will be answered. A Lithuanian proverb is very apt: "Kuo pats kvep, tuo kita tep." (He who smells bad blames it on another.) The words of Molotov: "Blood-saturated imperialist and aggressor" fit Soviet Russia like a glove. One of the victims of Soviet imperialism and aggression is Lithuania. She was violently seized by Russia and is being mercilessly bled by it. Over 500,000 Lithuanians were murdered or deported to Siberia by the Soviets. The Lithuanians remaining in Lithuania are in a virtual prison and slave-labor camp. They and all Lithuanians demand and urge that the United Nations and others demand that Soviet Russia stop annihilating Lithuanians, Latvians, and Estonians; that Soviet Russia withdraw its troops, terroristic police, and political agents from the Baltic States, and thereby erase the stigma of imperialistic aggression, restoring the sovereign rights and self-government to the people of Lithuania, Latvia, and Estonia, and enabling them to coexist as free and independent nations.

Selective Service Act

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. ROGERS of Florida. Mr. Speaker, under unanimous consent granted to all Members for extension of remarks on H. R. 3005, I would like to state for the record that illness prevented my being present on February 3 to vote for the passage of this bill. The large vote by which it was passed speaks for the importance in which it is held

and the unanimity of feeling of the Members of the House for its merits.

The world situation is one that calls for sacrifice, courage, and determination. We are faced with the inevitable requirement of maintaining an Army, a Navy, Air Force, and Marine Corps for the indefinite future, of not less than 2,850,000. Our military experts have estimated and testified to the fact that voluntary enlistments cannot provide this number, essential to our national defense.

I believe that continuation of the draft for 4 years allows long-range planning for our Military Establishment, which is essential. I believe it also allows long-range planning for our youth, though it in nowise changes their period of service.

In the light of world conditions, this is necessary legislation—essential for the preservation of our Nation and of the free world.

National Negro History Week

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. DIGGS. Mr. Speaker, February 13 marked the beginning of National Negro History Week, an observation fostered to recognize the contributions made by one of the principal cultural groups in America.

Inaugurated in 1926 by the late Dr. Carter G. Woodson, noted historian and president and founder of the Association for the Study of Negro Life and History, because of the complete lack of information in our educational institutions on this subject, the underlying purpose is to promote understanding and unity between peoples through presentation in strict historical fashion of the cultural accomplishment of Negroes in civilization and history.

The observation of National Negro History Week at this time has a more pronounced significance than ever before. We know that paramount in our world today is the issue of unity between the peoples of the world. Through the daily continuation of its program of disseminating information, based on thorough historical research, to educational and social welfare institutions, the association makes its contribution to world history by aiding America in the task that is before it to promote true racial integration and, thereby, demonstrate its declared concepts of human freedom and equality.

The association's program, as stated by its founder, Dr. Woodson, is not merely to emphasize Negro history, "but rather the history of the world void of national bias, race hate, and religious prejudice." He adds:

The case of the Negro is well taken care of when it is shown how he has influenced the development of civilization.

An excellent, although by no means all-inclusive, summary of that influence was given to us by an unknown poet, who said:

"I am somebody.

I am a poet in Langston Hughes.

I am a creator of rhyme in Paul Lawrence Dunbar.

I am a Christian statesman in J. H. Jackson.

I am a diplomat in Ralph A. Bunche.

I am a celebrated entertainer in Nat Cole, Eartha Kitt, and Harry Belafonte.

"I am somebody.

I am somebody. I am a soldier in Gen. B. O. Davis, Jr.

I am courage in Crispus Attucks.

I am a humorist in Timmie Rogers and Eddie Anderson.

I am a leading soprano in Dorothy Maynor and Leontyne Price.

I am a world-famous tenor in Roland Hayes.

I am a renowned baritone in William Warfield and Robert McFerrin.

I am a contralto in Marion Anderson and am a member of the Metropolitan Opera Co.

I am a beautiful and talented woman in Lena Horn and Dorothy Dandridge.

"I am somebody.

I am somebody. I am an athlete in Lennie Ford and Goose Tatum.

I am a sprinter in Eddie Tolan.

I am an intelligent pen in the hand of Frank Yerby.

I am a college president in Rufus Clements, Charles S. Johnson, and Mordecai Johnson.

I am a fighter in Thurgood Marshall.

I am a breaker of world records in Jesse Owens and Mal Whitfield.

"I am somebody.

I am somebody. I am an orator in Howard Thurman.

I am a preacher in C. T. Walker and L. K. Williams.

I am a composer in Nathaniel Dett.

I am an actor in James Edward.

I am a boxer in Jimmie Carter and Archie Moore.

I am a knockout punch in Joe Louis.

I am a baseball player in Jackie Robinson and Roy Campanella.

I am a home-run hitter in Larry Doby and Willie Mays.

I am a world-famous pitcher in Don Newcombe and Ruben Gomez.

"I am somebody.

I am somebody. I am a scientist in George Washington Carver.

I am an industrial educator in Booker T. Washington.

I am a Congressman in William L. Dawson, Adam Clayton Powell, Jr., and Charles C. Diggs, Jr.

I am an advisor to the President in J. Ernest Wilkins.

I am a champion for world peace in Charles H. Mahoney.

I am a publisher in Louis E. Martin, Carl Murphy, and John H. Johnson.

I am the originator of the blood bank in Charles Drew.

I am a pathologist in Julian Lewis, and I am a chemist in Percy Julian.

I am the first successful operator on the human heart in Daniel Hale Williams.

"I am somebody.

I am somebody. I am a marksman in Dorie Miller.

I am a registrar of the Treasury in L. B. Toomer.

I am loyalty in the Armed Services.

I am insight in Sojourner Truth.

I am an advocate of justice in Walter White.

I am a leader in A. Phillip Randolph.

I am a builder in Walter A. Rife, and I am an architect in Paul Williams.

"I am somebody.

I am somebody. I am a moulder of character in Nannie Burroughs.

I am a banker in R. R. Wright and L. D. Milton.

I am a certified public accountant in Jesse Blayton and Richard Austin.

I am a sculptor in Henry O. Tanner and I am a cartoonist in E. Simms Campbell.

I am a businessman in Charles C. Diggs, Sr., and Sidney Barthwell.

I am a grand specimen of womanhood in Mary McLeod Bethune and Mary Church Terrell.

"I am somebody.

I am somebody. I am an insurance executive in C. C. Spaulding.

I am a biologist in Justis Howard.

I am a historian in Carter Woodson and J. A. Rogers.

I am a leader in education in Charlotte Hawkins Brown.

I am a beautician in Mesdames Walker, Washington, and Malone.

I am a trustee in slavery. I protected my master's wives and daughters while he fought to keep the chains of slavery about my body.

I am a bishop in W. A. Fountain and George Baber.

I am a ball of fire in Richard Allen.

I am a laborer in John Henry.

I am a true Christian, for indeed, I practiced the religion of Jesus at points better than my master from whom I learned it.

I am somebody!"

Appraisal of the Tariff Problem With Relation to Textiles

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement by Mr. Henry R. Heimann, executive vice president, the National Association of Credit Men, which gives a dispassionate and conservative appraisal of the tariff problem with relation to textiles:

FEBRUARY 15, 1955.

DEAR MEMBER: Tinkering with tariffs could be a dangerous economic and political pastime. Like the boy who takes apart a watch to see what makes it tick, only to find when he tries to reassemble it that he has more parts than will go into the case, so, too, tariff makers can mess up the works.

In the history of our own Nation we have had some tariff laws that were indefensible. They constituted monopolistic protection and could never be justified under any evaluation of fairness and equity to the rest of the world. In recent years the pendulum may have swung too far in the opposite direction, and today unfortunately it seems to be swinging even farther. Several suggested tariff changes could do irreparable damage to some of our most important industries. Some suggested tariff increases might be fully justified in the light of new conditions. It would be well, therefore, that the greatest of care be exercised and that all parties of interest be heard before changes up or down are made effective. We do not wish to build a fence around America, and we do not need to do so, but we do not intend to

extend an open invitation to manufacturers abroad, in nations of very low wages, to come in and destroy our standard of living or to cripple some of our major industries.

There is a new element in the tariff picture that apparently is not too well in mind. Heretofore we were able to offset the great disparity in wages paid here and in some of the competing countries seeking a free-trade entry, because of our more modern plants and equipment, methods of distribution, and our greater per capita production. It would appear at times that too many people discussing tariffs have failed to take note of the fact that some of the other countries now competing with us have considerably modernized their equipment, and indeed have plants and facilities as well as distributive systems that are equal to ours. Under these conditions it is no longer possible for American business with its high wage schedule to compete with efficient foreign competitors operating under low-wage rates without some measure of protection which is necessary to maintain the standard of living our workmen now enjoy.

Let us take a look at the cotton textile situation. One of the larger sources of competition is the Japanese textile and cotton industry. How many people realize that the Japanese textile industry today is practically new; that its plants and equipment are modern in every respect; that it can produce almost as efficiently as we do in the United States in our textile industry. The average wage paid in Japan to its textile workers is less than 15 cents per hour. The average wage in the United States in the textile industry is \$1.30 an hour. Under these conditions you see what the textile industry of America is up against, unless it has some tariff protection.

There is little wonder, therefore, that in the last few years the Japanese exportation of textile goods to this country has increased tremendously. In fact, their production capacity is so high at the present time that they are not injudiciously crowding their exporting program. They may feel they are getting a lion's share of the business over here and they do not particularly care to stir up a tariff controversy. Give them credit for being astute and realizing that to do so could jeopardize the advantage they now hold in the textile markets.

NEVER GOOD BUSINESS TO SET ASIDE EARNINGS TO BUILD COMPETITORS

You can readily sympathize with the American textile manufacturer who has been taxed to build up this Japanese industry. He has had to pay a very heavy earnings tax, and a part of the money the Government exacted from him has been used for foreign aid. The foreign aid bill has been paid for in part by the very companies that now must compete with the beneficiaries of their tax payments to this Government.

Stated simply, in the competitive program of business it is never considered good business judgment to set aside a part of your earnings for the purpose of building up a competitor. Such an altruistic position would disrupt all business, including the competitor's. The inflow of Japanese cotton goods in the last 3 months of the year has been enormous. That inflow has been largely due to our help in rehabilitating or reconstructing the Japanese textile industry.

Textiles affect many segments of our economy. The agricultural interests are very much interested because we grow cotton. Here we have a surplus which constitutes a tax burden upon our people. The possibility of reducing the surplus of cotton is not very favorable so long as we continue this high importation. The cotton farmer like the textile manufacturer has a heavy stake in the textile business.

MILLION AND QUARTER WORKERS IN HIGHLY COMPETITIVE INDUSTRY

We have approximately 1,250,000 of our people working in the textile industry. They

constitute a large segment of our manufacturing working force. They are not overpaid as to wages when the American standard is considered, but, as stated previously, the wage payments made to American workers are approximately 8 to 10 times higher than those paid in Japan to textile employees. Are we to move into a period of unemployment in this industry with its attendant cost? Are we getting ready to take a third bite out of the textile companies' dwindling earnings for the purpose of maintaining unemployment payments to idle employees?

Another point that could be made in the interest of a very careful stop-look-and-listen policy as to textile tariffs is the fact that the textile industry in America is highly competitive. Tariffs, therefore, in textiles cannot be said to maintain a monopoly because there is no such thing as monopoly in the textile industry. Nor do we have a monopoly in textile skills. Nor does our Government permit cartels. Nor do our reciprocal trade agreements apply to Japan.

Everybody recognizes that a reasonably free flow of trade and exchange of goods and services should be the objective of the world at large. There must, however, be certain limitations to free trade—particularly when you have various standards of living in various countries. Unless you have such limitations in effect the tendency will be to pull down the entire framework of standards of living of the world at large. The objective of a free and full exchange of goods and services is to build up the standard of living. Until such time as wage payments or standards of living abroad are improved, it seems a certainty that adequate protection must be given in the textile industry by way of tariffs.

MANY OTHER FACTORS INFLUENCE PROBLEMS OF EXPORTING COUNTRIES

There is another misconception about tariffs, namely, that they are the sole cause of the financial, economic and social problems arising in certain exporting countries. This is not true. There are many other factors that are equally, if not more, important to a sound national economy. One is a sound budget. Another is the absence of exchange restrictions. Another is the cost and efficiency of business and the government. Another is a decent wage standard. Unfortunately, the eyes are focused on the tariff and there are many who believe mistakenly that you can cure the economic ills of any nation, such as Japan, by simply removing tariffs on its exports.

From an economic point of view, it is well to go easy on any tariff readjustments. We must carefully weigh all the facts in a given situation. We must always keep in mind that our objective is to maintain our high standard of living. We want to help the rest of the world, but the rest of the world must likewise learn to help itself. Unless it does so, our intended help will boomerang and tear down the living standard we have established. This would not help but, quite the contrary, would have a very serious effect on other nations.

NEED CALM JUDGMENT IN TARIFF ADJUSTMENTS OF OTHER NATIONS TOO

I have used the textile industry merely as an example, because the problem is so immediate in that industry. The textile industry has had a difficult time for several years. Its problems, however, will be increased if it is not given a measure of protection against foreign cheap labor competition. It is an industry too vital to our own economy, to our defense program, to our agriculture, to our wage earner, and to the people who have invested capital in this industry to put it up against the type of competition that results from the cheap labor in certain eastern countries. Most textile stocks are selling in this boom market far below their book value.

I mentioned Japan's wage rate, but note that in India the textile wage is even less than Japan's 15 cents per hour. Even in great Britain the textile wage averages but 40 cents an hour. In Switzerland it is 43 cents; in France 38 cents; and in Germany 32 cents. Let us hope, therefore, that calm and mature judgment will be used in any tariff readjustments, not only in the textile field but in other industries that face a comparable problem.

BIG VOLUME OF STATE AND LOCAL TAX-EXEMPT BONDS MAY RAISE INTEREST RATE

For a number of years we have had sharp competition in the sale of bonds and promises to pay between the Federal Government and private industry. For the years ahead a third very active competitor is entering the field. The volume of State and local tax-exempt issues that are to be marketed in the next few years is tremendous. State and local governments are on the eve of a very heavy spending program. Their tax-exempt bond issues to cover much of their increased expenditures will compete not only with the Federal issues but also with private financing needs of business. The effect may well be to increase interest rates slightly. It depends upon what the managed money authorities do in the situation. If more credit is pumped into the tremendous reservoir of synthetic credit then there will not be too much of a change. If the natural law of supply and demand is ever allowed to operate occasionally, then interest rates will look up.

After all there does come a time when available funds for investment become scarcer and that time may not be too far off. It is not because the accumulation of investment funds is not going on at a heavy rate, but it is because of the tremendous demand for funds. The inflationary factor wherein the dollar-purchasing power has been so reduced makes it necessary for business to do much outside financing.

In the year ahead it is estimated that business may charge off as much as \$15 billion in depreciation charges. These charges, of course, strengthen the cash position of business. In addition, business ought to have \$7 billion in retained earnings with which to pursue its expansion and normal business program. Despite these vast sums business finds itself in the position of needing additional money to meet the ever-growing demands and to expand in keeping with its industry. Even the very largest of companies, as will be observed from the financial pages, find it necessary to go into the money market to keep abreast of our expanding economy. Much of the money is procured outside the banking fields. That is why the banking loans to business do not wholly reflect the business demands for credit. Many believe it would be better if more of business credit needs could be handled through regular banking sources. That would be better for the banks and consequently for the Nation as a whole. However, some of the loans are not satisfactory banking loans because of their length of maturity. In recent years this has given rise to considerable banking competition beyond the industry.

ELIMINATING TAX EXEMPTION WOULD BOOST LOCAL RATE ON BUSINESS, INDIVIDUAL

With the growing tax load the attractiveness of tax-exempt bonds is going to become more evident day by day. No doubt this may cause some agitation that this type of security be made taxable. Here again, however, too few people realize that a tax-exempt bond reflects the tax exemption. If the tax-exempt feature of a State or local bond were eliminated and the funds of States and local political subdivisions were made subject to a tax, and if this could be constitutionally done (which is questionable), it would simply mean a higher tax rate against business,

agriculture and the individual in the States, cities, or counties issuing the bonds. What it would mean is an increased local tax on the various groups of businesses and on the individual because the local government would have to pay a higher interest charge. It would also mean a greater return of taxable funds to the Federal Government because in such event the interest collected would be taxable.

History does not indicate that an increase in the flow of tax money to the Federal Government is quickly reflected in a lower Federal tax bill. Usually there are new needs discovered for the increased flow of money, and the tax rate (as will be well demonstrated during the current congressional session) remains constant despite Government receipts. In the end, therefore, if you tax State and local bond interest, John Q. Public would just have a larger tax bill or a bigger debt he eventually would have to pay with taxes.

Sincerely yours,

HENRY H. HEIMANN,
Executive Vice President.

The Federal Service: Its Problems and Its Future

EXTENSION OF REMARKS OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. SCOTT. Mr. Speaker, under permission granted me, I am submitting herewith copy of an address entitled "The Federal Service: Its Problems and Its Future," delivered by the Honorable James C. Worthy, Assistant Secretary of Commerce, before the American Society for Personnel Administration, Society for the Advancement of Management, and the National Capital Chapter of the Civil Service Assembly, on January 28, 1955:

THE FEDERAL SERVICE: ITS PROBLEMS AND ITS FUTURE

(Address by Hon. James C. Worthy, Assistant Secretary of Commerce.)

I. INTRODUCTION

I am very proud of the opportunity to address this joint meeting of three distinguished organizations. Whatever differences there may be in the membership, professional specializations, and systems of concepts and techniques as between your three groups, all of them have one characteristic in common—a focus on and a concern for the human problems of running the Federal Government. Each of your organizations has made significant contributions to the efficiency of Government operations and to the integrity of the career service. Your membership rosters constitute a "Who's Who" of leaders in the field of management and administration. I salute you for what you have done, and wish you Godspeed in your continuing efforts.

I appreciate your inviting me here today to discuss some of the problems of the Federal service as they appear to a relative newcomer to Government who is now on his way back to private business. My status in this respect gives me a perspective which may have a certain value. For whatever they may be worth, I would like to share with you some of the observations I have made during the past 2 years.

Personal point of view

I want to be perfectly clear that what I shall have to say represents solely my own thinking and that none of the proposals I shall make are to be considered as in any way official. They represent merely the ideas of one individual on the verge of re-entering private life. I trust you will view them in that light and accept them as sincerely directed toward improving the Federal service.

First of all, let me say it has been a great privilege to be a member of the Eisenhower administration and an officer of the Department of Commerce. I accepted the invitation to come down to Washington because I believed so implicitly in the principles represented by the President and by Secretary Weeks. I have never had occasion to regret that decision. Friends at home have commented on what they sometimes refer to as my willingness to accept the sacrifices of public service. I have always assured them that no sacrifice was involved. Quite the contrary: these 2 years have been the most stimulating and rewarding of my entire life, and I shall always be thankful that this opportunity was given to me.

I shall always be thankful for the friends I have made here, in high positions and low; friends who have made my task easier and my life richer. I have come to have a tremendous respect, not only for the appointive officials of this administration but for the members of the career service. I hope that as I go back to private life I will be able to help correct some of the mistaken impressions which prevail in certain quarters about the kind of people who work for the Government. I can say in all sincerity that for hard work and patient devotion it would be hard to find their equal in any line of endeavor.

II. SPECIAL CHARACTERISTICS OF GOVERNMENT WORKERS

The question is often asked of me as to how people in Government differ from those in private business. By and large, of course, they do not differ: Government people are a representative cross section of the American people as a whole, with all their diversity and all their strengths and weaknesses. But in the professional and higher administrative levels of Government service I think there are certain characteristics which at least in respect to emphasis tend to distinguish the typical Government employee from his counterpart in private industry.

Generalizations about people are always hazardous, but I think it can be said that the typical upper level career employee tends to look somewhat more to the satisfactions of the job itself and somewhat less to the monetary rewards of that job than the typical employee in private industry carrying comparable burdens of responsibility. Whereas the business executive defines his status and measures his progress to a considerable extent in terms of his income, his opposite number in government is inclined to give greater relative weight to his job as such and to his professional achievement on that job.

I do not mean to imply that the government worker is not interested in the size of his paycheck. In many cases, in fact, his somewhat sharper focus on job satisfactions may represent an adaptation to a situation in which financial rewards are more difficult to achieve than in private industry. Whatever the origin of the attitude, the fact remains, I think, that there is a difference, at least in degree, in the respective orientations of the man in government and the man in industry.

Implications for administrators

This generalization has important implications for the government administrator, particularly to the administrator who comes into government from private industry where he

has been accustomed to rely heavily on monetary rewards for energizing and directing the efforts of his organization. For one thing, the government pay system is too cumbersome and inflexible to permit it to serve as a useful tool for this purpose, and the businessman cum administrator must learn to rely on other means.

Of greater significance is the fact that failure to appreciate the extent of the government worker's ego-involvement in his job may lead the new administrator inadvertently to destroy or seriously impair the primary incentives available to him to promote high-level performance and efficient operation. The government worker will exert himself to the utmost, if necessary under severe difficulties, if he feels that those in authority recognize the importance of what he is doing and are giving him the support he needs. But if the value of his work is questioned—or, worse, if he is attacked directly or by implication as an unnecessary burden on the public payroll—he is deprived of the chief incentive he has for diligent, conscientious effort.

This does not imply by any means that a new administrator should accept without question all the activities he may inherit; neither does it imply that functions once established need be continued indefinitely. Indiscriminate approval loses its value here as in all human affairs. What is needed is a selective, judicial approach; an attitude of evaluating functions on their merits, of seeking to eliminate the less essential in order to strengthen the more essential, of concentrating on the most important things to be done and providing the circumstances, the atmosphere, the support which will enable them to be done better. This is the kind of approach the Government employee will understand and respond to, and the administrator who uses it can count on a loyal, enthusiastic, and productive organization.

Efficiency in Government

Because of the many impediments to efficient operation in Government, it is important that this characteristic of the Government employee be recognized and utilized. Most of these impediments to efficiency are inherent in the nature of Government service.

There is, for one thing, the high rate of turnover at the top. I was looking the other day at a picture taken about 2 years ago of the secretarial officers of the Department of Commerce. Of the 7 men in the picture, 4, including myself, are no longer there and have been replaced by newcomers. The situation in other departments, I imagine, is fairly comparable and is not by any means unique to this administration. I could not help wondering as I looked at that picture what would happen to a private business concern if it experienced a like degree of turnover in its top staff.

This kind of turnover places a severe strain on any organization. Government, as an on-going institution, has adapted itself over the years to absorb this strain. It has built-in resiliencies that enable it to weather the comings and goings of those at the top. Experienced civil servants develop techniques of self-protection that help them adapt to change in policies and personnel; those who fail to develop such techniques are not likely to survive for long.

These are natural adaptations to the realities of Government life; they are essential to a reasonable degree of continuity of function. But they take their toll in efficiency. When so much of the organization structure has to be designed to provide resiliency to change, when so large a part of the efforts of key personnel must be devoted to self-protection—or equally important, when so much initiative is stifled for fear of unnecessary exposure—it is little wonder that Government operations are often inefficient as compared to private industry.

Challenge to Administrators

The Government administrator, however, has it within his power to offset these impediments in substantial degree. He has available, for the tapping, a tremendous source of energy and enthusiasm in the job-oriented attitudes of the typical career employee. Give the career employee leadership as to the direction you want him to go, recognize the importance of what he is doing, see that he has the support and facilities he needs, do what you can to remove roadblocks and encumbrances in his way—and you will be amazed at the effort and productivity you will call forth. Under these circumstances Government operations can more nearly approach the efficiency of private industry. But the task requires high orders of understanding and administrative skill.

III. COMMONSENSE IN ADMINISTRATION

In this general connection, I would like to say a few words about the organization of administrative functions in the Federal Government. There has been a vast proliferation of administrative activities in recent years. Budget and management staffs, personnel staffs, organization and methods staffs, general service staffs, and so on have often grown more rapidly than the agencies of which they are a part. Typically, too, when cut-backs have been necessary the administrative staffs have been cut back less severely in proportion to the professional and program staffs. Both the growth of the administrative staffs and the tenderness with which they are treated when appropriations are reduced are justified in terms of the presumed contributions of such staffs to efficiency of operations.

Expansion of administrative staffs

It is easy to argue that an extra budget analyst can save many times his salary, or an extra personnel man can help improve employee morale, or the centralization of common services can save payroll. All these things may be true—in balance and moderation. But I have the feeling that in some cases we may have gone too far. The pendulum has swung widely since the reports of the first Hoover Commission called attention to the need for improved administrative management in the Federal service. The organizations represented here today have greatly aided in that swing. And because of the strategic position the administrative staffs have come to occupy in most major agencies, they have been able to expand and strengthen their functions, often at the expense of the program areas.

I think a time has come for stock-taking. Above all, I think the time has come for a re-evaluation of the role of the administrative functions.

One reason administrative staffs have grown as they have has been the tendency to elaborate and extend administrative controls. A parallel factor has been the tendency to centralize functions. If the approach is in the direction of control and centralization, there is no limit to the extent to which the administrative staff can grow; but the cost in terms of the effectiveness of the organization as a whole can be very great indeed.

A service approach

In the Department of Commerce we have tried to develop a different point of view. We have tried to minimize the control aspects of administrative functions and to promote maximum decentralization. In particular, we have tried to emphasize the service aspects of the administrative jobs. We have tried to get across the idea that none of the administrative functions—whether personnel, budget and management, organization and methods, or whatever—has any value in its own right, that it is useful only to the extent that it contributes to the achievement of program objectives.

In our view, the purpose of the administrative staff is not to devise and police controls, except as positively required by law or regulation, but rather to assist program staffs in finding their way around difficulties and to provide them with the professional advice and services they need to do their jobs more effectively. Under this concept, administrative staffs can be kept small but their value to the organization can be greatly enhanced. And the job satisfaction of the administrative people themselves can be enriched and deepened accordingly. I submit there is far more basis for pride in helping a bureau or a division solve a knotty problem than in issuing a reprimand for deviation from some procedural detail.

As professionals in the several functional branches of administration, I urge you to consider carefully the role and orientation of your administrative organizations. I feel very definitely the need for strengthening administrative management in the Federal service, but I think we ought to consider carefully the means we employ for that purpose.

IV. THE PROBLEM OF PATRONAGE

I should like to turn now to another subject which also, in my view, requires considerable reevaluation. I refer to the subject of patronage and its relation to the career service. No other topic—except possibly that of security—has generated so much heat and so little light during these past 2 years.

Whatever other fruits it may have enjoyed from its victory in 1952, the Republican Party has been bitterly disappointed in the matter of jobs. The party had been out of power for 20 years. There had not only been little or no Federal patronage during all that time, but party leaders and workers recalled vividly what happened in 1933 when the Democrats succeeded the Republicans in office.

Recollections of 1933

They recalled the arbitrary dismissals of career employees suspected of the taint of Republicanism—such as the removal from the civil service of 376 "higher paid technical and professional positions" in the Bureau of Foreign and Domestic Commerce and the en bloc replacement of incumbents by loyal Democrats. They recalled the thousands of Democrats who found their way into Federal employment in the years following 1933 and the difficulty of getting a job without Democratic endorsement.

They recalled the vigor with which Jim Farley handled his job as patronage boss and his frankness about what he was doing and why. They recalled that as late as 1948 Jim Farley had written: "While many criticize the spoils system, I have always felt that it is just as easy to find a good Democrat as a good Republican or vice versa and that the party in power should reward its own."

Disappointments of 1953

Remembering these things, the leaders and workers of the Republican Party looked forward to the turnover in office 2 years ago with relish and anticipation. But they were sorely disappointed; and if they have grown bitter, they can be understood. It does little to assuage their bitterness to point out that there are a number of very important differences between 1933 and 1953. But if we are to deal intelligently with the problem, we had better understand what those differences are.

I had the fortune—or misfortune—of serving in the first years of two new political administrations: with the NRA and its successor agencies from 1933 to 1936 and with the Department of Commerce from 1953 to 1955. I am therefore in a position to see quite vividly some of the sharp contrasts between the two periods.

Greatly extended civil service coverage

For one thing, the coverage of civil service is much more extensive in the latter period than it was in the former. When the Democrats took office in 1933, 80 percent of all Federal jobs were under civil service. But by 1936 civil service coverage had been reduced to about 60 percent, partly through removing certain jobs from civil service but more importantly through specifically exempting the newly created emergency agencies. As against about 40 percent of all Federal jobs available for patronage purposes before the end of President Roosevelt's first term, only 15 percent are so available now. Whatever this may represent in the way of a desirable strengthening of the merit system, it also represents a formidable restriction on freedom of appointment.

Growth of Government under Roosevelt

Of much greater importance, however, was the fact that 1933 saw the beginning of the rapid buildup in the size of the Federal establishment, whereas 1953 saw the initiation of a sharp trend in reverse. During President Roosevelt's first term, new agencies were created in quick succession and the need for Federal workers grew by leaps and bounds.

I can remember the hectic buildup period of NRA during the summer of 1933. We had few administrative regulations in those days, but I can remember one of them: No hiring on Fridays. This rule was necessary simply because the recordkeeping machinery could not keep pace with the rate of hiring. So each Friday people from the chief clerk's office went through the organization taking a census of all those hired during the preceding days of the week. Other agencies faced with similar problems of rapid growth no doubt employed a variety of expedients, but I have always thought of this one as illustrating vividly the great wealth of jobs available at that time. And I can assure you from having lived through it that the Party then in power made full use of the political opportunities thus afforded.

Contraction of Government under Eisenhower

The situation faced by the new Republican administration when it took office in 1953 was sharply different. Instead of entering on a period of great expansion, President Eisenhower set in motion the economy program which had been one of the important Republican pledges in the preceding campaign. Instead of more jobs there were fewer. Instead of rapid, large-scale recruitment, widespread reductions in force were the order of the day. During the first 2 years of the Roosevelt administration, Federal employment increased by 141,000. During the first 2 years of the Eisenhower administration, Federal employment decreased by 200,000. In the Department of Commerce alone, regular, full-time employment was cut back 23.3 percent during our first year in office. Thus, even in the relatively few job categories which remained outside civil service the opportunities for patronage were meager indeed.

Buildup of pressure

But memories of what had happened in 1933 persisted, and discontent within the Republican organization rose to fever pitch. Pressure on the administration became extreme. I think it is to the everlasting credit of the President and the men around him that, in the face of this pressure, they have kept and maintained their strong position of safeguarding the merit system. I shudder to think of what might have happened had less courageous and less forthright men been at the helm.

But the pressure remains and the problem persists, and the entire subject is becoming

increasingly confused. I think the time has come for a fresh and objective reappraisal.

A large part of our present confusion comes from failure to distinguish between two quite different things: the need of a new administration to gain control of the machinery of Government and the need of the party in power for jobs to reward the party faithful. These two needs have only in common the fact that both involve jobs and both involve people. Otherwise, they are entirely different in nature and must be satisfied by entirely different means. Let us consider each of them in turn.

Controlling machinery of government

In order to gain control of the machinery of Government, it is necessary for a new administration to control only a relatively few jobs. These are the key positions in the organization, the positions which are truly policy determining or policy influencing and the incumbents of which are close enough to the working processes to insure the faithful adherence of the staff to the program directions laid down.

In this connection, it is important to remember that by far the greater part of all governmental activities are devoid of partisan content. What has the work of the Bureau of Standards or the Patent Office or the Bureau of the Census or the Office of Business Economics to do with which party is in office? The level of their appropriations may rise or fall in accordance with the dictates of administration policy, the scope of their activities may expand or contract accordingly, and there may be certain changes in program emphasis. But the work itself is nonpolitical.

So long as the top staff in such agencies is professionally competent and properly cooperative with the new administrative group their personal politics is beside the point—assuming, of course, that they comply fully with the restrictions of the Hatch Act. In considering the number of jobs a new administration needs to have at its disposal to insure control of the governmental machinery, this largely nonpartisan nature of by far the greater part of the federal establishment needs to be kept in mind.

Support for administration policies

Even in activities where there is an appreciable degree of partisan content, the number of jobs that must be controlled still is relatively small. It has been my observation that the great majority of Federal workers—I can say this confidently at least with respect to the employees of the Department of Commerce—are conscientiously supporting the policies and programs of this administration—as I am sure they conscientiously supported the policies and programs of our predecessors in office.

Unfortunately, there has been a certain amount of confusion on this point, and it has sometimes been overlooked that, if people are to support a particular program or policy, they have to know what that program or policy is. One of the difficulties faced by the new administration when it came into office 2 years ago—and I am sure it is a difficulty experienced by any incoming administration—was that many of the new officials had to learn their way around in their new jobs. They had, of course, a general idea of the kinds of work performed in the bureaus and offices for which they were responsible and they had fairly clear-cut notions of the directions they wanted to go. But they often were not familiar with detailed issues and it took time for them to acquaint themselves thoroughly with the pros and cons of various alternative lines of action.

Under these circumstances, in the early months of this administration people down the line were sometimes lacking in clear-cut policy direction. But the work had to go on, and in the absence of specific instructions

to the contrary they were likely to continue along much the same lines as under the prior administration. Thus it happened that the new administrators were sometimes confronted with actions or proposals for action with which they were in disagreement, and it is easy to understand that in some cases they developed the feeling that their career staffs were undercutting and second-guessing them. But this was only a passing phase. As the new administrators gradually worked out their own policy positions, as they made clear to those under them the directions they wanted to go, the career staffs swung in solidly behind them and are giving them their loyal, wholehearted support.

Few jobs required for control

Thus, even in activities with substantial partisan content, it is necessary to control only a relatively few jobs to control the machinery of government. Effective control is not secured by reaching far down into the organization, but by making sure that the few really key jobs are filled, not merely by people loyal to the administration but by people with a sure grasp of the problems of the organization and the ability to provide clearcut goals and positive leadership. Given this, there need be no fear of lack of control.

By and large, I think the schedule C system has proved reasonably adequate to assure effective control of the governmental machinery. In the Department of Commerce we have not been granted all the schedule C authority we asked for, but, for the most part, we are fairly content. It might interest you to know that of our approximately 41,000 permanent full-time jobs only 86 are in schedule C. I think this gives some indication of the quite small number that are needed for purposes of control.

V. SUSTENANCE OF THE PARTY SYSTEM

But there is another and quite different need that must also be met. This is the need for jobs to nourish the American party system. For this purpose greater numbers and quite different categories of jobs are required than those embraced under the schedule C concept.

Nature of party system

The genius of this country is political. That genius is expressed in our unique party system no less than in our unique Constitution. The distinguishing characteristic of American political parties is that they are nonideological—there are far greater differences of ideological position within each of the two great parties than there are between them. This characteristic has important implications for our political system. It means, among other things, that many conflicts are resolved within the framework of the parties themselves rather than in struggles between the parties.

In countries when parties are largely ideological, as in England, the conflicting ideological principles of the parties makes the resolution of issues difficult. Under our system where the differences are chiefly within and not between the parties, issues can be debated much more clearly in terms of their individual merits; precisely because the ideological factors are fuzzy they interpose fewer difficulties to the reaching of agreement. The American process is seldom neat and orderly and few interest groups are ever entirely satisfied with its results. But neither is any interest group ever wholly alienated. The American party system is probably the most effective means ever devised by man for handling the political problems of organized society.

Necessity for patronage

Under ideological party systems, the common interest of ideological position helps hold the party machinery together and keeps it functioning. Under the American system, some other unifying and sustain-

ing factor is necessary. Historically, this factor has been patronage.

I think we have failed in this country to appreciate this peculiar characteristic of the American political system. I think that in our enthusiasm for extending the scope of the merit system we have come dangerously close to denying our political parties the sustenance they need to retain their health and vitality.

We have been misled, I think, by false analogies between our and the English civil service systems. We have gone on the implicit assumption that if the merit system is good it should be continually expanded until, ideally, it covers all Federal employment. But we have failed to realize that the English can afford a universal merit system because their parties are ideological and consequently have little need for patronage whereas there is serious doubt that our parties could survive for long in their present form without adequate patronage. Many of the difficulties of the Republican Party today are directly traceable to what may be best described as 20 years of malnutrition.

In our indiscriminate pursuit of the ideal of a universal civil service we may have gone too far. I think we need to take another look at what we have done in terms of its implications for the party system.

Characteristics for political recruitment

Let me make this very clear: I am not suggesting we turn the clock back; I am not suggesting we expose either Government employees or the public to the evils of a revived spoils system. What I am proposing (and remember, I am speaking only for myself) is that we make a careful analysis of Federal employment for the purpose of identifying certain jobs whose nature is such that they can be filled without material loss of efficiency, and perhaps even with gains in efficiency, by the selection of applicants referred by the party in office.

I am not suggesting that such jobs be filled by Republicans simply because they are Republicans (or by Democrats simply because they are Democrats) but that they be filled by properly qualified persons referred by the political party in office. The emphasis, in other words, is not simply on party label but equally on fitness and capacity.

One requirement would be that jobs designated for this purpose be such that their effective performance would not be seriously impaired by fairly frequent turnover. Most of them should be in the field, close to the grassroots for these have by far the greatest political value. They should be the kind of jobs which lend themselves to efficient recruitment through the channels of party organization. For certain kinds of jobs, in fact, it should be possible to secure just as well qualified people through political referral sources as through competitive civil service examinations, often with a definite improvement in efficiency of recruitment and quality of selection.

Quite definitely, jobs designated for this purpose should not be those requiring specialized technical or professional skills; not only are such jobs of little value politically, but it is essential for orderly and efficient government that they be filled entirely without reference to political considerations. For the same reason, jobs involving special public trust, such as those in the Internal Revenue Service, should be excluded for it is essential that the public have confidence that the decisions of such officials are not susceptible to pressures of any kind, political or otherwise.

Other specifications, both of inclusion and exclusion, could be spelled out but these, I think, suggest the general approach.

Need for study

I shall not be so unwise at this time as to try to identify any specific jobs which

might be set aside in this kind of special reserve. It is the essence of my thought that the problem be studied very carefully with the needs of the party system in mind as well as the requirements of efficient management. I venture to suggest that in the interests of contributing to the strength and vitality of the party system we could afford to risk a slightly lower level of efficiency on certain kinds of work than we might otherwise try to achieve. On the other hand, I am convinced that if we have capable management, and if the jobs are properly selected for the specific purpose here in mind, filling them with applicants referred from political sources may well result in increased efficiency and better performance. The competitive civil service is not necessarily synonymous with maximum efficiency.

Also, let me be clear that I am not necessarily talking about a large number of jobs. Actually, the number which might remain outside the merit system might very well be no more than the total outside the merit system today. But they would be better distributed. They would be excluded from the merit system because they have characteristics which peculiarly fit them for this special purpose. Their status would be well-defined and the conditional tenure of their incumbents well understood.

Benefits to merit system

Such a program would not only greatly strengthen our very special party system, it would also be a boon to the merit system itself because it would channelize along safer lines the tremendous political pressures which otherwise build up whenever there is a change in the party in power.

We have seen something of such pressures during the past 2 years. You can be sure that they will recur with equal or greater force the next time there is a change in party. If these pressures are not relieved by wise and well-considered measures there is always the danger that they may reach a point where "something has to give," and the resulting explosion may do irreparable harm to the merit system.

There is no necessary conflict between the merit system and the selection of politically referred applicants. Both serve highly essential purposes, and their roles can be reconciled. The two are in conflict now because we have failed to take into proper account the very real—and, let me emphasize, legitimate—needs of the American party system. But this can be corrected by identifying certain carefully selected jobs and making it quite clear that there is nothing wrong in filling them with applicants referred by the party in office.

It should be made equally clear that appointments to all other jobs, except those in the schedule C category, would be made absolutely without reference to political considerations of any kind. By carefully distinguishing between the characteristics and methods of administering the two systems, they could work side by side in much greater harmony than now prevails and could serve their respective purposes much more usefully.

VI. REORGANIZATION OF PERSONNEL FUNCTIONS

I should like to turn now to another subject which likewise, I think, needs reappraisal. I refer to the need for more effective organization of the executive branch for efficient management of personnel, especially in the higher levels. I recognize that I am venturing onto controversial ground and repeat that the opinions expressed, whatever they may be worth, are entirely my own, and I accept sole responsibility for them.

Administrative difficulties

Many of the administrative difficulties of the Federal service have their origin in three main points:

1. The Civil Service Commission, over a period of years, has been called upon to per-

form two quite different and in many ways basically conflicting functions. On the one hand, the Commission is called upon to protect the interests of career employees; on the other, it is called upon to serve as the staff arm of the Chief Executive in personnel management matters. The first is an employee interest. The second is a management interest.

2. The President, as Chief Executive, is responsible for providing central leadership in the executive branch in personnel management. To date, however, no President has ever had an adequate staff for positive and progressive personnel management, nor one with full jurisdiction over all executive personnel matters.

3. Personnel management in the departments and agencies needs to be strengthened through strong central executive leadership within the framework of regulations established for the career service and through almost complete decentralization of authority and responsibility for actual personnel operations to the departments and agencies themselves.

Let me elaborate these points a little further.

Conflicting functions

First of all, the combining of two basically conflicting functions in the Civil Service Commission is an open invitation to schizophrenia. In this respect, the experience of private industry is illuminating. Some companies have established personnel departments for the stated purpose of representing the interests of workers to management and the interests of management to workers. Where serious efforts have been made to apply this concept, the results have been highly unsatisfactory to both workers and management, and the personnel director has usually wound up with a bad case of ulcers and thoroughly discredited on both sides.

It should be axiomatic that no single individual and no single agency can properly represent both management and workers. At some point the wholly legitimate requirements of management come into conflict with the wholly legitimate interests of workers, and regardless of whether the personnel director takes a stand on one side or the other or seeks to temporize, his effectiveness is lost and his influence dissipated.

Second, it seems to me essential that all functions involving central executive leadership in personnel management in the departments and agencies be vested in the Executive Office of the President and that the President be given a staff adequate to discharge his responsibilities in the important field of personnel management.

Realignment of responsibilities

This requires, in my opinion, a far-reaching realignment of responsibility for personnel functions. As I see it, the Civil Service Commission can best achieve its historic mission of establishing and maintaining a strong career service if it is relieved of responsibility for administrative operations and concentrates on providing the framework for the career service principally through (1) establishing appropriate regulations and standards for such a service, (2) inspecting personnel management activities in the agencies, and (3) adjudicating employee appeals. These functions are the very heart of establishing, maintaining, and protecting the career civil service.

A proper realignment of functions also requires, in my opinion, a strong executive personnel agency in the Executive Office of the President. The functions of such an office should be: (1) to develop and formulate general personnel policies within the framework of laws and regulations established by Congress and the Civil Service Commission, (2) to stimulate, assist, and review personnel management in the depart-

ments and agencies, and (3) to carry on certain types of personnel activities, especially those involving high-level executive positions, which can only be conducted effectively from the Office of the President.

Bureau of Personnel

Such an agency might be called appropriately the "Bureau of Personnel." It should be a part of the Executive Office of the President, should report directly to the President, and should have a status coordinate with the Bureau of the Budget.

Some of the functions which should be performed by the new Bureau of Personnel are now performed by the Civil Service Commission. Others are now performed by the Chairman of the Civil Service Commission in his capacity as the President's Adviser on Personnel Management. Still others are now performed by a variety of individuals and offices scattered about in various places. Finally, some of the functions which should be performed in the interest of effective personnel management are not now being performed at all or are being performed only on a rudimentary level. Grouping all of these phases of personnel management into a single strategically located agency in the Executive Office of the President would unify and strengthen personnel management in the executive branch and provide the President the facility he needs for exercising leadership in this crucial area of governmental operations.

Progress in other areas of management

Such a realignment would be in keeping with the best developments in organization in the recent history of other phases of management. The Bureau of the Budget has been able to do a far more effective staff job for the President since its reorganization in 1939 and transfer from the Treasury Department to the Executive Office of the President. Great improvements in administration have been achieved in a number of agencies through adoption of corporate forms of organization, business-type budgets, and comptrollership systems of controls. Accounting systems have been greatly improved under the joint accounting program of the Bureau of the Budget, the Treasury Department, and the General Accounting Office, and commercial-type audits represent a big step forward over the traditional Government-type audits.

In a number of subject-matter areas, moreover, rulemaking, inspectional, and appellate activities have been separated from operating functions with a substantial improvement in organization and operations. I need only refer, for an example, to the very desirable clarification of functions and organization in the field of civil aeronautics, where we have a Civil Aeronautics Board (the CAB) to establish the framework of regulations for civil aviation activities and a Civil Aeronautics Administration (the CAA) to carry on necessary operations such as aviation safety, Federal airways operations, airport engineering, and the like.

Personnel arm of President

As I see it, the Bureau of Personnel in the Executive Office of the President would serve as the personnel arm of the President, with no confusion as to its orientation toward more efficient management practices. It would develop and formulate general policies within the framework of civil-service laws, regulations, and standards; and provide central leadership, assistance, and review for the personnel organizations and programs of the various departments and agencies in terms of the needs of efficient management.

The Bureau would engage only such activities as cannot be efficiently decentralized to operating departments and agencies. Personnel operations should be streamlined and decentralized to departments and agencies far more than they have up to the pres-

ent time, particularly in the field of recruitment, examination, and related matters. With more effective guidance from a Bureau of Personnel in the Office of the President, it could be expected that better personnel management would develop in the departments and agencies. The improvements thus achieved should in turn make possible a far greater delegation of authority and responsibility than perhaps would be wise at the present time.

In addition to providing strong leadership and guidance to operating departments and agencies in the executive branch, the Bureau of Personnel would perform various functions of a staff nature for the President. I need not catalog all the useful functions the Bureau might perform, but I would like to mention 1 or 2 which may be of special interest.

High-level executive placements

One of the most important of such functions is that of executive placement in high-level jobs of a policy-determining or policy-influencing nature. In general, these jobs are about equivalent in type and level to schedule C jobs and above. Jobs of this nature obviously have important implications not only from the standpoint of executive management but also from the standpoint of political relationships.

The first requirement for effective organization of any kind is that key positions be filled with people properly qualified to perform their tasks. A related requirement is that adequate means be provided to assure orderly replacement with equally competent people in face of the turnover that always takes place.

I have been struck, these past 2 years, not only with the great difficulty of securing properly qualified people for higher level Government positions but also with the problem of assuring effective utilization of the personnel available. An agency head, faced with the loss of one of his top officials, is in a very difficult position. He is an extremely busy man. The demands on his time and attention are such that he can give little thought to locating a good replacement, and the probabilities are strongly against the right man just happening to come along at just the right time. In consequence, many important positions are in danger of being filled on a basis of accident or expediency, and many good men are passed over merely because no one happens to think of them in a particular connection at a critical moment.

One of the primary functions of the Bureau of Personnel as I see it would be to provide an executive placement service to the President and to high officials of the Government. Suitable rosters should be developed and kept up to date of persons within the Government and of persons outside the Government who are well qualified for various types of key positions and who should be considered for them and if necessary persuaded to accept them. Very often, the person needed for a particular job is a most reluctant candidate indeed.

Optimum use of talent

Executive talent is always a scarce commodity, and one phase of the executive placement function should be to assure optimum use of the talent actually on hand. I am very sure that many of the people already serving in this administration are qualified for higher responsibilities than those they now hold. Means should be provided for identifying such people and for indicating the kinds of higher responsibilities for which they should be considered. The bureau of personnel should periodically appraise the work of all policymaking officials, not only to bring to light any hidden talents already on hand but to discover weaknesses and inadequacies which should be

corrected by replacement or other suitable administrative action.

With rosters thus developed, the Bureau of Personnel would be able to render a highly useful service to the President and to the heads of the various executive agencies. As vacancies occur, the director of the bureau could do the staff work of reviewing the qualifications of all potential candidates, both from within government and without. He could then present a small but highly select list to the agency head, who would make the final selection. Without in any way restricting the range of choice of the agency head or encroaching on his responsibility, a service of this kind would save him an appreciable amount of time and worry. And it would tend to greatly improve the quality of selections. The basis of selection would be considerably broadened and there would be greater assurance that the best qualified person available is actually appointed. The resulting improvement in management and direction of the key affairs of government could be very great indeed.

Orientation of new officials

One of the serious needs of Government is some more effectively organized means for instructing new high-level appointees on the problems they will face in taking over their new responsibilities. Any retail store on F Street does a better job of making sure that a new salesgirl gets a good start than does the Government with respect to a new assistant secretary. Every secretarial officer of this administration with whom I have talked has expressed the wish that some way, some how, he could have been warned about some of the pitfalls he had to discover the hard way or could have been given certain basic information about how government works and about how he could most effectively take hold of his new responsibilities.

The Bureau of Personnel, as I see it, would not only play a key role in the selection and appointment of new high-level officials, but would also be responsible for seeing that they get off to a good start.

Closely related to executive placement and orientation is executive training and development. The Bureau of Personnel should undertake to plan out and operate a governmentwide, interagency program of training and developing promising young executives for key positions in the future. Unless we do this, we are failing to make maximum use of the potential talent we already have available in the Federal service. Drawing on the experience of industry, I think it can be safely said that the only successful way to run such a program would be from the Office of the President.

College recruiting

Another function of the Bureau of Personnel should be the direction of college recruiting, on which the quality of future management depends in large degree. From my experience in private business, I know that we must keep a continuing influx of promising young college graduates each year, in order to maintain competent management. In the company to which I am about to return, it takes about 8 years to train a good store manager through various intermediate assignments and positions. The company relies heavily on recruiting able young college graduates each year. It knows from experience that if it fails to recruit sufficient trainees in any given year, it is in for trouble 8 years or 10 years later, when it will be looking for good store managers and can't find them to the extent it needs them.

Shocking deficiencies

On a conservative estimate—to my mind unrealistically conservative—about 8,000 new college graduates a year are needed in Government service. Currently, I understand, we are actually recruiting only about 2,000 a year. I can imagine what such a deficiency would do to a private industry; its

implications for the future competence of Government operations are shocking.

The Government's whole college recruiting program must be completely overhauled, with a view to competing more effectively with private business firms and professional organizations in attracting a better share of the cream of each year's crop of college graduates. This means, among other things, that we must be able to offer them not only a decent salary, but recruitment without burdensome procedural requirements. We must also provide a carefully managed program of opportunities to show what they can do, promotion as rapidly as they show their ability and as rapidly as they would be advanced in private industry, and reasonable protection from the vicissitudes of reductions in force and similar disturbances of tenure for a stated period of years (perhaps as long as 10), provided, of course, their performance and progress are satisfactory.

Strengthened functions

There are many other ways in which the Bureau of Personnel could strengthen personnel management in the executive departments and agencies. The main point is simply this: As a management agency, it should—and could—focus attention more sharply on the several problems with which government is faced in achieving efficient and economical personnel management. It should—and could—help us to distinguish mere tradition and form from real and current operating needs, and thereby help us to devise more realistic and effective solutions to our personnel problems.

I have tried to give some indication of the broad lines along which, in my view, the personnel activities of the Federal Government should be reorganized. I think our present arrangements are inadequate because conflicting roles and responsibilities have been allowed to grow up over the years within the Civil Service Commission which compromise it in its function as a regulatory agency and severely handicap it as a management arm of the President and the executive branch. I have tried to suggest a means for eliminating this conflict and for strengthening both functions. I do not expect ready acceptance of these proposals, but I hope they may provide a basis for further thought and discussion, out of which may come an effective solution for one of the really serious problems of government administration.

VII. CONCLUSION

I fear I have talked much too long. But I had some things I wanted to say, and I am grateful to you for providing me the occasion to say them.

I want to say only one thing further.

It has been a great privilege to serve under the leadership of President Eisenhower and Secretary Weeks. It has been a great experience to be here in Washington these last 2 years. One of the fine things about that experience was getting to know the people in the Department of Commerce and people such as yourselves in this room with a common interest in the problems and the future of the Federal service. I shall think of you often. Good luck to you all.

Security of the Republic

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article which

appeared in the January 31, 1955, edition of the New Republic magazine.

This address, printed with some deletions for reasons of space, was made by former United States Senator Harry P. Cain, of Washington, and presently a member of the Subversive Activities Control Board:

SECURITY OF THE REPUBLIC

On January 15, 1955, Harry P. Cain, Senator from Washington from 1946 to 1952 and since then a member of the Subversive Activities Control Board, addressed a meeting of Republicans in the Fifth Congressional District in Spokane. "I am here as a proud Republican," said Mr. Cain, "but I am speaking as one who feels that his basic allegiance is to the Nation."

Mr. Cain first praised the work of the Subversive Activities Control Board in terms we believe to be just. He then spoke of his six enjoyable but hectic years in the United States Senate. "Its only conceivable drawback," he noted, "was an exaggerated emphasis on work of every possible kind rather than an output of thought. I readily confess," he stated, "that I attempted to accomplish too much for too many people in too many directions all at once. In attempting all this I lost sight of some fundamentals which I have returned to focus during the past 2 years."

In presenting the reflection of 2 years Mr. Cain declared his willingness to live indefinitely under the conditions and demands imposed by the conflict against communism. He expressed his view that given intelligent world leadership the United States would eventually win this conflict. He cited as his major concern, whether at the conclusion of the conflict freedom and justice would govern the United States.

Promising that his address would not contain a single unreasonable, insupportable, or destructive political reference, Mr. Cain analyzed the fundamental problems raised by the Federal security program. With some deletions made for reasons of space this speech is printed below:

"No one among us denies that the present is an age of peril. Were we in disagreement about this, we could reach agreement about nothing.

"Most of those in authority in each political party refer to the present and the years of our immediate future to be an intended period of peaceful coexistence with our enemies. It makes me much more alert and less gullible to think of these years as being coexistence with conflict. Call these years what you will, they will be demanding of a national preparedness and readiness in the armed services, which will long continue the draft or some counterpart, on the farm and throughout industry, sufficient to call for hard sacrifices and participation by all of us.

"This knowledge doesn't bother or perplex me. I accept it willingly. Like you, I am not living in the past or in the future. We must contribute in some real measure to the age in which we live.

"As between our material strength and that of the Soviet Union, I see no particular hazards or defeat in store for the United States. I can only believe as I do that our present leaders and those to come will pursue every intelligent avenue for reconciling our differences with the leaders of international communism short of war. I must remain convinced, as I am, that we shall prevail and survive through any war which may be forced on civilization. In this sense and as a citizen, I have no fear of the Soviet Union whatsoever.

"My only major concern is with what we are to be when international communism's ambition for world domination has been defeated in one way or another. Will we or those who follow us be able to say after the conflict has run its course that through its years, even though they be a hundred, we

Americans and our Government have maintained and left untarnished our self-respect?

"Will we then be able to reassure the rest of the world that America remains a place in which the individual is free because his Government and those in authority in every walk of life have been just?

"As for myself, justice or equity and freedom or liberty are the two evidences of human progress and hope which distinguish representative governments and their peoples from those directed by tyrants, dictators, and despots. Other differences are only skin deep and hardly worth mentioning.

"I want no victory over the godless forces of oppression which does not include the preservation of these assets without which a free people die and wither away.

"Here we are confronted with the greatest challenge of our time. Now is when we must inquire about and make certain that in working to become victorious across the seas, we are permitting no domestic enemies or any acts of cowardice, shortsightedness, arrogance, or stupidity to assault or cripple our bastions of freedom here at home.

"How often do you hear it said that, because of our overwhelming fear of communism, we are blindly or blithely destroying the Constitution and the Bill of Rights? How often do you hear it said that muddleheaded if well-intentioned dreamers are so enamored of liberty in the abstract that we are doing too little or nothing meaningful in opposing the conspiracy which seeks to drive freedom from the earth?

"I listen each day to those who frantically espouse each of these premises. In my judgment, neither contention is even remotely correct, but there are far too many citizens who believe one or the other of these contradictory courses to be true.

"In our struggle to survive as free men and women, we must keep three elements in balance. They are justice, security, and freedom. It seems apparent to me that none of these elements can stand alone and that no two can operate successfully without the other.

"In the years of our past, we have lived by the dictates of freedom and justice. We have known what they were and we have long taken their blessings for granted. We can't say as much about internal security. In terms of time it is reasonable to say that our Nation didn't recognize the pressing need for an internal-security system prior to 1947, a mere 8 years ago.

"In March of 1947, our Nation departed from the more tranquil life and times of the past. A Government program was established to examine into the loyalty of those many individuals who serve the Federal Establishment as employees.

"This was followed by the Internal Security Act of 1950, which created the Subversive Activities Control Board and other domestic security activities. Then came the adoption of the Federal employees security program in April of 1953. As its predecessor loyalty program did, this program requires that every civilian employee or applicant for employment in the executive branch of the Government submit to an investigation for loyalty, but it goes much further than loyalty and considers a number of other factors like excess drinking, sex perversion, and bad company which affect the Nation's security. In addition to these far-reaching measures, the last, or 83d Congress, stiffened up most of the statutes dealing with espionage, counter-espionage, and sabotage. You may now, for example, be executed as a spy in peacetime.

"When you add all of this to the Foreign Agents Registration Act, the Smith Act, various rulings by various Attorneys General, the continuing and vigilant activities of congressional investigative committees, and the investigative processes of the Civil Service Commission, you have in absolute fact today an internal security system of practi-

cally all-inclusive dimensions. With the exception of wiretapping authority, would you establish much more were you an autocratic ruler in our land?

"More than a year ago, when our present security system was but several months of age, the President said:

"In this country if someone accuses you, he must confront you; he cannot assassinate you or your character from behind without suffering the penalties an outraged citizenry will impose."

"In his state of the Union message, Dwight Eisenhower said what I believe he means literally:

"We shall [he said] ferret out Communist subversion while carefully preserving our traditions and the basic rights of our citizens."

"These assurances that justice will determine security decisions represent the only foundation strong enough to support a domestic security system for the United States. In no other fashion can we build a system we can trust or live with and any other system will shortly become identical with what we so rebel against in the Soviet Union and fought so hard against and vanquished so completely in Hitler's Germany.

"Let us never forget that in an effort to keep our Nation secure at home, we have constructed an apparatus which can destroy us if we don't watch out.

"Since April of 1953, the Nation has been living with Executive Order 10450, which looks into the loyalty and security reliability of millions of our citizens who are employed by or seek now and in the future to be employed by the Federal Establishment. The cornerstone or guide within this order is that no individual shall be employed by or work for the Government unless his or her retention is clearly consistent with the national interest.

"What have we learned out of this unique and new experience?

"The most encouraging lesson is an admission by many responsible persons in executive and legislative authority that we suffer most from a lack of experience with the security program we have created. I know but few who think the administration of the system has been adequate to the reasonable requirements of freedom. I know but few who believe the system is an adequate answer to the reasonable demands of internal security.

"I was impressed on Wednesday of this week when the District of Columbia Bar Association publicly announced that a special and continuing committee of its leading members has been established to provide legal representation for Government employees who become involved in security cases. This service will be provided without any cost whatsoever to those employees who are unable to obtain counsel of their own choosing or who are without funds to retain an attorney.

"But to be impressed by this development is not sufficient. Never before in our history has it been thought necessary to provide protection from the outside free of charge, for the individual against possible and unwarranted abuse and condemnation by his Government. If any steps will cause us to stop and think, this is it.

"My own considered view is that our security system has worked well and fairly on the average but that conspicuous and inexcusable examples to the contrary have occurred much too often. It isn't persuasive that we should be complimented because we seldom err. Our Nation can't long tolerate a system which doesn't soon eliminate the possibility for errors which are disastrous to anyone like you or me when they arise. I want you to think about three instances in which our internal security apparatus has failed completely in one respect or another

in its mission of balancing the requirements of freedom with the demands of security.

"The first: The case of Wolf Ladejnsky has the more recently been in the public's eye. In reflecting on this sad matter, I speak as a part of that 'outraged citizenry' to which Dwight Eisenhower made proper and pointed reference.

"The Ladejnsky case points up practically every weakness which we can find or trace in our prevailing security system. It includes evidences of the shortsightedness, ruthlessness, smugness, and brutality of bureaucracy at their worst.

"Wolf Ladejnsky was naturalized a citizen in 1928. He became a public servant for the Government in 1935 and has been on the Federal payroll ever since. During these 20 years, his written record of service has been noted for its reliability and competence and for his intelligent contributions to our Nation's fight against international communism. Ladejnsky was a powerful fighter in the forces against oppression and slavery long before many among us were conscious of the problem. In his years of service, no supportable question against Ladejnsky's loyalty was ever raised.

"So far as I know, Wolf Ladejnsky has never been faced by any accuser, nor has he been confronted with any charges. He became unwittingly a cause célèbre because some eager beavers and Johnny-come-latelys in our necessary effort to keep America strong couldn't take the time to talk with him or to relate the points in question to 20 years of a man's private and public life.

"Ladejnsky was saved because he had friends in high places who have known him intimately through the years and because nameless outraged citizens cried aloud in their indignation.

"It isn't everyone who can call on a Douglas MacArthur, a WALTER JUPP, and members of both parties in both Houses of the Congress. Men and women of smaller reputations might only consider themselves caught in a trap without knowing where to turn for help or an opportunity to state their case.

"I shed bitter tears for a political reason as well. The case of Wolf Ladejnsky hasn't been solved with finality. There has been no retraction or apology over his being labeled a security risk. Great agencies of our great Government proclaim the man's loyalty and need for his splendid services. Another equally great department is silent and seemingly content to let a cloud on a citizen's priceless reputation hang on.

"You will hear more about Wolf Ladejnsky. Your political opponents will demand, with justification, I can't deny, that a full explanation of the circumstances and details be spread on the public record. This was our job to undertake. We were the ones who blundered. It was for us to explain the manner in which the injustice and contradiction occurred in order that you citizens would be reassured that no similar injustice would happen again. The measure of our collective and individual character is always determined by the way in which we admit our weaknesses and by the steps we take to correct them.

"The second, Victor Havris, of Detroit, was a master sergeant stationed in Europe in 1953. At the age of 32 he had 14 years of loyal service behind. It was thought by someone that the young man's father had been a Communist. It was developed through a hearing conducted by an Air Force security board that Victor Havris, at the age of 12, had been taken by his father, now dead, to some Communist Party meetings. There was no evidence or charge that young Havris was a Communist or a fellow traveler or that he had ever attended any Communist gathering since he was 12 years old.

"Because of the disclosure that young Havris had been led by the hand of his

father to a Communist meeting, he was declared to be a security risk and faced dismissal from the Air Force.

"This recommendation was overruled by a special board which was appointed to re-examine the case. A Democratic Congressman from Michigan was the one who prevailed upon the Air Force to delay and re-examine its dismissal decision.

"The third: Milo J. Radulovich was a first lieutenant in the Air Force who was not on active duty when questions about his being a security risk were raised in 1953. No doubt about his loyalty was intimated publicly. The case against Radulovich, who was a physics student at the University of Michigan under the GI bill of rights, was based on accusations that his father, John Radulovich, had read pro-Communist publications and that his sister, Mrs. Margaret Fishman, had marched as a picket in pro-Communist demonstrations.

"For these reasons, ouster proceedings were initiated against Milo Radulovich. This intended action was concurred in by the board of three colonels who first heard the case and by every staff level until the question was laid before the Air Force Secretary.

"When Milo Radulovich, age 26, heard that his reputation had been restored by the Air Force Secretary, he said: 'It's just like having your future handed back to you. Just to say thanks isn't enough. I never expected it; I'm kind of bowled over.'

"It's time that we begin to worry when a young American, age 26, expresses surprise that he was dealt with justly by his Government.

"I now offer to you some recommendations and suggestions which perhaps are durable and lasting in their value.

"(a) There is a pressing need for the adoption of some method which will guarantee that important or unreconcilable differences between heads of departments in the loyalty and/or internal security fields will be referred for decision to a higher authority.

"No internal security system can become effective, understandable, or reasonable unless its standards and the procedures for implementing them are national standards.

"In the Ladejinsky affair, one standard was advanced by the State Department and the Foreign Operations Administration while a fundamentally contradictory standard was supported by the Agriculture Department. This incredible result bewildered employees throughout the Government and confused people within our country and all around the world.

"If there isn't one national policy which is advocated and supported from the very top, there can't be any system or understanding or order at all.

"The higher authority in question could be the Chief Executive or some high-ranking official to whom such a task is assigned or to a commission which certainly would include within it private citizens for whom the Nation has the fullest measure of respect and confidence in their characters and judgment.

"(b) We must employ a more meticulous care in the selection of security officers. Because of the scope and newness of the problem, some are assigned to judge others who are simply not qualified for these most difficult of all assignments.

"Above all else, the Nation's need is for security personnel who can tell the difference between disloyalty and nonconformity; between treason and heresy.

"Every Government worker must be loyal and reliable but there is no reason why they must be rigidly orthodox in their thinking. There is every reason to encourage the iconoclast as well as the conformist to serve the Republic on the public payroll you taxpayers support.

"Whether in or out of Government, the orthodox mind, because of its strength and

singleness of purpose, maintains and preserves progress, but the dreamer and the nonconformist make progress. The opportunity to be different, while being strictly loyal, is a climate we ought to take pains to develop.

"I consider the security officer to be the cornerstone in our fight to remain strong and free. Any misfits or second-raters among them are more dangerous to our future than the subversives they endeavor to catch. These are the people who indict the innocent without reason and overlook the guilty for lack of knowledge, training, and experience.

"Were I appointing a security officer, I would select no one whose background didn't include a sound and wide knowledge of the theoretical advance and practice of communism since the times of Karl Marx and this same individual would be required to have an equal knowledge and understanding of our Constitution, its Bill of Rights, the movements which produced the Declaration of Independence, and the history of the United States.

"(c) Under Executive Order 10450, the function of a security hearing board is to conduct hearings on security cases and offer their decisions to the head of a given agency for him to accept or reject as he thinks best.

"The members of these hearing boards are generally chosen from the top level of the administrative working force. The rather large number whom I know personally are conscientious, competent and desirous of being fair.

"Their liabilities are few, but important. They have no tenure of office and they lack a feeling of independence because they are subordinates and subject to the directions of superiors. Another sizable fault is that a majority of them have had no previous experience with hearings and the kind of testimony with which these hearings deal.

"These security hearing board members lay no claim to being professionals. They started as rank amateurs and it will take time for some to learn their new business and longer for others. I can only recognize their inexperience to be a perplexing problem. I constantly wonder whether professional hearing examiners could better keep the balance we seek between security and justice.

"(d) It might be advantageous to separate the personnel function from the function of internal security. It often happens that the job-suitability interviewer or the processor of personnel forms is called upon to make at least a preliminary judgment on questions of loyalty and security.

"Why shouldn't the interviewer or processor pigeonhole an application which indicates that the applicant has been a member of organizations alleged to be subversive? These organizations may not be subversive or perhaps they weren't before they went out of business years ago. No one is likely to encounter any future trouble by shelving a troublesome-looking application. Many a personnel officer will react to security questions as he would to poison. He wants none of either.

"Too much has been said about Government employment being a privilege and not a right. Of course, it's a privilege. Why labor the obvious? All an applicant is entitled to is a fair and impartial break. He or she does have that right to be judged competitively and fairly on their job qualifications. Their security status could be judged subsequently by an authority in that field.

"We must be alert always to avoid procedures, forms and attitudes which stimulate the advancement of mediocrity in any way within the Federal structure.

"(e) We must increasingly learn to tailor security to the job. An individual may be unsuited for the strictness of security demanded by a particularly sensitive assign-

ment. This does not necessarily imply that the individual couldn't fill many other important assignments with credit to himself and the Government. Our operations and the living in the past never called for such an exercise of good judgment as does the present. If this were Russia, we wouldn't bother much about this exercise. Because we live in America, we must be bothered constantly.

"(f) The basic criterion in Executive Order 10450 ought, I think, to be reexamined in the light of every development in the last 20 months.

"This criterion, that an accused applicant or employee must meet the test that his employment is 'clearly consistent with the interest of the United States' would and does, where literally applied, constitute a burden which can hardly be borne by anyone. It almost makes the employee affirmatively prove that the national interest requires the retention or continuation of his services. Who among us could do that?

"I believe that the phrase 'clearly consistent' has been the source of much of our trouble and that the cases previously referred to, and others like them, were instigated by it.

"'Clearly consistent' can easily be construed to mean without doubts, real or fancied, of any kind. It can be read to mean that pure hearsay or malicious gossip or unsupported allegations constitute doubts to be resolved in favor of the Government. To my knowledge it has been so read.

"Such an interpretation implies that a domestic system of absolute security is both desirable and possible. In point of logic and commonsense, it cannot be either possible or desirable.

"Any system through which men and women are judged must provide the judges with room for judgment and discretion.

"Instead of the rigidity of 'clearly consistent' we might better work toward the latitudes included in language like this:

"'No person should be dismissed or denied employment from the Federal service as a security risk unless it is affirmatively found that his retention or employment is reasonably inconsistent with the national interest.'

"I am not suggesting that an established doubt should not be resolved in favor of the Government. It should be so resolved. What I am suggesting, and what our Nation ought to demand, is that the doubt about an individual be first established before it is resolved against him.

"Let the Government judges assume their rightful responsibility for establishing their doubts about any individual to be valid and most of the fear and skepticism concerning our security system would disappear overnight.

"In expressing this conviction, I am thinking about you and what you are entitled to should you endeavor to join or remain within the Federal establishment.

"(g) The general public has a tendency to consider loyalty and security as being one and the same thing. That doesn't follow. A loyal person can be a security risk and a security risk can be truly loyal. Obviously, a disloyal person is a risk.

"We should, I believe, be more specific in our use of the term 'security risk.' Drunkards, perverts, drug users, gossipers, and those who insist on keeping bad company may well be security risks while being loyal. We ought to make this distinction clear. When a person is fired as a risk, the reason for their being so considered ought to be stated.

"A person who drinks too much can often recover from that indiscretion and build a new life—if given a chance. The risk dismissed for being disloyal will remain disgraced for life.

"Here again we should be trying to strengthen our Federal structure without

unnecessarily destroying individuals in the process.

"Espionage agents will be found among the disloyal. These are the ones we ought to try the hardest to discover. When we do, we ought to execute them. Risks who are otherwise loyal will not often be found in this category. We ought to treat them accordingly—without needless embarrassment or harassment.

"A while clique of spies could hardly do as much damage to us as could our failure as a government to have confidence in our people. Any government, to deserve to survive, must deserve the respect of its citizenry. A government is under no compulsion to be less severe in punishing crimes against the state, but that government is under every compulsion to extend consideration and just treatment to every citizen. He or she must be treated as what they actually are—the fiber and substance from which a free nation derives its strength and purpose.

"Some wise man in the early days of our beginning, perhaps it was Franklin, said: 'I give you a Republic if you can keep it.'

"That's what I've tried to talk about, as a citizen—how to keep it."

Moral Treason in East-West Trade

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. FEIGHAN. Mr. Speaker, early in the hearings of the Ways and Means Committee on H. R. 1, both Mr. Charles E. Wilson and Mr. Harold E. Stassen declared themselves in support of American trade with the areas of the Russian Communist empire. Their reasoning and motives on behalf of Red trade are still very vague and cloudy, and should be the object of challenge on the part of every Member who appreciates the resultant political perils that would beset us in the event that the current campaign for American participation in East-West trade should succeed.

The testimony of Dr. Lev E. Dobriansky, professor of economics at Georgetown University, and president of the Ukrainian Congress Committee of America, before the Ways and Means Committee on this crucial issue, sets forth the major reasons for our rejection of the Wilson-Stassen proposal. It challenges the Red trade advocates to justify the often used distinction between strategic and nonstrategic goods in relation to the totalitarian economy of the Russian Communist empire, and clearly demonstrates the moral and political qualities of the Red trade proposal. Moreover, it points out the foolhardiness of the so-called Benson plan now being considered for virtually dumping American surplus foodstuffs behind the Iron Curtain of the Communist empire.

Every Member should carefully read the contents of this testimony and seriously consider its recommendations concerning this issue. To serve this objective, I insert this statement in the Appendix of the RECORD:

MORAL TREASON IN EAST-WEST TRADE

(Testimony of Dr. Lev E. Dobriansky)

In these concluding moments of the hearings I deem it a privilege to be given this opportunity to testify on certain vitally important aspects of H. R. 1—the Trade Agreements Extension Act of 1955—which, by way of contrary opinion, have been alluded to in the testimonies of two members of the administration who appeared before this committee in the initial stages of its proceedings. Proper and sound consideration of these elements is so crucial to the strategic interests of our country that the rationally ordered points of a program of action as submitted below cannot be too strongly emphasized.

Because of the patent need of concentrating our studied attention on these fundamental aspects, it is not my purpose here to elaborate any personal observations or opinions on the overall advisability of the legislation now being considered. However, I would like to point out that extreme care and caution should be taken in pursuing a legislative course that suggests at this time the adoption of a national policy directed at a general reduction and eventual elimination of tariffs. The criteria for the judicious exercise of this care are surely not to be found in the counting of proponents and opponent noses nor in the relative amounts of high-sounding clichés, which often shield much fallacious argumentative content, nor even in comparative sets of particularist statistics presented as "proofs" of given points. Instead, ultimately they can only reside in certain rationally formed guides of thought attuned to a synthetic approach to the problem of expanded free world trade in the historical circumstances that surround us today.

At this point I should like to submit for the record and the careful examination of the members of this committee a compact readable summary—the free trade ideal—of studies which I had undertaken in the intelligible light of this flexible approach. Furnishing an economic rationale of the tariff as an effective instrument of countervailing power to conserve the multiple sources of our expansive domestic (regional) activity, it treats of all the essential arguments that have doubtlessly been presented here in support of this bill, and also explains fully the grounds underlying the opinion stated above.

THE IMPLICATION OF EAST-WEST TRADE

From the viewpoint of a total politico-economic understanding of this measure, what is by far more serious and perilous than the somewhat uncertain general effects of steadily reduced tariffs is its couched implication of East-West trade. This implication in what is loosely characterized as trade liberalization has already been underscored for public notice by two testifying members of the administration, and its ominous ramifications in the entire area of American foreign relations, jeopardizing the very posture of American world leadership, are exceedingly grave matters that should be of the utmost concern to this committee in the final formulation of this bill. For not only are the arguments offered in support of such trade specious in character, not only is the general understanding upon which they rest adequate cause for heavy doubt toward other kindred opinions of these advocates, but also, perhaps most outstanding of all, their self-contradictory position partakes by its own nature of moral treason itself.

The naive tendencies reflected in the reasoning of these East-West trade advocates are reminiscent of the politico-economic mentality that prevailed during the UNRRA period. In sharp contrast, however, at no

time can they be found in the maneuvers of Moscow which consistently regards trade, along with almost everything else, as a weapon designed to serve its higher goals of Communist aggression. To our long-run detriment it would most advantageously employ this weapon in order (a) to secure basic consumer goods for the relief of its troubled areas in the empire now undergoing genocidal consolidation, (b) to exploit commercial media for the further expansion of its conspiratorial activity, (c) to intensify the economic dependence of free nations on Communist sources of supply, and (d) to facilitate the further allocation of resources for war preparations. At this very moment, for example, the passive resistance of courageous peasants in Hungary, Ukraine, Poland, and elsewhere are reaping some measure of harvest in economic and political concessions as a result of the widespread food problem in the Russian Communist Empire. Are we intent upon relieving Moscow of these growing pressures from within by supplying it with foodstuffs through trade and, in effect, cooperating with it to stifle the sources of patriotic resistance in the empire?

THE FALLACY OF STRATEGIC AND NONSTRATEGIC GOODS

The main notion by which the Red trade advocates seek to justify their patently vague statements and position is the distinction drawn between strategic and nonstrategic goods.¹ The evidence shows that in almost every instance they appear to be hard put as to where the clear line of demarcation exists. The fundamental truth of the matter is that with reference to a totalitarian economic environment, such as the Russian Communist empire, which enjoys an unusual degree of shiftability of human and material resources, this distinction is a crass fallacy. As every competent observer of this empire knows, its environment has been and will doubtlessly continue to be a species of war economy. Consequently, regardless of the type of good, any degree of importation bears strategic importance to the overall planning of this chronic war economy, and where consumer goods are involved, be they foodstuffs or manufactured items, the general economic plan for sustained political Communist aggression, both within and outside the empire, is easily implemented through the reallocation of resources.

By ignoring this simple principle of elementary economics are we preparing to plunge foolhardily into a scheme that might well eventually seal our own doom? This fallacious distinction has served as a smoke-screen for the trading activities of some of our major allies whose long record in international relations is punctuated by the absence of moral principle, not to speak of pragmatic foresight, where transient economic gain is easily realizable. Judging by the prepared trend of thought on the part of some of our own officials, one can venture to say that in the event of so-called liberalized trade in the free world, this smoke-screen will be rationalized on grounds other than ostensibly limited markets in the free areas. Aside from the paramount fact that both the free and unfree peoples of the world hold us in esteem for the moral and political principles that have shaped our great tradition, pragmatic prudence alone should recall to us the historical lesson that twice in this century the morally indefensible policies of our two major allies have led them to the brink of national disaster, only to be saved by our intervention. These policies have not changed; indeed, they are gradually contaminating ours, but who in the end can save us?

Footnotes at end of speech.

MORAL TREASON IN EAST-WEST TRADE

The very premise of the distinction between strategic and nonstrategic goods exposes the advocates of Red trade to the charge of moral treason. If one soberly reflects for a moment on this, the only premissal reason for the distinction, fallacious as it is in itself, is that we do not regard Moscow and its empire as a friendly political unit. Many declarations of our President and Secretary of State clearly define it as a potential military enemy and an active moral and political enemy. The facts bearing this out are overwhelming, and in the language of any rational person, trading with an enemy is treason.

Flimsy comments from officials or private lips as to what are strategic or non-strategic goods will remain only as arbitrary utterances until adequate logical and moral grounds of justification for the distinction itself are provided. I venture to say there are none. Moreover, when it is argued, in the words of one Cabinet Member appearing before this committee, that Red trade "will help the peoples of those countries to eliminate their antagonism or their fear of our country, and establish some friendly relations with them . . .," then we can really begin to wonder as to the state of knowledge and understanding on the part of some of our officials regarding the Russian Communist empire. Apparently they have not yet read the monumental, authoritative reports of the Select House Committee on Communist Aggression to begin to appreciate the factually founded distinction between the puppet governments of Moscow and the captive peoples of the various enslaved nations who embrace nothing but hope, trust, and friendship for our country. Trade will aid their tyrannical masters in deepening the roots of their captivity, not them in their hope of eventual liberation.

BUTTER FOR GREASING THE IRON CURTAIN,
NOT FOR MANGANESE

It is significant that in the course of the committee's questioning on what constitutes a nonstrategic good, the item of butter was first and exclusively raised in reply. Indeed, the additional remarks of the two testifying administration members give credence to the speculation that the administration is favorably considering what has come to be known as the Benson plan on food surpluses, which, in the initial case of butter, calls for virtual dumping in the Russian Communist empire. There is also growing evidence of an organized effort to push the immoral cause of Red trade along these lines and to inveigle the support of farm groups in an appeasement scheme accommodating the fixed dependence of our agricultural surplus problem on continuous Communist purchasing. The subsidization of Communist guns with United States butter would only be the start before the plan takes on cumulative impetus.

What convolutions of thought mixed with questionable motives have produced this weird concoction of politico-economic enterprise, it is not easy to say, except, perhaps, that the opiate of peaceful coexistence is already having effect. A rational person would point to the many friendly peoples in impoverished areas of the free world where our surplus food would be most gratefully received, but it appears that aid to the Kremlin in solving its serious farm production problem and contributing to its empire consolidation efforts takes precedence.

We have been wasting our many moral, political and diplomatic weapons in this struggle with an enemy who is admittedly bent upon our destruction, and now our economic weapons are to be brought into disuse with the initial bonanza of manganese for butter. The fact that numerous Communist goods are mined and processed by slave labor seems to be of no consequence

in the accounting of the Red trade advocates. How one could reconcile these trade proposals with professions of faith in the eventual liberation of the captive peoples in the slave half of the world is, to put it mildly, incomprehensible. Indeed, a true adherence to such faith should impel us to utilize our surplus butter in greasing the hinges of the Iron Curtain in order to open it wide for carefully selected American distribution teams, accompanied by a corps of newsmen, with complete freedom of disposition among the peoples. By this humanitarian program, restricted to this item, we would be confirming their real faith and loyalty in us rather than supposedly eliminating through misdirected trade some mythical antagonism or fear of our country.

RECOMMENDED STEPS ON H. R. 1

In the light of this statement and its major treatment we earnestly urge (a) that a clear and unmistakable separation of trade issues between the slave Communist world and the free world be made and (b) that a prohibition be specified against any trade whatsoever with the Russian Communist empire, which would prevent the execution of such ventures as the so-called Benson plan. In acting upon these recommendations this august committee would be translating into positive action some of the remarkable findings of the Select House Committee on Communist Aggression which the Congress in its preceding session saw fit to establish for purposes like these. In short, you would be translating into the body of this legislation the spirit of morality and unblemished political principles that still animate the soul of every American patriot and captivate the imagination of the peoples of the world.

² Hon. C. E. Wilson in exchange with Representative KARSTEN, committee hearings.

Extension of the Sugar Act of 1943

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. METCALF. Mr. Speaker, the following memorial from the Montana Legislature calls attention to the need for prompt consideration of the extension of the Sugar Act of 1948 which expires next year.

Legislation is necessary during the current session of Congress so that the sugar industry can go ahead with its current operations and future plans with a minimum of uncertainty. If the act is not extended in 1955, sugar beet farmers will not know at planting time what the provisions of the Sugar Act will be at the time they market their crops. In the past 50 years the sugar beet growers have more than doubled their beet yield per acre and tripled their sugar yield. This has been accomplished by farm management and modernization programs making the best use of long range scientific investigations. Continuation of these worthy programs make the need for action this year necessary.

But, as the memorial points out, exten-

sion of the act is not enough. The new quotas must recognize the increased consumption and increased demand and give American sugar producers, both beet and cane, an additional share of this new market.

Demand has increased by a million tons since the last passage of the Sugar Act. This demand is continuing to increase at the rate of 100,000 tons per year. Yet the quota for domestic producers is the same as it was in 1948. In revising the quotas the American producers must be given an additional share in this new demand.

The various sugar acts since 1934 have been good for our Nation, the market has been stabilized and production has been kept plentiful enough so that the industry and the consumer alike have benefited.

We import more than half of the sugar we consume. We are sharply curtailing the production of crops of which we have a domestic surplus and which we need to support. I find it hard to justify curtailment of acreages of a crop where our domestic production only meets half of our national needs. The Montana Legislature declares that it is in the national interest for us to immediately renew the Sugar Act and to provide the American sugar beet growers with their just and equitable share of the market which the increased consumption and growth of the Nation has provided. I am sure that Congress will also find it in the national interest.

The memorial follows:

Joint memorial of the Senate and House of Representatives of the State of Montana to the Congress of the United States, to the Honorable JAMES E. MURRAY and MIKE MANSFIELD, United States Senators of Montana, and to the Honorable LEE METCALF and ORVIN B. FJARE, Representatives in Congress from Montana, and to the Secretary of Agriculture of the United States requesting Sugar Act of 1948 be continued in force and the quota of domestic beet sugar be increased.

Whereas under the Sugar Act of 1949 sugar marketings from domestic areas of the United States and its territories are limited to 4,444,000 tons of a total present national consumption of 8,200,000 tons; and

Whereas these fixed quotas established for our own domestic production have no regard for increases in the population, and

Whereas foreign areas, principally Cuba, have been allotted all of the increase in sugar consumption resulting from population increase, or other factors, which consumption requirement as determined by the United States Department of Agriculture increased from 7,200,000 tons for the calendar year 1948 to 8,200,000 tons for the calendar year 1955, and may be expected to continue to increase at a rate of more than 100,000 tons per year, and

Whereas the domestic producers in Montana and in other States are as a result restricted in their privilege to grow sugar beets and sugar cane as indicated particularly in the determination of proportionate shares allotted to Montana sugar beet growers for 1955 crops to a total of only 50,980 acres, which has reduced such acreage permitted to be planted by 8.7 percent from the acreage actually planted during the preceding year of 1954 and has created hardship on the farmers of Montana: Now, therefore, be it

Resolved by the Senate of the State of Montana (the House of Representatives concurring) That the Sugar Act of 1948 be continued in force but that the quota of do-

mestic beet sugar be increased to the extent it will have a fair and equitable share of the increased consumption and in the additional sugar required to meet the growth of the Nation and the needs of its people; and be it further

Resolved, That copies of this memorial be transmitted by the secretary of the State of Montana to the Congress of the United States of America, Senator JAMES E. MURRAY, Senator MIKE MANSFIELD, Congressman LEE METCALF, Congressman ORVIN B. FJARE, and to the Secretary of Agriculture, Washington, D. C.

GEO. M. GOSMON,
President of the Senate.
LEO C. GRAYBILL,
Speaker of the House.

Approved February 5, 1955.

J. HUGO ARONSON,
Governor.

The Admission of Scientists

EXTENSION OF REMARKS OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1955

Mr. CELLER. Mr. Speaker, I have introduced a bill relating to the admission into the United States of scientists and others, in an attempt to eliminate restrictions placed upon them which have caused serious loss to the body of our scientific information and to the enrichment of our cultural life.

Defects in the present procedures for the issuance of nonimmigrant visas have prevented the participation of aliens in meetings, conferences, temporary employment, and other transactions in the United States—such as scientific, scholarly, trade, and industrial conferences, employment in temporary research positions and the conduct of commercial, industrial, or professional transactions. The contribution of such aliens to the advancement of scientific and scholarly knowledge by their participation in such meetings, conferences, temporary employment, and other transactions in the United States is essential to the national defense and the furtherance of the industrial, technological, and cultural leadership of the United States. Such aliens are invited to such meetings, conferences, temporary employment, and other transactions in the United States by learned institutions and societies of national renown who, by their invitation, vouch for the character and learning of such aliens. Such meetings, conferences, temporary employment, and other transactions in the United States do not involve access to information the dissemination of which would prejudice national security.

The importance of the contribution of such aliens has, heretofore, not been sufficiently recognized in the procedure for the issuance of nonimmigrant visas to such aliens.

The text of the bill which I have introduced is as follows:

Be it enacted, etc., That section 101 (a) 15 of the Immigration and Nationality Act (66 Stat. 169; 8 U. S. C. 1101) is amended by addition of the following paragraph:

“(J) An alien having a residence in a foreign country which he has no intention of abandoning, who is invited by an institution, organization, or governmental agency, to take part in a scientific, technological, artistic, sport, or other cultural conference or meeting in the United States, or to occupy temporarily a teaching or research position at an institution of learning or research, or to take part in an industrial, technological, scientific, or cultural transaction which is temporary in nature: *Provided*, That the Attorney General shall establish and maintain in consultation with the Office of Education of the United States and make public from time to time a list of such institutions, organizations, or governmental agencies, which may, under regulations issued by the Attorney General, invite such alien, and which shall have agreed to the Attorney General the termination of attendance or visit of such alien.”

SEC. 2. Section 212 (d) (2) of the Immigration and Nationality Act as amended to read as follows:

“(2) The provisions of paragraph (28) of subsection (a) of this section shall not be applicable to any alien who is seeking to enter the United States temporarily as a non-immigrant under paragraph (15) (A) (iii) or (15) (G) (v) or (15) (J) of section 101 (a).”

Another Look

EXTENSION OF REMARKS OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. O'NEILL. Mr. Speaker, over the past weekend, there has been nationwide comment in the American press on the remarks of our able Democratic leader, JOHN W. MCCORMACK, of Boston, with reference to his opposition to proposed cuts in our Army manpower.

As one who has long been an advocate of a strong national defense, I am more than happy to have the privilege of inserting in the RECORD the editorial which appeared in the Boston Traveller on Friday, February 11, 1955, which clearly states the views of Mr. MCCORMACK:

ANOTHER LOOK

When House Democratic Leader JOHN W. MCCORMACK, of Massachusetts, says he thinks the administration should take another look at the proposed Army manpower cuts, he is voicing an opinion shared by large segments of both major parties.

“It could be a terrible thing for our country,” says MCCORMACK, “if the President is wrong.”

It would be terrible indeed. It would be tragic, and it could be fatal.

At the present time there are about 3 million men in the Armed Forces. The administration plan is to cut this figure down to about 2,850,000 by next year, with most of the cut in the Army.

There has been quite a lot of argument about this proposed cut, with most of the opposition coming from Army Chief Gen. Matthew Ridgway.

But this week President Eisenhower had assumed full responsibility for the decision and it appeared that the cut was going through.

In all fairness to President Eisenhower, we think he is the man most capable of making the decision, and we're glad he had the courage to do so.

But it is also true that the President worked out this policy on the basis of world conditions as they were several months ago.

Since that time a very critical situation has developed at Formosa and there has been a world-shaking change of command in the Kremlin.

The logical question that Representative MCCORMACK and his colleagues are asking now is: “Do these events make a difference in our manpower needs?”

The President and his advisers say “No.” MCCORMACK and his group say they don't really know, but that they think a reappraisal is justified.

This request for a reappraisal seems reasonable, and the administration has nothing to lose by granting it.

The one thing that most observers agree on about the Kremlin shakeup is that it forecasts a tougher and more militant Russia. It's a new ingredient that should be added to our manpower policy before a final decision is made.

Twenty-three Years of Experience With Our First Socialist Experiment

EXTENSION OF REMARKS OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GWINN. Mr. Speaker, we have had 23 years of experience with our first socialist experiment—that much-touted TVA. I have been criticized for characterizing TVA as socialistic. However, my opinion conforms with that of the authorities. The Chattanooga (Tenn.) Times of February 15, 1934, quotes Norman Thomas as saying:

The TVA is the only genuinely socialistic act (in the New Deal)—a flower in the midst of weeds.

TVA is owned and operated by the United States Government; that is to say, TVA is a communal of public-owned property acquired by taking private property amounting to \$2 billion mostly from the people of 41 States, for the alleged communal benefit of the people in parts of 7 other States. Such immoral taking of private property never fails in the end to blight a people who take it. The proof is already apparent in Tennessee. She has suffered a reduction in production and commerce and, therefore, in the well-being of her people since the advent of TVA.

The United States Chamber of Commerce has compared Tennessee with 10 Southeastern States which use private power. In 1930, before the advent of TVA, the population of Tennessee ranked fourth among the 10 States. In 1950 she still ranked fourth.

In 1933, just a year prior to operation of TVA, the receipts from farm marketing ranked Tennessee fifth, while in 1950 she dropped to eighth place.

The retail sales payroll in 1935 put Tennessee in third place; in 1948 she had dropped to fifth place.

Retail sales in 1929 had Tennessee in second place; in 1948 she had dropped to fifth.

In value added by manufacture Tennessee ranked third in 1933; fourth in 1947. In gross postal receipts she ranked third in 1933; down to fourth in 1951.

In all the categories examined Tennessee has fallen behind in productivity. In only one area has Tennessee improved her rank among her neighboring States and that was in per capita income and per capita taxes paid. But that increase was caused by subsidies and doles paid by the United States Government; not from improved production. One hundred and eight million dollars have gone down there annually mostly from other States to pay 22,796 TVA employees an average of nearly \$5,000 apiece plus millions in doles granted by the Federal Government. Without the Federal payroll and subsidies and doles Tennessee would not have enjoyed an increase in per capita income but would have suffered a serious decline. She is now a taxeater and not a growing tax producer as compared to the other States.

The most startling failure of TVA is that it does not produce sufficient power for the people it serves. So TVA never will be able, selling electricity at half price, to earn enough to expand to meet the need of a growing community. That's why Tennessee growth is slowed up. There is a shortage. What value is low-priced electricity when it cannot be had at any price? This is the universal characteristic of socialism everywhere.

Besides all this, TVA is completely exempt from all taxes. It does not contribute a dime to national defense, not even toward the salaries of the President and the Congress that does all these nice things for it. Finally, TVA was made ashamed by the complaints of the local people in the adjoining municipalities that educated the TVA children, provided police and streets and hauled away their garbage free of taxes to them. So TVA condescended to volunteer to make a contribution of about a tenth of what it should toward the expenses it had thrust on its neighbors. But it way decide to quit at any time.

Had TVA paid taxes at the same rate paid by private power companies for the fiscal year ending June 30, 1953, such taxes would have amounted to about \$80 million; resulting in a loss in operations of about \$57 million. If TVA were required to pay interest on the appropriations granted it by Congress that loss would have been increased by another \$24 million, which figure does not include the \$10 million more for amortization. Thus if TVA were run as an honest business enterprise, its books on June 30, 1953, would not show a credit balance of \$19 million but a deficit balance of \$91 million. Yet, even with that deficit representing a subsidy paid by the Nation's taxpayers, the TVA system cannot produce enough cheap power to satisfy the demands of the consumers it was designed to serve.

There is no similar shortage of power in other parts of the country where private companies are the suppliers. The reason for this is that the private power companies, being run on sound and

honest business principles, have anticipated the increased demand for electrical energy. At this time the private power companies are undertaking a \$2.5 billion expansion program of their facilities.

The original excuse for the law creating TVA, viz, to control floods and to aid navigation on the Tennessee River, has turned out to be a joke and a fraud of extensive proportions. Instead of stopping floods it has actually permanently flood 660,000 acres—an area as big as Rhode Island—out of a million acres it owns and controls. This great Tennessee River bottom, according to Army engineers, would not seriously flood more than once in 500 years. The bottom lands did sustain some overflow in the spring, as most river-bottom lands do. It benefited the land by leaving a fertile sediment. Crops thrived. Annual production was about \$27 million. That is now all destroyed, and there is water, water everywhere.

Let us not dwell in detail on alleged improved navigation by deepening the Tennessee River, except to say that this was also a device to hide vast sums that should have been charged to cost of power. As a navigation scheme it has failed because it is cheaper to ship by rail.

There is another loss that is even more important than the \$2 billion that have been poured into this monumental blight of Tennessee and drain on the other States. The people of Tennessee lost their political freedom when they became dependent on TVA. Their Governor is compelled to come to Washington, hat in hand, predicting dire consequences for his people if the dole is shut off. The people of Tennessee must live under whatever rules Congress promulgates and those rules affect not only the rates charged for power, but touch every aspect of the State's economy as has been pointed out. They have lost their productivity. They may not buy power elsewhere as private companies are excluded from the TVA reservation. They have lost their economic freedom, their know-how to provide power for themselves—competition is dead. In the words of Herbert Hoover:

They have surrendered the control of their resources and energy to a Federal bureaucracy.

TVA cuts the price of power to a loss figure so as to buy the votes and support of its consumers in the rankest kind of political corruption. It exempts itself from taxation and by more political corruption forces its competitors to pay approximately 23 cents out of every dollar to help pay taxes TVA customers should pay but do not.

Even the little schoolboys now define TVA as "a river that flows through 7 States and drains 41." They were drained again in 1954 for the 22d year. TVA will be coming up to the public trough again in 1955. But Tennessee knows that no scheme to buy votes as crazy and incredible as TVA can last. This administration has already given fair warning. So Mr. Robert M. Metcalf, Jr., vice president of Guaranty Mortgage & Trust Co., of Memphis, Tenn., comes up with this remedy.

He suggests that the power-generating facilities of TVA be sold to the people in the area which it serves. This would result in relief for the taxpayers of the remainder of the Nation and at the same time give to the people of the TVA reservation exclusive control over the agency upon which they are completely dependent for their power. Perhaps even more important than these immediate tangible gains, is the fact that such a sale would represent a reversal of the largest, most clear-cut Socialist step the United States has ever taken.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. DONOHUE. Mr. Speaker, last Sunday, February 13, 1955, the Worcester, Mass., Lithuanian organizations celebrated Lithuanian independence day with an appropriate program held in the Lithuanian Naturalization Club, at 12 Vernon Street.

Guest speakers included Petras Viscinis, of Brockton, Mayor O'Brien, and Withold A. Bernot, president of the Lithuanian Naturalization Club.

Rev. Justin Steponaitis, curate at Our Lady of Vilna Church, gave the invocation.

Represented on the committee in charge of the celebration were the following organizations: Lithuanian Aid Association, Branch 1; Lithuanian Citizens' Club; American Lithuanian "Sandara," Branch 16; Lithuanian "Bendruomone," Worcester Branch; "Ateitininkia" Alumni; St. Casimir's Society; Lithuanian Women's Club; Lithuanian American Alliance, Branch 57; St. George's Society; Old Folks Aid Society, and St. Ludwig's Society.

The members of the celebration committee were: Mykolas Zemaitaitis, president; Pranas Paulinkonis, Vincas Mitrikas and Lionginas Leknickas, vice presidents; Jonas Palubeckas, secretary; Povilas Babickas, financial secretary; Jonas Dvareckas, treasurer, and Juozas Pupka and Alexsas Zilinskas, assistant treasurers.

In connection with the celebration, I have been asked to include the addresses delivered by myself and a most prominent Lithuanian American, Anthony J. Miller, Esq., over radio station WNEB in Worcester, Mass.

The addresses follow:

LITHUANIAN INDEPENDENCE DAY RADIO ADDRESS
DELIVERED BY ANTHONY J. MILLER, Esq.

As a Lithuanian American, I am very glad to have a part in this commemoration of the 37th anniversary of the declaration of Lithuanian independence.

This annual program is dear to the hearts of all Lithuanians and their friends, because it is held to recollect that day of February 16, 1918, which marked the end of well over a century of suffering under a hostile, foreign rule.

Thirty-seven years ago, Lithuania stood forth as an independent, democratic republic with a happy, prosperous people who faced the future with confidence in their destiny.

In this year of 1955, our observance is unfortunately, shaded with sorrow. The bright star of Lithuania's freedom has been clouded over by the violent storms of tyranny. We gaze with sadness upon the advancing tragedy of sacrifice to ruthless imperialism that has enveloped Lithuania; she has ceased to be an independent nation.

The world does not know all the terrible details of what has happened and is happening to Lithuanians behind the dark impenetrable Iron Curtain. However, we do know that behind that dreadful Iron Curtain hundreds of thousands of God-fearing Lithuanians have been liquidated, martyred for their patriotism, their religious faith, their steadfast resistance to tyranny.

Hundreds of thousands of good Lithuanians have been torn from their families and their homes for service as slaves in Siberia. It is slave labor the Kremlin is using to equip Russia for further expansion, for further despotism, for further persecution, and, perhaps, even for war, and a substantial part of the slave force has been kidnapped from Lithuania. We grieve for the terrible catastrophe that has befallen our native Lithuania.

Under ordinary circumstances, this anniversary commemoration ought to be a day of rejoicing for all Lithuanians and Americans of Lithuanian descent. But how can we rejoice when our people are suffering under the oppression of Communist tyrants? How can there be gaiety when Lithuania is burdened with the miseries of Kremlin tyranny? How can there be gladness when pagan totalitarianism darkens every Lithuanian street and byway? We cannot be happy on this occasion, but we can hope and we can pray.

Lithuanians have had times of trial frequently in our history. In days gone by, many foreign tyrants have dominated the freedom-loving Lithuanians. Although these tyrants may have been temporarily able to destroy the liberties of the Lithuanian people, they were never quite able to destroy the dreams of independence in the minds of Lithuanian patriots, nor could they wipe out the aspirations for freedom everlasting in their hearts. Those dreams and aspirations were, in time, fulfilled. After the First World War, the Lithuanian people realized the hopes which they had long cherished, and on February 16, 1918, they proclaimed their national independence.

In the 2 decades that followed, Lithuania flourished. While Lithuanians happily enjoyed their freedom, they made good use of it, too. They improved their economy, and with the passing years grew ever stronger and wiser in the ways of self-government and democratic living. Their future appeared bright, when suddenly came the war of the giants.

First invaded by Soviet forces in 1939 and later crushed between massive military machines of powerful Nazi Germany and gigantic Soviet Russia, Lithuania suffered successive occupations by these two totalitarians. In the end it was the Red armies of Stalin which won, and planted the emblem of the hammer and sickle where the yellow, green, and red tricolor once had flown. By force and fraud Lithuania was incorporated into the Soviet Union.

The painful years that have ensued are recorded in infamy. The deportations, the enslavements, the destruction of political freedom and economic initiative are facts which have trickled through to the free world despite the curtain of silence behind which the Communists try to hide the countries they have overrun.

But we Lithuanian Americans know that the people of Lithuania are of stout heart.

We know that faith and hope cannot be muffled in Lithuanian breasts. Inevitably the time will come when the tyrant's grip will weaken, when freedom will win over enslavement, and sorrow will be turned to joy.

The American people and Government have refused to recognize the Soviet Union's annexation of Lithuania. In many ways America is informing the world of Soviet misdeeds in Lithuania, and is mobilizing the moral force of world opinion against the oppressors, in the hope that Lithuania's day of freedom will be hastened and that the Kremlin's rule of misery and hatred will be forever overturned. With the utmost sincerity I express to all Lithuanians and Lithuanian-Americans my hope and prayer that that happy day will be soon.

LITHUANIAN INDEPENDENCE DAY ADDRESS DELIVERED BY UNITED STATES REPRESENTATIVE HAROLD D. DONOHUE, OF MASSACHUSETTS

It is an honor for me to once again join with the patriotic Americans of Lithuanian descent here in my district, as well as those throughout the country, in commemorating the founding of the Republic of Lithuania.

On this occasion I feel it is most fitting to recall how deep are the roots of Lithuania independence and national courage for, indeed, it is the vigor of those roots which keep your native democratic tradition alive and indestructible.

The first independent Lithuanian state was organized more than six hundred years ago. It grew into a flourishing kingdom, one of the most prominent in Eastern Europe. The Lithuanians then, as now, were a God-fearing people devoted to the peaceful development and prosperity of their country.

However, because of the geographic position which Lithuania occupied, at the crossroads of two cultures, those of the East and the West, Lithuania was the victim of frequent raids and invasion by more powerful and ruthless neighbors. Eventually she was forcibly annexed by Russia in the 18th century and cruelly deprived of her independence as a nation.

Despite this disaster, however, the spirit of Lithuanian freedom and courage remained as strong as in the glorious days of the early kingdom. The most inhuman attempts of the Czars to wipe out every last vestige of Lithuanian culture were doggedly resisted. The brave people of Lithuania were biding their time to seize the opportune moment to again declare their liberty. That moment arrived 37 years ago following the collapse of Czarist Russia during the First World War.

The years following World War I were years of great hope for the independent Lithuanian nation. The little Baltic nation made astounding progress; she became a model republic. However, before her efforts could achieve full fruit, the catastrophe that swept all of Europe, starting in 1939, brought a tragic end to the Lithuanian republic.

Once again Lithuania, with other Baltic States, was illegally seized by the Soviet Union. In the confusion and immensity of the great world conflict, the misfortune of Lithuania and her neighbors was heedlessly overlooked. However, in more recent times, I am happy to say, it appears the free powerful nations are becoming increasingly aware of the importance of this gallant country.

In the 13th and 16th centuries, Lithuania was a stronghold of Western European civilization, on the dividing line between the East and the West.

Today the Baltic States still form a well-spring of western civilization. The ideas and ideals of the West continue to live in Lithuania, but they are under constant assault by the Kremlin dictators. Indeed, as we know, the whole Christian free world is now engaged in a death struggle with Communist atheism. To keep ourselves ade-

quately armed and prepared for any open warfare is, of course, necessary. However, the only way in which the civilized world can finally survive and conquer pagan barbarism is to recognize and preserve the Christian principles of peaceful living that the Lithuanian nation has been practicing for over six centuries. Our world cannot expect to remain Christian if we permit the godly glory of Lithuania to be strangled by tyrannical hands. The tradition and heritage of your native country serves as an inspiration to a confused and hesitating world.

When she was an independent sovereign nation, Lithuania gained the highest respect and admiration of all peoples as a wonderful example of self-government by those to whom the cause of freedom was sacred and precious.

Today we find Lithuania in the 15th year of her enslavement under the yoke of tyranny and oppression. Her proud people have been robbed of their independence by the armed might of Communist aggression. Terrible crimes have been perpetrated against the Lithuanians. Yet courageously adhering to the ideals and principles of the Christian freedoms they once possessed Lithuanians at home and abroad have refused to give in to despair. Through many centuries of repeated invasions and persecutions by despots and tyrants the Lithuanian God-given determination to be free and independent has never been extinguished, and you and I know that it never will.

Because of the present subjection of the people of Lithuania to Communist tyranny, this cannot be a day of rejoicing. Yet, because of the indomitable courage of the Lithuanians, it can be and is a day of tremendous hope.

Awaiting their day of liberation we can by these meetings remind your brave people that they are not forgotten; we can here resolve never to be reconciled to their fate, and pledge that we will never bargain with their temporary Communist masters to confirm their captivity.

At the same time we join in prayer that God in His infinite wisdom may speed the day of the deliveration from Communist tyranny and that the beloved Lithuanian people may soon be restored to their rightful place of honor in the family of free Christian nations.

Cradle of Glory

EXTENSION OF REMARKS OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1955

Mr. HESELTON. Mr. Speaker, Mrs. James G. McNett, of Williamstown, Mass., and one of my constituents, has long been an admirer of President Abraham Lincoln. She has studied his writings and background extensively and has written a play, *Cradle of Glory*, based on Lincoln's early life in Indiana, which has been produced by our Armed Forces for presentation to our servicemen overseas.

As the epilogue of her play, she used a speech of Lincoln's made by him at a reception in Indianapolis on February 11, 1861, when he was en route to Washington to assume office.

It is timely and appropriate and is an inspiration to each of us in our daily living.

At Mrs. McNett's request, I intended inserting it in the *RECORD* on February 12, Lincoln's birthday. However, since the House was not in session on that day, I would like to quote it at this time:

In all trying positions in which I shall be placed, and doubtless I shall be placed in many such, my reliance will be upon you and the people of the United States; and I wish you to remember, now and forever, that it is your business, and not mine; that if the union of these States and the liberties of this people shall be lost, it is but little to any one man of 52 years of age, but a great deal to the 30 millions of people who inhabit these United States, and to their posterity in all coming time. It is your business to rise up and preserve the Union and liberty for yourselves, and not for me. I appeal to you again to constantly bear in mind that not with politicians, not with Presidents, not with office-seekers, but with you, is the question: Shall the Union and shall the liberties of this country be preserved to the latest generations?

**One Bank Merger Begets Another—
Bankers Trust and Public National
Now Merge—Public Hearing Should be
Held Before Any Bank Merger Ap-
proval—Chase-Manhattan Merger Will
Control Over One-Fifth of All New York
City's Deposits**

**EXTENSION OF REMARKS
OF**

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 6, 1955

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the text of a letter I sent to the superintendent of banks of New York State, the Honorable George A. Mooney:

Hon. GEORGE A. MOONEY,
Superintendent of Banks,
State of New York,
New York, N. Y.

DEAR Mr. MOONEY: Before the ink is dry on the agreement to merge the Chase National Bank, the Bank of Manhattan Co. and the Bronx County Trust Co., we hear an announcement of still another gigantic merger between the Bankers Trust Co. and the Public National Bank, which would result in combined deposits of over \$2,500,000,000 and resources of \$2,800,000,000.

The Chase, Manhattan, Bronx County Trust merger would become the second largest bank in the United States. It would mean that this combination would control 20.9 percent of all New York City's commercial deposits. This percentage figure is inordinately large and has disturbing aspects when it is remembered that there are sixty other financial institutions vying for the banking business in this area. The merger will accentuate the comparative weakness of the smaller banks remaining in the area, and will make it difficult if not impossible for them to compete.

In making a decision on this merger, one cannot disregard the fear for the future which this merger creates among the smaller institutions in New York City. Certainly they should be consulted and their views be made known regarding the advisability or

inadvisability of bringing this new banking goliath into their midst.

May I suggest that before such a merger is consummated a public hearing be held at which the views of all those parties interested, as well as members of the legislatures, National and State, and important members of the public may be heard. A vital public issue is involved.

Doubtless you are aware of the subtle implications made in recent press releases to the effect that official sanction for this merger will be a mere procedural form. It was stated in the *New York Times* of February 9, for example, that "As a matter of efficiency and prudent planning, attorneys for the two banks" would not set a date for stockholders meetings without having ascertained in advance "the attitude of the banking department" and that the "Setting of the dates of the meetings would indicate that the superintendent had found nothing illegal in the proposal to merge and has no objection." Does this mean that the merger is a fait accompli and that your consent is a mere matter of form and thus quite assured? I am certain you will not treat so lightly a merger of such economic consequence and that you will deny such news reports.

In the interim why should not public hearings be held to aid in making a decision?

This is a matter of momentous public concern. The interests of the banks in question are not the only interests involved. I would be pleased to appear at such a public conference. The hearing, as indicated, would help you materially in rendering a decision.

Now on the heels of the Chase, Manhattan, County merger, the announcement of another huge merger between the Bankers Trust and Public National is made. One gigantic merger seems to beget another gigantic merger. This merger will give us the eighth largest banking institution in the country. The public must be alerted to the dangers inherent in these combinations. The merger trend now developing points up the need for a complete and judicious appraisal of all the facts that are pertinent to this problem, so that no hasty or unwise decision will be made which is detrimental to the banking system of our country and to the people generally.

Sincerely yours,

EMANUEL CELLER.

Lithuanian Independence

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, on this 37th anniversary of Lithuanian independence I direct the attention of our colleagues to the following letter which I have sent to the Lithuanian American Information Center:

MARY M. KIZIS,

Director, Lithuanian American Information Center, New York, N. Y.

DEAR Miss KIZIS: Let me take this opportunity to salute Lithuanians all over the world on the occasion of the 37th anniversary of their nation's independence.

I salute the Lithuanian American Information Center for its continuing efforts to remind the world of the sad plight of your former homeland. I salute the almost 1 million Americans of Lithuanian descent, who can never forget the principles that fostered

the Lithuanian Declaration of Independence, and, more especially, the people of Lithuania, who will never be satisfied with their present undemocratic, externally enforced government.

I take this opportunity to remind the people of Lithuania that freemen everywhere support their desire to regain the right of self-determination. We must continue to support the American policy of nonrecognition of the Russian annexation of Lithuania.

I will wholeheartedly support further efforts on the part of the Voice of America to attempt to spread the truth throughout the Communist-dominated world. In line with these ideas we should all join forces to liberalize our immigration laws and offer refuge in the United States to displaced persons from all countries.

Again, congratulations on this memorable day in the history of a free people.

Sincerely yours,

ABRAHAM J. MULTER.

Second Look at the News

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1955

Mr. HÉBERT. Mr. Speaker, shortly before the last congressional campaign, Hermann B. Deutsch, one of the more articulate radio commentators in the New Orleans area and associate editor of the *New Orleans Item*, had something to say which made plenty sense to me.

At the time I heard the broadcast I asked Mr. Deutsch for a copy of his remarks with the intention of bringing it to the attention of the House at the earliest possible date.

The delay has been my fault, but after reading these observations and keeping in mind the time when they were made, I am sure you will agree with me that the thinking and the conclusions of Mr. Deutsch are indeed timeless.

Here is the broadcast as given over radio station WWL in New Orleans, Loyola of the South:

SECOND LOOK AT THE NEWS

A very good evening to all of you out yonder in a blessed free land where you and I and the neighbors will be Mr. and Mrs. The-Most, come Tuesday. Why? Because we'll be jam-packed in a curtained polling booth with a throng that really is The Most.

Of course, you may not be with us. Perhaps you're like the mule who ran full tilt into the side of a barn not because he was blind but because he didn't give what on the air we call a hoot. Perhaps you're content to remain a faceless nobody, so it's your privilege not to join the splendid host who invite you to share what they won and held for you. If that's how you feel about it, you certainly have the right to shrug aside something millions of less fortunate people would give the very blood out of their veins to possess.

Let's take a look at those who invite you to join them in a curtained booth where there's a voting machine or maybe just a shelf with a pencil or rubber stamp where you can mark a paper ballot. You wouldn't think your hosts could all find room in that tiny cubicle where the world's mightiest sovereign—Their majesties, the citizens of

the United States of America—have their uncontradictable say on the first Tuesday after the first Monday in November of each even-numbered year. But they can and do make room not only for themselves, but for you.

Some of them are right sizable, too, like that son of a Yorkshire-born planter, a young Church-of-England communicant named Washington. He tops 6 feet by a goodish bit, and can vault right over his big white horse by placing just one hand on the saddle. The two beside him are a 19-year-old French Catholic, Marie Joseph Paul Yves Roch Gilbert Du Motier, Marquis de Lafayette, and a Liverpool born Jew named Robert Morris.

Just behind them stands a chap named "Fletcher, or Kraus, or Gonzales, or Koshivskovich, or Napolitano," or whatever; the name doesn't matter, really, because you pay more attention to the sackcloth rags swaddling the feet which left bloody footprints in the snows of a place called Valley Forge than you do to his features.

Another of the shining company awaiting you in your polling booth is John Peter Zenger. He's a German-born colonist who is accompanied by his lawyer, a man named Andrew Hamilton. Between them, they established the principle of press freedom for you in connection with the newly founded New York Weekly Journal in 1733. That laid the basis for a famous remark by an Albemarle County aristocrat named Thomas Jefferson who said that, given the choice between a land with a free press and no laws, and one with laws but no free press, he would unhesitatingly choose the former.

If you choose to join him and the others in that wonderful group of Americans, you'll also find among them a truculent Tennessean named Andrew Jackson. That he whopped the living daylight out of a conquest-avid foe at Chalmette below New Orleans in 1815 is important, to be sure. But it is no more important than the fact that he did it with a motley array of fighting men which included such superbluebloods as Omer Villerre, and a supercutpurse whose real name may actually have been Jean Lafitte, though he was born of God alone knows what parentage, and died and was coffined God alone knows where. Incidentally, Andy Jackson also had the help of a son of the Dutch rabbi who had established in Rhode Island the first Jewish congregation in this country. The son's name was Judah Touro. He had come quite penniless to New Orleans and lost most of one thigh when he was wounded at Chalmette while serving as ammunition carrier. But he survived to become one of the South's wealthiest and most generous philanthropists. Among other donations, he made the final contribution to complete the fund for a monument at Bunker's Hill in time for old Dan'l Webster himself to deliver the dedicatory oration.

In the polling booth, you'll likewise rub elbows with men named Lee and Grant who fought on opposite sides for the selfsame thing—your freedom to vote as you please on every first Tuesday after the first Monday of each even-numbered year's November. Men named Lazear and Hill will be there, too. After the shooting war in Cuba had ended, they volunteered to become human guinea pigs in Walter Reed's great experiment, proving the principle that conquered yellow fever for all time to come. Some of those who, without the stirring thunder of the battlefield to spur them on to heroism, thus gave their lives, assured you another sort of freedom and safety.

Along with the soldiers, you'll also meet in the polling place men named Eli Whitney and Robert Fulton and Henry Ford and Eluthere Irene du Pont de Nemours and Franklin and Altgeld and Morse and Edison and Rockefeller and Firestone and Wright.

Each of them contributed to the concept that is given its finest expression when you join that jam-packed assembly in your polling booth, and is smirched when you willfully fail to do so.

You will find men who built harvesting machines and precision lathes and transistor hearing aids; homegrown geniuses like a lanky Missourian calling himself Mark Twain, and foreign ones like Frederic Auguste Bartholdi, who designed and fashioned a statue to be called Progress for the Suez Canal. However, the canal's snooty directorate turned it down—and did they ever goof in doing so. Because that same statue was then presented to this country where we know it by its formal title of "Liberty Enlightening the World" or, more simply, as the Statue of Liberty.

Your polling booth companions aren't all oldtimers. Among them is a sergeant of Italian ancestry named John Basilone who received the Congressional Medal of Honor just in time to go to his death in another furious battle; a general of Dutch Colonial stock, Roosevelt by name, who lies buried on a cliff overlooking Omaha Beach near the village of Coleville-sur-Mer on the French channel coast; two lieutenants named Colin Kelly and Meyer Levin who died in the same Flying Fortress of which the former was pilot and the latter bombardier; but they did not die until after they dropped the bomb that blew to the bottom of the Philippine Sea the first of the capital ships Japan was to lose to a foe she had thought to overwhelm by a single surprise assault.

You'll also rub elbows with four chaplains who stood on the deck of a torpedoed troopship as the vessel was sucked slowly down into the insatiable North Atlantic. These 4, intoning Catholic and Protestant and Jewish supplications to the same all-compassionate throne of grace, laid down their lives in the faith of their fathers, that 4 more young soldiers might find room in boats and on rafts than might otherwise have been rescued.

The polling booth you'll enter on election day is not only crowded. It is also noisy. You will hear a mighty chord as you exercise the right its individual notes assured for you. True, the chord does sound like a great "amen" even though—and God be thanked for it—the chord has not been lost. It has only been neglected by some folks who are so mentally and morally small and warped that they remain deaf to one of the finest harmonies ever produced on earth. They close their ears to it by staying at home on election day.

What are the diverse strains of which that harmony is blended? The roar of traffic along a city street, the thunder of airplane motors, the chirp of crickets at nightfall along a hedgerow, the hum of a powerplant's dynamo, the cacophony of a jazz band, the slow creak of a wagon wheel in a train that is plodding ever westward to settle a wilderness, the songs a soldier sings as he marches to battle: Continental infantrymen mockingly turning against the Redcoats a jeer by adopting it as their very own march—an impudent composition we know as Yankee Doodle; the Green Grow the Rushes, O, which the soldiers of Scott and Taylor sang on the road to Chapultepec, so that to this day, Americans are known there as green-grows, or gringos; Tenting Tonight, Lorena, and Just Before the Battle, Mother; There'll Be a Hot Time and Goodby Dolly Gray and Just as the Sun Went Down and Where Do We Go From Here, Boys, and Mademoiselle From Armentieres and Don't Sit Under the Apple Tree.

There is also the ring of a hundred thousand hammers as rails reach out across the wilderness in spite of every obstacle; hammers that beat muskets not only into plowshares, but into cotton gins and bulldozers and combines, into the framework of an

Empire State Building and a United Nations Secretariat, into the Oakland Bay Bridge, and the Hudson River tubes; into motorcars and sewing machines and radios and electric iceboxes—the ring of hammer upon anvil in every forge of freedom.

If you concentrate a bit, you will also distinguish the voice of a Fourth of July orator as he repeats the words of an immortal Declaration; of a group of schoolchildren repeating in unison the pledge of allegiance to a banner that symbolizes government of the people, by the people, and for the people; of the voice that put into words man's aspiration toward freedom from fear, freedom from want, freedom of thought, and freedom of worship—yes; and right along with those deathless phrases the crackle of just two sharp words: "Play ball."

Clearly distinguishable, as well, are ritual and litany and prayer: Hail Mary, Our Father which art in heaven, and Hear, O Israel, as well as the myriad variants which express the aspirations of innumerable other sects amid the pomp of vaulted cathedrals, synagogues, and abbeys, as well as from little wooden chapels among the pine forests of the mid-western basin, the fir-clad ranges of the Pacific slope, the mesas of the Southwest, the bearded live oaks of the Deep South.

Let me tell you something, something I would like to call to your attention not boastfully or in unbecoming pride, but simply as a fact. In my home parish of Jefferson, here in Louisiana—and by parish I mean exactly what you outside of Louisiana mean when you say "county"—there is actually no real contest in the forthcoming election. Our congressional Democratic candidates are unopposed. There is little or no difference of opinion among us about the constitutional amendments coming up for a referendum.

Yet we'll be there on Tuesday. We'll cast a big vote. We'll do it, the neighbors, and I, simply because that's our day to be not merely Mr. and Mrs. Whoozis, but Their Majesties, Mr. and Mrs. American Citizen. It'll be crowded as all get out in that polling booth, but think of the singing splendid company we'll be a part of when we add to the swelling chord to which each of them has contributed an element of the world's mightiest harmony our little meed of resolution, of gratitude—yes, and of prayer, each after the fashion of his own choosing and the faith of his fathers, and perhaps something about those dead not having died in vain.

And so, to all of you out yonder in a blessed free land where we can be Mr. and Mrs. The-Most on the first Tuesday after the first Monday of each even-numbered year's November, this is Hermann B. Deutsch bidding every one of you a very good, good night.

United States, Not States, To Get Most From Tideland Oil

EXTENSION OF REMARKS OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mr. LAIRD. Mr. Speaker, in the last political campaign there was a deliberate attempt on the part of certain individuals running for elected offices to falsify and mislead the American voters concerning the Submerged Land Act which was passed in the 83d Congress and supported by a majority of the Democrats and Republicans in the House of Representatives.

Under leave to extend my remarks, I would like to include a copy of an article which appeared in a December issue of the highly regarded news magazine, *U. S. News & World Report*:

UNITED STATES, NOT STATES, TO GET MOST FROM TIDELANDS OIL

Tidelands oil is going to turn out to be a bonanza for the Treasury in Washington, far less so for the States that fought so hard for the title to these lands under the Gulf of Mexico.

It appears now as though the Federal Treasury will end up at least \$6 billion richer because of tidelands development. The States of Louisiana and Texas will be lucky if they get \$1 billion.

This twist of fortune results from the wording of the law that turned over part of the tidelands to the States and the oil development that now is going on. In writing the law, Congress gave Texas title to lands extending 3 leagues, or 10.5 miles, offshore, while Louisiana was given title to lands 3 miles out. The rest of the Continental Shelf, stretching out as far as 100 miles, was reserved to the National Government. Louisiana, however, is claiming title to lands going out to 27 miles.

It is these lands reserved to the Federal Government that now are turning out to be most attractive to the companies that are searching for oil. These lands also are believed to contain almost eight times as much oil as the lands now held by the two States.

Federal officials, in fact are surprised at the prices they are getting for drilling rights in the submerged lands. They recently asked for bids on 199 tracts of about 5,000 acres each off the Louisiana coast. They expected to get about \$50 million for the lot. Instead they got \$121 million for only 97 tracts. The other 102 tracts were withdrawn because of the conflicting claims to title from Louisiana.

So far, the Treasury is getting \$144 million for leasing only 462,000 acres—less than 3 percent of the submerged lands mapped as potentially oil bearing. So, just for drilling rights alone, the Federal Treasury now is likely to get at least \$1 billion when the whole area is leased.

Royalties too: In addition, the Government will collect 16½ percent of the value of all oil produced. The Geological Survey estimates that oil in these lands amounts to 11.5 billion barrels. At today's prices, that means a return of at least \$5 billion in royalties.

All of this money is now destined to go into the general fund of the Treasury. Once, however, Congress came close to setting aside offshore-oil revenues for the benefit of the Nation's public schools. That proposal passed in the Senate but was blocked in the House. Later the "oil for education" plan was shelved in the conflict over giving tidelands to the States. This plan now is expected to be revived.

Whatever is done with the money, it now is clear that one of the most extensive oil hunts in history is about to get under way, and the Federal Government will get the lion's share of the public benefits. The \$144 million that the Federal Treasury already is offered for a fraction of the tidelands, contrasted with the \$65 million realized from leases by Louisiana and Texas, is an indication of what lies ahead.

More than 30 oil companies now are active in the hunt for oil. Before they are through, they expect to locate at least as much oil under water as that already proved in the coastal plain of the Gulf States. This dry-land area is known to contain 11 billion barrels of oil and 67 trillion cubic feet of natural gas. New discoveries are still being made.

Drills go deeper: The advantage to the Federal Government results from the grow-

ing ability of oil companies to drill farther out from shore and in ever-deepening waters. Not so long ago, a 60-foot depth of water was considered the limit. This seemed to give the Gulf States all the breaks in tidelands development. But now Continental Oil Co., with associates, is preparing to drill in 97 feet of water off Grant Isle, La. Gulf Refining Co. has leased a Federal tract that lies under 164 feet of water. And oil engineers and shipbuilders have designs for seagoing platforms that will operate at 200-foot depths.

These developments have changed the basic conception of oil possibilities. The offshore area once was thought to embrace no more than 25,000 square miles. Now the estimates are double that figure, with most of the area under Federal control.

Underwater explorations are being stepped up by recent finds. Magnolia Petroleum Co. and associated firms brought in a new well on a submerged salt dome 30 miles off the Louisiana coast. The same companies made another strike 18 miles offshore. Another group also opened a new field 30 miles out, and Phillips Petroleum Co. located a natural-gas well in still another area. Shell Oil Co. has made a strike close to the 3-mile limit off Louisiana, and Standard Oil of Texas has brought in a discovery well near Corpus Christi, Tex., in State-owned waters.

At the moment at least 22 wells are being drilled in Federal waters alone. This drilling is expected to double in the next year as more and better platforms, tenders, and barges are built.

However, it is not cheap to explore for undersea oil. A typical company usually invests \$3 million in seismographic surveys alone, just to find indications of oil. Then anywhere from \$2 million to \$10 million goes for drilling equipment. Another \$1 million may be needed to drill a well to a depth of 10,000 feet, where most of the oil is found.

These costs can be justified only if large amounts of oil are discovered. As one company executive says: "It looks like we'll have to learn to walk away from small discoveries."

Billions of barrels: Actually, the companies expect to find a lot of oil. One estimate is that, within 5 or 6 years, explorations will turn up 6 billion barrels of new oil reserves, plus 15 trillion cubic feet of natural gas. Official estimates indicate that the whole submerged area, State and Federal, will add 13 billion barrels to the Nation's present proved reserves of 34 billion barrels. Underwater oil off California may add another 2 billion barrels. That adds up to enough oil for about 20 years, at last year's rates of United States production.

Most of the oil hunting is being conducted at present off the Louisiana coast. In the waters off Texas, drilling difficulties are reported to be much greater because of high winds and rough waters. Two recent drilling ventures in this area were failures. Nevertheless, oil-company executives rate their prospects off Texas as good and are planning on more extensive drilling. They expect to solve their problems as they gain more experience.

Eye to the future: The emphasis at present is on locating reserves. What most companies want primarily are reserves for future production, not oil that is to be marketed now. Reserves are a guaranty that oil producers will stay in business for many years ahead. Also, before undersea oil can be marketed, pipelines must be laid to link offshore wells with refineries on land. To date, 1 pipeline has been laid stretching out 17 miles from the Louisiana coast. This is to be lengthened soon to 48 miles.

Signs are, therefore, that the actual marketing of tidelands oil will not be undertaken on a large scale for some years. That means large royalties to the States and Federal Government will not be realized either, until some time in the future. However,

there seems to be little doubt that eventually a very large public revenue will be realized from offshore oil and that more than 85 percent of it will flow into the coffers of the Federal Government.

Address of Secretary of Labor Before the New England Governors' Conference

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address of the Secretary of Labor, the Honorable James P. Mitchell, before the New England Governors' Conference, Boston, Mass., on November 18, 1954:

I appreciate this opportunity to speak before this distinguished group. Your conference is in the best tradition of our American heritage. It is an effort through cooperative endeavor to promote the well-being of the people in your area. This approach commands the respect and admiration of all of us.

The great natural resources of New England, the ingenuity and industry of its management, and the skill and resourcefulness of its workers would seem to make it a most attractive and profitable place for industrial enterprise. In addition, the high degree of labor-management harmony and the maturity of the relationships between workers and employers would seem to be conducive to high production and successful operations. Consequently, when some companies closed their New England plants or let them become obsolete and built or expanded in other areas, you tried to find out why and to correct your difficulties and attract new industries.

I have reviewed many of the studies of the New England economy. From this I have concluded that you are trying to solve problems with the intelligence, initiative and resourcefulness for which you have always been noted. As a result of the work of conferences such as this, the efforts of the New England council, the studies which you are promoting, and the local efforts to attract and expand industry, I see a bright future for this region.

The whole history of our country has been one of change, growth, and progress. That is the process now going on in New England. I note that you are diversifying your industries and shifting into production of the new products of this electronic age. No longer is the future of your area tied as closely to its traditional industries, some of which are experiencing a long-term decline.

You lost the village blacksmith to Detroit, and some of the textile mills to the South, but in their place you are expanding your transportation equipment industries, your electrical machinery manufacturing, your jewelry and silverware industries, your aircraft plants, your fabricated metal products factories, and your recreation and resort facilities. Each new age has found you meeting its challenge. You may be justly proud of your past and fully confident of your future.

The industrial transition which you are undergoing will undoubtedly be faced by other sections of the country from time to time. The problems you are meeting as employment in some industries declines and the lessons you are learning to increase employ-

ment in other industries can be studied with profit by every region of the country.

The entire country has recently been going through a period of changeover from high-level defense production to a more normal economy. This changeover has been superimposed in New England on a regional transition which had been building up for a long time and which has been accelerated since the end of World War II. In 1939 two-thirds of the region's manufacturing employment was in the soft-goods industries, but in 1954 just over 50 percent of the workers are producing nondurable goods. There has been a great increase in the production of electronics and other electrical equipment, fabricated metals, and transportation equipment, and considerable decline in the textile industry which employed 281,000 workers in September 1939 and only 173,000 in September 1954.

Since the end of the war there has, as you know, been a nationwide decline of employment in the textile industry, although not as great a drop for the country as a whole as for the New England region. The overall decrease has been due in part to the shift to the synthetics and in part to improvement in techniques of producing the conventional cottons, woolsens, and silks which began in the 1920's. Output per man-hour in the decade 1929-39 increased by 41 percent in woolsens and worsteds, by 46 percent in cotton goods, and by 131 percent in silk and rayon. Increases in productivity slackened during World War II, but the recent installation of new types of textile machinery has greatly increased output per worker since 1947.

The essence of the New England economy is its ability to utilize its outstandingly able labor force and its mature labor-management relations. New England's record in labor-management relations, as measured by the number of man-days lost through strikes, continues to be excellent. For example, in 1953, only 4.9 percent of the Nation's man-days of idleness from work stoppages were in New England, whereas New England has 7.1 percent of the Nation's nonagricultural employment. This same favorable record has existed in nearly every postwar year.

New England, in common with the rest of the country, has an interest in taking steps to eliminate unemployment. This is a problem which can best be solved at a local level. The Federal Government can make some contribution but cannot do the job alone.

Like other areas, New England has benefited from the procurement activities of the Federal Government. For example, from July 1 through November 13, 1954, at least 70 contracts, each of one-half million dollars or more, were awarded to firms located in New England. These large contracts had a value of over \$208 million. They covered such diverse items as cartridges, propeller assemblies, helicopters, aircraft engines, barracks, woolen cloth, sonar sets, electronic equipment, mine sweepers, parachutes, shoes, wire, chemicals, amplifiers, antennas, rifles, coal, plastic dinnerware, automatic screw machines, a hospital, a radar gunnery trainer, a warehouse, a submarine, and spare parts for aircraft.

In the first 10 months of 1954, the value of Federal contracts awarded for highway construction was over \$5¼ million in Connecticut, over \$4¼ million in Maine, over \$16½ million in Massachusetts, almost \$6 million in New Hampshire, over \$2¼ million in Rhode Island, and over \$4½ million in Vermont.

I cite these figures only to indicate that I believe New England is getting its share of Federal expenditures and to express the hope that this has been helpful to your economy.

While there has been a recent decline in unemployment, we in Washington are not complacent about the unemployment situation. We are determined to take all possible

steps to promote job opportunities. We are trying to make sure that all of our policies—legislative and administrative, financial and operating—promote the economic welfare of the American people. I am sure that you in your own areas have the same objectives and are working toward the same end.

There are many areas in which we can work together for the benefit of the people of your region and the Nation as a whole. These include the Federal and State programs to promote the social and economic welfare of the American people.

Many Americans are concerned about the growth of Federal bureaus and programs in recent years and the pressures to add still more functions that will make the Government bigger.

No one seriously suggests that the role of Government in today's dynamic economy should fail to keep pace with the changing times and the altered needs of the American people. But we must continually ask ourselves whether the governmental action that will do the job best may not actually be, in many instances, that of the State or community which is most familiar with the particular problems of the citizens who live there.

In a letter to the Congress, on March 30, 1953, President Eisenhower pointed out that "the Federal Government has entered fields which, under our Constitution, are the primary responsibilities of State and local government. It has led to duplication and waste. . . . The maintenance of strong, well-ordered State and local governments is essential to our Federal system of government."

However, until our State and local governments take positive and well-considered steps to meet the demands of their own citizens for the performance by government of necessary functions, the pressures on the Federal Government to do what the local governments could do but have not done will continue. As in the past, such pressures will encourage the further expansion of Federal regulation and control in these areas.

Consequently, it will be to our mutual advantage to explore today those areas in which further State action is desirable.

The New England States pioneered in State minimum-wage legislation. Massachusetts passed the first law in 1912. Currently, all of your States but one have minimum-wage laws, although one is limited to its coverage to a single industry. New England not only set the trend in minimum-wage legislation, but also in covering men under such laws. Connecticut was the first State in the Nation to take this action. New Hampshire, Massachusetts, and Rhode Island soon extended their laws likewise to cover men. The pattern set by the Federal Fair Labor Standards Act in giving wage protection to both men and women has been more commonly accepted in this New England area than anywhere else in the United States. Of the 5 laws now covering men, 4 are in this area. Likewise, this area has followed the pattern of the Federal act in establishing a statutory minimum. Three of your State laws establish a statutory minimum rate; and Connecticut was the first State to meet the 75-cent minimum rate set by the Federal act.

Despite the great progress that has been made, there is still work to be done in this area. I hope that this region will work toward having in every State minimum-wage legislation that sets a realistic statutory minimum rate and covers men as well as women workers.

Workmen's compensation is one of the areas in which this Department is intensely interested. Under the leadership of Under Secretary Larson, who is an expert in this field, we hope, with the cooperation of the States, to make real progress and to strengthen this most important program for working men and women.

When workmen's compensation laws were first passed, they contemplated benefits approximating two-thirds of the worker's wages when he was incapacitated from an occupational injury. Now due to rising wages and increased cost of living, weekly benefits fall far below this standard. Likewise, many employees are not covered at all because of the exemption of small employers. In the 6 New England States, for example, all laws exempt employers with less than a specified number of workers, ranging from less than 3 to less than 8. The average weekly earnings of factory workers in the United States are over \$72. Only 2 of the 6 New England States—Connecticut and Massachusetts—provide a maximum weekly benefit of \$40 or more for temporary total disability. For the other 4 States, the maximum ranges from \$25 to \$33.

In many other areas, we need to strengthen our workmen's compensation laws. The need for coverage of occupational diseases as well as injuries resulting from accidents is obvious. Three of your States (Vermont, New Hampshire, and Maine) limit such coverage to a specific list or schedule of diseases. With new industrial processes constantly being developed and exposing workers to new hazards, it is essential for workmen's compensation laws to provide for full coverage of occupational diseases, as is now done in more than half of the States.

This is another area in which there is still room for progress in New England.

By and large, the unemployment insurance laws of the New England States compare favorably with those in other jurisdictions. The basic maximum weekly benefit amounts range from \$25 to \$30. In Connecticut and Massachusetts, where recognition has been given to family responsibilities, the maximum weekly benefit is greater for the individual with dependent children—up to \$45 in Connecticut, and limited to the individual's average weekly wage in Massachusetts.

Of the New England States, New Hampshire is the only one which nearly approaches the President's recommendations for an improved unemployment insurance program so far as duration of benefits is concerned. All eligible individuals may receive benefits for 26 weeks if they continue to be unemployed through no fault of their own. In Maine and Vermont, all eligible claimants are entitled to uniform duration of 20 weeks. The remaining 3 States provide for a maximum of 26 weeks but many workers are entitled to fewer weeks of benefits, depending on their earnings in the prior year.

In the New England States other than New Hampshire, the percentage of maximum weekly benefits to average weekly wages ranges from 38.1 to 45.2; in Connecticut and Massachusetts, individuals with dependent children receive a higher percentage of their average weekly wage. The majority of claimants in New Hampshire would receive benefits up to one-half of their average weekly wage only if its benefit formula were changed from one in which the weekly benefit is based on a fraction of a full year's wages. This is due to the fact that use of a fraction of a full year's earnings tends to depress the weekly benefit because of the inclusion of weeks of less than full-time earnings as well as weeks of no earnings. Maine, with a maximum weekly benefit of \$27 and uniform duration of 20 weeks, is hampered by its type of benefit formula so that only 21.6 percent of insured claimants in 1953 were eligible for the maximum weekly benefit amount.

As you can see, this is another area deserving of your careful consideration. This is particularly true because of the increasing attention being given to stabilization of income. This type of income security is sometimes called the guaranteed annual wage. Actually, in many cases unions demanding

a guaranteed annual wage are really looking for supplementary unemployment compensation. Improved unemployment-insurance systems would help alleviate this problem.

One of the major problems in the field of economic security is maintaining the income of individuals and families when the wage earner is ill and unable to work. The need of workers for income maintenance during periods of unemployment caused by illness is possibly even greater than their need for income when the unemployment is due to lack of work.

Yet while all States have statutory provisions for unemployment insurance, only four provide their workers with statutory protection against loss of wages due to non-work-connected disabilities. Of the 4 States, the 1 in New England—Rhode Island—is the pioneer. In other New England States the legislatures have considered disability insurance. Connecticut and Massachusetts have given it active consideration over quite a period. Vermont is 1 of the 6 States which has modified its unemployment insurance law to permit an unemployment claimant to continue to receive benefits even though he becomes unable to work during an uninterrupted period of unemployment, provided that he does not refuse work which would have been suitable if he had not become sick.

The importance of disability benefits to the workers in a State is indicated by the fact that in 1953 Rhode Island paid \$12.6 million in unemployment insurance benefits and \$6.2 million in disability benefits.

The field of temporary disability insurance is worthy of further attention. It is an area in which protection is needed and State action is warranted.

I should like to stress the importance of a strong, coordinated State labor department to the States' efforts to meet their responsibilities to the wage earners within their borders. A State labor department should administer labor laws, but it should do much more. It must provide the planning and leadership that are vital to achieving the objectives of a growing economy, good labor standards, safe work places, and the minimizing of industrial disputes. Only through such a strong labor department can these objectives be carried out with the flexibility required by our changing social and industrial developments.

A labor department is the agency of State government to which workers and employers should be able to turn for advice and help in meeting everyday problems of employment and in planning for the future. The New England area is fortunate that it has had functioning labor departments over a very long period. I can think of nothing that I would consider more important in terms of the welfare of the wage earners of your State than to strengthen that agency of your State government that gives leadership in the conservation of the State's human resources.

There is a great need for State facilities to provide effective mediation and conciliation services in labor-management disputes. Generally speaking, the Federal Mediation and Conciliation Service limits itself to labor-management disputes which threaten a substantial interruption of interstate commerce. Unless the States step in, there is a no-man's land in other labor disputes where no mediation services are offered.

State agencies are particularly well qualified to help settle labor disputes. They are in the best position to understand the local problems and the local interests involved. The local community suffers the toll of labor disputes more than any other area and, therefore, settlement is primarily the interest of the State.

Unfortunately, many States do not provide active mediation services, making it impossible for them to bear the responsibility

which is properly theirs. The active services include certain New England States, but there is room for improvement here as in other areas. Three of the States in your region have what could be called fully effective State mediation and conciliation services. In the other three States, you obviously have room for some progress.

All of the New England States have basic safety laws and an agency charged with administering those laws. Four (Massachusetts, Rhode Island, New Hampshire, Vermont) have delegated full authority to the administrative agency to draft rules and regulations to carry out the intent of your basic safety law and to provide the flexibility required to keep pace with rapidly changing industrial processes. One State (Connecticut) has no such general authority, and in the other one (Maine) the authority appears to be somewhat limited.

Experience shows adequate industrial safety for employees can never be achieved unless regulatory authority is given to promulgate safety codes, and that authority is actually used to build a solid foundation on which a safety structure can be erected. Now, I do not mean that safety code enforcement is all that is involved in a good safety program. If that were so, your inspectors would only need to be good policemen. They must be much more than that. They must be highly trained technicians, skilled in the best accident-prevention methods and able to put their knowledge to use.

Every worthwhile safety program is based on the premise that a safe and healthy place to work is provided the employee. Everything else—training, supervision, and employee cooperation—that enter into the program must follow. And a trained staff, working with an adequate safety code structure, can do a great deal to show the employer how to provide a safe work place.

I believe you will wish to look into this problem. Where you lack basic legal authority to carry on good safety programs, you will want to remedy that as soon as possible and strengthen your State resources for the promotion of occupational safety on every front. Every dollar spent in accident prevention will yield high dividends in reduction of costs resulting from occupational accidents and in the conservation of the Nation's greatest resource—its workers.

The Labor Department's Bureau of Apprenticeship is charged with promoting apprenticeship and industrial training. I have instructed this Bureau to encourage management and labor to expand their efforts in improving the skills of the Nation's work force. All of us know that this is extremely important to our economy at all times. I have also directed the Bureau of Apprenticeship to encourage State agencies to assume more leadership and more responsibility in the promotion of sound apprenticeship programs.

As you know, each of the New England States has an active apprenticeship agency. However, improvements can be made. Two-thirds of the New England States do not have active State staffs and therefore are not in a position to give the necessary promotional and technical assistance to the people in their industries.

I strongly urge you to evaluate what is currently being done in your States and to improve and intensify training efforts to expand the skills of the entire New England work force.

I particularly urge you to consider the importance of adequate training programs for the young people of your States who are for the first time entering employment. Attention should be given to the special supervisory problems involved in their training and emphasis should be placed on application of safety rules.

All levels of Government should be concerned not only with apprenticeship training but also with the many other very important types of training. We in the Labor Department are in the process of launching a new program to encourage effective training for all workers. The responsibility for developing the skills of employed workers lies with management and labor. The role of the Federal, State and local governments is only to assist and help. This role is important, however, and deserves our fullest support.

We have gone a long way in the United States in correcting child-labor evils since the early days when so many workers in mines and factories, including the growing textile mills of New England, were young children. New England was the pioneer in seeing the evil of child labor and in enacting legislative remedies. It was in Connecticut in 1813 and Massachusetts in 1836 that the first child-labor laws were passed. But as child-labor protection has become a nationwide movement, New England as a region has lost its lead. The nationally accepted standard of a 16-year minimum age for employment during school hours has been met by only 4 of the 6 New England States (Connecticut, Maine, Massachusetts, Rhode Island). Rhode Island is the only State in this area to set a maximum 40-hour work-week for boys and girls under 16 and Connecticut the only one with a maximum 8-hour day and 48-hour week standard for those 16 and 17 years of age.

In the early days of our Nation farmwork was a family activity, but now the widespread practice of depending upon seasonal hired laborers has made the protection of children working in agriculture one of our greatest needs. We have made too little progress anywhere on this front. For example, among the New England States not one applies to agricultural employment a 16-year minimum age for employment during school hours, and only Connecticut has a 14-year minimum age for limited agricultural work outside school hours.

Much remains to be done by the New England States to provide the basic child-labor protections that are generally accepted today as necessary to safeguard the educational opportunity of our youth and advance constructive employment opportunities for young people when they are ready to join the Nation's work force.

We all know that despite our professed beliefs in the equality of man, certain groups among us are discriminated against because of their race, color, religion, or national origin. When this discrimination affects a person's opportunities for employment, it is particularly pernicious. The freedom to earn a living without being discriminated against is as important to the individual as the better-known civil rights and freedoms guaranteed by the Constitution. Freedom of speech, assembly, and religious worship may seem to be empty phrases to a person who is deprived of his chance to make a living because of the color of his skin, or the way he worships God or because his ancestors were members of a particular national group.

As you know, there has been a long struggle for the enactment of Federal legislation to meet this problem. One of the arguments against Federal legislation in this field is that this matter should be dealt with by the States. To lend validity to this argument, however, the States must take some action to eliminate this injustice to large numbers of their people.

Here in New England three of the States, Massachusetts, Connecticut, and Rhode Island have acted. These States have statutes against discrimination in employment which have demonstrated that State action along this line can be effective. The annual reports of the State agencies administering

these laws indicate that they have succeeded in reducing discrimination in employment. They have opened up employment opportunities where members of some groups have previously been barred.

I commend to the attention of other States the experience of Massachusetts, Connecticut, and Rhode Island in meeting the problem of discrimination in employment.

There are two significant population trends which I believe I should discuss with you before closing. First is the bumper crop of World War II babies now going through the school systems of the Nation and soon to be candidates for their share of employment opportunities. Second, and of real concern to the New England area, is the increasing representation of older workers both in the general population and in the labor force. People 45 and older have increased from 17.8 percent of our population in 1900 to 28.4 percent in 1950. They will comprise nearly 50 percent by 1975.

Studies conducted in selected areas through State employment security agencies have established clearly that, in spite of the present high levels of production and employment, older workers are at a distinct disadvantage in obtaining new employment. Unless the economy achieves considerable further expansion, the large number of young people born in the 1940's who will reach working age in the 1960's will create much heavier competition for jobs.

It follows, then, that unless hiring and retention practices of employers detrimental to the interests of older workers change before the 1960's, an excessive number of older people will suffer unemployment and dependency. In this respect, New England faces a particularly acute situation. Great concentrations of older people tend to be found in the older industries. This is true in the case of textiles, which have in the past represented such a large part of New England's industrial endeavor, and it is true also in the metal trades, which account for much employment in this region.

In recognition of the impact of these problems in your States, Rhode Island, Massachusetts, and Connecticut have established committees on the aging which are given earnest attention to constructive actions that may be taken. I share their concern. We at the Federal level are also working on this problem. It will take the best cooperative efforts of all of us to find the solution.

Thank you for permitting me to discuss with you some matters of mutual interest. These are some of the many areas in which we can work together for the benefit of the people of New England and the country as a whole. I hope that you will call upon me whenever the Department of Labor can be of assistance. You may be assured of our earnest desire to cooperate with you on behalf of the general welfare.

Proprietors of the House—Democrat Rayburn and Republican Martin, Alternating as Mr. Speaker

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following interesting article from the current issue of Life regarding our be-

loved present and past Speakers of the House:

PROPRIETORS OF THE HOUSE—DEMOCRAT RAYBURN AND REPUBLICAN MARTIN, ALTERNATING AS MR. SPEAKER, OPERATE WITH SKILL, WARMTH, AND FIRMNESS TO GET WORK OF CONGRESS DONE

(By Robert Coughlan)

In the grandiloquent corridors of the House wing of the National Capitol, obscure among the intaglied marbles and gilded ceilings and spacious vistas and heroic canvases of battle scenes and founding fathers, there is a small alcove containing a pair of private suites. In one of these, by tradition, sits the Speaker of the House with his staff; in the other, which adjoins it, sits the Minority Leader with his staff. Between them lies a formal rancor and an obligation to plot each other's ruin.

One day last December the Honorable JOSEPH W. MARTIN, chieftain of the House Republicans and hence Speaker of the preceding session, emerged from the Speaker's office into the corridor. At nearly the same moment the Honorable SAMUEL T. RAYBURN, leader of the Democrats, whose victory in November's election made him Speaker-to-be, emerged from the Minority Leader's office.

Here was a historic confrontation: the two great rivals, their positions soon to be reversed as the fruit of a bitter campaign, that reversal signified when RAYBURN (with what sweet malice one can imagine) would depose MARTIN from the Speaker's office and relegate him and his party's hopes to the humiliation of the minority leader's office in which RAYBURN had chafed these past 2 years. Surely there would be hot looks between them, perhaps hot words, or worse.

This is what happened.

"Joe," said Speaker-designate RAYBURN, looking at Speaker MARTIN with querulous affection, "Ah'm tired of all this shiftn' around. What do you say, we each keep the same room we got now?"

"You're the Speaker, Sam," MARTIN replied with a warm smile. "Whatever you say."

And so, as the new Congress opened this January 5, people wanting the Speaker of the House had to look for him in the minority leader's office, and the other way around. It wasn't protocol and it wasn't parliamentary, but for SAM RAYBURN and JOE MARTIN it was practical and that's what counted.

Elsewhere in the world, at about this same time, France's National Assembly was preparing to strangle itself in new extremes of factionalism. English laborites were serenading Sir Winston Churchill with catcalls. Olenhauer, leader of West Germany's Social Democrats, was refusing any understanding with Chancellor Adenauer; while in the United States, the Senate, often referred to as "the responsible body," was gingerly feeling its collective head and wondering what was in the stuff it had been drinking for the past 2 years; what with the Bricker amendment, the McCarthy mess, and the Republican leader sniping at the President who was also head of the Republican Party, it had made an inglorious record.

MARRIAGE OF OPPOSITES

The Members of the House, the body designed constitutionally as the "popular branch," could look back on a decorous and productive session and forward to one that promised to be equally so. The House seemed to have become in fact "the responsible body." And the reason, when one stopped to think about this anomaly, lay to a large extent in the nature of the House leadership—not a little in that eclectic and congenial spirit which sacrificed form and avoided the dusty nuisance of moving day. With RAYBURN and MARTIN, or MARTIN and RAYBURN, whichever way the die fell, the House could settle down to the things to be done with the homespun

comfort of a fat man slipping into a pair of old shoes.

RAYBURN and MARTIN—SAM and JOE, for each has got rid of the second syllable of his first name—have been compared with the proverbial old married couple who have lived together so long that, in spite of spats and opposing opinions firmly held, they have almost blended their identities. Some maintain that they even have grown to look alike, but this idea is spoiled somewhat by their complexions and hair. RAYBURN is almost totally bald; MARTIN has kept a heavy shock of unruly hair which even now, at a little distance, gives the illusion of being black. However, they are of a size, about 5 feet 7 inches, and share the gentle rotundity of their years. MARTIN is 70 years old; RAYBURN is 73; MARTIN has served in the House for 30 years, and as leader of the Republicans there for 16 of them; RAYBURN has served for 42 years, and as leader of the Democrats for 18 of them; MARTIN slurs his "r's" in a northeastern accent and RAYBURN in a southwestern one; both speak in rather clipped sentences and sound a good deal alike; both are unmarried and each has a sister who keeps house for him back home.

In fact, except that RAYBURN likes fishing and MARTIN likes baseball, and that—as MARTIN says, "Sam's a born and bred Democrat from Texas and I'm a born and bred Republican from Massachusetts, and we'll always have that between us," and "We've got different economic ideas, but we're not too far apart on that, either," RAYBURN and MARTIN are almost an overlapping image of that very important personage, "Mr. Speaker."

"Mr. Speaker" is the second most important elective official in the United States. Since 1947, when he was put ahead of the Secretary of State, he follows the Vice President in the line of succession to the Presidency. But he far exceeds the Vice President in his power and his influence over legislation. As for Senators, SAM RAYBURN disdainfully says, "I'd rather be Speaker of the House than any 10 Senators."

POWER OF THE PURSE

Mr. Speaker's powers are so great as to defy exact calculation and yet so amorphous as to defy exact definition. Since the House holds the Nation's purse through its constitutional control over appropriations, and the Speaker is the House symbolized, he is a man for whom all executive departments must feel that tenderest of emotions—financial. Since he strongly influences committee appointments, all House Members must look to him for a chance to get ahead. Through his control of the intricate parliamentary machinery of the House, he can expedite or delay bills, encourage or cut off debate. By the simple device of not seeing a Member who is trying to be recognized, Mr. Speaker can leave him forever mute. Yet the Speaker cannot be a tyrant. His rulings can be overturned and his power, like that of the Government itself, must derive from the consent of the governed.

There was a time when this was not so. Back in 1890 Speaker Thomas Reed, driven to it by the fractious habits of the Members, rigged the Rules Committee to consist simply of himself, his two deputies and two members of the opposition. The latter being always outvoted 3 to 2, and the Rules Committee having the say-so as to which bills could reach the House for a vote, the opposition found itself completely throttled. The Reed autocracy continued for 20 years, on through the regime of the famous "Uncle Joe" Cannon of Illinois, who was such a despot that the Members finally revolted and in 1910 stripped the speakership of most of its powers, taking special care to liberate and enlarge the Rules Committee. Later speakers rebuilt much of the power Cannon had lost, but it was a gradual process and the power was of a different quality, based

on changes in the times, the country and the House of Representatives itself.

JOE MARTIN remembers that even in 1925, when he first took his seat, "not 1 man in 50 paid much attention to what was happening in Congress. We didn't have any really big issues to worry about or for the country to worry about. We'd only be in session about 9 or 10 months altogether out of the 2-year term." Then, in 1930, began the time of troubles—25 years of them, so far—and "what Congress did affected everybody in the country." As a result Congress itself changed: The average Member who might have run "just for the experience and the prestige it would give him in his law practice or newspaper job back home" now ran probably because he had convictions. This naturally made a difference in the techniques of leadership.

When they consider it politically necessary, both RAYBURN and MARTIN know how to issue pointblank orders. But this is usually a last resort. "Times have changed," MARTIN says. "You can't browbeat a Member of Congress any more. They've got to have confidence in you to follow you." And RAYBURN says, "You've got to lead with kindness and with good reasons," adding, "I never criticized Cannon, or Reed for that matter. They worked with the rules they had, and if you're a strong man you don't back off from the power that's given you. But things are a lot different now. They've got to want to follow you, and you've got to fix it so they'll be thinkin' of reasons why they should instead of why they shouldn't."

Thus Mr. Speaker in modern times has become a representative's representative, a politician's politician, manifesting—since people generally get the kind of Government they deserve—both the virtues and shortcomings of his constituency, the House. Who and what are these 435 people?

SAM RAYBURN was musing aloud not long ago about what makes a Congressman. He has seen about 3,000 of them come and go, an average turnover of 150 seats a term. He said, "They're as good a cross-section of the American people—the best of the American people—as you can find. You can tell a whole lot about the people of a district by the kind of fellow they keep sending here. For instance, one man came to me. He was from a pretty rough district, a lot of uneducated people. He said to me, 'I don't belong here. I don't know what's going on here and I never will. But you'll never get rid of me because I'm just like my folks.' And he was, too."

"But these representatives have been selected. They've been honored—it's an honor to be elected to anything by the people. Now, they're no smarter than a lot of other people where they come from. I don't doubt at all there's people smarter than they are. But let me tell you one thing about smartness—when you've got commonsense, you've got about all the sense there is. And I shouldn't say this, because this House has been so good to me, but they're the best jury I ever saw a man tried before. When a new man comes here, the others want him to make good. They're pulling for him. If he makes a good job on his first speech or in his committee, they're glad. But if he falls down or makes a fool of himself, he's got a strike against him, and if he keeps on doing it they'll just have nothing more to do with him—and why should they?"

"Of course," he went on, "it takes a while for a man to learn and get established and gain his full influence. He don't reach his full usefulness his first term or two. And the worst thing a district can do for itself, if it's got someone here doing his job, is to keep changing its Congressman."

"A man makes a record here about the way he does in business, or the law, or anything else: it's hard work that makes the difference."

JOE MARTIN, talking on the same theme, summed it up this way: "It's a pretty shaa'p test they put you through. A man has to demonstrate commonsense, courage, honor and ability, and he can't mind hard work. There's another thing you can't overlook. If a feller is going to keep comin' back, he's got to service his district. That's what they send him for. A man can be a statesman, but if he's going to be one he'd better have a pret-ty good sec-re-tary to see about all the little humdrum things back home."

THOSE ROLLING WAVES OF SENTIMENT

Honor, devotion to work, commonsense—if these are Mr. Speaker's prescription for success in Congress, they are also the qualities that Congressmen mention most often about RAYBURN and MARTIN. In the slippery defiles of politics it is honor that counts most: and again and again one hears the phrase, "SAM and Joe are men of their word." Or, as Lew Deschler, Parliamentarian of the House, put it recently, "They keep their commitments. No matter how rough it gets, they don't run out. They don't run." In that regard, RAYBURN says simply, "There's no degrees in honorableness. You are or you aren't."

Mr. Speaker, the representatives' representative, must also have fairness, tact, and tolerance. RAYBURN says, "A Speaker has to be fair. Otherwise they'll tear him to pieces. That's because so much House business is done by 'unanimous consent of the Members,' and all it takes is one fellow who thinks he's been done wrong to stand up and say 'I object.'"

Of fact, MARTIN says, "You've got to try to build up good will. You can't operate unless the Members like you."

Of tolerance, RAYBURN says, "There's bound to be differences of opinion in the House. That's what it's for—for the Representatives of all these different districts and sections to come here and argue it out, with fairness to everybody. But you've always got to figure, when you differ with somebody, your opponent has just as much sense as you have, just as much patriotism, and just as much right to his ideas—so he may be right."

Yet all these qualities together are not enough for successful leadership. The decisive element, which when added to the others can lift a man to the Speakership, is an understanding of the human relationships, fears and ambitions which permeate politics and make it an art—a feeling for the situation. RAYBURN says, "You can't really say how you lead. You feel your way, receptive to those rolling waves of sentiment. And if a man can't see and hear and feel, why then, of course, he's lost."

This quality may be initially a gift of nature, but it also requires nurture. MARTIN and RAYBURN have spent their lives in politics, and it will be useful to look back to some of the times when they were learning to see and hear and feel.

JOE MARTIN was born on November 3, 1884, in an unassuming, knocked-together two-family frame house two blocks off the main street of North Attleboro, Mass., a small (population now 12,000) New England town of ordered social life and careful thinking. To this day, almost the worst thing MARTIN can say about a man is "He doesn't take time to walk around the block before he makes up his mind."

His father was a blacksmith whose earnings may have averaged about \$15 a week. Joseph Jr., as the eldest son of 8 children, learned very soon how to work, not simply for his own spending money but to help support the family. He had all sorts of part-time, schoolboy jobs, including selling one of the North Attleboro newspapers, and later reporting for it. He was an all-round boy in school, a good student, such a good short-stop that he later played semipro ball, and the next most popular member of his class. As he recalled recently, "The girls put me

up and the boys put up another can-dee-date. I voted for him and lost by one vote. I never made that same mistake since."

Naturally he wanted to go on to college, but although he was offered a scholarship at Dartmouth he felt it his duty to work and give the younger children their chance. With his help the youngest boys, Ed and Al, went through Dartmouth. In the Yankee tradition of North Attleboro, especially in those times, hardship was not any cause for discontent with society but simply for sober ambition. Joe saved what little he could, and by 24 it amounted to \$1,000. With that and with money borrowed from his friends among the local businessmen, he bought the North Attleboro Evening Chronicle. He is still its publisher, although he has been on holiday from it almost ever since.

Joe ran for the State legislature in 1912 simply because, "I was a newspaper man and I thought the training and inside knowledge would help me in my job." But the State leaders liked him, there was a 3-way factional quarrel going on in the party and Joe found himself in a position he was to occupy many times from then on: he was the only one to have the confidence and liking of all factions, and so he was given the job in question, which was to run the reelection campaign of Senator Henry Cabot Lodge. This was a success. Local Republicans put him up for Congress. He lost the primary—the first and last time he was defeated in a contest for public office—but then the winner died, and the district committee selected him as their candidate. He won and came to Congress on March 4, 1925.

With his twinkling deep-blue eyes and methodical habits the freshman Congressman gave an impression both friendly and reassuring and he got along well from the start. "Fortune makes a difference in the way you get ahead," he says and cites the facts that he was lucky enough to be assigned to the important committees on Foreign Affairs and on Rules and that he knew Calvin Coolidge. This was a real distinction because not many people in Washington knew Coolidge or much about him. But Martin had served under him in Massachusetts when Coolidge was president of the State senate and could answer people's questions about this Yankee sphinx who suddenly had become President. So, he says, "Prestige attached to me automatically."

As a footnote to history, it should be mentioned that Martin found Coolidge "really a warmhaated man when he liked you" and also that Silent Cal could be "downright garrulous when he was among friends and got on some topic that struck his interest."

Well sponsored, friendly, and utterly conscientious, MARTIN impressed his party's leaders and at the same time achieved the essential in a system based on seniority: He kept getting himself reelected. Although his district takes in some industrial areas and normally has only a moderate Republican majority, and although his outlook and voting record remained so conservative that he has often been called reactionary, his service to the district in all the little humdrum things and his tireless grass-roots campaigning made him unbeatable. In 1939 he became minority leader by unanimous vote.

The House had long since become his life and his blood. He took quarters in a little suite at the Hay-Adams House, a comfortable and sedate hotel across from the White House, but this was less a home than a place to sleep. Work was everything, from 8:30 a. m. when he sat down at his table in the House dining room for his abstemious breakfast of melon, whole-wheat toast, and coffee, to be joined by his whip and other senior Republican Members, or perhaps by lesser Members with favors or bills of privilege to ask him about; or, from time to time, perhaps by SAM RAYBURN on a matter of intra-

party interest. MARTIN says, "Breakfast helps me keep track of my committeemen. And you can drop a word about this or that thing . . . people like to know what's going on, you know."

The day's business well laid out over the coffee cups, MARTIN would go to his private office at about 9:30, from there (when he was Speaker) to the Speaker's ornate formal office at 11:45 to brief the press, to the House Chamber at 12, and through the session for however long it might last. And then, almost always, to one or more of the parties where his official presence was desirable, there to chat a while, tell a few stories, and hold a cocktail which he put to his lips occasionally without drinking. (He has been called "the greatest marathon nondrinker in Washington.")

His power grew steadily in all sorts of ways. Through many small and not-so-small favors: posing with a can of somebody's local brand of applesauce or somebody's local Queen of the May; relaxing party discipline to let somebody vote against a party bill that would do him harm in his special situation at home (and, according to his critics, letting his deputies take the brunt of enforcing discipline when the party's solidarity had to be held). Through the responsibilities he took and the successes he made: he ran the Republican congressional campaign in 1938, the Republican National Committee in 1940 (although the candidate was Willkie, and MARTIN's heart was not in it), and chairmanned national conventions.

He traveled to every State except Mississippi and into most of the congressional districts until, he says, "I know some of the districts better than the people who represent them and I know their problems in their local situations. So that gives them confidence. I have all this experience behind me; in that way leadership builds on itself." His name was seldom on a piece of legislation and he was never to be noted as a profound political thinker. But behind the modest, homespun manner and often rumpled and harried appearance, there developed a consummate political technician. Even Roosevelt admired him, although he attacked him strongly in the famous Martin, Barton, and Fish campaign speeches.

"You know," MARTIN reminisced recently, "Franklin Roosevelt, not withstanding 'bein' a Democrat, liked me very much. One day Steve Early came to me and said, 'Jox, the Boss likes you very much. He says that of all the Republicans he knows, he'd rather have you on his team.' This was at the time he was drawing in Republicans into his Cabinet. All I said was, 'Too bad he never can.' Much later Charles Edison asked me if it was true, as he had heard, that Roosevelt had offered me the job of Secretary of the Navy before he got him. I said it was news to me. But then I suddenly realized that's just the way Roosevelt would work, sendin' Steve Early to sound me out that way and I suppose that's a job he had in mind to offer me."

Throughout the years, too, a warm friendship grew with SAM RAYBURN. The two men, so alike in so many ways, were perhaps most alike in their visceral feeling of pride and responsibility for the House and what it symbolized. MARTIN and RAYBURN, firmly and loyally committed to their parties' programs as they were, still knew that practical politics at all levels demands compromise. During the course of a day they saw each other often, visiting back and forth at their adjoining offices, consulting informally "back of the rail" at the rear of the House Chamber, carrying on an endless political warfare always tempered with mutual respect. When at last the long Democratic reign was broken in the congressional election of 1946 and JOE MARTIN took over the gavel from his old friend on January 3, 1947, RAYBURN addressed the new House as follows:

"Today I have the high privilege and great personal pleasure, if it had to come, of presenting to you your Speaker, my friend, your friend, the friend of mankind, a man of unquestioned character, of demonstrated ability, with a great, fine heart and with fairness; and I predict for him a career such that history will record him as one of the great presiding officers who have occupied this position."

As events turned out, this was the first move in a game of musical chairs that has been going on ever since and which JOE MARTIN, at the opening of the Democratic 84th Congress, said "makes me think of an old ditty that went something like this: 'Off again, on again, gone again, Finnigan.'" Last month, when the gavel most recently changed hands, MARTIN said: ". . . I am off again and in a few seconds I will be gone again. . . . Mr. Speaker, do not become too attached to this chair. Nineteen hundred and fifty-seven is just around the corner. Seriously, it is a very pleasant duty that has been assigned to me today to present to you . . . a man of fairness . . . your Speaker and my Speaker, Speaker RAYBURN."

A BOYHOOD AMBITION

This is RAYBURN's sixth full term as Speaker. He has already served 2 years longer than Henry Clay, whose record he surpassed on January 30, 1951, during the 82d Congress. As he took over the House this time from MARTIN, it was with the easy custom of a muleskinner picking up the reins of a 10-span team; and he cracked the whip at once, with a little lecture to the new Members about getting to work on time. With justice, RAYBURN feels proprietorship over the House. And no doubt his return to the speakership gave him a very deep personal satisfaction. It is a role not only which he has filled with historic distinction, but one which he picked out for himself before most of the present Members of the House were born.

SAMUEL TALIAFERRO (a family name on his mother's side) RAYBURN was born 73 years ago in Roane County, Tenn., the eighth of 11 children of a Confederate cavalry veteran who had served under Lee until Appomattox and who never stopped hating Yankees. He was a farmer, and poor. When small SAM was 5, the family moved to Fannin County, Texas, where there was good cotton land to be had. Usually there was enough to eat, but only through the endless, exhausting effort of every member who was big enough to handle a hoe. SAM had already learned how, back in Tennessee, at age 5.

The family and neighborhood conversation was of crops and weather and politics, in about that order, and SAM very early knew that the Democrats were God's people and that the greatest Democrat of all, very probably, was the Honorable Joseph Weldon Bailey, Congressman from the Texas Fourth District which included Fannin County. When SAM was 10, he read in the papers that Bailey was going to speak in Bonham the next week. He borrowed the family horse and rode the 12 miles to Bonham and there—literally a barefoot boy with cheeks of tan, overalls and all—listening in trembling admiration to the great Bailey, his ambition was formed. He knew that someday he would be a politician. By the time he was 13, he had his life planned: he would become Speaker of the United States House of Representatives.

When he was 17, SAM left the farm to go to the East Texas Normal College at Commerce, 15 miles away. Twenty-five dollars, nearly all the money the family had, was pressed into his hand in the final handshake by his father. For the rest of his living he swept floors, rang the college bell and milked a cow. He earned his teaching certificate that year, taught in a country school the next year, returned to normal school for more

education, went back to teaching school and then, having reached the age of 24, decided it was time to get on with the next stage. He ran for the State legislature and was elected. This not only put him into politics but gave him access to the University of Texas law school, which is at Austin.

He served in the legislature and studied law in his spare time, living on his \$5 a day legislative pay. He was reelected twice, and in his third term was made speaker of the Texas House, the youngest man (29) ever to hold the office. In the last year of that term, Joseph Weldon Bailey, who meantime had gone on to the United States Senate, retired, and his successor as Fourth District Representative filed to succeed him. SAM in turn filed for the Fourth District vacancy and won. Thus he came to Congress on March 4, 1913, to occupy the former seat of his old hero and to start the last and hardest part of fulfilling his boyhood dream.

A PROGRESSIVE CONSERVATIVE

It took him 27 more years to do it, years stretching from the beginning of Woodrow Wilson's New Freedom to the last period of Franklin Roosevelt's New Deal. Small, not very handsome, not a frequent speaker, he remained unknown to the country at large for a good many of those years. But among his peers and superiors he very soon attracted attention. Wilson noticed him and saw to it that he was put on the House Interstate and Foreign Commerce Committee. There he stayed for 24 years, becoming the ranking minority member during the Republican era and then, from 1933 to 1937, the chairman.

Those 4 years saw the New Deal created; and RAYBURN, who had become enormously well informed on matters in his committee's purview, fathered a large proportion of the New Deal's enduring works, including the Railroad Holding Company Act, the Rural Electrification Act, the Securities Act, and the Federal Communications Act. He had to fight through much legislative shot and shell in the process. In 1937, a wise and weathered veteran, he emerged to become Democratic majority leader and then, when Speaker William Bankhead died in 1940, to succeed at last by acclamation to the speakership.

Behind these barest bones of a fabulous career in a historic era there lay, naturally, a whole library of events, episodes and anecdotes. A few items can be selected that shed some special light on his character, as well as on the nature and situation of "Mr. Speaker." For instance, how much of a New Dealer was he?

Frank McNaughton, an old friend, wrote this about him from the perspective of 1943: "He has never gone overboard on economic or social nostrums [or] for anything but the collective wisdom of the peoples and the virtues of Congress as their representatives. . . . To his intimate friends he has described himself as a 'progressive conservative or a conservative progressive.' . . . It would be accurate to describe RAYBURN as a 60 or 65 percent New Dealer."

A few weeks ago, reminiscing about those years, RAYBURN said, "There never was any 'rubber-stamp Congress.' I'd go up to the White House, and other leaders from the Congress, and we'd talk it out with Roosevelt with frankness and openness. Sometimes I might not agree with the decision. But if I find myself with 4 other men and they're 4 and I'm 1, I'm going to go along with the 4." And he added, using words almost identical with MARTIN's on the same theme, "You can't be a leader, and ask other people to follow you, unless you know how to follow too."

To lead "with kindness and with good reasons" has never implied, so far as RAYBURN is concerned, the use of any of the small, standard deceptions of political hucksterism. He has never tried to be "popular." There is a

compact dignity about him and a certain air of withdrawal that makes excessive familiarity unthinkable. His temperament is rather saturnine, his tongue can be sharp and his face was set long ago in morose lines. He has been known to be vindictive. He can lash out with mulish temper, as more than one correspondent has learned, and—like MARTIN—he has grown a bit cantankerous with age. But he is a genuinely kind and warmhearted man.

A former Washington correspondent tells how, some years ago, the depths of this kindness were revealed to him: "One of our daughters died. The next morning SAM was at our front door. He said he had just come to help out in any way he could. Understand, I was fairly new in the bureau and I wasn't very important to my paper, and I certainly wasn't important to SAM in any political way. But there he was. He helped me make coffee and told our other two little girls stories about Texas. I knew he was supposed to go to have breakfast with the President at the White House that morning and at one point I asked him about it. He said, 'Yes, but I called the President and told him I had a friend in trouble.' This story has never been printed."

A CROSSROADS OF HISTORY

In the long, long gallery of RAYBURN's life, some other vignettes should be noted. August 12, 1841, the day the bill to extend selective service came up in the House, RAYBURN, believing that the country was close to war, had put all the power of the Speakership behind the bill, had begged and pleaded with wavering Members for their support. But the isolationists were very strong. "The House," a reporter wrote, "was tense as an overtuned violin string; for days the rafters had echoed with harsh, emotional, sometimes almost subversive speeches." In the late afternoon, RAYBURN started the rollcall, standing close behind the tally clerk to watch the little meter click the ayes and noes. The vote seasawed. At the last click, RAYBURN immediately announced the result, 203 ayes to 202 noes, and thereby, under the House rules, prevented any irresolute Member from jumping up and changing his vote. After allowing a recapitulation, RAYBURN announced that the bill was passed and "without objection a motion to reconsider is laid on the table." There was a tremendous uproar. But RAYBURN made his decision stand and thereby prevented the discharge of 1 million trained men from the Army, which had a total strength of only 1.4 million. Four months later came Pearl Harbor.

January 6, 1943, the day that the 78th Congress convened and that RAYBURN began his second full term as Speaker, Roosevelt called him to the White House, where he learned that he was to see the President alone on a matter of urgent importance. "The problem, SAM," Roosevelt said after a long portentous preamble, "is your age"—at which JOE MARTIN and other congressional leaders crowded into the office singing "Happy Birthday, dear Speaker."

The day, only a little more than two years later, when Vice President Harry Truman was visting at RAYBURN's little hide-away office. It lies on the first floor of the House wing, almost directly beneath the regular Speaker's office, and is headquarters for little, informal, late-afternoon gatherings of his friends in the Government and the newspaper corps, the sociability helped on with a drink or two, the conversation ranging over every topic and all of it off the record. Truman, an old friend, dropped in often. Amid the hum of amiable conversation, there was a sudden, paralyzing shock: a message that the President was dead. Truman left at once.

William S. White, a New York Times correspondent who was present, later wrote of

RAYBURN: "His heavy and very nearly immobile face was still in the shadows and the only movements upon it were the small and barely visible traces of tears. He swept them away roughly. For a long time no one said anything at all. Then Mr. RAYBURN hunched his shoulders and, looking out unseeingly into the dusk, he spoke slowly in short, hard phrases as though talking to himself . . . an oath . . . that SAM RAYBURN—southern Democrat and all—had followed Franklin Roosevelt in life, and that SAM RAYBURN would follow Franklin Roosevelt in death."

And some less dramatic but also symptomatic scenes: RAYBURN in his small bachelor apartment on Q Street, cooking his special chili supper for a few good friends; RAYBURN shoving aside every attempted testimonial to dine privately and quietly on his birthday with an old colleague and his wife from Texas; RAYBURN, standing red faced, proud and embarrassed on the Speaker's dais this January 6, while President Eisenhower interrupted his State of the Union speech at the joint session to say: "The district where I was born has been represented in this Congress for more years than he cares to remember, I suppose, by our distinguished Speaker. Today is his birthday and I want to join with the rest of you in felicitating him and in wishing him many happy returns of the day." The CONGRESSIONAL RECORD's account notes at this point: (Applause, the Members rising.)

On issues, JOE MARTIN and SAM RAYBURN have fought each other every foot of the way. And they have fought with conviction. In an almost classic degree, the two men—the Yankee townsman and the Southern farmer—have symbolized in their own time a whole matrix of sectional and economic antagonisms as old as the Republic. That they are more alike than different, that their rivalry has bred friendship rather than enmity, that antithetical aims should so often have been synthesized in the national interest is a tribute to them and to the democratic process they supervise. To both Mr. Speakers, the country as a whole, along with the House that represents it, could well accord applause, the Members rising.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily Record, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Golden Anniversary of the Forest Service

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report on the United States Forest Service:

GOLDEN ANNIVERSARY OF THE FOREST SERVICE

The year 1955 will mark the 50th anniversary of the establishment of the Forest Service in the United States Department of Agriculture.

On February 1, 1905, the Forest Service was created in its present form in the Department of Agriculture through the merging of the earlier Bureau of Forestry and the Forestry Division of the General Land Office. Although forestry received the attention of the Federal Government as early as 1876, it was not until the present Forest Service came into being that a rounded national policy for forestry was developed and work began to go forward with long-range objectives to maintain and increase the productivity of forest lands everywhere in the country.

Progress in forestry in the United States during the half century has been great. Working together, private and public agencies have effectively demonstrated the values of organized protection against fire, insects, and disease, and of good management and wise use of the Nation's forest resources. Especially significant have been the advances in research, the development of the national forests, the expansion in activities of the State forestry departments, the development of forestry education, and the big advances in the practice of forestry by the forest industries.

FOR THE PERMANENT GOOD OF THE WHOLE PEOPLE

In the 50 years of its existence, the Forest Service has had a colorful history. Many of its alumni, still living, can recall the early struggles of the infant bureau to promote the then somewhat novel idea of managing forest lands for continuous production, and, in the face of much misunderstanding and antagonism, to develop the public forests for the use and benefit of the public.

The Forest Service came into being when Theodore Roosevelt, ardent advocate of conservation, was President of the United States. Its first chief, Gifford Pinchot, the first native American to obtain professional training in forestry, had previously headed the Bureau of Forestry in the Department of Agriculture.

The Federal forest reserves, establishment of which began in 1891, had been under jurisdiction of the General Land Office, Department of the Interior. An act of Congress in 1905 brought these reserves into the Department of Agriculture, and paved the way for the establishment of the Forest Service. It followed a recommendation of President Roosevelt that the "forest work of the Government should be concentrated in the Department of Agriculture, where . . .

problems relating to growth from the soil are already gathered, and where all the sciences auxiliary to forestry are at hand for prompt and effective cooperation."

The forest reserves (later to be known as national forests) were established by reservation of certain areas of public domain, mostly in the Western States. At first they were opposed by many who thought that the reserves were to be locked up, thus thwarting the development of local industry and sacrificing the present to the future. But President "Teddy" Roosevelt insisted that "forestry is the preservation of forests by wise use"; that forestry means "making the forests useful not only to the settler, the rancher, the miner, the men who live in the neighborhood, but indirectly, to the men who may live hundreds of miles off down the course of some great river which has had its rise among the forest bearing mountains."

In similar vein, Secretary of Agriculture James Wilson declared that all land in national forests was "to be devoted to its most productive use, for the permanent good of the whole people."

PROGRESS ON A BROAD FRONT

Private forestry

Half a century ago, the owner of a tract of forest land usually aimed at getting an immediate return from cutting and selling the timber, and from selling the cleared land to settlers. Until a small band of pioneer conservationists began to preach forestry, few ever thought of holding and managing woodlands for permanent production.

Today large numbers of owners are managing their forests for continuous crops of timber. These include many of the big lumber and pulp and paper companies with large timberland holdings, as well as many farmers and other owners of small woodland properties.

Several national and regional associations of lumbermen and pulp and paper manufacturers are now conducting programs to promote good forestry practices. A "tree farm" program, under sponsorship of American Forest Products Industries, Inc., now operates in 36 States. In 1954, some 5,000 landowners were reported to be participating, with holdings totaling over 30 million acres of forest land—about 9 percent of all the private commercial forest land in the United States.

State forestry

The first State forestry department was established in California in 1835. Later in that same year Colorado, New York, and Ohio also organized State agencies for forestry work. But 8 years later all of these States but New York had discontinued their forestry departments. It was not until after 1905 that State forestry work really got going. Today nearly all of the 48 States, as well as Hawaii and Puerto Rico, have agencies engaged in forestry activities.

The Weeks Act of 1911, which laid the groundwork for Federal-State cooperation in forestry, was a great stimulus to the development of effective State forestry agencies. The Clarke-McNary Act, passed by Congress in 1924, greatly broadened the basis for this cooperative work.

The State foresters' organizations are now providing systematic protection against fire for more than 374 million acres of State and

private forest and watershed land under the cooperative program. Forty-three States, Hawaii, and Puerto Rico are producing and distributing trees to help landowners reforest idle lands or establish shelterbelts; last year some 435 million trees were distributed. Thirty-nine States, with Federal Forest Service cooperation, under the Cooperative Forest Management Act of 1950, are providing on-the-ground technical assistance to owners of private forests in the management of their woodlands; and assistance on processing problems to small sawmill operators and other processors of primary forest products. States, counties, and municipalities maintain about 26½ million acres of State and community forests and parks. In 45 States and Puerto Rico extension programs in forestry are being conducted through the extension departments of the State agriculture colleges. In these programs farmers are provided with information on the various phases of woodland management and the utilization of farm timber. Thousands of farm youths are carrying on forestry projects in 4-H Club work.

Forestry schools

Professional training in forestry was still a very new idea here in the United States in 1905. The first 4-year professional course in forestry, in fact, had been started at Cornell University only 7 years earlier, in 1898. In that same year, the Biltmore School of Forestry, a private school, was started in North Carolina; it continued until 1912. The Yale Forest School was established in 1900, offering graduate courses in forestry leading to a master's degree.

A few more schools of forestry came into being during the next 3 years. Between 1902 and 1905 regular forestry courses were started at the University of Michigan, the State Forest Academy at Mont Alto, Pa., the University of Maine, University of Nebraska, University of Minnesota, and Colorado College. Harvard University also set up an undergraduate course in 1903, but later moved its forestry work to the graduate school. Before 1905 Michigan and Iowa State Colleges were offering nonprofessional courses that were later expanded into full professional curriculums.

These were the schools that were pioneering in forestry education half a century ago. Most of these institutions then had only 1 or 2 forestry teachers and a handful of students. Today more than 30 universities and colleges in the United States are offering full professional instructions in forestry; more than 21,000 students have completed regular 4-year courses in forestry in the past 50 years; more than 4,000 have earned master's or doctor's degrees in this field.

Federal forestry activities

The work of the Forest Service in the past half century has gone forward along three principal lines: Administration of the national forests, cooperation in forestry programs with the States and private forest owners, and research.

The national forests in 1905 were largely undeveloped, remote back-country areas. There were few roads or other facilities for protection and management. For the most part the forest boundaries were not marked nor even surveyed. Today the national forests are playing a substantial part in the Nation's economy. They are supplying a yearly cut of more than 5 billion board-feet of timber, and the present sustained-yield capacity is estimated to be at least 6.9 billion

board-feet. This allowable yearly cut under sustained yield will become even greater as the basic growing stocks are further built up and as utilization practices further improve. The national forests are furnishing seasonal grazing for some 8 million cattle and sheep. Last year, the national forests reported 35 million visits by persons seeking outdoor recreation. These forests are the home for great numbers of wildlife, including nearly a third of the Nation's big-game animals. They have 81,000 miles of fishing streams and over 2½ million acres of lakes. National forests help protect the water supplies of some 1,800 cities and towns, of more than 13 million acres of irrigated farmland, of more than 600 hydroelectric power developments, and of thousands of industrial plants. As public properties containing basic natural resources, the national forests are managed for continuous production. A policy of multiple use is followed which seeks to maintain a balanced production and use of all the forest resources, and to bring the largest total of returns and benefits in the public interest. Protection and scientific management of these resources are helping to stabilize industries and communities dependent on them.

Even before the Forest Service was established, its predecessor, the Bureau of Forestry in the Department of Agriculture, was publishing bulletins to encourage good forestry practice, and offering to help private forest owners plan their timber harvest so as to obtain successive crops. Federal cooperation with the States for the protection of State and private forest lands from fire began following enactment of the Weeks Act of 1911. The Clarke-McNary Act of 1924 materially expanded the scope of cooperation in fire control. This act also provided for Federal cooperation with the States in the production and distribution of forest planting stock, and in forestry extension work. Federal cooperation with the States in providing technical assistance to owners of private forest lands and to processors of primary forest products is carried on under authorization of the Cooperative Forest Management Act of 1950, which superseded the Norris-Doxey Cooperative Farm Forestry Act of 1937.

Research has been a major activity almost since the Forest Service came into being. New methods and practices developed through research in forest and range management and wood utilization have contributed much to the advance of forestry. Research results over the years have been worth millions of dollars to agriculture and industry and to the public as a whole. The Forest Service now maintains nine regional forest and range experiment stations; also forest research units in Puerto Rico and Alaska. The Forest Products Laboratory at Madison, Wis., established in 1910, is one of the world's largest institutions for research in the utilization of wood.

Several other Federal agencies are also concerned to some extent with forestry matters. The Bureau of Land Management, Bureau of Indian Affairs, and National Park Service of the Department of the Interior have forestry units. Military reservations of the Army, Navy, and Air Force contain several million acres of forest land. The Tennessee Valley Authority administers some forested lands above its reservoirs and carries on activities to encourage good forestry practices by private landowners. In the Department of Agriculture there are forestry phases in the work of the Soil Conservation Service, Extension Service, and Agricultural Conservation Program Service.

THEN AND NOW

In 1898 Gifford Pinchot and Henry S. Graves, who were to become the first and second Chiefs of the Forest Service, were the

only two native-born, professionally trained foresters in the United States (and they had obtained their training in Europe). By 1912, there were still only about 500 men in the United States with some degree of technical training in forestry. (There were also many early-day forest rangers, lumbermen, and others who began without a technical background, but through their own experience acquired a considerable knowledge of the subject.) Figures from the forestry schools indicate that about 1,000 degrees in forestry are now being granted annually.

In the first decade of this century, the Forest Service was the principal employer of American foresters. In 1912 it was estimated that 60 percent of the professional foresters in the country were in Federal Government work, and that fully 95 percent had been so engaged at one time or another. The Forest Service is still the largest single employer of trained foresters, but it now employs only a small part of the total. The States, municipalities, educational institutions, trade associations, and private corporations have absorbed large numbers of graduating foresters. Many others are in business as consulting foresters. Twenty-five years ago, all private industry in the United States employed less than 200 graduate foresters. Today the forest industries employ some 5,000.

In the fiscal year 1905 the receipts from uses of the national forests were less than \$75,000. National forests receipts in fiscal year 1954 were more than \$67 million.

When the Forest Service came into being, the first Chief Forester, Gifford Pinchot, speedily fused a new organization, youthful in spirit, enthusiastic, inspired by a high purpose and determined to get things done. The work appealed to young men with venturesome spirit, love of the outdoors, and zeal for public service. A new public enterprise was in the making.

But in the western national forests, many a forest officer in those days had to face a hostile local sentiment. He was pictured in newspaper cartoons as an insolent dragoon pitilessly riding down women and children; or he was described as wearing a feather in his hat after the supposed fashion of European foresters, ridiculed as an eastern dude or a bespectacled college professor out of place. It took some time for people in those areas to find out that a forest ranger was not a hireling sent from Washington to interfere in their local affairs, but a person interested in bringing about the orderly use of public resources to aid in the sound, healthy development of the community to which he himself belonged.

In time, the forest ranger came to be a respected figure, sometimes even a romantic hero of movies and novels. Now each year the Forest Service receives several thousand letters from boys who want to know how to become a forest ranger.

In 1905, when a fire occurred in a national forest, the ranger would round up whatever help he could enlist among local settlers, and they would go on horseback or afoot to fight the blaze. Often the ranger would tackle a large fire singlehanded and do what he could with ax and shovel to check the spread of the blaze. Many a fire in the back country burned for weeks or months, until rain or snow finally extinguished it. Today, both Federal and State forest-fire control is highly organized. Radio communication, mechanized fire-fighting equipment, fast automotive and aerial transportation speed and facilitate the control work. In some of the western mountain country, smoke jumpers now parachute to fires in inaccessible forest areas.

Fifty years ago, very little land outside the national forests was receiving any regular

or systematic protection against fire. Today, the State forestry agencies, with private and Federal cooperation, maintain organized protection for more than 374 million acres of State and private forest land. In 1953, area burned was held to 0.7 percent of the area protected. Of the 53 million acres of forest land that still lack organized protection, fires burned 13.5 percent.

MANY HAVE HELPED

The advances made in forestry over the past half century have been the result of efforts by many organizations and individuals along with those of the State and Federal forestry agencies.

It was in response to demands from the American people, expressed through many citizens' groups, that the Forest Service was established half a century ago. The American Forestry Association was one of the earliest of many national and local conservation organizations that have long been active in the promotion of forestry measures. Numerous service clubs, civic organizations, sportsmen's organizations, farm organizations, labor unions, veterans' groups, chambers of commerce, garden clubs, women's organizations, young folks' organizations, and church groups have been actively interested in forest conservation. State forestry associations, composed of woodland owners, foresters, and public-spirited citizens often spearheaded forestry activities within their particular States.

Industrial groups and associations also have been concerned with forestry. National and regional associations of lumbermen and pulp and paper manufacturers have been making fine progress in getting good forestry practices in effect on member companies' lands, and in many cases also are encouraging and facilitating better practice on the part of other woodland owners. Many forest industry concerns are cooperating with the Forest Service and State agencies in forestry research projects. American Forest Products Industries, Inc., sponsors the "Tree Farm" program and the "Keep Green" forest-fire prevention programs now conducted in many States.

The nationwide cooperative forest-fire prevention campaign ("Smokey Bear") is conducted by the State foresters and the Federal Forest Service under sponsorship of the Advertising Council, Inc., with the support of American business, including the advertising industry, and the cooperation of many other organizations.

More than 20 American railroads now employ foresters to help promote better forest practice in the areas they serve. The American Bankers' Association has had a forestry committee. Many county governments have become interested in seeing a better brand of forest management practiced, realizing that the tax base is improved and business and income in the community stabilized when the forests are kept permanently productive.

The schools of forestry in American universities and colleges deserve much credit. Perhaps even more important than the technical training given have been the ideals, the vision, and the enthusiasm for forestry work that these schools have instilled in their students.

Professional standards for forestry have been set by the Society of American Foresters, a professional organization to which most foresters belong.

The foresight and vision of many Congresses over the years is reflected in laws which led the way in formulating American forest policy. From the beginning, forestry has had bipartisan support in Congress. Major advances in the national forestry program have taken place during both Republican and Democratic administrations.

THE NEXT 50 YEARS

Starting almost from scratch at the beginning of this century, American forestry has made remarkable advances in the past 50 years. What men of vision half a century ago saw in the years ahead fell far short of what actually came to pass. They failed to fully foresee the astounding developments that have taken place in science, agriculture, and industry. They could not know that the half century would bring two world wars. All of these things made their impacts on the forests and on the course of forestry.

No more than our predecessors can we today foresee what lies ahead. Perhaps we are on the threshold of new developments in chemistry that will bring many new uses for wood—uses that we can't even visualize today. Perhaps advances in tree genetics will give us new and better kinds of trees, and cause innovations, therefore, in our methods of forest management. The course of the national economy or changes in the international situation may greatly affect supply and demand for forest products.

It is reasonable to assume, at least, that the people of the United States will continue to need the forests and the products and services of forest lands. A growing population and an expanding economy, indeed, should mean increasing demands on the forests.

There is every prospect that the pressure for water will increase. Our per capita consumption of water has multiplied during recent decades. In many part of the country further agricultural, industrial, recreational, and municipal developments depend primarily on increasing the supply of usable water. The forest's function as a protector of watersheds is its most important service in many areas. It is likely to become even more critically important.

There is every prospect, too, that requirements for timber will continue to grow. As the supply of some of the nonrenewable resources dwindles, the substitution of wood products may call for an increased output of timber from renewable forests. The expected large increase in the country's population, the development of new uses for wood, and a rising standard of living may indeed bring a tremendous increase in pressure on the forests for timber products. The food needs of a growing population also may increase the pressure on forest ranges for livestock forage.

The number of recreational visits to the national forests has nearly doubled since 1941, the year of highest prewar use. Continued growth in the demand for forest recreation, including fishing and hunting, seems inevitable. As the complexities of modern living increase, and as the workaday activities of most people become further removed from the field, forest, and stream, the need for healthful and relaxing outdoor recreation will be greater. The spiritual, esthetic, and recreational values of the forests will become ever more precious.

With such ever-increasing demands in prospect for water, timber, recreation, and other products and services of the forests, it may be expected that private forestry will continue to advance, and that the development of the National Forests and other public forests will continue in response to growing needs. It may be expected, too, that a growing realization of the importance of the forest resources will bring a greater appreciation by the people of the need for management and wise use of the forests.

Forestry, then, should go steadily forward. Its potentialities for contributing to national prosperity, security, and progress are very great. Fifty years from now, as today, the strength of the Nation will lie in its people and its resources.

York Schools

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include an article from the February 1955 issue of the magazine *Changing Times*. The title of this article, "What a Good High School Should Do," makes me particularly proud, for it discusses the vocational education program in operation at the William Penn Senior High School in York, Pa.

I am certain my colleagues join in my congratulations to the York school officials for the recognition they have received in this national magazine.

The article follows:

WHAT A GOOD HIGH SCHOOL SHOULD DO—HERE ARE THE STANDARDS THAT THE BEST SCHOOLS ARE SETTING—SEE HOW YOUR OWN SCHOOL STACKS UP

Ever wonder whether the high schools in your town, county, or city are doing the job they should be doing?

There's a way to find out. Just get the answer to this question: Are they serving every type of youngster in your community?

The high school of half a century ago was basically a college preparatory school. Preparing students for college is still a major function of the high schools, of course. But they have long since recognized the fact that they must educate many kinds of children besides those bound for institutions of higher learning. They must offer courses for boys and girls who plan to enter offices, stores, and other business establishments after graduation, as well as courses for the student who will go immediately from high school into industry or agriculture. They must even serve large numbers of students who are not sure what they want to do but who must spend their days in school profitably.

The schools must also teach all their students something of good citizenship, homemaking, banking, consumer credit. They must give courses in such varied things as music, art, driving, and plain getting along with people.

They must do all this for bright students who need continued challenging to be kept interested, and they must do it for poor students who need constant encouragement to be kept from dropping out of school. They must do all this, too, for ever-increasing swarms of students. To complicate the problem further, the increase is particularly heavy in the lower registers of academic ability—among kids who once would have gone to work after grammar school but who now go on to high school as a matter of course.

Obviously, to evaluate how effective a high school is in meeting these varied needs of its students, you must take into account the size and type of community and the size of the school itself.

If you live in a small or medium-sized city, yours may be a comprehensive high school that teaches college preparatory, business, vocational and general students all under one roof.

If you live in a large city, it may be that several high schools offer college, business and general courses, while separate technical

or vocational schools specialize in trade and industrial education.

If you live in a rural area, your school may be a small consolidated high school, which, in addition to academic subjects, teaches a number of agricultural courses.

No matter where you live, however, a knowledge of the various kinds of high school curricula—and a look at some of the newer methods of teaching them—can provide a good standard against which to measure the performance of your own school.

Take the different types of courses one by one and see what is being done with them by the better high schools today.

COLLEGE PREPARATORY

It used to be that the college preparatory student took a standard classical course, talked with the principal or a favorite teacher about which college to attend and sent away for a catalog or two. If he took the right subjects and had reasonably good marks, he didn't have much trouble getting into the school that he wanted to attend.

Now things are different. As early as junior high school, many students are set to exploring trades, businesses, and professions to see what may interest them. In high school, those youngsters who plan to go on to college are urged to begin shaping their work toward entrance requirements of colleges and universities as early as the sophomore year.

During their junior and senior years, they are given the opportunity of attending college-day programs, when representatives of various colleges and universities are on hand to answer questions of both students and parents. The youngsters also are urged to investigate scholarship possibilities in case they will need financial assistance of this kind to get through college. Those who plan to apply for scholarship aid are encouraged to begin working toward it at an early date. In a well-run high school today, everything possible is done to eliminate haphazard choice of a college by students in the preparatory classes.

BUSINESS COURSES

The business course, frequently called the commercial course, still is offered for those who plan to enter office work when their high-school days are over. Two or three years of English and 2 years of social studies, including a year of American history, usually are the minimum required cultural courses. In addition, business-bound youngsters have a wide choice of languages, sciences, and other liberal arts electives. Required business subjects include banking principles, commercial law, clerical practice, and business arithmetic.

But there are some important differences between high-school business education today and that of, say, a generation ago. Once upon a time the high-school commercial course was based almost exclusively on typing and shorthand. Business students took these two subjects willy-nilly, and those who couldn't master the work, particularly shorthand, fell by the wayside.

Now, however, high schools recognize that not all business pupils are alike, either in ability or inclination, and that not everybody who wants to work in an office has to be able to take shorthand.

So up-to-date schools usually divide their business curriculum into 2 or 3 programs, or "sequences," designed to offer different subjects to students of differing aptitudes and interests. A typical division of a commercial course might be three programs like this: Stenographic, with emphasis on typing and shorthand, for pupils aiming for stenographic or secretarial work; clerical, with emphasis on filing, business practices, and office procedure, for pupils interested in office work but not in stenographic careers;

bookkeeping, for pupils interested in that phase of business.

Today, also, the alert high school is aware that its commercial course graduates will be going into offices that have all types of mechanical equipment, much of it unknown when mother was a girl. So somewhere in its business curriculum the secondary school tries now to include instruction in the use of as many different business machines as possible—dictation, mailing, duplicating, and others.

There is at least one more major development. In many communities classwork for business students is supplemented by actual office experience. What is being done in York, Pa., a small, prosperous industrial city with numerous business offices, is a good example. Senior commercial students in William Penn Senior High School may, with consent of their parents, elect to devote half their time to classwork and half to on-the-job training. They alternate 1 week of school with 1 week of work. They get paid for their work, and their employers, cooperating closely with school officials, try to see that they get as diversified experience as possible. Many are hired full time by the offices after graduation.

York, incidentally, has gone a step further in its business-education department, adding a course in retail and wholesale selling to the commercial curriculum. The course is offered to junior and senior students, and subjects include salesmanship, store organization, economics of distribution, merchandising, and job problems. In their senior year these students also may take paid jobs for experience, attending class in the mornings and working in local drug, department, and other stores in the afternoons. In other cities similar courses are sometimes offered in vocational rather than business-education departments.

VOCATIONAL COURSES

Vocational courses have for some time included instruction in machine-shop work, electrical work, carpentry, cabinetmaking, auto repair, and other trades. In urban areas where demand is great enough, rather specialized courses, such as cosmetology, now frequently are offered in one of the high schools.

The big advance in vocational education, however, has been the development of specific training for specific jobs, particularly for jobs available in local industries. Sometimes this training is given within the schools themselves. Sometimes it is given outside the schools—in shops and factories under so-called work-experience plans similar to the business-education and retail-wholesale work programs just described.

In York, in what reputedly is the oldest program of its type in the country, William Penn vocational students aged 16 and over may alternate 2 weeks of industrial plant work, with pay, and 2 weeks of class study. They work under apprenticeship agreements, but school authorities keep sharp watch over their duties, working conditions, and progress. Some 40 to 50 York industries cooperate to make the program possible. Graduates of the cooperative industrial courses have risen to become foremen, executives, and even owners of plants.

Schools don't have to be in York or in any other city to develop a program like this, either. Take the case of Rockland County, N. Y., a busy industrial and agricultural area just north of New York City.

Rockland County has 8 small high schools of only 200 to 600 students each. Obviously no single school could do much in the way of industrial or agricultural education on its own.

But with the cooperation of county industrial and business leaders, Rockland County high schools prepare their students for 14 or more vocations, from power sewing to horticulture and landscaping.

An organization called the County Board of Vocational Education and Extension helps in establishing the courses in the five schools that have the necessary space. Any course is available to any high-school student in the county. If a course is not offered in the student's local school, he gets free bus transportation to and from whatever school is teaching the subject. He remains attached to his own local high school, however, for required academic subjects, related industrial theory, and extracurricular activities.

As in the case of college days for college preparatory students, career days are held by many high schools today to acquaint pupils with job opportunities in the area. Representatives from business and industry are invited to visit the schools and to address and to confer with the students. Sometimes the reverse is true, and students visit companies and plants. It's all part of an effort to see that as many round pegs as possible get fitted into round holes.

GENERAL COURSES

What's a general course? Just what its name implies—a kind of educational cafeteria where students are offered an overall sampling of knowledge. Required courses are at a bare minimum—English, history, a little math—and the choice of elective subjects is virtually unlimited. The student can try anything from Latin to industrial arts.

Time was when the general course student was looked down upon as the pupil who wasn't able to do the work in any other course.

It is more widely understood today, however, that the general course serves a very useful purpose. Not all high school children know where their real interests lie, and a program of general studies allows such youngsters time to make up their minds. Instruction is so planned that students may switch to any other course once they uncover a real interest. In York, for instance, general students have successfully changed almost at the last moment into commercial, retail and industrial work, and some have even gone on to college.

OTHER THINGS COUNT, TOO

Does your school have guidance counselors for boys and girls? If it doesn't, it should have. What are guidance counselors? They are specialists in handling the educational and even the domestic problems of adolescents. They check on youngsters whose marks are lower than they should be, listen to students' complaints, solve behavior, social and other personal problems, give job and career guidance, and in general act as confidant and friend to the youngsters. All of them can tell heart-warming stories of kids kept or put on the right track because the door of the guidance counselor's office was open to them.

If your school isn't big enough to afford full-time counselors, maybe it can hire part-time counselors who will also teach. Or perhaps it can join with several other nearby schools and hire guidance people jointly, splitting the cost of their salaries.

Next, what about extracurricular activities? Don't underestimate their value. They are not a frivolous waste of time. Properly handled, athletics tend to create esprit de corps, a sense of loyalty and a sense of belonging, which some educators think is almost as important to children of high school age as the subjects they study. Dramatics, debating, departmental clubs, student government programs, publications and similar activities stimulate student interest in school and develop cooperation, leadership and initiative. So do student bands, choruses and orchestras. All of these things spell breadth of opportunity and development for individual boys and girls and sometimes lead directly to successful careers.

Last, what about your school faculty itself? Kindly, dedicated teachers who know their subjects, know how to get them across and have a genuine interest in their pupils are priceless assets to any school. More than one principal has discovered that a sympathetic teacher who can win his or her students, and get something into their heads at the same time, is the best insurance for keeping them in school.

But good teachers, like anything else of quality, cost money. If you can't get or keep first-rate faculty members in your high school, check the salary scale. If the trouble lies there, ask yourself whether giving your youngsters inferior teachers and instruction is really sound economy.

So there you have it. If your high school is to do a good job, it must first concern itself with the educational needs of all the different kinds of pupils who come to it. It must develop the widest possible variety of courses. It must supplement business and vocational instruction with practical work experience in office, store, factory or farm. It should hold college and career days and have guidance personnel to work with your youngsters. It should have a well-rounded extracurricular program, a pleasant, cooperative atmosphere and the best teachers you can get.

Try measuring your school against these standards. Maybe you will be pleasantly surprised at how thorough a job your high school is doing after all. That will be all to the good. Or maybe you will be able to put your finger on what, if anything, is missing. And once you know, maybe you can do something about it.

Utilization of Surplus Government Property for Educational and Public Health Purposes

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following statement of Robert F. Nolan, supervisor, Massachusetts State Agency for Surplus Property, before the House Subcommittee on Government Operations with respect to H. R. 3322:

I am appearing before you as a representative of the Commonwealth of Massachusetts to record the interest and support of our educational and public health institutions in the successful enactment of H. R. 3322.

I have been employed by the State department of education, vocational division, as a State supervisor for over 18 years and have had direct supervision of the surplus property utilization program for the past 9 years as only one of other administrative duties and responsibilities in the department.

The surplus property utilization program in Massachusetts has been of inestimable value to our educational and health institutions. A total of \$40 million (acquisition value) worth of real and personal property has been donated or acquired by public benefit discount since 1946 for over 500 schools and colleges and over 100 hospitals in the State.

Surplus mechanical and technical equipment no longer needed by the Federal Government has been used successfully by our public and private, nonprofit tax-exempt schools and colleges to stimulate an interest

in science and engineering. Great ingenuity has been exercised by our teachers and their students in using surplus materials in our classrooms. The training value derived from using surplus materials in the educational program is worth many times its value as property sold at auction or as scrap and our trainees very often leave our schools and colleges to enter the armed services or are employed by agencies or contractors involved directly in defense research and production.

During the past several years, substantial aid has been provided our State hospitals and other tax-supported and nonprofit tax-exempt hospitals in the State. Our hospitals have been able to acquire at little or no cost from the surplus property program needed items of replacement and additions to professional equipment and furniture which they would have been financially unable to obtain otherwise. This contribution from the use of surplus has materially affected the accomplishments in the area of patient care and directly facilitates their contribution to the national defense in the training of doctors and nurses.

For the past year the surplus property donation program has been losing huge quantities of very valuable surplus property due to the activities of Federal agencies and departments selling their surplus to salvage dealers rather than making it available to us for distribution to our eligible schools and hospitals. These salvage dealers who were able to acquire such surplus at a small fraction of its original value, realizing the need for this property by our schools and hospitals, have many times offered to sell this same property to us at rates which clearly demonstrate the huge profits involved to the salvage dealer.

We firmly believe that Federal property once procured by the taxpayers should be utilized when needed by education and health institutions for the benefit of the taxpayers and we respectfully request your active support in arranging for the immediate and successful enactment of H. R. 3322.

We further believe that the changes in the basic act as outlined in H. R. 3322 will alleviate some of the present weaknesses and inconsistencies and allow for a closer coordination of agencies which will result in more public benefit accruing to the United States by allowing for further utilization of Federal surplus property.

It should be emphasized that the total needs of all the qualified schools and hospitals in the country would be but a very small percentage of the total quantity available for disposal and any loss in terms of recapitalization will be small when compared to the public gain by the further utilization of the property in our educational and health programs.

We heartily endorse that section of H. R. 3322 which will remove title restrictions on personal property transferred to schools and hospitals. In the past due to a Federal administrative determination, restrictions were placed on personal property which were not only impossible and impractical to administer but also decreased the public benefits that accrue from using the property. To illustrate: At present the Federal regulations require that a school must use a surplus typewriter for 4 years in their educational program before title passes. Obviously some machines used constantly in a school program reach the point where it is not practical or worthwhile repairing them before the expiration of the 4 years and the school is still accountable. After passing through a series of such experiences, school administrators become discouraged at these restrictions and lose interest in the program. In other words, too much redtape.

Our program in Massachusetts has always been closely associated with every major development in the surplus property utilization program for the past 9 years and we

are convinced that efficiency and economy in such a program results from experience based upon a practical approach.

Successful administration and operation of this program requires a close cooperation and team play between the States and the Federal agencies and departments involved. Practically every State in the country now has a substantial investment in personnel and facilities devoted to the problems of: (a) determining the eligibility of educational and health units; (b) as a service agency to these groups we are in a most advantageous position to determine what types and quantities of surplus property are needed and useful in their educational and health programs; (c) establishing good working relationships with all of the Federal storage and disposal officers in order to screen available surplus property; and, (d) arranging for the allocation of surplus property to the States for distribution to the eligible institutions within the States.

Since the States have made such a substantial contribution, it follows that the Federal Department of Health, Education, and Welfare, and the General Services Administration should be allowed sufficient funds to properly staff and strengthen their program so they can function efficiently and provide the services and leadership to match the States' efforts, and thereby make the program more effective.

In conclusion, may I point out that in my 9 years' experience with this program I can report that all of our schools and hospitals have a tremendous interest in this program, and they are constantly requesting us to obtain for them more and more property which they find invaluable in helping them to meet the demands of an ever-expanding program of health and education. We have nowhere near met the needs of our schools and hospitals to date, and I personally believe that even if the program was expanded to 10 times its present size it still would not be sufficient to provide relief for their present requirements, let alone the anticipated expansion to meet their ever-increasing demand for services from the public.

May I express the appreciation of my State and that of the schools and hospitals in the State to your chairman, Mr. McCORMACK, and to this committee for this opportunity to discuss our program. Our schools and hospitals have expressed the sincere hope that you will report favorably on this bill to Congress so as to allow for the improvement of the administration of the program for a better and more effective utilization of surplus Government property for educational and public-health purposes now and for the years to come.

H. R. 1

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include correspondence which I have had with Hon. Joseph E. Talbot, Vice Chairman, United States Tariff Commission.

I am sure the information contained in this exchange of correspondence will be of particular interest and significance to the many industrial workers in the area which I have the honor to represent:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., January 26, 1955.
HON. JOSEPH E. TALBOT,
Vice Chairman,
United States Tariff Commission,
Washington, D. C.

DEAR MR. TALBOT: Many people in my Congressional District have written to me and have come to see me personally in order to express their very real and sincere concern over and opposition to legislation which would have the effect of lowering tariffs. Most of the individuals who have contacted me regarding this matter have set forth in considerable detail their opposition to H. R. 1, to extend the authority of the President to enter into trade agreements under section 350 of the Tariff Act of 1930, as amended, since they have the definite opinion that its passage would have an adverse effect upon their employment opportunities.

You are well aware, I am sure, of the fact that since becoming a Member of Congress I have publicly and privately expressed the view that I consider one of my prime responsibilities to be that of protecting not only the lives but the livelihood of the people I represent. I am determined to continue and intensify the efforts I have made in the past in order to fulfill this responsibility.

I would be very grateful indeed if you could properly advise me as to how the passage of H. R. 1 would affect those individuals who are presently employed in the basic industries in my district. A list of 25 representative industries of eastern Connecticut is attached and I should like to have your comment with regard to each.

I can readily appreciate that my request will necessitate much research and analysis in order to furnish me the requested information; however, I know you have a realization of its importance to me and I would, therefore, be grateful for as prompt a response as is possible.

With all good wishes,

Very sincerely yours,

HORACE SEELY-BROWN, JR.,

Member of Congress,

Second Connecticut District.

LIST OF 25 REPRESENTATIVE INDUSTRIES OF EASTERN CONNECTICUT

Textiles: Including manufacture and processing of wool, cotton, silk, and synthetic fibers; also velvet, lace, linen, fish nets, fishlines; and cotton, nylon, and silk twine.

Thread: Manufacture of cotton, rayon, silk, nylon, and rubber thread.

Buttons: Manufacture of metal, bone, plastic, and pearl buttons.

Electric goods and electrical parts: Including parts and components for appliances and radio and television receiving and transmitting sets; also electric switches and tuners.

Paperboard: Including manufacture, printing, and processing of paperboard and fiberboard and containers.

Chemicals: Including industrial chemicals, such as resin and plastics, biological chemicals.

Bone and ivory goods: Including piano keys and boards, furniture handles, etc.

Rubber: Including rubber footwear, rubber sheets, molded rubber products, and brake linings.

Tin: Including metal and plastic.

Vacuum bottles.

Screws and screw machine products.

Toilet goods: Including soap, soap powders, cosmetics.

Mechanics' hand tools.

Machine tools and dies.

Cutlery: Including surgical instruments.

Surgical dressings.

Jewelry: Including jewelry and costume jewelry (metal and plastic).

Gun sights.

Printing presses.

Fisheries.

Farm products: Including poultry, poultry products, dairy and dairy products, and potatoes.
Shoes.
Chocolate candy.
Optical goods.
Bricks.

UNITED STATES TARIFF COMMISSION,
Washington, D. C.
The Honorable HORACE SEELY-BROWN,
House of Representatives.

DEAR MR. SEELY-BROWN: I have your letter of January 26, 1955, with which you enclosed a list of commodities that are produced in eastern Connecticut. You ask that I comment on how the enactment of H. R. 1 would affect the individuals who are presently employed in the production of those commodities.

Under H. R. 1 the President would be authorized to make reductions in duties—

(i) By not more than 15 percent of the rates existing on July 1, 1955;

(ii) By not more than 50 percent of the rates existing on January 1, 1945, in the case of articles not being imported or being imported in negligible quantities; and

(iii) To 50 percent ad valorem or the equivalent thereof in the case of articles subject to higher ad valorem rates or equivalents.

The President would be authorized to reduce duties to the lowest rates permissible under any of the three duty-reducing authorities.

You will note that H. R. 1 would merely authorize the President to reduce duties; it would not make reductions mandatory. It is impossible to say, therefore, what if any changes will be made in the duties on the commodities in the list you enclosed with your letter. However, as the result of a study we made for the Randall Commission, I am able to indicate in general those commodities in your list for which a reduction of 15 percent would provide the lowest rate of duty (these are shown in table 1 enclosed); those commodities, which are not imported or imported in negligible quantities, for which a 50-percent reduction in the rates existing on January 1, 1945, would provide the lowest rate of duty (shown in table 2); and those commodities for which a reduction to 50 percent ad valorem would provide the lowest rate of duty (shown in table 3). The classification of the commodities in your list into these three categories is based upon imports in 1952.

The tables also indicate the ad valorem equivalents (based on imports in 1952) of the present rates of duty on the various commodities or groups of commodities in your list. For some groups of commodities only a range of the ad valorem equivalents of the duties are shown, as it would be impracticable to give the ad valorem equivalent for each commodity in the group.

It should be noted that many of the commodities on your list are also in the list of articles published on November 16 by the Interdepartmental Trade Agreements Committee, which will be considered for possible tariff concessions in the pending trade-agreement negotiations with Japan and certain other countries. The commodities falling within each of the three aforementioned classifications will no doubt be quite different after the rates of duty have been changed in these trade agreements.

I trust the information given herein will be helpful to you. I am sorry I could not have supplied the information sooner, but a great deal of time and effort was required in the preparation of it.

Sincerely yours,

JOSEPH E. TALBOT,
Vice Chairman.

TABLE 1.—Commodities produced in eastern Connecticut for which a reduction of 15 percent of the present rate of duty would provide the lowest permissible rate under H. R. 1

Commodity	Approximate ad valorem equivalents (based on imports in 1952) of the present rates of duty (percent)	Commodity	Approximate ad valorem equivalents (based on imports in 1952) of the present rates of duty (percent)
Toilet goods: Soap (except castile), soap powders, and cosmetics.	Various 5 to 40.	Textiles, etc.—Continued	
Resins and plastics.	Various 10 to 45.	Nets and nettings made on bobbinet or Meehlin machine.	Various 30 to 45.
Biological chemicals: ¹ Hormones.	12½.	Veils and veillings.	Various 32½ to 45.
Brick.	Various 6 to 12.	Embroidered hosiery.	30, 40.
Optical goods.	Various 15 to 50.	Ornamented gloves and mittens.	45, 50.
Electric goods and electrical parts, including parts and components for appliances and radio and television receiving and transmitting sets, and electric switches and tuners.	Various 10 to 40.	Ornamented corsets and allied garments.	37½.
Printing presses.	12½.	Ornamented wearing apparel.	50.
Machine tools and dies.	Various 15 to 30.	Miscellaneous ornamented fabrics and articles (including lace handkerchiefs).	Various 40 to 53.
Cutlery.	Various 16 to 30.	Hat brails of synthetic materials.	23, 45.
Surgical instruments.	45.	Hats, bonnets, and hoods made of brails principally of synthetic textiles.	45.
Mechanics' hand tools.	22½.	Corsets, n. e. s.	27½.
Screws and screw machine products.	12½, 22½.	Elastic fabric.	20.
Gun sights.	Various 22½ to 45.	Floor coverings.	Various 10 to 40.
Chocolate candy.	Various 3 to 20.	Cotton rags, except for paper making.	25.
Farm products:		Textile waste.	4.
Poultry (except turkeys, dressed or undressed).	Various 2 to 23.	Surgical dressings.	30.
Poultry products.	Various 8 to 35.	Other.	Various 12½ to 45.
Dairy and dairy products.	Various 2 to 25.	Shoes (leather).	Various 5 to 20.
Potatoes.	10.	Slippers (for housewearing).	10.
Fish and fish products, including shellfish.	Various 1 to 45.	Rubber footwear.	17, 35.
Textiles: Manufactures of cotton, flax, wool, silk, or synthetic fibers:		Rubber sheets.	25.
Yarns.	Various 13 to 40.	Rubber thread.	25.
Threads, of cotton, rayon, silk, or nylon.	Various 10 to 30.	Molded rubber products.	Various 12½ to 25.
Fish nets and fishlines of cotton, flax, etc.	Various 25 to 40.	Buttons of metal, bone, and plastic.	Various 6 to 45.
Linen fire hose.	11.	Bone and ivory goods (except buttons):	
Small wares.	Various 12½ to 35.	Bone and horn manufactures.	25.
Table damask:		Ivory manufactures, including piano keys and boards, furniture handles, etc.	17½.
Cotton.	19, 30.	Jewelry, including plastic, and metal articles and parts to be worn on apparel or carried on or about the person.	Various 30 to 55.
Linen.	15.	Thermos containers (vacuum bottles, etc.), capacity over 1, not over 2 pints.	50.
Other woven fabrics, except pile.	Various 10 to 55.	Brake and clutch lining, molded, pressed, or formed (asbestos).	10.
Cotton velvets and velveteens.	Various 23 to 35.	Paperboard, manufacture, printing, and processing of paperboard and fiberboard and containers:	
Other pile fabrics and manufactures of.	Various 20 to 35.	Asbestos wallboard.	12½.
Knit goods.	Various 15 to 58.	Paperboard, pulpboard, leatherboard, and wallboard and manufactures of.	Various 5 to 17½.
Wearing apparel, not knit or crocheted.	Various 5 to 38.		
Household articles.	Various 10 to 55.		
Nottingham lace-curtain machine products.	40.		
Lovers-lace machine products.	35, 45.		
Machine-made lace (other than Levers, Nottingham, and bobbinet-Jacquard).	50.		

¹ Most of the biological chemicals, such as "antitoxins, serums, vaccines, and bacterins," are duty-free under tariff par. 1610 of the Tariff Act of 1930. Hormones are the principal dutiable items.

² Other than described in tables 2 or 3.

Trade Agreements Extension Act

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1955

Mrs. KNUTSON. Mr. Speaker, we have normally in the United States an agricultural machine geared to abundant production. The American farmer produces enough for himself and 18 others; crop production per acre has increased 30 percent since 1920 due to

better tools and techniques, more and better fertilizer, insecticides, and fungicides, hybrid corn, improved seed varieties, rural electrification, and the conservation of soil and water resources. Production per animal has increased 50 percent since 1920. The farmer has become one of the most important consumers of the automotive industry.

But American agriculture cannot prosper if it can only produce the food and fiber needed for the people of the United States. Agriculture must export or die. In 1951 we exported around \$4 billion worth of agricultural products. In 1954 we exported a little less than \$3 billion worth. It is necessary that we

regain our export markets. Our markets must be world markets. Our customers must be mankind. If the American agricultural industry is to produce only for the domestic market, it is faced with bankruptcy; industry is faced with shut-downs, the industrial worker with unemployment. It is certainly a fundamental fact in our economy that when the farmer cannot buy, the industrial worker cannot work.

Trade is a two-way proposition. It is fundamentally an exchange of commodities. There is only one way that a person can buy anything and that is through the sale of commodities or personal services. Foreign nations need to sell

to us in order that they may have dollars to pay the American farmer for his surplus production of cotton, wheat, lard, rice, and tobacco.

The extension of the Trade Agreements Extension Act of 1955, without crippling amendments, is of vast importance to the American farmer and to the industrial worker whose well-being is dependent upon the health of the agricultural economy.

The Institute of Fiscal and Political Education

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. REECE of Tennessee. Mr. Speaker, I wish to take this opportunity to commend the objectives of the joint resolution introduced recently in this House by the gentleman from Pennsylvania [Mr. Flood], seeking to promote the teaching in American schools of the differences between the theories and practices of the American way of life and the theories and practices of atheistic communism.

This joint resolution proposes to establish a commission to study the testimony relating to the theories and practices of communism taken under oath by the committees of the Senate and House of Representatives and by any agency of the executive branch of the United States Government, and, on the basis of this study, to prepare material for a book to give the fullest possible information on Communist theories and practices. The commission would also be authorized to prepare suggested curricula of studies suitable for use in the teaching of courses in schools, colleges, and universities in order to show the basic differences between the theories and practices of the American way of life and the theories and practices of atheistic communism.

I agree with the gentleman from Pennsylvania that there is need for instruction in our public schools as well as colleges and universities regarding the encroachment upon democratic institutions by the Communist world conspiracy. Communist techniques have long been employed to capture the mind of our youth. The principal defense of our democratic institutions remains to counteract this menace with the teaching of the truth. Indeed, one of the best means for inspiring confidence in our American Republic is to compare it with such police states as Soviet Russia or Communist China.

The Pennsylvania Bar Association has led the way in urging the teaching of the differences between democracy and communism in our schools by a commendable resolution adopted in the year 1954. The American Bar Association also has taken this problem under advisement. In its 77th annual meeting

in Chicago, in August 1954, Judge Walter M. Bastian, of the Court of Appeals of the District of Columbia, then chairman of the standing committee on citizenship, proposed the following resolution:

Whereas the American Bar Association believes that enlightened citizenship requires intelligent understanding of world problems, free discussion, and courageous thinking: Be it

Resolved, That the facts of the theory and practice of communism be taught in appropriate forms at all levels in all educational institutions of the United States in conjunction with the teaching of the theory and practice of the Government of the United States of America under the Federal Constitution; and be it further

Resolved, That this association stand ready to implement the purposes of this resolution by aiding in the preparation of suitable material and otherwise through its standing committee on American citizenship.

Action on Judge Bastian's resolution is still pending before the American Bar Association.

Not only the legal profession, but also the teaching profession has recognized the need for instruction which will compare democracy and communism. In 1953 Dr. Erling M. Hunt, professor of history in Teachers College, Columbia University, declared:

Since the demobilization that followed World War II there has been widespread conviction, somewhat uncertainly implemented, that young Americans should understand the contrasts between democracy and communism.

In supporting instruction to this effect in the public schools, Professor Hunt further said:

So far as communism is concerned, the schools are, I believe, basically responsible for inoculating young citizens against it.

As the gentleman from Pennsylvania [Mr. Flood] has well said, there are no generally acceptable textbooks on communism available for use in the public schools. It is difficult to teach a course in the public schools without a textbook on the subject. Lack of adequate textbooks is one of the reasons why the task of alerting students to communism has moved slowly in our elementary schools and high schools. Another reason for this lack of progress has been the hesitancy of teachers to engage in what some critics call indoctrination. Furthermore, the already overcrowded curricula of our public schools seems to defy the introduction of any new subject. In spite of these obstacles, however, the time has come when educators should find space in the curricula of our schools for a serious comparison of American democracy with communism.

In view of the reluctance of commercial publishers to contract for publishing a high-school textbook on communism, the board of trustees of the Institute of Fiscal and Political Education, in November 1954, voted to arrange for the preparation of such a textbook. This project was undertaken as a public service.

The Institute of Fiscal and Political Education holds an absolute charter granted by the board of regents of the University of the State of New York, which was obtained through the good

offices of John W. Davis, former Democratic candidate for President of the United States.

The purpose of the institute, as outlined in its charter, is to promote, solely in the interests of higher and secondary education, the broadest possible public understanding of technical and practical problems in fiscal and political fields by preparing, publishing, and distributing bulletins, pamphlets, studies, charts, and other sources of information and also by disseminating such information through public discussion, through collaboration with institutions of higher learning, by radio and otherwise.

The President of the institute is John Marshall, former First Assistant Attorney General of the United States under President Coolidge and President Hoover. Serving on the board are such educators as Dr. Wilson M. Compton, former president of Washington State College; Dr. Felix Morley, former president of Haverford College; Dr. Forrest H. Kirkpatrick, dean of students, Bethany College; Dr. O. Glenn Saxon, professor of economics, Yale University; and, Dr. John Lee Coulter, former president of North Dakota A. & M. College. Former Ambassador Arthur Bliss Lane is on the board as well as such eminent counselors at law as Donald R. Richberg, Lowell Wadmond, and Henry A. Wise; together with R. A. Hummel, chairman of the board of the Lone Star Cement Corp.; John Payson, vice president of the International Bank of Washington; former Congressman Charles S. Dewey, eminent banker and known, no doubt, to most of you; W. Royce Powell, prominent public relations director; and, the managing director, Harry G. Marquis.

The institute has engaged in several educational projects such as a program known as Washington Service—a series of pictorial booklets on political economy. Among the authors were the late Senators Robert A. Taft, Pat McCarran, and Burnet R. Maybank. Other Senators who expressed their views in this service were HARRY BYRD, STYLES BRIDGES, HOMER CAPEHART, PAUL DOUGLAS, EVERETT DIRKSEN, KARL MUNDT, ESTES KEFAUVER, and ALEXANDER WILEY. I, too, prepared a booklet for this series.

Another interesting and valuable educational program which the institute has undertaken is known as Operation Freedom. This is a series of full color, pictorial booklets dramatizing each section of the Bill of Rights. These pamphlets are used as collateral text material in the study of American history and the American way of life, and are recommended for use in the seventh and eighth grades of elementary schools. They have been approved by municipal school systems in many parts of the country.

I heartily agree with the gentleman from Pennsylvania [Mr. Flood] that a great service can be performed by the Commission To Make Available Information as to the Basic Differences Between the Theories and Practices of the American Way of Life and the Theories and Practices of Atheistic Communism. There are, however, two considerations which require attention. First, the study of the Commission is to be limited

to the evidence taken under oath before the Congressional committees and the agencies of the executive branch of the United States Government. But there is a vast reservoir of information regarding the theory and practice of communism aside from evidence taken under oath. Such information includes the writings of Communists and ex-Communists, the reports of many reliable scholars, newsmen, and other observers, and documents of foreign governments. A textbook for the public schools should draw on all these sources.

Second, American education has been, since the founding of the Republic, in the hands of local authorities. Textbooks prepared by a central government are alien to American tradition. Under our American system, each school board in each school district should be free to determine the textbooks which are to be used in the public schools. In other words, competitive scholarship and competitive professional skill should guide the selection of textbooks for the American youth.

The Institute of Fiscal and Political Education proceeded with considerable care in arranging for the preparation of its experimental textbook. In view of the fact that many teachers are unprepared to teach a comparison of democracy and communism, the institute decided to issue both a textbook and a teacher's guide or handbook. Again, in view of the fact that high-school curricula are already overloaded, the institute decided to publish four textbooks; one designed for schools that can give an 18-week course, and 3 other textbooks for courses respectively of 9 weeks, 6 weeks, and 3 weeks. In other words, the institute has attempted to meet the needs of every high-school curricula in the country.

The institute gave careful consideration to the selection of the scholar to whom the task of preparing the textbooks and teacher's guides should be entrusted. It eventually selected Dr. Kenneth Colegrove, professor emeritus of political science of Northwestern University. Several considerations guided this choice. Dr. Colegrove is a distinguished scholar. His professional degree of doctor of philosophy was taken at Harvard University. In recognition of his book on the American Senate and World Peace, Columbia University in 1944, conferred on him the honorary degree of doctor of letters. His books and articles in learned journals on comparative government and international relations are universally esteemed. His record as a teacher of young men and women has been noteworthy. His service to the discipline of political science as secretary of the American Political Science Association has endeared him to the teaching and scholarly profession. In addition, he has had practical experience in the affairs of the Republic, having served as consultant in the Office of Strategic Services during the Second World War, as consultant to Gen. Douglas MacArthur in Tokyo immediately after the war, and later as consultant to the State Department.

In another respect, Dr. Colegrove is unusually competent to prepare textbooks comparing democracy and communism. For the past 15 years, he has written the articles on Asia, Communism, Civil Liberty, Democracy, Dictatorships, and the Union of Soviet Socialist Republics for the World Book Encyclopedia and its annual supplements, volumes which are widely used in the high schools of the United States. In fact, his comparison of democracy and dictatorships has long been one of the features of this popular encyclopedia for young students. In the yearbook of Collier's Encyclopedia for 1954, another publication extensively used in high-school libraries, he has a leading article on Techniques of Communism.

Dr. Colegrove has brought to the preparation of the textbooks and teacher's handbook a keen appreciation of the needs of high-school students, partly acquired when, before completing his university training, he began his professional career by teaching in an Iowa high school.

At the outset of his project, Dr. Colegrove made a survey of the literature which should be drawn upon in preparation of a textbook and teacher's handbook. Seeking to conform the textbook to the best pedagogical methods, Dr. Colegrove was fortunate in securing the continuing advice of one of America's outstanding educators, Dr. Erling M. Hunt. Dr. Hunt is professor of history and head of the department of the teaching of social studies in Teachers College, Columbia University. He is past president of the National Council of the Social Studies, and former editor of Social Education. He is also coauthor of the World's History, published in 1947, with a revision in 1954, by Harcourt, Brace & Co. This is one of the most successful history textbooks for high schools.

I would like to quote a recent statement by Dr. Colegrove. It reads:

Anyone who undertakes to write a textbook on democracy and communism should approach his task with humility and a deep sense of responsibility. He should always bear in mind that no one person has a monopoly on wisdom. He should seek advice and consultation at every stage of the project.

American young men and women must be taught the truth. Accuracy is paramount. At the same time, indoctrination must be avoided. Our American democratic process should extend into public-school education. The essential characteristic of a representative republic is the fact that the citizens actively participate in government. By the same token, in our educational system, our boys and girls should participate in the learning process. In other words, they should be led to draw their own independent conclusions from data presented in a textbook or by the teacher in the classroom. Instead of confronting pupils with iron-bound maxims they should be induced to weigh the evidence and to form their own judgments.

At the same time, teachers and textbooks should not neglect the spiritual values. This precept is more easily uttered than carried out, particularly in case young students are to be induced to form their own value judgments. Perhaps the most approved method is to emphasize American history and tradi-

tions as a basis for comparison with other systems. In any event, the character and personality of the teacher is far more important than the content of the textbook.

In comparing national systems, every effort must be made by both teacher and textbook writer to avoid engendering hatred of other peoples. Textbooks that inculcate hate of potential enemies have been one of the causes of war. While maintaining loyalty to truth and freedom, textbooks should inspire sympathy for and understanding of all peoples.

It is sometimes said that teachers in the public schools refrain from making comparisons between democracy and communism because of fear of entering into a controversial subject. The existence of any such fear is probably exaggerated. Many able teachers are already giving instruction in a comparison of democracies and totalitarian regimes. America has a million loyal, courageous, and devoted teachers. Any hesitancy on their part to teach a comparison of democracy and communism has been largely due to the fact that school boards and school administrators have not been in general agreement as to the necessity for including this subject in the curricula.

The issue is clear. Shall such an important educational project be carried out by a privately supported, tax-exempt organization which is known for its historical and objective approach or shall it be done by the Federal Government, which then will be making further inroads into the field of education instead of leaving it to the State, county, and municipality where it rightfully belongs.

I do not believe, and I am sure you will agree, that the Federal Government should go into the textbook business.

The outline of the complete textbook which is serving as the basis for discussion of the proper content of the textbook is as follows:

DEMOCRACY AND COMMUNISM—A HIGH SCHOOL TEXTBOOK

TABLE OF CONTENTS

Introduction

1. Why study democracy and communism:
(1) Citizens of a republic should be well informed.

(2) Dangers of ignorance.
(3) World conflict between communism and democracy.

(4) Suppression of liberty.
(5) Dictatorships and war.
Chart: Map of the democratic and Communist worlds.

2. What is democracy?
(1) Our form of government.
(2) Participation by the people.
(3) Respect for human beings.
(4) Respect for law.

Chart: Four aspects of democracy.
3. What is communism?
(1) The promise of the good life: Theory and practice.

(2) The deception of citizens.
(3) The people in a dictatorship.
(4) Destruction of constitutional government.

Chart: Four aspects of communism.
4. What is liberty?
(1) Protection of human rights.
(2) Promotion of justice.
(3) Justice through law.
(4) Freedom of opportunity.

Chart: Four fundamentals of liberty.
5. Is American liberty worth fighting for?
(1) Experience of the Pilgrims and Puritans.

(2) Views of Washington, Jefferson, Madison and Lincoln.
(3) Declaration of Independence.

- (4) Constitution of the United States.
- (5) Price of liberty: Eternal vigilance.
- Chart: History of liberty in the United States.
6. Communism and liberty.
- (1) The police state in Soviet Russia.
- (2) Loss of liberty in Poland.
- (3) Destruction of freedom in Czechoslovakia.
- (4) Slavery of the Baltic Republics.
- (5) The Red Terror in China.
- Chart: Loss of liberty in Communist countries.
7. How America encourages independent thought.
- (1) How Americans won freedom of speech.
- (2) Guaranties of free speech and press.
- (3) Education for all.
- (4) The American people control the public schools.
- (5) What the public schools teach.
- Chart: The American public schools teach freedom.
8. How communism controls thought.
- (1) Obedience to the "party line."
- (2) Teaching hate in Communist schools.
- (3) Discipline of young Communists.
- (4) Censorship of newspapers, books, and art.
- (5) Education of the "Soviet man."
- Chart: Communist control of thought: Behavior of the "Soviet man."
9. Why some men and women become Communists.
- (1) Communist promises to slum dwellers.
- (2) Promises to unemployed.
- (3) Appeals to minority races.
- (4) False idealism.
- (5) The urge for power.
- Chart: Communist inducements for recruits.
10. How a Communist cell works.
- (1) Daily life of a Communist member.
- (2) Study of Communist doctrine.
- (3) Teaching the party line to novices.
- (4) Obedience to the party leader.
- (5) Sabotage and espionage.
- (6) What is the compensation for this hard work?
- Chart: Workday of a Communist.
11. Democracy in action.
- (1) Practice conforms to theory.
- (2) Representative government.
- (3) Free elections.
- (4) The right to oppose.
- (5) The two-party system.
- (6) The making of law.
- Chart: The democratic process.
12. How Soviet Russia deceives the Russian people.
- (1) The U. S. S. R. constitution is a delusion.
- (2) Faked elections.
- (3) The people have no voice in government.
- (4) False propaganda.
- Chart: Methods of deception in the U. S. S. R.
13. How Red China deceives the Chinese people.
- (1) Imitation of Russian communism.
- (2) No free elections.
- (3) False propaganda.
- (4) Brainwashing in Red China.
- (5) Deception of the peasants.
- Chart: Methods of deception in Red China.
14. The Communist Party in Soviet Russia.
- (1) Limited membership in the Communist Party.
- (2) The grades of leadership.
- (3) The Politburo or Presidium.
- (4) Party discipline.
- (5) The purges.

Politicking at Its Worst

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the February 16, 1955, issue of the Washington Evening Star:

POLITICKING AT ITS WORST

The Democratic members of the Joint Congressional Atomic Committee are playing the

shabbiest kind of politics with the so-called Dixon-Yates contract. Although they have attacked the project with all sorts of holier-than-thou arguments, they have not produced the slightest bit of convincing evidence to support their lurid talk about it—particularly their ridiculous charge that it is an economically wasteful and morally wicked undertaking cooked up in a sinister plot to enrich the private-power interests at the expense of the American people and the sacrosanct Tennessee Valley Authority.

This charge, of course, is about as unjustified and as fantastic as any charge could be. Actually, although the Dixon-Yates contract has certain administrative features that are open to legitimate criticism, it seems in many ways to be sounder—from a dollars-and-cents viewpoint—than similar agreements involving private power and the Atomic Energy Commission. And certainly, considering how the contract's terms have been subjected to exhaustive public debate and congressional scrutiny, few things could be more absurd than the effort to depict the project as an evil brewed in the dark by men conspiring against the public interest. Yet, despite this, and even though the venture has been resoundingly approved by both the AEC and the Securities and Exchange Commission, the Democrats on the joint committee continue to kick the issue around with unabated intensity.

Thus, having a vested interest in their own muddling of the facts, and apparently convinced that they can gain some partisan advantage from attacking without letup, these Democrats demand that the AEC and the SEC reverse themselves with a vote to kill the contract. Further, with crocodile tears in their eyes, they warn (1) that unless this is done the Dixon-Yates controversy—which they alone are keeping alive—will continue "for years to come," with injury to the AEC's military work; and (2) that the administration, not they, will be responsible for that fact. Here, surely, is an example of politicking at its worst, and the President, needless to say, has every reason to feel more determined than ever not to yield to it.

Pay As You Mail

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. WAINWRIGHT. Mr. Speaker, a good deal of vision and commonsense is presented in an editorial from Newsday, a large daily paper on Long Island. While this editorial was written last month, I have refrained from inserting it in the CONGRESSIONAL RECORD until this time. However, within the next few weeks the House will have the opportunity to make some important decision in regard to the Post Office Department.

Two philosophies will be present. They are diametrically opposed to each other. The first is that the Post Office Department is a service organization similar to the State Department or the Department of Commerce and is therefore entitled to create a financial deficit.

The other philosophy is that the Post Office Department should be run on a paying, business-like basis for the service it performs for individuals, corporations,

publishing houses—in fact, for everybody.

The following editorial summarizes and ably presents the latter contention:

PAY AS YOU MAIL

The postal rate increase proposed by Postmaster General Summerfield are no more than necessary and logical to meet the needs of the Department. The rate increases, which apply to first-, second-, and third-class mail, are expected to bring in an additional \$332 million a year.

This is still not enough to get the Post Office on a pay-as-you-go basis. For the current fiscal year, the deficit is running between \$300 and \$400 million. But with the increased efficiency Summerfield has also promised, the deficit can be cut down to manageable size.

Part of the extra money will go for pay raises for postal workers. These are badly overdue. The workers have not had a raise in more than 4 years, while the cost of living has gone up considerably.

The rate increases are designed to make each division in the Department come closer to paying its own way, and at 4 cents, letters will continue to be one of the biggest bargains available. They have stayed at 3 cents for more than 20 years, while postal costs have nearly doubled.

Newspapers and magazines, too, will bear a greater share of their mailing costs. Summerfield has asked that second-class rates go up 15 percent for two successive years to yield an additional \$8 million plus annually. This is as it should be.

When roughly the same proposals were made to Congress last session, they were turned down. Congress passed a pay raise measure but failed to approve the rate increase. The reason was that 1954 was an election year.

We hope, for the good of the postal department, its workers, and the Federal budget, that Congress can screw up its courage in a nonelection year and approve both measures.

Postal Pay Raise

EXTENSION OF REMARKS

OF

HON. CHARLES A. BUCKLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. BUCKLEY. Mr. Speaker, I have introduced legislation to provide for a 10-percent pay increase for postal workers, and I have spoken to individual members of the Committee on Post Office and Civil Service to urge that they act promptly on this or similar legislation. On Tuesday, February 15, 1955, I submitted a statement to the committee in support of my bill, as follows:

Mr. Chairman, during the last Congress legislation was passed providing for an increase in the salaries of postal employees. There is no doubt but that this legislation merited more consideration than it received. The increase it provided was totally inadequate, but because the bill was vetoed by the President, the postal workers did not receive even this small measure of relief. I believe we owe it to these employees to take prompt action at this Congress to increase their salaries and make the effective date retroactive. If the bill is vetoed then we should vote to override.

I have introduced a bill which would provide a 10 percent increase in the pay sched-

ules of postal employees. I am very much aware of the need for such increases since in my district and in the New York area generally there are a number of postal workers and other Federal employees, and I know from conversations with them that they have all they can do to make ends meet. Many have suffered income losses from the various reorganization and reclassification programs and from reductions in grade brought about by post-audit actions of the Civil Service Commission. There is reason to believe that very often employees are forced to take reductions in grade because of reduced appropriations.

The Government worker today is called upon to carry an extra workload due to the policy of the administration to reduce Federal payrolls through attrition, which means that vacancies occurring through retirement, death, and resignation, are not filled. These are conditions over which employees have no control. If after 2 or 3 years a man in private industry had his pay reduced because some supervisor had made a mistake in allocating his job to the proper pay scale, the unions would call a strike of all employees. Yet this can happen to a Government employee and there is little or nothing he can do about it. If the Budget Bureau imposes a ceiling on an appropriation for a Government agency and employees have to be laid off through reductions in force or transferred to another post or reduced in grade as a result of it, there is nothing the Federal worker can do but accept it. He may have to readjust his standard of living, he may have to run his old car for another year or two, and cut out some of the little things in life he and his family have learned to enjoy, but there isn't anything he can do except appeal to Congress for an increase in pay.

The postal worker is underpaid. This is truth, not fiction. I marvel at the fact that postmasters are able to recruit qualified men at the extremely low rate of pay at which new employees must start.

I urge you gentlemen to approve an increase in pay which will be equitable and proper. Let me also urge you to proceed with haste since this matter has been pending for a long time and we must keep faith with those who have been waiting so patiently for us to act. I hope this committee will report a bill and send it to the floor before the end of this month. It is the only way in which we can demonstrate that we mean what we have said, that we do intend to keep our promises, that we will make this one of the first legislative enactments of the 84th Congress.

Scientist's Stand Opposed

EXTENSION OF REMARKS OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES
Thursday, February 17, 1955

Mr. DODD. Mr. Speaker, in the New York Times of February 16, 1955, there was printed a letter written and signed by that distinguished American journalist and editor, Herbert Bayard Swope.

I urge my colleagues in the House to read Mr. Swope's letter in which he discusses the outrageous speech delivered in Chicago by Prof. Harold C. Urey.

It was in this speech that Professor Urey presumed to tell the American people that a grave injustice had been

done in the conviction of the Rosenberg atomic spies.

Mr. Swope has written the best answer to Professor Urey that I have seen. The letter follows:

SCIENTIST'S STAND OPPOSED—DISSERVICE TO OUR JUDICIAL SYSTEM IS SEEN IN DR. UREY'S STATEMENT

TO THE EDITOR OF THE NEW YORK TIMES:

Once more the question of government by law or government by scientists has come to the fore. Prof. Harold C. Urey, at a dinner in Chicago, February 12, reported by the Times on February 13, is quoted as being convinced that a grave injustice has been done the Rosenbergs and Morton Sobell, who were convicted in connection with treason to the United States in revealing secrets of the atomic bomb to Russia.

It is every man's right to adjourn to the nearest tavern and revile the court which may have rendered an adverse decision, but when it comes to a question of standardizing justice how can one better the process of assuming that truth has been served by the hands of the United States district court (in which Judge Irving R. Kaufman did a palpably honest job), the circuit court of appeals, and the United States Supreme Court, which had the Rosenberg case before it three times?

How is our thinking to be formulated? Is it to be based upon the convictions of an individual or the concerted efforts of the courts, acting on a verdict of our fellow citizens sitting as a jury—a method that represents the highest form of public opinion?

DEFENSE METHODS

Professor Urey is undoubtedly a scientist of high order, but does that fact equip him to hold an opinion better than the rest of us who may not know how to make heavy water, but who know and feel the claims of justice? The explanation does not lie in the superiority of his opinion nor that of his fellows. It lies in the curious belief that certain types of scientists are laws unto themselves. They have not yet become certain that, for better or for worse, nationalism is still prevalent. Accordingly, self-protection of a country requires an immediate and an adequate defense against any form of security violations.

Perhaps in the future we will have outgrown nationalism. Personally, I doubt it. But until that time comes I do not see that the attitude of men like Urey or J. Robert Oppenheimer, for whom I hold in other matters a good opinion, should be permitted to destroy the methods of defense through our courts that have been so laboriously built up since Magna Carta.

I think that Dr. Urey's utterance was incendiary. He has a right to an opinion, but I submit that, airing it in the manner in which he did, supported by a galaxy of names, it is not inclined to strengthen our judicial system.

Mind this: I am not one of those who demand conformity; Hitler made "Gleichformigkeit" and abhorrence. To me, democracy is defined best as dissent. But dissent can be expressed in a less arrogant and provocative manner than Professor Urey employed. I would not stop him from a free expression of opinion, but I ask that the forces of those who do not agree with his views become articulate so that their silence will not be taken to mean their assent.

SCIENCE OF LAW

Let them believe that the science of law, even though it be occasionally in error, is as important to us—even more important—than the nuclear sciences. We live under the first every day, but the second, praise be, is one that touches us only occasionally and up to now it has done us no good except in the increase of knowledge.

And knowledge, too, is restricted. Not long ago a distinguished scholar, Dr. Grayson Kirk, who is doing so well at Columbia University, used a slogan for the university's bicentennial celebration, "Man's Right to Knowledge and the Free Use Thereof." The first part of the statement, "Man's Right to Knowledge," is sound; but the second part—"and the Free Use Thereof"—is not true. There is much knowledge that we dare not employ freely; for example, the use of knowledge that has to do with our defense.

Much that I have said about Professor Urey applies to other scientists; and I would not exclude Professor Einstein from that group.

The Times, always seeking to be scrupulously fair, printed Urey's statement at length. It owes at least one dissent to the opposition. This, then, is an effort to express that right.

HERBERT BAYARD SWOPE.

New York, February 14, 1955.

Address by Hon. Joseph W. Martin, Jr.,
at Dallas, Tex., February 14, 1955

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. ALGER. Mr. Speaker, it is a pleasure for me to call the attention of my colleagues to an occasion of great importance to my district of Dallas County. Our most admired and respected colleague, the gentleman from Massachusetts, Mr. JOSEPH MARTIN, addressed a large gathering in Dallas February 14 as a part of our Lincoln weekend celebrations.

The response of those present left no doubt as to the affection and high esteem of the people for Mr. MARTIN. We Texans were most appreciative and proud to have him with us to benefit from his vast experience in the Federal Government and to hear his underlying concepts of the function of government.

So that others may also enjoy his remarks of that evening, I include in the Appendix of the RECORD the following speech which he delivered at that time:

Texas friends and neighbors, this is a visit I have anticipated for many weeks. We hear a great deal about Texas in Washington—some of it even from Texans themselves—and almost everyone winds up by saying that you have to be in Texas to see what is going on in order to believe it.

Any doubts about your growth and progress have vanished as a result of this visit. In fact, I am somewhat surprised that your fine committee could persuade this many Texans to sit still long enough to hear a speech—because only people who are very busy could have brought about what you have accomplished in recent years.

No man, I am sure, could in one evening talk about all of the wonderful things I have seen in this great State since my journey to Dallas. I have managed to absorb some of the highlights of your progress, however. In taking note of some of them, I cannot refrain from thinking that if all of our people could come to Texas for a visit, there would be no fear for the future of the Nation.

The Dallas story is one of which all of you can be justly proud.

I note that your annual payroll is over \$1 billion for the third year in a row.

That the income for all of your people in 1954 set a new record of \$12½ billion.

The census people tell us that the population of Dallas is expected to increase by 30,000 people in 1955; that the State population is growing at a rate that exceeds the national average.

Your employment is increasing steadily; your wage earners are sharing an ever-increasing amount of your prosperity; your markets and farms are prospering; and your construction records for homes and factories reach new peaks with the dawning of each new day.

Texas banks are bulging with the savings and investments of her people; Texas farm marketings are at a new high; Texas agriculture is now the most diversified in the history of the State.

Yes, even the baby business in Texas is booming. In fact, 1 out of every 16 babies born in the United States is now born a native Texan—a notable contribution on the part of Texas mothers, among their many other amazing accomplishments in the building of a bigger and better Texas.

Yes; I am now convinced; Texas is an amazing place; Her people top go-getters; her future bright with the promise that peace, progress, and prosperity are here to stay.

I want to congratulate you on electing BAUCE ALGER as the Representative in Congress from Dallas.

He is a credit to your judgment and a welcome addition to the National Legislature. Already he has established many warm friendships for the benefit of his home State and district, and we respect the intelligence and integrity he has displayed since joining us.

He has demonstrated an energy and alertness that, combined with experience, will make him an outstanding Member of the House. He will be a credit to his State and to his district.

I hope that Mr. ALGER is the first of many Republicans that Texas will send to Congress. I hope that Texas—first in so many things—will also be the first in this part of our great country to really and truly develop into a two-party State.

Had I been borne a Texan, I would be one of your best salesmen.

The fact that I was not, however, does not prevent me from sharing in the pride that is rightfully yours because of your accomplishments.

Texas and the rest of the Nation, I am firmly convinced, have prospered and grown in part because of many things that have been done in Washington during the past 2 years under the leadership of President Dwight D. Eisenhower—a native Texan.

The Eisenhower administration and the 83d Congress have set many records of progress.

First, we wiped out the economic controls which had kept our people in a state of constant irritation for more than a decade. These controls handicapped the growth of our country. Business has gone ahead faster because these controls were eliminated.

We settled for good the question of whether Texas and other States were to enjoy the constitutional privileges of managing and exploring their own lands or whether the Federal Government would be allowed limitless encroachment of the rights of our people, and, incidentally, the Federal Government prospered through the legislation.

We ended the Korean war—not completely on our terms, but in a manner at least befitting the dignity of a government determined to build a defense and a security for the long haul to peace.

We abolished certain agencies competing with private business and we sold or are

selling the competitive Federal operations which thrived on tax dollars to the detriment of free enterprise.

The administration also created a new department of Government—Health, Education and Welfare. And the President selected the best-looking Cabinet officer in history to run the Department—Mrs. Oveta Culp Hobby, a Texan—and she is doing a splendid job.

Many useless Government jobs were abolished, but there was no wholesale patronage firing of employees. On the contrary, the complaint was because some were not removed.

We cut taxes a total of \$7,400,000,000—the biggest reduction in history; and we reduced appropriations in 1954 and 1955 a total of \$64 billion below the 1952-53 level.

This reduction helped us in our efforts to bring about a prosperity based on peace rather than war.

Recognizing the need for a rapid expansion of the Nation's road system, the 83d Congress provided funds of almost \$2 billion for highway and farm-to-market road improvements for 1956 and 1957. In addition, the President has presented to Congress a long-range, multibillion, pay-as-you-go highway program. This is the first modern appraisal and plan for our highway needs in many years, and one that is long overdue.

The St. Lawrence seaway was voted a go-ahead in the past year, so that our eastern and midwestern waterways can expand to meet the needs of a growing population and an expanding economy in that area.

We extended social-security coverage to 10 million additional people and unemployment compensation to 4 million more Americans, recognizing as we did the need for a long-range approach to the problems and needs of a vastly increased number of older citizens.

The men and women who built up our country must not be neglected in their old age.

At the same time, we moved speedily into the field of health and hospitalization for our older people. We redesigned the construction program from a theory of building hospitals for the sake of building hospitals to a program of construction tailored to the need for rest homes and clinics. In this way, so long as the Federal Government can serve a purpose in the area of health and hospitals, we are meeting the needs of those least able to pay for proper care.

This, I might emphasize, is not a New Deal program, a Fair Deal program or a socialist program. It is a human program, as the President so consistently reiterates. It is designed to lift the burden from deserving citizens who face the misfortunes of age or illness without adequate funds. It is but a small measure of the debt we owe those who have worked as good Americans toward the better life we enjoy today.

On the defense front, we made ourselves much stronger militarily, with the full utilization of atomic weapons.

We are living in critical days. We must not minimize the threat to our way of life. Both inside and outside the country there are people who seek to undermine and destroy the freedoms we hold precious. These people must not be allowed to succeed. They cannot succeed if we are alert and vigilant.

Asia is the scene of an unfolding explosive drama. Soviet Russia and its pawn, the Chinese Reds, seek to dominate all Asia. If this could come to pass, it would eventually mean the Red domination of Africa, Asia, Europe, and perhaps eventually the United States.

This threat makes it essential for us to build our defenses so strong that we are invincible. Over \$30 billion is planned to be expended this year on defense alone, and each succeeding year will require equally large sums until the danger is over.

Wisely we are specializing in atomic weapons and atomic defense, for these instruments of warfare present the only way our shores can be attacked. Supremacy in the air and in atomic weapons as planned by President Eisenhower means security. This we must have.

President Eisenhower knows thoroughly our defense needs. When he says we can save \$2 billion for the taxpayers without impairing our defense, I say to you I am for his proposal. This cold war we are in could go on for many years, and we must have economy in our spending for armaments. We must not forget a demoralized financial condition and wild inflation could destroy our country.

The Soviet leaders are no longer a mysterious group. Their aims are as clear as the noonday sun. They seek world domination, and they steadily push to accomplish their objective.

The Red plotters will resort to arms only if they are sure they can win. They know they cannot win now, and therefore they are stalling until they think the time is ripe.

We must keep our defenses strong so that this day will never come.

Let us think about the forces that threaten us. Red China is the immediate foe, but back of her is Red Russia supplying the hardware of war.

When we hear the threatening talk of the Soviet and the Red Chinese let us not be led astray.

We all want peace. We will go a long way to secure peace. But let it be understood we are not going to be bluffed into permitting the Soviets to dominate the world. We will not be coerced into abandoning the free world to servitude and poverty.

We also have the problem of communism and subversion at home. Much has been accomplished by the Eisenhower administration to arrest subversion and bring the Red rats to light. We silenced with harsh facts those who denied the menace existed. We did this by the swift enactment of legislation designed to plug the loopholes in our security.

We stripped the Communist Party of all legal rights.

We denied Government comfort to Red-infiltrated labor unions.

We sent 50 Communist leaders to jail.

We deported more than 100 lingering subversives, who piled the Communist intrigue for years without bothering to apply for citizenship while they planned the destruction of this Nation.

Why the alien subversives were accorded the freedom of this Nation—some for more than a decade—we have yet to learn. We still seek the answer to the question of who built the barrier of illegal protection around them.

When you hear the rattling disputes over the administration's security program, keep these questions in mind. Many have not been answered as yet, many may never be. But so long as I remain in the House of Representatives, an answer to all the questions will be sought.

As a nation, we cherish individual rights. Each of us is entitled to a complete and fair appraisal of our lives at the bar of public opinion as well as in our courts.

Let us retain that freedom without the tarnish of personal restrictions—but let us retain also the commonsense that recognizes the ability of some to use it as a shield while subverting the very heart-beat of personal liberty.

Never forget that once we relax our vigilance, the Communists will seize again upon the same pattern of manipulation, infiltration and spying that worked against us before.

We do not seek revenge against those who blundered in the past. Nor are we seeking silence from those who deny the blunders

or are blind to the dangers we face. Let them speak. But let us weigh their words against the facts as we know them. And I believe when we do, responsible Americans will support with vigor continued efforts to stamp out the Red evil in our time.

Now, what of the future on other fronts?

As I said, last year we gave the largest tax reduction in the history of the country. It is on that solid foundation we will make 1955 a year of prosperity. You may recall how some political partisans were saying last year that we were in a depression. Well, they were just as wrong as men can be. That depression was averted by wise leadership—1953 and 1954 were the 2 most prosperous years in our history, and 1955 will also be a great year for America.

Official Government statistics show that for automobiles, furniture, appliances, food, clothing, personal services, and traveling, our people will spend more—by many, many millions—than they did in 1953 and 1954. In addition, industry alone will spend a record-breaking \$27 billion for construction this year.

The President envisions, and I heartily concur, that a long period of great expansion, stretching to new horizons of peace and plenty, is ahead for us all.

The President's concept of the future is based on the conviction that private citizens must have the widest latitude to contribute to the development of the economy—an opportunity consistent with the needs of all our people, one in concept with the enterprise and ingenuity that built the great Nation we serve today.

This means for the future more good homes, more good schools, better health facilities, and lessening of the impact of disaster upon our citizens in all walks of life.

Our people are self-reliant. They always have been. Thus we build to strengthen that self-reliance instead of weakening it with paternalistic governmental interference in our daily lives.

With this in mind, the President has presented to Congress a program of progress. Designed to supplement the accomplishments of the 83d Congress, this program consists of:

An adjustment of trade regulations to promote the flow of trade and capital between friendly nations and to protect American industry.

A continuation of policies to ferret out and neutralize subversion.

A further cut of \$4½ billion below Government spending in the fiscal year which ended last June 30.

Improvements in the partnership development between Government and private enterprise in the utilization, conservation, and development of our natural resources.

Extended development of a modern highway system in keeping with the growth of our population and the expansion of our towns and cities.

More than \$12 billion for the development of flood control, navigation, harbor improvements, construction of roads, schools, and other utilities.

Improvements in programs to provide better care for our mentally ill, our crippled children, and voluntary health insurance coverage by private concerns.

And, finally, but not the least in importance, the continuation of policies which meet the broad requirements of a growing nation, dedicated to the needs of our steadily increasing standard of living.

Our chances of success on the legislative front are great if our legislators meet the challenge before us. Politically we have a divided house, but the problems this presents should not blind us to the human needs of our people in the days ahead.

I cannot help but be enthusiastic about the future. Just recently—if you will grant me a personal remark—I completed 40 years

of public service. At no time in those 40 years has America ever looked more strong, more abundant, or in better shape to grasp the opportunity for progress that lies ahead.

We have a way of life that is the envy of the world. We have never faltered in sharing our bounty, nor will we now blight our future by selfish motives.

Two global wars have thundered across the vistas of our dreams for peace and plenty. These wars have claimed too many of our courageous young.

More than ever today the world is aware that wars settle nothing, that man's search for peace must be fruitful or we perish.

Let us resolve that in the days ahead we will be strong and steadfast, yet patient and prayerful, and as dedicated Americans work toward the goals we all seek.

Abundance is bulging on the horizons of our lives. The sum of man's knowledge in science, art, and religion mounts steadily toward the rising star of permanent peace and freedom.

The decades of desolation of spirit and wealth lie behind us if we move with confidence and inspiration in the days ahead.

We must work together as Americans; we must unite to help those who lead us.

Our great President, Dwight Eisenhower, has dedicated much of his life to public service.

If we falter in our support of his hopes and ideals, we add to the burden he carries for us all.

Let us as free men take up our share of the task ahead. Let us walk together with buoyant confidence that in God's will the pathways of peace and plenty will climb to the pinnacle of man's faith and spirit that rests in the hearts of men of good will everywhere. By striving thus we will reach the goals of peace, progress, and prosperity for all mankind.

Compensation of Postal Employees

EXTENSION OF REMARKS OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. KING of California. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the attached assembly joint resolution of the California Legislature relative to the compensation of postal employees:

Assembly Joint Resolution 4

Joint resolution relative to the compensation of postal employees

Whereas employees of the United States Post Office Department have received but one wage increase since 1949, which increase failed to compensate them for the great increase in the cost of living that has occurred since 1949; and

Whereas most other public and private employees have received wage increases which more nearly enables them to meet the increased living costs; and

Whereas any increase in the cost of living particularly affects postal employees because of their relatively low wages; and

Whereas postal employees should receive an increase in wages not only because such an increase would be equitable but also because the efficiency of the postal system would be enhanced thereby: Now, therefore, be it

Resolved by the Assembly and Senate of the State of California (jointly), That the Congress of the United States is respectfully

memorialized to enact legislation for an increase in the compensation of postal employees commensurate with existing costs of living; and be it further

Resolved, That the chief clerk of the assembly be directed to transmit copies of this resolution to the President and Vice President of the United States, to the Postmaster General, to the Speaker of the House of Representatives, and to each Senator and Representative from the State of California in the Congress of the United States.

A Little Wider Publicity

EXTENSION OF REMARKS OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by William Chapman White which appeared in the New York Herald Tribune on February 16, 1955. This well illustrates how a persistent and intelligent editor of a weekly paper on the Pacific coast can make his influence felt in the metropolitan paper of New York.

The article follows:

A LITTLE WIDER PUBLICITY

(By William Chapman White)

It is doubtful if many people in these parts read a weekly newspaper published in San Mateo County, in California. It has the somewhat impressive title of "The Half Moon Bay Review and Pescadero Pebble." It usually devotes its news columns to the doings of local organizations, including the Sons of Italy, the PTA, and the 4-H Clubs, to water-supply problems, and to the troubles of the local artichoke growers.

The paper carries on its front page a column written by George E. Dunn, a small-town newspaperman. For some years Mr. Dunn has hammered away at one thing in his column: the need for stiffer sentences, even up to death, for anyone caught selling narcotics to children. Time and again he has written: "There must be more severe penalties placed on those who deal in selling narcotics."

That would seem to be almost obvious, yet too often newspapers all over the land carry stories on the inside pages about dope sellers sentenced to 3 months, 6 months, perhaps even a year. A man can get more than that for stealing a broken, second-hand car or even a scrawny rooster. One after the other, various magazines and papers have published exposés of the use and sale of drugs in small groups in big-city schools. The readers are appropriately shocked. The police bestir themselves for a while. Eventually the problem of the dope traffic to children comes to the courts and the courts can only do what the law allows.

It allows death or life imprisonment for murder, but murder is usually a one-time act. Narcotics selling is chain murder, passing something worse than death on to children yet unborn. The death penalty or life imprisonment may not break up the narcotics trade any more than hanging stopped all horse stealing in the West; but as was said at one horse thief's execution: "The chances are this'll stop him from further horse thieving."

A few weeks ago Congressman J. ARTHUR YOUNGER introduced a bill into this session of Congress. In part it reads: "Any person

who sells or in any manner facilitates the sale to a minor of any narcotic drug . . . shall (in addition to any other applicable penalties prescribed by law) suffer death or imprisonment for life." In addition to this bill now before Congress, two similar bills have been introduced into this session of the California Legislature. One calls for 20 years imprisonment for the first conviction for selling dope to children and death for a second conviction on the same charge. The other bill asks a mandatory 15-year sentence for first conviction and life, without parole, for a second.

It is no accident that Congressman YOUNGER not only comes from California but right from San Mateo County, where Mr. Dunn's columns have their widest circulation. It must be deeply satisfying to Mr. Dunn not only to know that his columns are read but that something he has whammed away at in his column year in and out finally emerges as a bill in Congress.

In his most recent column Mr. Dunn wrote: "To get wider publicity on this subject I would appreciate it if other newspapers give some notice of what endeavors are being made by our legislators in behalf of our youth." That modest request is worth answering. The whole story is typical of the force and the influence that small-town newspapers often possess even though not all that they strive for winds up as a bill in Congress.

It is also heartening to find that Mr. Dunn has never once said, "Look what I did."

The Federal Reclamation Program

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 24, 1955

Mr. ENGLE. Mr. Speaker, Representative WAYNE ASPINALL, chairman of the Subcommittee on Irrigation and Reclamation, has gotten that subcommittee off to a good start by presenting at its organizational meeting a concise yet comprehensive history of irrigation and reclamation in the West and development of present reclamation policy. I commend this document, prepared by Mr. ASPINALL with the able assistance of the engineering consultant of our committee, Mr. Sid McFarland, to all my colleagues. Copies may be obtained by calling the House Committee on Interior and Insular Affairs. In this connection, Mr. Speaker, I include in the RECORD following these remarks, a recent news story and an editorial from the Daily Sentinel, Grand Junction, Colo.:

ASPINALL BRIEFS SUBCOMMITTEE ON RECLAMATION, IRRIGATION

(By George S. Holmes)

WASHINGTON.—Something new happened in Congress today. The chairman of a subcommittee prepared the members of the group for their labors by presenting a brief but comprehensive history of the subject with which they will deal.

The chairman was WAYNE N. ASPINALL, the subcommittee, the irrigation and reclamation group of the House Interior and Insular Affairs Committee, and the history, the origin and development of irrigation and reclamation in the West.

Representative ASPINALL included in the review of the Government's activities in

reclamation from their inception until the present, for the benefit of the new Members not only of the full House Interior and Insular Affairs Committee but of his own Subcommittee on Irrigation and Reclamation.

Many of the new Democratic Members are freshmen, while others have previously served on other committees. ASPINALL's treatise tells them what it is all about and will moreover contribute a basic understanding of the objectives and problems of reclamation which should be extremely helpful to oldtimers on the committee as well as newcomers.

Tracing the origin of irrigation in the United States from the use of the waters of City Creek, in Salt Lake City, by Brigham Young and his followers, in 1847, to the colossal hydroelectric multiple-purpose Federal projects of today, ASPINALL produced figures of astronomical proportions to illustrate the economic wealth irrigation and reclamation have brought to the Nation in general and the West in particular. Here are some of the developments and statistics he cited:

Since 1902, when President Theodore Roosevelt signed the first reclamation act, 79 Federal reclamation projects or major divisions of projects have been constructed by the Government, from many of which private irrigation groups also receive water.

In the 52 years elapsing since creation of reclamation operations, 116 dams have been built, including Hoover, Grand Coulee, Shasta, Hungry Horse, and others, as well as over 5,000 miles of canals, some big enough to carry the waters of rivers of major size. Included in these structures is the world's longest irrigation tunnel, on the Colorado-Big Thompson project in Colorado.

As the result of the availability of water, irrigable lands have increased from 39,300 in 1906 to 7,147,528 acres by June 30, 1953. On these redeemed lands are located 125,000 family-sized farms and 417 towns with a combined population of 1,653,000.

In 1953 the value of crops from federally irrigated land was \$785,940,000. The cumulative value of such crops since 1906 through June 30, 1953, was \$9.7 billion.

During 1954 more than 24.5 billion kilowatt-hours of hydroelectric energy were provided for the power system of the Western States, bringing a return of \$33,900,000 to the United States Treasury.

The total of all net power revenues returned to the Federal Treasury through June 30, 1953, was \$225.9 million.

Net power revenues during the next 50 years from 1953, at the level of fiscal year 1954, should return an additional \$1,692.5 million to the Treasury.

Irrigation and municipal water repayment contracts should return \$691 million, of which \$108.9 million had been paid to June 30, 1953.

Representative ASPINALL described the stimulating effects of this crop and power production on the natural economy as "almost incalculable," as shown by the steady flow of commerce between Eastern and Western States in carload shipments.

The total cost of project plant properly for the Federal reclamation program, as of June 30, 1953, he told his listeners, amounted to approximately \$2.4 billion. This, he emphasized, is only one-fourth the cumulative value of the crops produced on Federal projects, and is also less than the Federal tax revenues received from reclamation areas which may be attributed to Federal reclamation development.

In a brief section on the development of reclamation policy, ASPINALL stressed the fact that repayment of construction costs by the beneficiaries has remained a basic cornerstone through the entire 52 years. Thus, the revenues from water users, and from power developments, help to pay for the

projects, whereas costs allocated to flood control and navigation are nonreimbursable, in accordance with policies established by Congress. Local communities and States, he pointed out, are always consulted in the planning of projects, and operations are turned over to local irrigation districts as soon as practicable.

ASPINALL spells out nine specific major policies on reclamation, since its origin and devotes attention also to special problems, including economic justification and financial feasibility, the 160-acre limitation on water deliveries, the repayment features of the program, the application of power revenues in the reduction of irrigation costs, and the lack of Federal water policy, which has permitted flood control and other Federal activity to go forward on a nonreimbursable basis, while at the same time requiring reimbursement for irrigation construction.

"There is need to re-assess all water conservation programs," he states, "in terms of their contribution to the Nation's economy and the direct recognition of the place water conservation has in the development of the total resource whether it be for flood control, power, or irrigation or other purposes."

In the opinion of this writer, "ASPINALL's Primer on Federal Reclamation" should be required reading by all Members of the Congress.

ASPINALL PRIMER—AID TO CONGRESS AND WEST

Typifying the thoroughness and energy with which the Congressman from the Fourth District of Colorado goes about his job is the compilation and distribution of the ASPINALL Primer on Reclamation, described in Wednesday's paper by the Sentinel's Washington correspondent, George S. Holmes.

As chairman of the subcommittee of the irrigation and reclamation group of the House Interior and Insular Affairs Committee, Congressman ASPINALL has compiled a concise yet comprehensive history of irrigation and reclamation in the West, and has made it available to every member of his committee and to other new Members of Congress. In making such information available in concise form to these legislators, WAYNE ASPINALL has served both his fellow Congressmen and the West. For there is no doubt that ignorance of the reclamation system, how it operates, and how it is financed, and of what it has contributed and can contribute to the general welfare of the Nation, is one of the chief reasons that western reclamation projects have been traditionally opposed by many, many Members of Congress.

ASPINALL's primer, we trust, will come to the attention of every Representative and Senator and receive their consideration. It comes at a time when reclamation legislation that is of vital importance to the advancement and prosperity of the whole intermountain area—and therefore to the whole Nation—is soon to be up for consideration.

Defense Against Fallout

EXTENSION OF REMARKS OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. RODINO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following edi-

torial from the Washington Post and Times Herald of February 17, 1955:

DEFENSE AGAINST FALLOUT

The Atomic Energy Commission and the Administration have acted wisely in making public a summary of the radioactive after-effects of nuclear explosions. Hard facts are the basis for intelligent planning; and Chairman Strauss' measured statement about the fallout seeks to give the facts in perspective. We suspect that the apprehensions about public panic as a result of this sort of disclosure will prove wholly unjustified. Most of the present information about the fallout, although never before released officially, has been known for some time through various printed stories. Such stories may have caused some alarm, but they also have been greeted with a considerable degree of apathy—perhaps because people simply do not want to think about a cataclysm they feel they can do nothing about. This feeling of futility is, if anything, more deadly than fear.

Full understanding of the great dangers about which Mr. Strauss spoke remains essential. Radioactive fallout from a hydrogen explosion could contaminate an area the size of New Jersey and make it uninhabitable for weeks if not months, even if the bulk of the population managed to survive the blast effects and the immediate lethal dosage of radioactivity. The use of the H-bomb to deny territory could be as significant strategically as the destructive effect itself. Nevertheless, there are many relatively simple precautions that can be taken by way of shelter and discipline, as the Atomic Energy Commission points out, that would greatly reduce the loss of life from radioactivity.

Why is there apathy to even the most gruesomely realistic accounts of the H-bomb danger? Because, in this newspaper's opinion, the people have not been presented with a convincing alternative to the paralyzing prospect of being roasted or garmmarayed to ashes if hydrogen war should start. Surely it is time for a radical New Look at the status of civil defense.

The sad fact is that in its net impact civil defense still is in an appalling state of disorganization—not for lack of effort on the part of persons working in it, but because of insufficient attention at the top levels of Government. Congress has treated civil defense more or less as a joke, in part, no doubt, as the result of a can't happen here complex, but also in part because legislators have not been satisfied that the planning is practical. Despite the hard work of many persons, the program is rife with contradictory assumptions and outmoded instructions. For example, in the District of Columbia, which presumably would be one of the major targets, the air-raid warning system so far is of little value; it is impossible to distinguish between the feeble siren tests and an ordinary two-alarm fire. There is little point in recruiting air-raid wardens and ground observers unless they can be instructed realistically in what will be expected of them.

Apathy and futility are luxuries the country cannot afford. Even in the event of an all-out hydrogen attack, estimates are that 65 percent of the population would survive; with adequate civil defense as much as 95 percent would survive. But an adequate program will not come about accidentally. It can only be obtained if men of stature will attach serious importance to the program and if the makeshift expedients are replaced with consistent, hard-headed planning at the top level. Such planning ought to envisage specific instructions to cities as to the kind of blast and fallout they could expect and the practicable evacuation and shelter measures they ought to prepare. It ought to be related to the amount of early warning that may be provided—the present stage, when the margin of warning would

be small and immediate shelter ought to be sought; the period in which 1 to 4 hours of warning would be possible and large-scale evacuation would be feasible; and, finally, the era of the awesome intercontinental ballistic missile if it should be developed.

None of this is in any way a substitute for enforceable disarmament. The only sure defense against the H-bomb is to control it (and this newspaper reiterates its proposal of last Friday for an internationally monitored moratorium on H-bomb tests as a starter). But even in the absence of international control Americans can do a great deal to protect themselves, given some more vigorous planning and leadership. It is absurd for the country to be spending hundreds of millions of dollars on continental defense and an early warning system and then to permit the necessary followthrough at the civil defense level to be dissipated in lethargy and confusion. Americans have a history of responding sensibly if they are told frankly and realistically what is necessary. The administration and Congress bear a joint responsibility to provide this leadership and the money that will be required to make it effective.

Postal Salary Increase Legislation

EXTENSION OF REMARKS

OF

HON. VERA BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mrs. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following statement submitted by me to the House Post Office and Civil Service Committee in support of an adequate and realistic salary increase for postal workers:

Mr. Chairman and members of the committee, I wish to thank you for this opportunity to state my views in support of legislation providing an adequate and realistic wage increase for postal workers. Such an increase is long overdue and I respectfully request your favorable consideration of H. R. 1592 and H. R. 2183 introduced by Congressman JAMES H. MORRISON and GEORGE M. RHODES, respectively.

There is general agreement that there should be an increase in the salaries of postal employees. H. R. 1592 and H. R. 2183, providing an increase of 10 percent, represent, I submit, an absolute minimum for those workers who have been underpaid for so long despite a constant rise in our standard of living. The last salary increase was in 1951 and the rise in the cost of living since then makes it imperative that the pending adjustment not only be adequate but that it be made as soon as possible.

As I stated to this committee during the postal pay legislation hearings last year it is a grave reflection on our Government that many employees of our Post Office Department, one of the largest businesses in the world, are forced to supplement their inadequate salaries with outside work in order to meet the increasing cost of living today.

I know what it is to be a housewife. I can understand the frustration of the wives of postal workers in attempting to make ends meet on salaries which are far removed from the real needs of the family.

The postal system is a vital part of our Government and the Government has an obligation to see that it is operated as efficiently as possible. One sure way of undermining this efficiency is by continuing to pay salaries which are grossly inadequate. Postal

employees are entitled to a decent wage that will enable them to care for their families.

The bill proposed by the Postmaster General embodying his reclassification plan is completely unrealistic and delegates power to the Postmaster General that is both unwarranted and unnecessary, and does not provide a fair and reasonable salary increase to postal workers.

I sincerely urge this committee to report out H. R. 1592 or H. R. 2183 and give the Congress an opportunity to pass this long needed legislation as early as possible.

Arizona and the TVA

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. UDALL. Mr. Speaker, our national policy concerning reclamation and power programs is being hotly debated these days. It is likely that many Members of Congress are rethinking their position on these questions. I think some light is thrown on this area of dispute by a penetrating editorial entitled "Arizona and the TVA," which appeared in the Arizona Daily Star, Tucson, Ariz., last Sunday. This piece deserves a wide audience, for its author is no political partisan, but the vigorously independent and widely respected William R. Mathews.

The editorial follows:

ARIZONA AND THE TVA

When Senator BARRY GOLDWATER recently glorified the controversial Dixon-Yates contract, and at the same time denounced the TVA as "socialistic," he must have forgotten the environment of his own city of Phoenix, and the activities of some of his staunch friends.

Phoenix, for instance, is the center of the Salt River Valley reclamation project. This project is run by the Salt River Valley Water Users Association. As the first major irrigation project it was originated by a Republican Congress back in the days of President Taft. It was financed federally by Congress with the assumption that all or part of the cost would be repaid.

The Roosevelt Dam, built in 1912, stands as evidence of how the waters of a river can be stored and as they are released for irrigation, generate electricity. Since the initiation of this project, what had been a semidesert has been transformed into one of the greatest wealth-producing valleys in the world.

Although it was made possible by the Federal Government and the use of Federal funds, the final repayments are just being made over a period of 40 years. It has at all times been tax exempt. As it developed, its management has not hesitated to use commonsense, and as the water flowed through the powerhouse of the Roosevelt Dam to generate electricity, other dams and other generating stations were built at lower levels. The result is that the same water generates electricity several times.

The managers of the project have sold the electricity to reduce the cost per acre-foot of water to the farmers. As dry years came on and the water dried up behind the dams, the managers correctly saw that until they could deliver firm electrical power, they would operate at a disadvantage.

Again they did the common sense thing. They built a steam plant, and have added to it. They borrowed the money to do it, and to this day it is tax exempt.

The magic that this enterprise of electricity and water can work opened up new vistas of what our land here in Arizona can produce once it receives water and electricity. The development of irrigation has spread to such an extent that now the use of the water from the Colorado River becomes a reasonable matter. The organization of the central Arizona project to promote diversion of Colorado River waters to central Arizona has come as a natural reaction.

Behind this newest project are some of the best brains and ability in the State. There is not a Socialist among these men. Some of them, most of them, are beneficiaries of the Salt River project. They know what can be done, and they do not call their project socialistic. What is more, they expect Senator GOLDWATER to get an appropriation from Congress to build it.

Between this achievement here in Arizona and the TVA there is a direct connection. If the waters of the rivers of Tennessee can be used to generate electricity, and by that means attract industries and by manufacturing fertilizer restore wornout lands, why should that be called socialistic? If so, the Salt River project and the proposed central Arizona project are socialistic.

Why is one sponsored by a Democratic administration called socialistic, while the other sponsored by a Republican administration—the first administration incidentally to have the vision of the wonders of rivers, electricity, and irrigation—accepted as private enterprise?

The Dixon-Yates contract fits in, too. If it was good business for the Salt River project to build its own tax exempt steam plant rather than buy electricity from a local utility company, why should it not be good business for TVA to do the same thing?

The issue of free enterprise is not at stake, because the Dixon-Yates contract is a cinch. There is no risk in it. Its profits are guaranteed by the United States Government. Free enterprise implies taking risks with one's own resources. It is a system of profit and loss. It did not take creative ability to put over the Dixon-Yates contract. All it took was the right kind of political influence.

The value of all this discussion, and the thing that Senator GOLDWATER has overlooked, is that here in Arizona we have proved how the harnessing of rivers, and putting their waters to productive use, can create other Valleys of the Sun, and that just as it took Federal financing and authority to do it here, so will it with other projects of which the TVA is another good example.

Air Force's Military Air Transport Service

EXTENSION OF REMARKS OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. MCGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an editorial which appeared in my hometown paper the Coshocton Tribune. To say I am in complete accord with this editorial would be putting it in mild terms.

It has been my privilege to be the recipient of MATS efficiency and cour-

tesy. This department and their personnel go way beyond the line of duty as it is often referred to. They have accepted many challenges and hazards and have always responded with honor and distinction. They are entitled to the thanks of us all.

CONGRATULATIONS

When a war is on, we hear a good deal about the Air Force's Military Air Transport Service. We are extremely conscious then of the huge bulk of men and materials which it lifts swiftly and safely to distant battlefield areas. But we seem to forget that this effort goes on with or without a war.

In 1954, its planes averaged a flight over the Atlantic or Pacific Ocean once every 54 minutes. Every hour of the year, MATS airlifted an average of 56 military passengers, 5 medical patients, and more than 20,000 pounds of high-priority cargo and mail.

Congratulations to MATS are clearly merited for a distinguished showing under every sort of hazard and challenge.

Rapid Growth of the San Fernando Valley

EXTENSION OF REMARKS OF

HON. JOSEPH F. HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. HOLT. Mr. Speaker, I should like to call attention to the rapid growth of the San Fernando Valley. The growth is phenomenal and merits the attention of my colleagues in the Congress of the United States:

VALLEY LEADS LOS ANGELES GROWTH WITH 613,188—COUNTY COMMISSION REPORTS INCREASE TO FIRST OF YEAR

The San Fernando Valley now has 613,188 residents.

This figure, which includes the cities of Burbank and San Fernando, was released today by the county regional planning commission and reports the valley's growth to January 1, 1955.

Meanwhile, the county's total population jumped to a record figure of 4,982,529, according to the report. This represents an increase of 175,896 for the calendar year 1954.

Los Angeles city's population including Torrance, was estimated to 2,228,050, according to the same report.

VALLEY LEADS

The figures for the valley indicate that this is the fastest growing area in the entire county, said Dr. Jackson Mayers, of Valley Junior College sociology department who completed three surveys of the valley.

While central Los Angeles City areas were losing population, the valley section of the city, excluding the cities of Burbank and San Fernando, increased population from 310,964 as of the 1950 census to the present 505,338, Dr. Mayers states.

This represents a 62.5 percent increase in less than 5 years.

HIGHER PERCENTAGE

The totals reveal that the valley is growing at the rate of 3,420 persons a month or 41,000 a year.

The valley growth, Dr. Mayers reported, is the main reason for the 200,586 increase of population in Los Angeles City since 1950. It is responsible for 98 percent of the growth.

Further estimates show that, where the valley was 15.7 percent of the city in 1950, today it has 23 percent of city population.

Burbank, which had 78,577 residents in 1950, now has 92,501. San Fernando City jumped from 12,992 to 15,349 in the same period.

VALLEY POPULATION GAINS 212,077 IN 5 YEARS (By Dr. Jackson Mayers, sociologist at Valley Junior College)

The all-Valley population gain of 212,077 in less than 5 years since the 1950 census exceeds the population increases of any other major city area in the entire United States, a national comparison revealed today.

With a combined population of 618,343 for Los Angeles city parts of the valley, Burbank, San Fernando, and Calabasas, the San Fernando Valley is accredited with being the fastest growing area of its size in the country. Its population is moving up faster than that of New York, Chicago, Philadelphia, the nonvalley parts of Los Angeles city, Detroit, and Baltimore. The valley is also exceeding the growth pace of Cleveland, St. Louis, Washington, D. C., Boston, San Francisco, Pittsburgh, Milwaukee, and Houston.

Only these cities have larger populations than the San Fernando Valley.

The valley has within it the county's sixth largest town, Van Nuys, which with 94,200 population is exceeded only by Los Angeles city, Long Beach, Hollywood, Pasadena, and Glendale. For the first time Van Nuys has become larger than Burbank which has a population of 92,501.

In 1950 Van Nuys had 57,053 people. The gain in less than 5 years is 65 percent. At its present rate of growth, Van Nuys will become the first city in the San Fernando Valley to pass the 100,000 mark. This record total can be reached some time this year.

Burbank, the second largest valley community, has risen 18 percent over the 78,577 total reported in the 1950 census.

Third place in population goes to North Hollywood with 85,000 people reported as of 1955. This compares to a 1950 total of 69,398, for a rise of 22.5 percent.

The fastest growing town of the whole valley is Reseda with a reported population of 55,000. This represents a 234 percent rise over the 16,456 figure of 1950.

Right behind is Pacoima which registered a 1955 population of 48,000. The total is almost exactly double the 24,301 reported in 1950.

SUN VALLEY UP 39 PERCENT

Sun Valley is up 39 percent to 32,500 people. In 1950 it had 23,359 people.

Studio City with 29,000 is up 37 percent over the 1950 total of 21,046.

With 20,500 people Sherman Oaks showed a rise of 33 percent over the 1950 figure of 15,425.

These increases give the valley 8 cities with populations of 20,000 or more.

Calabasas, which is outside Los Angeles city, has a reported 4,155 people. The city of San Fernando reached 15,349.

Significance of the figures is that city areas of this size are well beyond any known suburb size. These areas are now in the city class. They are meeting most of the basic needs of their populations in essential respects. The Los Angeles area is now changed from a major city and many suburbs to a series of cities, one beside the other. A series of multiple nuclei have come into existence.

In 1959, Los Angeles was the only major city to have less population than the surrounding towns in the county. Los Angeles was outnumbered by 51 percent against 49 percent. It is not dominant in a population sense as is, say, the city of Chicago, where the main city represents 75 percent of Cook County population.

VALLEY HIGH IN NATIONAL CONSTRUCTION

San Fernando Valley (exclusive of Burbank and San Fernando cities) finished

fourth in the Nation in new construction valuation for 1954, according to figures of 40 leading cities, compiled by Dun & Bradstreet, Inc.

Building total here exceeded that of St. Louis, Washington, D. C., Miami, and Minneapolis combined. Following is the table of construction valuations for 1954:

New York.....	\$546,570,149
Los Angeles.....	408,671,889
Chicago.....	229,881,300
San Fernando Valley.....	208,912,098
Houston.....	165,338,198
Dallas.....	142,690,046
Philadelphia.....	137,508,800
Detroit.....	126,511,219
Milwaukee.....	102,241,364
Denver.....	100,569,348
Baltimore.....	89,122,612
Atlanta.....	87,541,690
Seattle.....	77,188,350
San Diego.....	72,379,291
Cleveland.....	62,255,000
St. Louis.....	60,683,304
Kansas City, Mo.....	58,674,000
San Antonio.....	58,307,589
San Francisco.....	57,745,732
Washington, D. C.....	55,687,881
New Orleans.....	54,948,128
Cincinnati.....	53,772,510
Portland, Ore.....	50,525,755
Memphis.....	49,178,068
Miami, Fla.....	49,019,186
Oklahoma City.....	48,515,918
Fort Worth.....	47,081,476
Austin, Tex.....	45,538,709
Long Beach, Calif.....	45,258,150
Columbus, Ohio.....	44,813,590
Wichita.....	41,416,975
Jacksonville.....	41,208,690
Tampa.....	40,944,437
Spokane.....	40,713,804

Mr. Sam Makes History

EXTENSION OF REMARKS OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD an editorial which appeared January 4, 1955, in the issue of the Daily Times published at Mamaroneck, N. Y., titled: "Mr. Sam Makes History."

It pleased me and I think it will please you, Mr. Speaker.

MR. SAM MAKES HISTORY

When SAM RAYBURN, of Texas, is elected Speaker of the House of Representatives tomorrow, he will be establishing historic records.

For one thing, he will be only the second man in all our history—and the first since the Civil War—to be elected Speaker after he had lost the post twice before. Mr. RAYBURN held that office in 1940-1947 and again in 1949-1953. Now he makes it for the third time.

For another point, this is the first time that a Speaker has been chosen for a seventh term.

And, too, Mr. RAYBURN has already served as Speaker for 10 years, 3½ months, which is the all-time record for that job. His new tenure will add years to that record and establish it as even harder for successors to surpass.

Lastly, Mr. RAYBURN heads the list of all our Congressmen in seniority. He now be-

gins his 22d consecutive term since he first took his seat in the House on March 4, 1913.

This has been the record, mind you, of a man who on Thursday celebrates his 73d birthday. Like "Veep" BARKLEY, of Kentucky, who at 77 returns to the Senate over which he once presided, "Mr. SAM" of the Fourth Texas Congressional District, doesn't allow age to slow him down.

And it is comforting that we have in the important post of Speaker, one with his experience and wisdom. For he is second in line of Presidential succession.

Great Lakes Connecting Channels

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1955

Mr. REUSS. Mr. Speaker, I have introduced legislation which will bring ocean-going vessels to the docks of Milwaukee and other Great Lakes harbors beyond Lake Erie.

The Common Council of the City of Milwaukee has recently adopted a resolution which supports the attempts to deepen the connecting channels of the Great Lakes.

We have heard many eloquent speeches recently on the necessity for expanded foreign trade, in which I strongly concur. The people of Wisconsin, Minnesota, Illinois, and Michigan are inclined to support the reciprocal trade bill, because they see the day approaching when all the Great Lakes will become an artery for foreign trade.

It is inconsistent, Mr. Speaker, for the House of Representatives to support expanded foreign trade, if we do not at the same time support legislation which will enable deep draft ocean navigation to enter the great commercial heart of America, the Middle West.

I therefore commend the following resolution adopted by the Common Council of the city of Milwaukee, February 8, 1955:

Resolution regarding Federal legislation and appropriations to deepen connecting channels of the Great Lakes

Whereas the Governments of the United States and Canada are now engaged in the construction of the St. Lawrence seaway project, which, when completed in 1959, will open the port of Milwaukee and other cities of the Great Lakes to deep draft ocean navigation, with great benefits to the economy of the entire midcontinent area and to national defense; and

Whereas the St. Lawrence seaway project will provide 27-foot navigation only to Lake Erie, and the connecting channels of the Great Lakes in the Detroit River, St. Clair River, Straits of Mackinac, and St. Marys River will require deepening in order to bring the full benefits of the St. Lawrence seaway project and deep-draft navigation to the ports of Lake Huron, Lake Michigan, and Lake Superior; and

Whereas, entirely aside from the requirements of the St. Lawrence seaway project, the deepening of Great Lakes shipping channels is timely and necessary to utilize to full capacity the many large vessels which have entered service on the Great Lakes recently, representing an investment of hundreds of

millions of dollars, and which are now unable to operate at full capacity due to channel depth limitations; and

Whereas the deepening of Great Lakes connecting channels will add to the efficiency of lake and ocean shipping and will confer great economic benefits on the commerce of the Great Lakes and of the entire Middle West, and is consistent with the trend toward deep-draft shipping and the substantial deepening of seaboard harbors at many localities; and

Whereas congressional legislation for this purpose should be given high priority so that the deepening of Great Lakes connecting channels may be completed in time to coincide with the completion of the St. Lawrence seaway project: Now, therefore, be it

Resolved by the Common Council of the City of Milwaukee, Wis., That this body hereby declares its vigorous support for legislation to authorize the deepening of Great Lakes connecting channels and the appropriation of funds for that purpose by the Congress; and be it further

Resolved, That the Senators and Representatives from Wisconsin be requested to exert their best efforts to secure the passage of such authorizing and appropriating legislation by the 84th Congress; and be it further

Resolved, That the Board of Harbor Commissioners and other interested city officials and departments be authorized by this Common Council to take all steps necessary to further the progress of connecting channels deepening legislation, and to collaborate with all other ports, associations, and interests working toward this end; and be it further

Resolved, That certified copies of this resolution be transmitted by the city clerk to the President of the United States; to the Senators and Members in Congress from the State of Wisconsin; to the Public Works Committee, House of Representatives; to the Commerce Committee, United States Senate; and to the Chief of Engineers, United States Army.

Security Risks and the Risks To Freedom

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. MULTER. Mr. Speaker, the following address by Harlan Cleveland, executive editor of the Reporter, given at the Rockdale Avenue Temple, in Cincinnati, Ohio, on January 23, 1955, is most appropriate. I direct it to the attention of our colleagues:

SECURITY RISKS AND THE RISKS TO FREEDOM
(By Harlan Cleveland)

Your celebration tonight, 300 years after the first Jewish settlement in America, is bound to remind us of what the Jews have done to build our country. In the spirit of the occasion, perhaps I should take a text from one Jew who laid a calming hand on the Nation's brow in a moment of stress and unreason.

He was Jacob Henry, one of our first security risks. You'll remember that he represented Carteret County in the North Carolina House of Commons in 1808, and was reelected in 1809. Two weeks after the session of 1809 opened, a colleague from Rockingham County moved that Jacob Henry's seat be vacated because, contrary to the constitutional requirement, he "denies the divine authority of the New Testa-

ment, and refused to take the oath prescribed by law for his qualification."

Debate started the next day, and Jacob Henry made a speech justly famous for its rhetoric—and famous also because he was right and his opponents were wrong. "The day, I trust, is long past," said Jacob Henry, "when principles merely speculative were propagated by force. . . . The proud monuments of liberty knew that . . . governments were only concerned about the actions and conduct of man, and not his speculative notions. . . . Will you bind the conscience in chains, and fasten conviction upon the mind, in spite of the conclusions of reason, and of those ties and habitudes which are blended with every pulsation of the heart?"

Jacob Henry won his fight, but he couldn't win ours. We have to do that ourselves. A few years ago, the phrase "security risk" was just another piece of Washington jargon. Now the phrase and all it connotes, sits like a heavy rock on the Nation's conscience, and we have to ask once more, "Will you bind the conscience in chains, and fasten conviction upon the mind?"

A few weeks ago, Albert Einstein wrote our magazine a letter commenting on a series of articles about American science. "Instead of trying to analyze the problem," he said, "I may express my feeling in a short remark: If I would be a young man again and had to decide how to make my living, I would not try to become a scientist or scholar or teacher. I would rather choose to be a plumber or a peddler in the hope to find that degree of independence still available under present circumstances."

At about the same time, these other things were happening:

The chief of a special mission to Brazil was trying to explain to his Brazilian host why the American Government had assigned a detective to accompany him. How could he explain it? The security officer was along to check up, not on the Brazilians but on the members of the American mission.

A friend of mine, back from Germany, showed me a dossier 3 inches thick. "I collected all these papers," he said proudly, "to prove beyond question that I resigned from the Government. Otherwise, everybody will think I was fired."

A Foreign Service officer named John Paton Davies was released from the State Department. Secretary of State Dulles had found that his reporting on China showed a definite lack of judgment, discretion, and reliability. During the next few days, Mr. Dulles showed how much these security questions tug at a man's conscience. The very next day, the Secretary of State called Davies' lawyer to say he would be glad for Davies to use his name as a reference with any future employer. A few days later, the Secretary was quoted by a visitor as still worried. The interview had nothing to do with Davies; but referring to the subject of discussion, the Secretary reportedly said, in effect: "This is very much like the Davies case. We know what is the right thing to do, but we can't of course afford to do it."

Over at the Department of Agriculture, a veteran farm attaché was thrown out. The State Department's security office had cleared him, but Secretary Benson had read part of the file to the President, and the President had said the file scared him. Harold Stassen rehired the man for a sensitive job in a sensitive country, but the President declined to tell his press conference he thought Secretary Benson had been wrong.

At about the same time these more or less tragic events were transpiring, the security program also had its lighthearted side. In one Government agency, a man was called on the carpet by the security office. He had been observed the previous evening with a blonde in a downtown cocktail lounge. How come? The employee, who liked his work, swallowed the obvious retort that it was

none of the Government's business, and produced evidence that the blonde was his cousin, in town for a short visit.

In a municipal court, somewhere in the United States, a drunk refused to answer a question, and said he would "stand on the fifth commandment." The magistrate was equal to the occasion. "You mean you honor your father and your mother?" he retorted. "O. K. Now answer the question."

I understand a Hebrew proverb has it that if God were living on earth, people would break his windows. The tropic growth of the Government's security program tempts me to bring this saying up to date. Nowadays, if God were living on earth, he would be a security risk.

What's got into us, anyway?

It's hard to remember now how recent it all is. In 1939, 15 years ago, when the Russians had been in power already for 22 years, we had no general security program, not even in the Federal Government. That was the year I entered the public service. I was hired under a civil-service code that started out with rule 1, published by the Civil Service Commission in 1884. Listen a moment to rule 1:

"No question in any form or application in any examination shall be so framed as to elicit information concerning the political or religious opinions or affiliations of any applicant, nor shall any inquiry be made concerning such opinions or affiliations, and all disclosures thereof shall be discounted."

I didn't realize it at the time, but in the same year I joined the Government, rule 1 was consigned to the ashcan by the first Hatch Act. For that law, signed in 1939, made it illegal for any Federal employee "to have membership in any political party or organization which advocates the overthrow of our constitutional form of government in the United States."

Who's to say what organizations are advocating the overthrow of the United States Government? As the Communist techniques became better known, during and after the war, it was clear that they didn't operate as a direct party of revolution, but as a kind of central gland for secreting into the national bloodstream a constant flow of loyal Communists. They worked through what they called front organizations—which were any organizations they could infiltrate and control—unions, peace societies, research groups, fraternal, and even religious organizations.

The best way to infiltrate any American organization is no mystery. Try it yourself: Just speak up often, take on more than your share of the disagreeable routine work any club has to get done, and arrange for someone to nominate you for the executive committee. The Communists, often concealing their party ties, tried this tested formula in thousands of organizations. Sometimes they succeeded; much, much more often, they failed. But they always tried.

That is why the Department of Justice, which had to decide what organizations the Hatch Act was talking about, developed a list of organizations the Communists tried to infiltrate. From that point on, each step was like dry martinis to a sousé: easy to take, hard to retract.

We're used to blaming Congress for our latter-day intoxication with security, but it's the executive branch that mixed the headiest drinks. It was a Cabinet member, Tom Clark, who published the Attorney General's list of organizations classed as subversive. It was the overloaded security officers in the executive departments who started dispensing with real detective work and relying on a mechanical cross-referencing of names on letterheads and mailing lists of the proscribed organizations. President Truman, not Congress, issued the first loyalty order—

and tightened it later by shifting to the accused the burden of proving there was no reasonable doubt of his loyalty. President Eisenhower, not Congress, replaced the loyalty criterion with the broader concepts of security risks, lumping into a single category Communists, drunks, perverts, over-talkative folk and Americans with relatives stuck behind the Iron Curtain.

Last year, the administration carried the whole process one step further. To prove its patriotism and win elections, it started publishing statistics about how many Federal workers had been fired or resigned with derogatory material in their files.

I have seen some of these security files, while I was working in Washington, and the term "derogatory material" can mean anything or nothing. Everybody these days has known at least one man who, like a friend of mine, has to spend months or years overcoming some casual informant's memory that he was considered a "pink" in the middle thirties. My own favorite case is the one made public by Anthony Lewis, a reporter for the Washington Daily News. In this case, "the employee was accused of associating with a writer who will go here by the name of John Brigby Jones. The charge continued: 'Information indicates that John Brigby Jones was author of a book which was advertised in a Louis Adamic publication. Louis Adamic had been listed as an official of the Progressive Party in Philadelphia in 1948, which has been cited as a Communist-front organization by the California Tenney Legislative Committee.' This might best be called wandering gull—from the Progressive Party to the late Mr. Adamic, to his publication, to a book advertised in it, to the author (who may not have placed the ad), and finally to his acquaintance, the accused Government worker."

To support this kind of reasoning, a whole system of scholarship is now established and expanding with extraordinary speed. It is said the FBI alone has dossiers of disloyalty on 5 to 10 million Americans—no inconsiderable fact by itself, when you consider that at least 1 man, cleared after a long security hearing, was reportedly fired because the agency head was uncomfortable about having in his employ "a man with such a thick security file." These 5 or 10 million names, and many more who could be added to the list on the same criteria, are people who belonged or were on mailing lists of organizations which the Communists tried—and in many cases failed—to capture. The dossiers include lots of "Unevaluated Intelligence," raw data, casual, spiteful, or inaccurately transcribed remarks by informants whose names are not given and who often have not been investigated for reliability themselves.

This system of scholarship is duplicated in some measure by several congressional and State committees, and a growing number of businesses, schools, foundations, and private detective agencies. For the sickness we call security is contagious. It spreads like an ink stain on a blotter—in all directions.

It spreads, first, in extent. Quite apart from the Government's 2½ million servants, and the employees of all the States, and all the members of the Army, the Navy, Air Force, and the Marines, the fear of security risks now pervades every organization that deals with the Government, gets money from the Government, gets tax exemption from the Government, is regulated by the Government, or hopes for future business from the Government. The budding scholarship of security is called on to judge whether literally millions of people will be employed at all—scientists in private firms; workers and executives in defense plants—and their subcontractors; students and researchers on grants from the Government or tax-exempt foundations; actors and writers working in

movies or TV; faculty members in any college or university that may want to get Government contracts to fatten its budget; all merchant seamen; anyone who wants a United States passport; and many, many other categories. The unworried American who today has no occasion to search his memory and put his files and scrapbooks in order is a member of a rapidly dwindling minority.

The search for the riskless society spreads in other ways, too. Once every Government agency has a police department, it's natural for the police to be given added functions, like checking up on the morals and ensuring decorous use by every employee of his leisure time. I'm not joking; a recent Budget Bureau order tells every Washington agency to do just that. Hence the questions about the blond cousin in the cocktail lounge.

The search for risks is also pursued with modernized techniques. A man's private life is now subject to invasion by a widening variety of electronic devices, used by Government and private gumshoes alike: we are already in the era of wrist-watch radios, observation by concealed television, and unbelievably efficient microphones for use in recording your lightest and most private word.

The security system spreads finally through vaguer and vaguer criteria for judgment. A whole tradition of dangling definitions and open-ended categories is in the making. The famous State Department order in 1953, ordering its information outlets not to use "material by any Communists, fellow travelers, etc.," was not so far ahead of its time, after all. The main grist of the security system today is not the Communists, but the "et ceteras."

We have nearly reached the point where the burden of proof is on every American to demonstrate beyond a reasonable doubt that he is not an "et cetera."

Let us not fail to remember that this didn't all start with the late McCARTHY or any of his political ancestors like Gerald L. K. Smith.

It started with the Communists. The security system began as a natural and healthy reaction to their stealthy duplicity, their secret double lives, their use of the lie as an instrument of power. The Communists tried to take over the centers of power and thought in this country—and failed. But they also tried to break up that sense of community in which our high morale as a nation has always been rooted.

Let's constantly remember this: that to dissolve this sense of community, this "stickum" of mutual trust, is the main concern of our enemies. Even more important than sending spies into our midst is to plant the idea that there are spies in our midst, that no man can be trusted, that even good friends may be secretly vile. As Learned Hand said, "A community is already in the process of dissolution where every man begins to eye his neighbor as a possible enemy."

Twelve years ago, the Chinese Communist leader Mao Tse-tung explained how men could be persuaded to an appreciation of communism:

"If the reasoning is good, if it is to the point, it can be effective. The first method in reasoning," Mao went on to say, "is to give the patients a powerful stimulus, yell at them, 'you're sick,' so the patients will have a fright and break out in an overall sweat; then they can be carefully treated."

We refused to listen to the Communists, but we didn't have an equal resistance when American patriots also yelled at us, "you're sick." In opposing Communist infiltration, we somehow fell into the other trap the Communists had laid for us. Faced by men who found a career in anticommunism, we started helping them to dissolve the "stickum" of mutual trust that holds our society together.

We hear a lot these days about a broad religious revival in this country. Certainly

there are more members of most churches than there have ever been before—a higher proportion of the people professing religion than was present in the Thirteen Original Colonies, which were supposedly peopled with men and women who left Europe so they could practice their religion in peace. If there is such a revival, it is probably not due to a greater acceptance of the antique rituals of your church or mine. More likely, it is because all of us are seeking to rediscover a sense of community we feel we have lost, a sense of community on which our free political institutions themselves are based. We Americans hold shares in a great tradition, a long and noble experience in which a revulsion against torture racks and star chambers produced the great political guarantees that are built into our Constitution.

We all feel, a little desperately, that if the "glue" of community is loosened, the tradition of political freedom can also disappear. That is why so many people feel as Albert Schweitzer wrote in one of his gloomier moments, that "we are not far from shipwreck on the rock of wanting to have even truth organized." Schweitzer overcame his gloom with action. To the question, "Whether I am a pessimist or an optimist," he said, "I answer that my knowledge is pessimistic, but my willing and hoping are optimistic." We can, will, and hope to change our course. But how?

There is much talk these days of a national commission to study the whole security system. Let's see if we can foresee, in outline, the kind of reasoning that a suitable commission might apply to its problem.

First, the commission will have to pin down just why it is that the security system so offends the national sense of what's right, why it cuts so abrasively across the American feeling of community. Surely the answer here is that it introduces an absolute into a political system that has always thrived on moderation, tolerance, the Aristotelian mean. It tries to eliminate risk utterly. It assumes there are absolute secrets which can be absolutely guarded from disclosure to our enemies. It tries to cover everybody.

It flies in the face of the American tradition that men can know something besides the official truth and say something besides the accepted norm. What Milton called the right to say "No" to the authorities is still our most precious social asset.

Our commission will, therefore, have to start by declaring the validity, for our time and Nation, of those same ancient truths and great principles which Jacob Henry used to defend himself in 1809.

It probably won't be able to improve, in this department, on what great American jurists have already said. Listen to Chief Justice Charles Evans Hughes, in the unanimous DeJonge decision: "The greater the importance of safeguarding the community from incitements to the overthrow of our Constitution by force and violence, the more imperative is the need to preserve inviolate the constitutional rights of free speech, free press, and free assembly in order to maintain the opportunity for free political discussion, to the end that Government may be responsible to the will of the people and that changes, if desired, may be obtained by peaceful means. Therein lies the security of the Republic, the very foundation of constitutional government."

The commission can borrow, too, from the recent statement by the board of directors of the American Association for the Advancement of Science, which made clear that there is no such thing as a permanent scientific secret, and introduced the arresting thought that every person is to some extent, however small, a security risk.

With this perspective on its problem, the commission should be able to decide against trying to create a riskless society. But what kind of a security system should it set up in place of the Gargantua that now, as Mao

Tse-tung would wish, causes us to break out in an overall sweat?

The key elements of a rebuilt system, I think, would be these:

1. The new system would cover only a limited number of people, in positions that are really of first importance to the national security.

2. It would encourage Government administrators to weigh the balance of risks, in using or not using a man in the Government's employ. It would thus place the stress on looking at the whole man, not at some isolated incidents or writings or impressions he has made on others.

3. It would abandon the lumping of disloyalty with other reasons for denying to a man the opportunity for public service. It may be impossible to avoid a procedure whereby a disloyal employee is fired with public knowledge of the reason for firing him. But no conceivable case can be made for a system which implies that everybody leaving the Government was a potential traitor.

4. Finally, and most important, there must be some regular judicial review of the whole process—complete with the presumption of innocence, the elimination of hearsay evidence, confrontation of witnesses, and the rest of the safeguards that have been developed in Anglo-Saxon jurisprudence over the centuries. Nothing short of a central review by men qualified to make considered judgments after listening to the whole story, will satisfy that underrated critic of every public policy, the American sense of fair play. John Lord O'Brien put it this way in a 1952 lecture: "The right to a hearing—the right to a fair hearing—involves a moral principle and one recognized as an element of public morality long before the adoption of the Constitution. It has become a legal right because it was a moral right, and the age-old test remains unchanged—the test of what is fair between man and man. This phase of the American tradition is the most precious heritage that has come down to us. It must not be sacrificed now."

The sickness which afflicts us, being partly psychosomatic, will not be cured just by taking pills marked "fair procedures." But in revising the procedures and restating our principles, we can perhaps begin to glue back together the sense of community, the lack of which has been so important a part of our national nervous breakdown. And if we recover our balance in the Government's security system, the privately sponsored erosion of our sense of community can more readily be checked.

Community, not conformity. On this point, Jacob Henry gave us a way to remember the difference: "When Charles the Fifth, Emperor of Germany, tired of the cares of government, resigned his crown to this son, he retired to a monastery, where he amused the evening of his life, in regulating the movements of watches, endeavoring to make a number keep the same time, but not being able to make any two exactly alike, it led him to reflect upon the folly and crimes he had committed, in attempting the impossibility of making men think alike."

Lithuanian Independence

SPEECH
OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mrs. KELLY of New York. Mr. Speaker, I am happy to have this privilege to pay tribute to the Lithuanians on

the 37th anniversary of their Independence Day.

There are certain things we value so highly that we carefully preserve them from the erosion and forgetfulness of time. There are certain events which we consider of such great significance that we take care always to preserve their memory. Time and time again we advert to these events for inspiration. Time and again we find ourselves drawn to them with a solemn sense of awe and reverence, because we realize that they are milestones of vital significance in man's struggle toward a higher and better life.

Such an event is the proclamation of Lithuanian independence. And such are our feelings when we celebrate Lithuanian Independence Day, the national holiday of all Lithuanians.

After February 16 of 1918, the day on which Lithuania was proclaimed an independent Republic, the history of that land was first a happy one, but then, when the Nazis and Soviet Communists decided to destroy its freedom it entered into a time of serious troubles. Thus, since the proclamation of independence in 1918 Lithuania has experienced both happiness and misery, prosperity and poverty, progressive democracy and totalitarian dictatorship.

The first two decades of Lithuania's independence were a blessing to its peace-loving, hard-working, and patriotic inhabitants. In the course of that short time, from 1919 to 1939, the country was definitely on the road to prosperity and progress, and the people were happy in rebuilding the economic and political life of their reconstituted country. They were not only learning the hard but useful lessons of democracy, but they were also practicing it in their daily communal and national life.

In those relatively calm days when the cold war was unheard of and World War II was not even thought of, Lithuania seemed to be safe and secure. However, as it turned out, the Lithuanians were not masters of their country's fate, nor could they assure its peaceful destiny. There came a turn of international events that has proved disastrous and quite tragic to Lithuania since 1939.

Lithuania's independence was one of the first casualties of World War II, and now, for almost 16 years, the unfortunate Lithuanians have been suffering under the worst of tyrannies. In 1940 their country was annexed to the Soviet Union; in 1941 it was overrun by Nazi forces; in 1944 the Nazis were evicted by the Red army, which came and took over Lithuania in the name of the Soviet Union.

Since those dark days Moscow's agents have turned the country into a prison. Just what the exact situation is in Lithuania we in the West have no way of knowing in detail, because for more than a decade the country has been sealed off from the West. We often get reports or rumors to the effect that there is considerable underground resistance to the Communist regime. Unfortunately, however, a totalitarian dictatorship, once imposed, is difficult to dislodge.

We who understand the plight of the Lithuanians and sympathize with them

think of that historic day when they proclaimed their independence and ardently hope that soon they will be able to celebrate in freedom this national holiday in their homeland.

Statement by Ben A. Droski, President of Michigan Federation of Post Office Clerks

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. DINGELL. Mr. Speaker, in compliance with a request, I wish to include the following statement by Mr. Ben A. Droski, president of the Michigan Federation of Post Office Clerks:

MICHIGAN FEDERATION OF POST OFFICE CLERKS
FAVOR BILLS H. R. 2117, H. R. 2118, H. R. 1572, AND REJECT H. R. 2987 IN POSTAL EMPLOYEES PAY INCREASE STRUGGLE

(Statement by Ben A. Droski, president, Michigan Federation of Post Office Clerks)

At present, before the House Post Office Committee, numerous pay bills for postal employees are being considered. The employee organizations of the rank-and-file postal employees, which by far exceed all other organizations, are chiefly interested in supporting H. R. 2117, H. R. 2118, and H. R. 1572. These bills include a 10-percent increase with a retroactive clause, an across-the-board raise in all grades. At this point however, this organization would like to stipulate that, only due to the decision of the Government Employees Council, which our national office is affiliated, does it support the 10 percent, the original sum of \$800 is the right figure and amount needed to substantially attain an American standard of living.

REJECTION OF H. R. 298 RECLASSIFICATION BILL AND 5-PERCENT INCREASE

This organization definitely opposes H. R. 2987, the bill submitted by Congressman Tom Murray in behalf of the Post Office Department. This latter bill contains a 5-percent raise plus a reclassification of the entire postal-pay structure. Here are the reasons of the Michigan Federation of Post Office Clerks for this action:

First, the waste of time to consider a proposal of reclassification that would be of no value to the rank and file, should not be borne by the Congress.

Second, the 5 percent offered is not a raise. In full agreement with the Judiciary Committee and the many testimonials given in behalf of a raise for Congressmen and Federal judges, that a raise has been long overdue, the postal employees are seeking a substantial raise of more than 5 percent, and those who believe they can only afford 5 percent, are not sincere in wanting to give the postal people a raise at all.

CONGRESSMEN FORTUNATE IN QUEST FOR PAY INCREASE HAVE NO PERCENTAGE OF RECLASSIFICATION TO CONTENT WITH

The Congressmen are fortunate in their pay quest. They have no percentage to worry about, neither do they have a proposal to be reclassified. However, let us suppose they did have the latter issue to guard against, and suppose it featured the proposals such as the Post Office Department wishes to impose on their employees, here is how it could happen: Congressmen's pay could be judged in accordance with the number of constituents in his or her district.

Such as the number of positions that some of the first-class post offices provide, some large offices and some small, which reclassification would be unfair to. The Congressmen's district could be judged on its importance, classification being rural, residential, or industrial, this in the post office would be, first-, second-, and third-class offices.

A Congressman beginning his first term would probably have to start at a smaller entrance salary. His first term being new to him, he would have to attain his experience before he can become qualified, such as a substitute in the post office. However, if called upon, he could fill in a responsible position, if he were reclassified.

COMMITTEE ASSIGNMENTS

If a Congressman were appointed to a committee of lesser importance, under reclassification his duties would be enumerated as such, thus his pay would be governed accordingly. Under the Post Office Department reclassification principle—equal pay for equal work.

Unassigned Congressmen, or unfixed key positions as the Reclassification Act calls for in the Post Office, would have the Speaker of the House provide their category, and would determine the applicable salary level. This is what could happen to a Congressman under a mythical reclassification act, and what would happen to a postal employee if he were restricted to such a proposal.

RESPONSIBILITY WITH SAME PAY

It is an established fact that a Congressman can do whatever job he is assigned to. He receives the same pay as his colleague. They will receive a straight across-the-board increase, not in accordance with their importance or responsibility. They are all important in all phases of duties the same as a postal employee.

In reference to the postal employees, the whole situation would be different if they themselves were griping about the responsibilities they all share, but they are not. Why then start a revolution such as reclassification; it wouldn't affect any rank and file employee to receive any benefits; in fact it would cause so much friction that Congress would have to include another addition to the legislation; this would be the provision for another key position known as POP's (post-office patrolmen) in the post offices to keep law and order.

SUBSTANTIAL RAISE FOR ALL

The postal employees are only asking for a substantial raise, straight across the line, not of this 5-percent stuff; this wouldn't pay the income tax on our part-time jobs we have at present; let's decide on a real, sincere raise, justifiable to the difference of a Congressman's cost of living today and in 1939.

To make a more rapid motion, let's make this an emergency issue; it has been since 1951; that's long enough; hurry it out for a vote on the floor of the Congress. We trust in your judgment; you have our facts, and very small wage figures to consult, how can you go astray? Thank you for this opportunity to enlarge upon the feelings of the employees who are members of this great organization.

Navy Supercarriers

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 2, 1955

Mr. PELLY. Mr. Speaker, under leave to extend my remarks, I include the

following editorial from the February 9 issue of the Bremerton Sun. Recently I pointed out what seemed to me a weakness in our legislative procedure whereby, unless Congress is alert, our military policy could be dictated by appropriations rather than after the careful study and consideration of the Committee on Armed Services. The analysis of the Bremerton Sun covers this point:

Kitsap's Congressman, TOM PELLY, made a solid case when, in bucking Congressman CANNON on the Missouriian's opposition to construction of another Navy supercarrier, he pointed up a dangerous situation which exists in the Congress.

PELLY said he is fearful the time may come when the Appropriations Committee, such as the one headed by CANNON, actually could dictate this Nation's defense and military policy merely through the device of controlling appropriations.

Our Congressman concedes the likelihood of this at the moment is remote and emphasizes the strong support being given the second supercarrier idea by Chairman VINSON of the Armed Services Committee. PELLY believes any quarrel now between the armed services and Appropriations Committees would be decided by the House in favor of a strong military policy. But he points to historic congressional respect for committee decision and warns: "In other words, unwittingly, we might scuttle our aircraft-carrier program and our national-defense policy. I'm sure we won't, but we might."

From what we understand of the battle swirling around CANNON's head, we feel sure PELLY is right. At the moment CANNON—once a highly respected champion of the taxpayer through his advocacy of economy and a balanced budget—is embroiled in a purely political battle apparently of his own doing. Reinstated as chairman in the Democrat control of the House, he is acting like a minor tyrant in attempting to give out subcommittee leadership posts on a basis of personal favor. He thus is earning the disfavor of many who once supported him.

As a matter of fact, CLARENCE CANNON very well may be spiking his own guns. This should make it all the easier for PELLY and VINSON and other advocates of the supercarrier to push that project along.

Nevertheless, PELLY's initial point still remains a dangerous warning. The overlapping jurisdiction of House committees does present an ever-present situation which, theoretically, could result in a dollar-conscious Appropriations Committee actually writing the Nation's defense policy.

Exchange of Letters With General MacArthur

EXTENSION OF REMARKS OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. ANFUSO. Mr. Speaker, I have recently had an exchange of correspondence with Gen. Douglas MacArthur which, I am certain, will be of utmost interest to all Members of Congress and to the Nation as a whole.

On January 26, General MacArthur delivered an address in Los Angeles which aroused deep national interest. In it he urged the United States to proclaim its readiness to abolish war, in con-

cert with the other powers of the world. After reading his address in the newspapers, I wrote to him on February 3 and offered to introduce a resolution in Congress declaring that "it is the will of the American people to abolish war as a means of settling international disputes."

On February 7, General MacArthur replied to my letter saying it would require more than congressional expression "to trigger a worldwide movement for the abolition of war." Instead of a resolution, he suggested that I present the matter on the floor of the House and from here "build up gradually to more aggressive action to implement the basic concept."

Mr. Speaker, I shall be glad to take up General MacArthur's suggestion and I hope to bring this matter to the attention of the House in the near future at which time I will be ready to discuss it in greater detail and to present my views on the subject.

I am extremely interested in the idea of developing a people-to-people approach to the problem of international peace, and I shall utilize all efforts in that direction. I welcome the views and suggestions of anyone who can contribute constructively toward the furtherance of this idea.

In the meantime, I desire to place into the RECORD the exchange of correspondence between General MacArthur and myself:

FEBRUARY 3, 1955.

Gen. DOUGLAS MACARTHUR,
New York, N. Y.

DEAR GENERAL MACARTHUR: I was very much interested in your statement which I read in the New York Times, urging the abolition of war. This is very commendable on your part and certainly you, as the greatest living soldier, are qualified to speak on this subject.

What do you think of my introducing a resolution in Congress declaring that it is the will of the American people to abolish war as a means of settling international disputes? The approved resolution of the Congress, signed by the President of the United States, should also call upon all other nations to adopt similar resolutions.

I am not sufficiently convinced that the United Nations is doing the job intended for it. I favor more of a people-to-people approach to the problem.

Before doing this I would be most appreciative of your views and any further suggestions.

In high esteem, I remain

Sincerely yours,

VICTOR L. ANFUSO,
Member of Congress.

FEBRUARY 7, 1955.

The Honorable VICTOR L. ANFUSO,
Congress of the United States,
House of Representatives, Wash-
ington, D. C.

DEAR CONGRESSMAN ANFUSO: I am grateful indeed for the support of my views on the futility of war as reflected in your thoughtful note of February 3.

It has always been my opinion that war's abolition can only come about through the emergence of a leadership in world affairs with the strength and vision and moral courage to proclaim a readiness in concert with other major powers, to enforce it as a matter of constitutional doctrine by specific constitutional proscription. There is no doubt in my mind but that the great masses of every nation in the world, whether on this side of the Iron Curtain or on the other,

would, as a matter of self-interest and protection, fully support such a constitutional limitation upon political power and zealously guard it against any despot's violation or abuse. For even in totalitarian regimes the leaders show at least token respect for the constitutional rights of the citizenry. This because all people, even those partially enslaved under oligarchic rule, have grown to look to their constitutions as the final repository and safeguard of their remaining liberties. Thus today, even the Soviet leaders do not so defy the will of the masses as to openly nullify their constitution. They may fool them. They may ignore rights to individual protection. They may sugar-coat many of the constitutional provisions to make them appear to give to the people rights and liberties which they do not in fact give, but they do give them a body of constitutional laws as something they have grown to expect and to demand, just as they constantly prate about peace being the ultimate objective of all public policy because they fear the masses will revolt against any course openly leading to war.

So in my opinion, it would take more than the congressional expression which you suggest to trigger a worldwide movement for the abolition of war. It would take a ringing affirmation of a dedicated leader commanding universal respect, capable of arousing the conscience of mankind into a crusade against lagging leaders who in the mad lust for ever increased political power willfully ignore the realism that war as an instrument of political power has been outmoded by the advance of science. I do not know when this Nation will be blessed by such a leadership but I pray that it will be before it has been drawn through the tragedy of another and infinitely worse cataclysmic conflict.

I would therefore suggest that instead of submitting a resolution, that you limit yourself initially to presenting your basic views on the floor of the House. From such a beginning you could build up gradually to more aggressive action to implement the basic concept.

With every good wish,

Most cordially,

DOUGLAS MACARTHUR.

History's Little Joke

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of our colleagues to the following article, written by Joseph Alsop, which appeared in the February 13, 1955, issue of the New York Herald Tribune:

HISTORY'S LITTLE JOKE

(By Joseph Alsop)

TACHEN ISLANDS.—If you want the real measure of what has happened to the Eisenhower administration and American foreign policy in the last 2 years, consider the story of those barren, controversial rocks, the Tachen Islands. If it were not so serious, it would be a cosmic joke. The background of the drama of the evacuation of the Tachens has been simple enough. It is no secret that for 10 days or so Chiang Kai-shek balked bitterly at making a present of the Tachens to the Communists. The Eisenhower administration had to press Chiang very hard, indeed, to take his troops off the Tachens before the Chinese Communists attacked them.

The joke lies in the fact that just 2 years ago the shoe was on exactly the other foot.

Those were the brave early days of Eisenhower policymaking. There was no talk then of cease-fires and peaceful coexistence, and the like. Instead the watchwords were liberation, dynamic new foreign policy, recaptured initiative, and the "unleashing of Chiang Kai-shek."

President Eisenhower's dramatic announcement that after being wickedly held in check by the Truman administration, the Generalissimo had now been boldly unleashed by the Republicans, caused a wave of reaction that reached all the way to the rocky Tachens.

At that time the islands were held by light guerrilla forces, hardly more important than those which fought for Yikiang-shan through close to 3 bloody days. The Formosa Government considered the Tachens too distant from the main island to be covered by air or supplied by sea. The Generalissimo and his military advisers did not wish, therefore, to commit either their prestige or large components of their regular forces to the defense of the Tachens. In short, the islands were then being treated as expendable.

But President Eisenhower had given the watchword. Chiang Kai-shek was unleashed. The Tachens were doubly valuable, as a base for irregular guerrilla operations on the mainland and as a forward radar warning point for both Formosa and Okinawa. So the American military advisory group on Formosa began pressing Chiang Kai-shek very hard to put regulars on the Tachens. This was one of the measures devised in Washington to give a little reality to the famous unleashing. The Americans did not win their point with ease. The Generalissimo was extremely reluctant to put regulars on the Tachens. Certain key Chinese military leaders, particularly the chief of staff of that period, Gen. Chou Chi-jo, resisted the American project to the end. None the less, as usually happens on Formosa, the American advisers triumphed in the end.

The 46th Division was specially chosen to be sent to the islands. Even after the 46th had been installed and the defense positions had been organized, however, the American advisers of the Chinese Government were still dissatisfied.

The commander on the Tachens, Gen. Hu Tsung-nan, was one of the old boys of the Chinese Nationalist Army, with a record that did not inspire confidence.

Once again heavy American pressure was put on the Generalissimo to replace the Tachen commander. When this reporter was in Formosa last year, the Americans had just won their second victory for the defense of the Tachens. Gen. Hu Tsung-nan had been recalled and the able Gen. Liu Nien-li had just been given the Tachen command, which he still holds.

In those days, too, one of the real wonders of Formosa was the world's most uncovered covert operation, the American financed Western Enterprises. Western Enterprises combined the claim to invisibility with a private housing development, special PX's, social clubs, and God knows what other rather conspicuous amenities. The whole town of Taipei knew that the spooks, as they were locally called, were helping the guerrilla operations based on the Tachens.

But now the spooks are folding their bed-sheets and packing to go home. Western Enterprises, as any pedicab driver will tell you, is soon to be no more, and its assets, whatever they may be, are to be transferred to the Navy. This is in fact a significant move in the direction of the cease-fire down the middle of the Formosa Strait and the general acceptance of "two Chinas," which are now the real aims of the Eisenhower administration Asian policymakers.

All of which is important for two reasons. In the first place, what are the unfortunate

Chinese Nationalists to think, when they are first powerfully pressured to defend the "essential" Tachens at all costs, and then told that the Tachens are not essential after all, and please to evacuate at once? This reporter has never shared the Knowland-Robertson-Radford view of the unvarying rightness of Formosa, but in view of the past record, the Generalissimo and his advisers certainly seem to deserve some sympathy at this time.

In the second place, might we not be better off in Asia today if there had not been so much loud, empty talk at the beginning, and if there were a bit more boldness, spirit, and determination in our policymaking today? Maybe it is impolite to ask the question, but the facts demand that it should be asked.

Lincoln and Eisenhower

EXTENSION OF REMARKS

OF

HON. EDWARD T. MILLER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. MILLER of Maryland. Mr. Speaker, last evening one of my fine Maryland colleagues in the other body, Senator J. GLENN BEALL, spoke before the Republican Club of Prince Georges County, Inc., at the Prince Georges Golf and Country Club. Senator BEALL's remarks were characteristically to the point and of particular interest at this time. Under leave granted, I here include his address:

What would Abraham Lincoln, the first Republican President, say today of this land of 162 million Americans. Perhaps he would not today express himself any differently than he did in 1856 when he said:

"We are a great empire. We stand at once the wonder and the admiration of the whole world, and we must inquire what it is that has given us so much prosperity, and we shall understand that to give up that one thing—free government—would be to give up all future prosperity.

"This cause is that every man can make himself. It has been said that such a race of prosperity has been run nowhere else."

Lincoln started life as a laborer and never ceased to love those who worked by hand to better themselves and their nation. His implicit faith in the ability of those who were willing to work for their own good and for the good of their neighbor has been an abiding principle of the Republican Party ever since.

On the other hand, he did not fear property and wealth as some have feared and even tried to destroy it in the recent past. He recognized the need for capital so that the means for building a better nation would be available to the bold planners who shared his faith.

Lincoln warned that the heavy hand of government could stifle economic growth as well as the growth of equality and personal liberty. He wanted more than anything else for the individual man to have his fair chance to improve his lot—to build a home, a business, to be free to fulfill his individual destiny.

As a party, we Republicans have held to those beliefs. We have fought to retain the meaning they have for the Nation.

Although our world is vastly different from what it was in Lincoln's day, the essence of our problems is little changed. We face the same issues of freedom, of the relation between levels of government and individ-

uals, of subversion and loyalty, and of the future course of our Nation.

Storm clouds were gathering when Lincoln entered the White House nearly 100 years ago. But he did not flinch. Through the terrible years that followed his leadership held the Nation together.

When President Eisenhower took office, the sky once more was overcast. And he has not flinched.

He has acted as Lincoln did before him. He has cut beneath the party battle to eternal truths. He has stated principles, defined differences, and clarified issues.

And, as was demonstrated by the overwhelming vote of confidence of both Houses on his Formosa resolution, the country is united behind him.

Now, let us see what the administration has done—and what it proposes to do.

The record for 1953 and 1954 shows that—

1. The Korean fighting and bloodshed was ended.

2. Honesty, integrity, and efficiency were restored to the Government.

3. Peacetime prosperity was achieved with 1953 the best and 1954 the next best in history.

4. Truman's spending plans were cut by \$10 billion and taxes reduced nearly 7½ billion dollars a year.

5. Inflation was halted—the dollar stabilized.

6. The 20-year trend toward centralization of power in Washington was reversed.

7. Highest security standards for Government jobs were set and 2,400 risks removed.

8. Social-security and railroad-retirement benefits were extended and improved.

9. Equality of treatment was promoted and racial segregation ended in many areas.

10. United States and free world defenses against Communist aggression were strengthened.

11. Wage and rent controls ended.

12. A start made on the peacetime use of atomic energy.

13. The Department of Health, Education, and Welfare was established and hospital building and vocational rehabilitation expanded.

14. Record Federal aid for highways was voted.

15. Housing aids to help more families own better homes were enlarged.

16. Tidelands restored to the States.

17. Flexible farm-price-support and surplus-disposal programs provided.

18. Postal service was improved.

19. Veterans and civil-service employees benefits have been increased.

An impressive record indeed. But what is past is prologue. Now let us look at our party's program for 1955 as proposed by President Eisenhower in his state of the Union message on January 6.

Highlights of the program include:

Tireless labor to make the peace more just and durable, sufficient military strength to discourage resort to war, encouragement of United Nations efforts to limit armaments, mutual and gradual reductions of foreign trade tariff barriers, extension of the Selective Service Act.

Strengthened Reserves and increased benefits for career servicemen, continuation of present tax rates, looking to a reduction in 1956, a nationwide water-resources policy firmly based in law, a new program to meet pressing national highway needs, establishment of a Federal coordinator of public works.

Alleviation of problems of low-income farm families, strengthened Federal disaster-insurance programs, extension of the Small Business Act of 1953, continuance of the 83d Congress' housing program, challenging private industry to meet housing problems fully after 1958.

A program to improve existing health services, including Government reinsurance.

Federal Government coordination in school expansion, assistance to States to cope with juvenile delinquency, a Federal Advisory Commission on the Arts in Health, Education, and Welfare, establishment of a 90-cents-an-hour minimum wage, extension of coverage, and Taft-Hartley Act amendments.

The modification of immigration laws, Hawaiian statehood, reduction of the voting age in Federal elections, District of Columbia self-government and suffrage, protection of voting rights of overseas servicemen, and extension of the Reorganization Act and Intergovernmental Relations Commission.

I think the first President of our party would agree that this is indeed a comprehensive, forward-looking program in the best Republican tradition.

Now, although our history has spanned nearly a century between Lincoln and Eisenhower, we still have today the same standards of republicanism held aloft by the party and the American people—the same standards of fair play.

These standards of fair play, I'm afraid, do not always apply to the Democratic Party. I have here a column by Mr. Gould Lincoln of the Washington Evening Star with which I am heartily in accord. I quote:

"The concentrated Democratic attack on Vice President Nixon which began immediately after the 1954 campaign and is now continuing with almost daily sniping, apparently has two basic and impelling reasons," the reporter says. "The first is to rid the Democratic Party of the Communist issue—the Red issue—which has plagued the Democrats for years and has hurt them in a number of States. Not having the courage to attack the President himself, their second aim is to strike at the man closest to him—the Vice President of the United States."

"So beginning with former Democratic National Chairman Stephen A. Mitchell and continued by Adlai Stevenson, Speaker Sam Rayburn, Senator Richard L. Neuberger, and by other freshmen Democrats in Congress, the drive is on to picture the Vice President as merely a smear artist and as such, entirely unworthy, a man who hits below the belt. Their theme song is that he made the Democrats out to be a parcel of traitors over the last score of years, and disloyal at the very least."

"The facts in the case, as revealed by a perusal of the Vice President's campaign speeches, are that the Vice President did no such thing. What he did was to accuse the Democrats of stupidity because they did not recognize the Communist menace; that they did not take the steps necessary to check infiltration of the Reds, and that when cases were called to their attention they did nothing about them. For example, the cases of Alger Hiss and Harry Dexter White."

"The Vice President said repeatedly that communism should not be a political issue, and that there was no difference between the loyalty of Democrats and Republicans. But, he added, some misguided officials of the Truman administration were blind or indifferent to the danger from the Communists."

"That is the kind of criticism which hurt—and which was effective against the Democrats in the 1950, 1952 and 1954 campaigns."

"The Democrats don't want any more of it."

"They have, they think, disposed of Senator Joe McCarthy of Wisconsin in such a way that he will not be effective in his attacks on them. He took no real part in the last campaign. Now they have turned on Mr. Nixon, who made effective use of the Red issue and is capable of doing so again."

"Senator NEUBERGER, without mentioning the Vice President by name, but plainly indicating Mr. Nixon was his target, recently criticized the latter's campaign against him, Senator NEUBERGER."

"As a matter of fact, Senator NEUBERGER was 1 of the 5 leftwing Democratic candi-

dates singled out by Mr. Nixon in his Pocatello address on October 25, 1954, when the Vice President asserted that the gains that the Democrats would make, if they took over the 84th Congress, inevitably would come from the ADA wing of the party."

"The other four were Glen Taylor, of Idaho, who ran for Vice President on the Henry Wallace ticket in 1948; former Representative John Carroll, of Colorado; Senator O'Mahoney, of Wyoming, and former Representative Yorty, of California."

"Whether it was Mr. Nixon's campaigning or not, 3 out of these 5 Democrats were defeated in their races for the Senate."

"Mr. Nixon is for the present, at least, holding his own fire. His defense is being made by other Republicans, among them Republican National Chairman Leonard W. Hall. Mr. Hall said it should be clear to every one who reads the papers and hears the TV and radio that there is now underway a 'highly-organized campaign to besmirch the Vice President. The technique is to smear him by falsely accusing him of smearing others. This is one of the lowest tricks in politics and in this instance destructive only to its perpetrators. Dick Nixon is one of the most effective campaigners in history. It is because he tells the truth and is effective that he is under attack."

"But should Mr. Nixon find it necessary to reply, he is quite capable. Further, he knows a lot more about the Communist activities in this country than do his detractors. He was mainly responsible for the conviction of Alger Hiss. No one is going to say to him, 'You never get a Communist.'"

"Nor can the Democrats get away from the fact that they were blind to what was going on when Hiss and White were active in the Government."

Now without exception, Mr. Nixon approached his discussion of the security question by establishing the loyalty of the vast majority of Democrats. In my opinion he never questioned the loyalty of any Democrat. He did repeatedly question ignorance, blindness, or carelessness on the part of some of the leaders of the previous administration.

Then he demonstrated that it was these people who were most interested in the election and an anti-Eisenhower Congress. Here are a few more of his actual quotes:

In Houston on October 4, 1954, "I have found that the great majority of Republicans and Democrats approve of the way the Eisenhower program is restoring standards of loyalty, honesty, and integrity in government."

"The issue in 1952 was not the issue of the relative loyalty of Democrats and Republicans. That was never the issue then—it is not the issue now," he stated in Philadelphia.

In Norwalk, Conn., the Vice President said, "The great majority of all of our people regardless of the party to which they belong are loyal Americans. And I have found that Democrats are just as interested as Republicans in developing an effective program for dealing with disloyal elements."

Then, in a Fresno speech, he said, "The ADA leftwing which is calling for the election of an anti-Eisenhower Congress is not truly representative of the principles of the Democratic Party. Its spokesmen and its policies are unworthy of the traditions of that great political party. There is no question but that millions of Democrats completely disagree with this group in its attacks on the President's loyalty program."

Those do not sound like the words of a smear artist.

They do not sound like the words of a man who would make out the opposition party to be a parcel of traitors.

No, they have more the tone and strength of a man who was a great force in cementing to our future the constitutional freedoms and personal liberties which emerged from the dreams of our Founding Fathers.

They sound more like the words of Abraham Lincoln, a man who worked with the commonsense of Christian humility and the political wisdom to perpetuate the principles of the Republican Party—even as we are working here tonight in Prince Georges County.

Postal Pay Increases

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. KING of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement before the House Committee on Post Office and Civil Service urging postal pay increases:

Mr. Chairman and members of the committee, believing as I do that our postal employees are entitled to at least a 10-percent wage increase across the board, I have introduced such legislation and am again appearing before your committee to urge favorable consideration of such an increase in the hope the committee in its wisdom will concur.

I also believe that consideration of a postal salary increase should be completely dissociated from the postage-rate increase. In my opinion, there is no basis for controversy on the wage increase whereas there will be serious controversy on the postage-rate proposal.

During the greater part of the last 2 decades, postal and other Federal employees have been unable to compete with increased prices. Wages of a worker, including Federal employees, must be considered in the light of cost of living. In a period during which our nation as a whole enjoyed unprecedented national prosperity, Federal workers have been stepchildren of our American economy.

Inadequate wages for Government workers can lead only to an inferior caliber of personnel, expensive recruiting and training experience, decreased efficiency, and, in the final analysis, poor Government operation. The combination of these undesirable conditions inevitably results in more costly Government to every taxpayer.

The cost of Government is properly the concern of each of us. No one advocates useless spending or the waste of our Public Treasury. However, in the matter of wages for Federal employees, there is involved a very human question as well as a moral obligation on the part of those responsible for determining salaries. The human question can be satisfied only if the worker is given a wage that will enable him to provide proper and adequate care for his family. A moral responsibility exists as long as Federal employees do not have collective-bargaining rights and in the absence of economic privileges accorded workers in private industry in a given wage dispute.

These two responsibilities should weigh heavily on those charged with establishing Federal salary schedules. They were completely ignored last year in the veto of the wage legislation approved by the 83d Congress. The current attitude of some persons in the executive branch of Government seems to be a take-it-or-leave-it offer, without reference to the needs of the employees or the justice of their case for better wages. This amounts to a callous disregard of more than 2 million Federal workers and their families and a complete evasion of the moral

responsibility on the part of our Federal Government to pay fair and adequate wages.

In my judgment, a pay raise is long overdue for our deserving postal employees and I trust the committee will promptly and favorably report a substantial increase in their compensation.

The Brooklyn Law School

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 3, 1955

Mr. MULTER. Mr. Speaker, I believe that everyone attaches a certain amount of sentiment to the educational institutions which they have attended. Both sentiment and pride cause me to direct the attention of our colleagues to the following address given by Dean Jerome Prince at the 1954 alumni luncheon of my alma mater, the Brooklyn Law School:

DEAN ADDRESSES ALUMNI ON HISTORY OF LAW SCHOOL

The executive committee of the alumni association has assigned to me the very pleasant task of sketching briefly to you this afternoon the history of Brooklyn Law School. The story of the origin and growth of the law school is a story well worth telling. For its recital, I am confident, will fill you with a sense of justifiable pride in your own institution.

The story begins shortly before the turn of the century, when, at a convention of teachers of commercial law, the late Dean William Payson Richardson met the late Norman P. Heffley, who at that time directed a business school in Brooklyn bearing his name. Mr. Heffley was of the opinion that the community of Brooklyn was in need of a law school, and you may recall that there was then none in existence in Brooklyn. Early in 1901, after many discussions between them, Dean Richardson and Mr. Heffley cooperated to organize Brooklyn Law School and its first class was held on September 30, 1901, in the Heffley School Building, at 243 Ryerson Street, Brooklyn. There were only 5 students in that first class, one of whom was the late Francis X. Carmody. A year later the law school moved from Ryerson Street to a brownstone building at 187 Montague Street, Brooklyn. It seems that the possessions of the law school were then so meager that they were all piled on one cart, and as the cart moved through the streets from the Heffley School Building to Montague Street, one spectator was moved to say: "There goes Brooklyn Law School." This, as many of you know, was Dean Richardson's favorite anecdote.

Mr. Heffley withdrew from the school soon thereafter and the task of supporting the infant institution fell upon Dean Richardson. In 1903, Brooklyn Law School became associated with St. Lawrence University and later became the department of law of that University.

From 1903 until the outbreak of World War II, the law school story is one of almost constant growth and development, in prestige as well as in physical resources. In 1904, to accommodate larger classes, the school moved to the Eagle Building, where it remained until the fall of 1928, when the school entered its own specially constructed building at 375 Pearl Street, Brooklyn.

When World War II broke out in December of 1941, the effect upon the law school was

almost calamitous. Within a short time, the law school attendance so dwindled that we had less students in the entire law school than we were accustomed to have in a single class. Some statistics may be enlightening. In one of the war years, we had only 30 students in the entire day division. This included all 3 years of law study.

I remember having one of the large classes during that period, a class of 15 students. We also had some small classes. Bob Sugarman had a class of two students in partnership. I recall this quite well because 1 of the 2 students was unprepared at the first session and the remaining member of the class was required to do all of the class work that day. I may add that this student resigned a week later, and we decided to cancel the course, thinking a class of one student to be too much of a luxury. During most of this period, there were only three full-time men on the law-school faculty. I was one of them. Professor Sealy and Professor Weyrauch were the other two. In one of the war years, Professor Weyrauch went to Albany to assist Hiram Todd on one of his investigations; that left Don Sealy and me as the entire full-time staff. I must confess that we taught a great many subjects, and if the war had continued a few years longer, each of us would probably have taught the entire curriculum. I recall one afternoon during the war when Don Sealy and I were walking to Joe's Restaurant for lunch, Don said to me: "You remember the story told by Dean Richardson about the spectator who said: 'There goes Brooklyn Law School' when he saw the cart moving the law-school equipment from Ryerson Street to Montague Street? Well, some spectator may now, looking at us, say: 'There goes the Brooklyn Law School faculty.'"

St. Lawrence University, of which we were the law department, had considerable financial difficulties of its own. Each of its departments was operating at a substantial loss. So, St. Lawrence University, to reduce its obligations, decided to liquidate the law school. I have no doubt that the law school would have disappeared at that time were it not for the efforts of Justice William B. Carswell, the only graduate of the law school who was then a member of the board of trustees. Largely as a result of his efforts, an agreement was entered into in December of 1943 by the terms of which Brooklyn Law School separated from St. Lawrence University and became a separate and independent nonprofit institution. A new board of trustees was selected and Justice Carswell became its president.

You might be interested to know that Dick Maloney, our new alumni president, was our attorney at the closing of title in 1943. We did not pay him for his services then and, although he continues to serve as the law school counsel, we have consistently adhered to the precedent thus established.

To effect the separation from St. Lawrence University, it was necessary to place a mortgage upon the building, and some of you may recall that we had an alumni campaign at that time to raise funds.

We held on, at times somewhat grimly, until the close of World War II, when Brooklyn Law School once more became one of the major law schools in the United States.

We suffered a loss in August of 1945, when Dean William Payson Richardson, who had been dean for 44 years, died after a brief illness. He was succeeded by Justice William B. Carswell. I was named vice dean, and later associate dean. We suffered another loss in September of 1953, when Dean Carswell unexpectedly died in Canada. Three months later, I was appointed dean of the law school.

Now what progress have we made in the 54 years of our existence?

Our graduates have achieved prominence in almost every field of endeavor; in the practice of the law, on the bench, in Govern-

ment service, in public life, in the Armed Forces, in commerce, and industry. It may surprise you to know that we have several very distinguished clergymen who are graduates of the law school. I do not intend to burden you with statistics, but it may be of interest to you to know that in the city of New York alone there are well over 50 judges, from magistrate to appellate division justices, who are graduates of Brooklyn Law School.

Whenever our students or graduates have come in open competition with the students or graduates of other schools, we have much more than held our own. Our bar examination results are good, as I think you know. In 1948, the Association of the Bar of the City of New York sponsored for the first time an interlaw school moot court competition. In that first competition, the Brooklyn Law School Moot Court Team won the national title by defeating the Yale University Moot Court Team in the final round. In the 6 annual competitions held thus far, the Brooklyn Law School Moot Court team has won 3 metropolitan championship and this in competition with all the other approved law schools in the city of New York. A prize is given by the association to the student who is adjudged the outstanding student speaker in the city of New York. The selection is made from among the members of the moot court teams representing all of the law schools in the city. This is an annual prize. In the last 6 years, on 3 occasions, a Brooklyn Law School student was selected as the outstanding speaker.

Turning to the law school itself, I might say that not too many of you know that Brooklyn Law School is today, and since 1937 has been, a school approved by the American Bar Association. This means that we are one of the one-hundred-and-twenty odd approved law schools in the United States. Our requirements have been strengthened and increased. An applicant today is required to have completed a minimum of 3 years of acceptable college work with a satisfactory scholastic average, and it might interest you to know that well over 90 percent of our entering class is composed of college graduates.

The normal law school course today is 3 years in the day, or full-time session, and 4 years in the evening, or part-time session. We do, however, permit a student to shorten his course to the extent of one semester by attending summer sessions. We have increased the number of credits required for the degree from 60, which was required about 20 years ago, to 76, the requirement at present. We have attempted to grapple with the vexing but important problem of the extent to which we may profitably help the student to bridge the gap between theory and practice. This we have done by introducing into the curriculum required courses in legal research, in brief writing, in the preparation of pleadings, and in laboratory sessions in trial practice. We also offer elective courses in criminal procedure, in the preparation of corporate forms, and in the preparation of the commonly employed commercial instruments. The most recent addition to our elective courses is a course in military justice.

Brooklyn Law School is today in every sense a nonprofit educational institution. It is governed by a board of trustees, headed by former Supreme Court Justice Charles C. Lockwood, no member of which receives any compensation. The two vice presidents of the board are graduates of the law school and may be known to many of you presently. One of them is Supreme Court Justice Charles N. Cohen, the other is former Corporation Counsel Paul Windels.

I think I have said enough although considerations of time have required me to sketch developments in broad outlines, to justify my conclusion that we have a thor-

oughly sound and progressive institution, with standards and with a record of achievement that will bear comparison with any law school in the United States. What we lack is a well-informed and active alumni body. I regard it as self-evident that the reputation which a school enjoys among the members of the public is but a reflex of the reputation it enjoys among his own graduates. And no school can enjoy among its own graduates the prestige to which it may justly be entitled unless its graduates know and are interested in the progress which the school has made. For these frankly selfish reasons, I hope that this luncheon today will mark the rebirth of a strong, healthy, and active Brooklyn Law School alumni association.

The Eternal Sea

EXTENSION OF REMARKS OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 31, 1955

Mr. McDONOUGH. Mr. Speaker, I recently had the opportunity of a private preview of the motion picture, *The Eternal Sea*, at the invitation of a friend and acquaintance of mine for many years, the producer and director, Mr. John H. Auer.

The Eternal Sea is a present-day historical episode of the actual experiences of a living Navy admiral, and it is not only an inspiring patriotic story but also an impelling story which would increase the admiration of any American for the United States Navy and the courageous spirit that overcomes all obstacles including physical handicaps to obtain its objectives.

The Eternal Sea will also assure the American people of the security and protection for which the great and powerful United States Navy has been built and organized to provide.

Mr. John Auer, the director and producer, is a devoted and patriotic naturalized American citizen. He came to the United States in 1929 and in that same year took his first oath of allegiance to the flag of the United States of America, as he says in very broken English. He resolved to serve his new country to the best of his ability, and in 1951 he produced and directed the picture *Thunderbirds*, which was dedicated to the National Guard. This picture was highly received by all, and Mr. Auer received a citation from the Department of Defense and the National Guard for his patriotic contribution.

The Eternal Sea, which Mr. Auer directed and produced for Republic Pictures, pays homage to the United States Navy, naval aviation, and above all to a courageous American who, despite the great handicap of losing his leg in battle, carried on to express undying devotion to his family, the service, and all mankind. This great American is Rear Adm. John Madison Hoskins, who is still on active duty with the United States Navy.

Private showings of *The Eternal Sea* have been given to many high officials in the Department of Defense, and a few of

the comments received as a result of these showings follow:

Mr. HERBERT J. YATES,

President, Republic Pictures Corp.

Congratulations on a truly great American epic of courage. *The Eternal Sea* is excellent theater and gripping entertainment. It will make all who see it prouder than ever before of their American heritage. In behalf of all those who have borne wounds for their country and for those other Americans who have triumphed over disability, our heartfelt thanks for this fine film.

Maj. Gen. MELVIN J. MAAS,
USMCR, Retired; Chairman, the President's Committee on Employment of the Physically Handicapped.

Mr. HERBERT J. YATES,

Republic Productions, Inc.

The Eternal Sea was reviewed by the Department of Navy and the Office of the Secretary of Defense and hereby is approved for public release. We believe it is a picture you should be proud of. It captures a fine spirit and will be of great value to the service. Its inspirational qualities should be of great value to every American. We consider it an excellent motion picture which justifies our cooperation. Sincere thanks for a job well done.

OFFICE OF THE SECRETARY OF DEFENSE,
Washington, D. C.

Mr. HERBERT J. YATES,

President, Republic Studios.

Congratulations to you, Mr. John Auer and Republic studios on *The Eternal Sea*. It is a great picture which will reflect much credit to Republic and Navy. Feel that it will have strong dramatic and human-interest appeal to general public.

Adm. W. G. BEECHER,
Chief of Information, Navy Department.

I urge all patriotic Americans to see this picture not only because of its dramatic appeal, but especially because of its patriotic and inspirational qualities.

Acreage Allotments in Drought-Stricken Counties of Tennessee

EXTENSION OF REMARKS OF

HON. ROSS BASS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. BASS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Be it resolved by the House of Representatives of the 79th General Assembly of the State of Tennessee (the Senate concurring), That the Department of Agriculture of the United States of America is hereby memorialized and requested to cut the allotment of no individual engaged in farming in counties classified as drought-stricken counties in this State by the Department during the year 1954 below the allotment which was made to such individual for the year 1954 upon any crop, allotment of acreage of which is made by said Department; be it further

Resolved, That upon the passage of this resolution and its signature by the chief executive, a copy thereof by duly certified and forwarded to the Secretary of Agriculture of the United States, and to each Member of Congress from Tennessee, and that

this resolution be spread on the journal of the house of representatives and senate.
Adopted January 25, 1955.

JAMES L. BOMAR,

Speaker of the House of Representatives.

JARED L. MADDOX,

Speaker of the Senate.

FRANK G. CLEMENT,

Governor.

Ike's Team Is Showing Lack of Skull Practice

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 17, 1955

Mr. DINGELL. Mr. Speaker, on January 23, 1955, there appeared in the Detroit Free Press a signed editorial by John S. Knight, its president and publisher. In itself the editorial is significant on the score that this lack of teamwork of the Eisenhower administration is being finally recognized, but it is more especially so because a staunch friend of the President points up sharply the weaknesses and by their exposure seeks the means of correction. Mr. Knight bears out the contentions of so many people who have already recognized the confusion of the minds and the tongues of administration spokesmen. These antics might be likened to those of a well-coached clown band with each instrumentalist playing a tune of his own choosing, and drowning out the discord by blowing the harder his own horn. It is high time someone pointed the way for the President and his discordant Cabinet.

Under unanimous consent, heretofore granted, I include in the RECORD the editorial to which I refer:

IKE'S TEAM IS SHOWING LACK OF SKULL PRACTICE

NEW YORK.—The Scripps-Howard newspapers, which have frequently spanked President Eisenhower for not exerting more leadership, have now come to the following conclusion as Ike begins his third year in the White House:

"On the whole, the President has shown a steady growth in confidence, in understanding, in patience and in effectiveness."

In general, that seems to us to be a fair statement of Eisenhower's position today. A year ago, Ike had difficulty in reconciling his role as President of all the people with that of being the actual leader of his party as well.

Now, however, he understands that the two can be compatible so long as he insists that party policy at all times keeps the public interest in mind.

At Wednesday's press conference, the President was confident and relaxed. He now takes loaded questions in stride with the aplomb of a professional.

Ike is getting the "feel" of public life.

Having said this, might I suggest that the administration is wide open to criticism on another count.

I refer to the lack of skull practice between Ike and his Cabinet members on matters of vitally important public policy.

The President likes to think of his official family as a team, presumably with every member playing an important and vital role.

The goal is a successful administration, not headlines for individuals.

Of late, the signals are getting crossed. Agriculture Secretary Benson fires Wolf Ladejinsky, who headed General MacArthur's land-reform program in Japan, as a security risk. Mr. Ladejinsky is promptly rehired by Harold Stassen, boss of the Foreign Operations Administration, with the comment that Ladejinsky has 19 years of Government service without a blemish on his record.

Who is right, Benson or Stassen?

Then we have Defense Secretary Wilson advocating more trade with the Iron Curtain countries in nonstrategic materials. Two years ago Mr. Wilson took an opposite view and wrote Senator McCARTHY that "contributions to the economic potential alone often directly, and almost always indirectly, contribute to any country's military potential."

With reference to Wilson's latest statement, the President says it does not represent the administration's position.

Why, then, did Wilson say it?

Some weeks ago Labor Secretary Mitchell made a speech before the CIO in Los Angeles in which he criticized the right-to-work laws adopted by 17 States.

When asked to comment on this phase of Mitchell's address, the President said Mr. Mitchell was not speaking for the administration.

Why, then, didn't Mitchell clear his speech with the President?

Other notable contradictions within the administration have occurred with respect to Indochina, the "Marshall plan" for Asia, and what we intend to do about Formosa.

There is also a wide-open split between Eisenhower and Senator KNOWLAND, the minority leader, on how to gain freedom for the American airmen held by the Chinese Communists.

The President cannot muzzle Senator KNOWLAND but he does have a right to expect that members of his Cabinet refrain from popping off in opposition to his own views.

He has finally taken steps to avoid future public controversies such as the Ladejinsky case by asking a special unit of the Justice Department to act as a mediator between Government agencies that differ on an individual case.

The President said further that if agreements were not possible, future cases of this kind would be brought to him.

He should now take the further step of requiring public officials speaking on sensitive questions of policy to obtain prior clearance from the White House.

This procedure would clarify administration policy in the public mind and strengthen it immeasurably.

You can't have a winning team with everybody calling signals.

JOHN S. KNIGHT.

Washington and Small Business

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I include in the CONGRESSIONAL RECORD the following article by C. Wilson Harder titled "Washington and Small Business":

WASHINGTON AND SMALL BUSINESS
(By C. Wilson Harder)

While he went along with the gag when the Federal Trade Commission found over

a thousand paper wholesalers guilty of conspiracy, Commissioner Lowell Mason, master of brilliant brittle prose, wrote a separate concurring opinion which may well be used as evidence by those wishing to eliminate FTC as a useless appendage on government, and substitute for it a more efficient and aggressive defender of the Nation's antitrust laws.

This decision was against what is called the fine- and wrapping-paper wholesalers. Fine paper is defined as printing papers. Since 1948 FTC has been as busy as bees on this case.

The FTC cited some 22 regional trade-paper associations, and blanketed in as unnamed defendants about 900 paper wholesalers who were called class respondents.

As Mason points out in his opinion, these "class respondents" are mostly small-business men scattered all over the Nation serving small-order customers with specialty-paper products. But FTC held that if they belonged to a trade association, they were guilty per se of conspiracy. Entire evidence entered against many individual wholesalers was that at the time of complaint they were members of some regional trade association.

And yet, while Mason's long opinion pithily emphasizes many points, it does skirt around big issue of FTC operation.

Big issue is this. The production of all kinds of paper is dominated by a few companies who sell direct to larger users, leaving small pickings to wholesalers. These large mills also offer bigger customers fantastic discounts on quantity purchases.

Thus a very small printer usually must buy from a wholesaler. If he becomes larger, he may be able to buy direct from a mill, but if he is a large user of paper, he can buy carload lots from the mill at price reductions which make it impossible for small and medium sized printers to compete for printing work of major jobs. And of course no wholesaler can meet the price competition of his own suppliers.

In paper case, as in so many other cases, FTC decided something was rotten in Denmark but went to Greenland to investigate. In fact, their actions are often akin to that which would prevail if police jailed victims of robbers while not touching bandits.

A few months ago, in tire discount decision, FTC laid down a rule which would have solved not only many problems of tire industry, but also paper industry and many others. But so far FTC has not invoked their own rulings but held compliance in abeyance while ruling goes through slow, laborious trial of court tests. In meantime, small business suffers from continuation of practices which FTC found damaging and illegal.

That is why there is substantial misgivings in Washington about FTC which has shown itself so high and mighty in cracking down on the little man, so blind to the transgressions of the great. And that is why a group of Senators, including Senator ESTES KEFAUVER of crime investigation fame, are talking loudly about an appropriation of a million dollars to finance full-scale investigation of why Nation's antitrust laws are not being enforced, and what measures are needed to insure their enforcement.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Printing and binding for Congress, when recommended to be done by the Committee on Printing of either House, shall be so recommended in a report containing an approximate estimate of the cost thereof, together with a statement from the Public Printer of estimated approximate cost of work previously ordered by Congress within the fiscal year (U. S. Code, title 44, sec. 145, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on Printing, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

DISTRIBUTION OF THE CONGRESSIONAL RECORD

To the Vice President and each Senator 100 copies; to the Secretary and Sergeant at Arms of the Senate, each, 25 copies; to the Secretary, for official use, not to exceed 35 copies; to the Sergeant at Arms, for use on the floor of the Senate, not to exceed 50 copies; to each Representative, Delegate, and Resident Commissioner in Congress, 68 copies; to the Clerk, Sergeant at Arms, and Doorkeeper of the House of Representatives, each, 25 copies; to the Clerk, for official use, not to exceed 50 copies; and to the Doorkeeper, for use on the floor of the House of Representatives, not to exceed 75 copies; to the Vice President and each Senator, Representative, Delegate, and Resident Commissioner in Congress there shall also be furnished (and shall not be transferable), 3 copies of the daily RECORD, of which 1 shall be delivered at his residence, 1 at his office, and 1 at the Capitol.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Lincoln's Philosophy Lives On

EXTENSION OF REMARKS OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES
Friday, February 18, 1955

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered at the Lincoln Day luncheon in Los Angeles, Calif., on February 10, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LINCOLN'S PHILOSOPHY LIVES ON

(Speech by Senator THOMAS H. KUCHEL, at Lincoln Day luncheon in Los Angeles, February 10, 1955)

Across our country this week, people are meeting to commemorate the birthday of Abraham Lincoln, martyred American president who saved our Nation and emancipated a race. His era in history was one of trouble and tribulation. But it was also one which beckoned to him to provide an unselfish and devoted leadership to a high cause, and he provided it to the benefit of his country in full measure. His was a martyrdom of sacrifice to the cause of freedom.

Abraham Lincoln's words come hurtling down the years: "With firmness in the right as God gives us to see the right, let us strive on to finish the work we are in . . . to do all which may achieve and cherish a lasting peace among ourselves and with all nations."

Mr. Chairman, our work remains unfinished, and our goal remains the same: peace among ourselves and peace with all nations. The burden of those labors is being borne today by a patient, devoted Christian leader, dedicated, as Mr. Lincoln was, to peace at home and throughout the world. With deep religious conviction, with humility, and with native commonsense, President Dwight Eisenhower is presently engaged in arming America morally, strengthening her economically and militarily, conducting her foreign policy skillfully and firmly, all in the forward march toward the attainment of the selfsame goal which our Civil War President set for our Nation.

Many significant changes have been wrought in the past 2 years by our Government in the conduct and direction of our national affairs.

I believe, and I have often said, that the people of our country want clean, strong, honest, American Government. Republicans want it. Democrats want it. So do our independent citizens. I can give you the assurance, though I know you do not need it, that that is exactly what President Eisenhower and his administration are giving to all of us.

The record of these last 2 years is studded with examples of bipartisan approval of presidential recommendations. This is true both in the domestic field and in foreign policy. It is a record which, I believe, will continue in the future.

On some legislation of singular interest to California, I am always proud to remember

that when the roll of Senators was called on passage, Democrats joined Republicans in approving our State's request, and we triumphed over scattering but vigorous partisan opposition.

As a Senator from California, as well as a Senator of the United States, I am grateful for this chance to summarize and highlight a variety of actions that will further our progress and brighten our promising future.

In the past year alone, Congress enacted laws that protected the interests of our cotton farmers, whose crop now is California's leading agricultural commodity; it cushioned the impact on seriously congested schools in scores of our communities where thousands of additional families were drawn by reason of Federal activities and programs. It has contributed toward the solution of our continually pressing water problem, undeniably a matter of greatest concern to our expanding economy and development; and it has facilitated our commerce through improvement of ports along the whole stretch of our coastline.

As a sample of what has been done to safeguard our lands and help us utilize our resources, let me cite part of the record of the 83d Congress:

Increased funds were appropriated to speed the pace of flood prevention projects in Los Angeles, the northern section of the bay region, and in the lower Sacramento Valley.

Dams were authorized to bring about greater use of waters in several widespread areas of our State, for the benefit of farmers and city dwellers alike.

Construction of additional distribution systems was made possible, to carry benefits of the central valley project to more farm areas in the central valleys of our State.

The outlook for the future is encouraging. Recognition of the continuing problem of our schools will be made in the present Congress and hearings on the matter are now in progress in Washington. Progress will be made in our water and power problems. With the recommendation of our Governor, I have again introduced the multiple-purpose Trinity-San Luis project in northern California, together with the so-called Tri-Dam project in San Joaquin, and new legislation to assist the people of Ventura County in their own acute water question.

As a member of the Public Works Committee I look forward to playing an active part in shaping legislation to carry out a comprehensive long-range highway program. This measure will enable the Federal, State, and local governments to tackle the neglected problem of expanding and modernizing roads of all types so our highway network may better meet demands of our highly mobile population.

The Federal Government, at long last, has become an ally in the fight against a menace which endangers an increasing number of communities, air pollution. Just this month President Eisenhower again acknowledged that the complex problem of checking and, we hope, ultimately eliminating smog, requires positive participation by national agencies. They will make a tremendous contribution chiefly in the field of scientific research and should speed the efforts already under way in various metropolitan areas. I shall endeavor to broaden the program of Federal assistance in this field, and I feel hopeful that aid will be forthcoming to clean up the atmosphere in the cities and towns of California and across the Nation.

Production and employment are increasing on a broad front. President Eisenhower has prophesied that, within a decade, our current annual production level of three hundred and sixty billion dollars will increase to five hundred billion or more, expressed in dollars of the same purchasing power.

In the first 2 years of the present administration, Federal appropriations have been reduced, Federal, personal income taxes and excise taxes were cut, the excess-profits tax was repealed, governmental controls on business were abolished, and 1954 was one of the best years, economically, in our history.

We've made magnificent strides in the field of human rights and equal dignity among our people in a fashion that would make Abe Lincoln proud of us. In this free republic of ours, the brotherhood of man becomes an increasingly accepted standard of decency, and the leadership of our Chief Executive has supplied the idealism and the intelligence to bring to more of our people a rising standard of living in this country of free men and free government.

With the most painful and heartfelt regret, the American people are aware that there are those in the world who oppose freedom and who have been measurably successful in stamping it out in great areas. Human slavery, in its most cruel form, is practiced today as a Government policy by those countries chained down by Red communism. Their current activities, placed in the background of their self-proclaimed desires, are cause for sober concern by free America and by the free world. And it is to this question that I desire now to direct your attention.

Basically, the American people today and their Government concern themselves with the security of our Nation and an honorable peace in our world. Perhaps never before have they turned as soberly to the contemplation of our Nation's needs to preserve freedom, as they have today.

We live our lives in a whole new era. Solving the problems of freedom in that era depends upon our acceptance and understanding of the new energies which men of science have brought forth in our time. The needs of the American people in securing their freedom must be, and have been, set in this background.

Several months ago I listened to Admiral Carney in Vallejo, suggest that the American Navy is on its way to complete atomic power for its propulsion. Thus, since 1789, we have passed successively through periods of sailing ships, and steam ships, and diesel ships, to atomically-propelled vessels. Our gallant air force is expanding almost daily, and piston planes give way to jet-powered aircraft. Whereas at the outbreak of the Korean war the United States Air Force had but 42 effective wings out of a projected 70, it has today 121 effective wings out of a projected 137, a goal which will be attained before too many months have passed, with the approval by the Congress to recommendations of the administration. Our airmen have long since penetrated the sonic barrier, and one of their experimental planes has flown 1650 miles per hour, and how much faster is the Defense Department's secret. An American airplane has flown to an altitude in excess of 85,000 feet, and again it is a secret how much further up he may have gone. The United States Army and the Marine Corps likewise have entered upon

a modern atomic posture of readiness and mobility, testifying, without equivocation, of our determination to safeguard American security.

Every citizen of this country and his family may give eternal thanks that the Commander in Chief of our defense forces is an unselfish and enlightened leader devotedly dedicated to peace in the world, partly by reason of his own experiences over an almost entire lifetime as a skilled professional soldier.

In his state of the Union message to the Congress early in January, the President of the United States again stated that our national goals continue to be a just and enduring peace, and a realistic worldwide limitation of the implements of war. "We maintain powerful military forces," he said, "Because there is no present alternative—they are forces designed for deterrent and defensive purposes, able to strike back with destructive power in response to any attack." The defense plans of the United States have been under the personal direction of the President after his own long and contemplative study. His recommendations for our country's defense will, I prophesy, be given the same bipartisan congressional approval in 1956 as they were those last 2 years. There are a few professional disagreements on emphasis, but here again we can be thankful for the experienced counsel which the Chief Executive can give as a military man. His recommendations include, among others, an emphasis on modern airpower and new weapons, the elimination of duplication and overstaffing, the acceleration of a program for our own continental defense, and the buildup of a military reserve. Incidentally, they include increases in compensation for service personnel. When I tell you that only 15 percent of the Regular Air Force personnel are expected to reenlist when their present terms expire, I underline the importance of increasing the attractiveness of peacetime military service.

Meanwhile, in existence or on the drawing boards are weapons so appallingly destructive as to chill one's imagination. International ballistic missiles—euphemistically termed IBM—will, we are told, travel across oceans at unthinkable speed, addressed to targets thousands of miles away, with considerable precision and accuracy. And while the science of destruction continues its deadly progress among the free countries of the world, there is no question that international communism, with the brains it has from varying sources at its disposal, likewise makes progress in this same field.

Recently, the former Chairman of the Joint Atomic Energy Committee said:

"Today, atomic and hydrogen bombs exist in growing numbers on both sides of the Iron curtain. Today—not next year, or the year after, but today—the Soviets have both the bombs and the planes needed to launch a devastating nuclear attack against the cities of North America."

Listen to Winston Churchill as he comments on current history:

"Mankind has never been in this position before. Without having improved appreciably in virtue or enjoying wiser guidance, it has got into its hands for the first time the tools by which it can unfailingly accomplish its own extermination. That is the point in human destinies to which all the glories and toils of men have at last led them. They would do well to pause and ponder upon their new responsibilities. Death stands at attention, obedient, expectant, ready to serve, ready to shear away the people en masse; ready, if called on, to pulverize, without hope of repair, what is left of civilization. He awaits only the word of command. He awaits it from a frail, bewildered being, long his victim, now—for one occasion only—his master."

There you have a glimpse of the background in which nations of the world may decide upon the course to follow in dealing with one another. And it is against that background that the American people must determine the course of their own policy as respects our neighbors. Our Government is seriously concerned with such a question, and the Senate, and the House of Representatives as well, have sat in judgment upon phases of it these past several weeks.

On January 24, President Eisenhower sent to the Senate and the House a message in which he reiterated that this country's basic goal is safeguarding the security of the United States by establishing and preserving a just and honorable peace. He then described, in considerable detail, the serious and darkening situation in the Strait of Formosa. Suffice to say here, since 1945 the islands of Formosa and the Pescadores have been occupied by the Republic of China, a loyal ally of the American people. Communist China, which incidentally still incarcerates innocent American citizens, announced its determination to invade and conquer these islands and bring them under the aegis of Red Chinese communism. The President emphasized the importance to the American people that these islands remain in friendly hands. He requested the Congress to adopt a resolution authorizing him to employ our Armed Forces as he might deem necessary to secure and protect these islands against armed attack.

What, my fellow citizens, is the importance to the American people of Formosa and the Pescadores? In the words of the President of the United States, those islands, in unfriendly hands "would seriously dislocate the existing, even if unstable, balance, of moral, economic, and military forces upon upon which the peace of the Pacific depends. It would create a breach in the island chain of the western Pacific that constitutes, for the United States and other free nations, the geographic backbone of their security structure in that ocean. With that, the Joint Chiefs of Staff of the United States agree."

I want to recall the words of another great American citizen who was a guest of the people of Los Angeles a very few days ago. Speaking to the 82d Congress on his triumphant return to our country, Gen. Douglas MacArthur described the Pacific Ocean as a vast moat to protect the United States as long as we held it. He spoke of a chain of islands in the Pacific which constituted for Americans a protective shield. It was his powerfully-stated conviction that a breach in that littoral defense line by an unfriendly power would make vulnerable each remaining segment of it. And then he said, "Under no circumstances must Formosa fall under Communist control. Such an eventuality would at once threaten the freedom of the Philippines and the loss of Japan and might well force our western frontier back to the coasts of California, Oregon, and Washington."

In the considered judgment of such American patriots who are qualified to speak, Communist occupation of Formosa and the Pescadores would seriously endanger the security of the people of the United States and would undermine the cause of peace.

The resolution was debated in the House of Representatives and it passed almost unanimously with only three Members opposing it. It was debated at considerable length in the Senate. All manner of amendments were offered to delimit or restrict the President's responsibility. I listened to those Senators who advocated restrictive amendments or who advocated, indeed, no resolution at all. I listened also to the distinguished Democratic Senator WALTER F. GEORGE, chairman of the Foreign Relations Committee, who urged the adoption of the

resolution exactly as the President had recommended it. On the basis of all the background and of the Senate debate, I say to the people of my State of California, there was only one course in my judgment to pursue in the cause of American security and peace in the world. That was to uphold the recommendation of the President of the United States. And the Senate did uphold the President's recommendation, and did so overwhelmingly.

Thus, for all the world to see, the President of the United States and the Congress, representing the American people, have taken an unequivocal position. It is a position in line with our basic foreign policy and completely in consonance with our American goal.

That action was followed a few days later by overwhelming ratification in the Senate of the Southeast Asia collective defense treaty. By that commitment the United States, together with Australia, New Zealand, Great Britain, France, the Philippines, Pakistan, and Thailand, combined to create a protective network of mutual defense, to promote security and to strengthen the fabric of peace in Southeast Asia and the Southwest Pacific. This treaty is designed to deter aggression, which means Communist aggression, in that area of the world by warning potential aggressors that an open armed attack upon the territory of any of the parties will be regarded by each signatory nation as dangerous to its own peace and safety. In such contingency the parties agree to meet the common danger in accordance with their constitutional processes. They also agree to consult on measures for their common defense whenever the territory of integrity or political independence of any of them is threatened other than by armed attack, which might endanger the peace of the area. Thus it is indicated to communism that its techniques of internal subversion would be dealt with effectively. If communism fails to understand anything but force and might, then communism is forewarned that retribution lies in store for it for breaching the peace in the future.

This is the foreign policy of the Government of the United States. We have now added a mutual defense treaty with Nationalist China. The SEATO treaty in Southeast Asia balances our NATO treaty of mutual security in Europe. It is a policy based upon coming into firm agreement of those who, like ourselves, love freedom. It is designed to deter Communist aggression and the onslaught of Communist slavery. It is an enlightened policy of our own self-interest consistent with our goal of freedom and of peace. There are some in California and some in the Nation who, for varying purposes, oppose this policy. They are a vociferous minority and they are wrong. For my part, my friends, I shall continue to support that policy as it is carried out by the President of the United States.

When Abraham Lincoln was about to become President of the United States in 1861, and as he was traveling en route to Washington, he made a statement to the American people which I repeat as I conclude:

"If the people shall be lost, it is little to any one man . . . but a great deal to the . . . millions of people who inhabit these United States, and their posterity in all coming time. It is your business to rise up and preserve the Union and liberty for yourselves, and not for me. I appeal to you again to constantly bear in mind, that not with politicians, not with presidents, not with office-seekers, but with you is the question: Shall the Union and shall the liberties of this country be preserved to the latest generations?"

Mr. Lincoln answered history in the affirmative. So will we.

The Challenge to Public Power

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. NEUBERGER. Mr. President, on February 16, 1955, it was my privilege to address the annual meeting of one of the most useful groups in our Nation—the National Rural Electric Cooperative Association. This is the organization which has done so much to bring the blessings of electricity, with an attendant higher standard of living, to hundreds of thousands of farm families in rural America.

Other Members of Congress, of both great political parties, who spoke to this highly successful meeting were the Senator from North Dakota [Mr. LANGER], the Senator from Tennessee [Mr. GORE], and Representative H. R. Gross, of Iowa.

I addressed the convention, assembled in Convention Hall at Atlantic City, N. J., on the subject of The Challenge to Public Power, reviewing the efforts undertaken during the past 2 years by the present administration to eliminate or destroy the public power program in the United States. I had the honor of being introduced by my old friend, Lee Wooden, of Jewell, in Clatsop County, Oreg., the president of the Rural Electric Cooperative Association in our own State.

Mr. President, I ask unanimous consent that my address to the delegates attending the National Rural Electric Cooperative Association be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE CHALLENGE TO PUBLIC POWER

(Address by Senator RICHARD L. NEUBERGER, of Oregon)

One of the great moments of my career was to stand with George William Norris, the father of public power in America, when he saw Bonneville Dam for the first time. He watched the Columbia River surging inexorably through the Cascade Mountain Range, before it thundered over the spillway of the long, low dam.

"I don't think you people in the Northwest realize what a marvelous resource you have in this wonderful river," said Uncle George. "Is there any other bounty which produces so much good for mankind and yet never diminishes in quantity?"

George Norris is gone now, and the public power program which he helped to build confronts a major crisis. Yet many times I have thought of what he said. What other resource can light farms, turn factory wheels and operate businesses and, at the same time, continue in as great an abundance as ever before?

The lighting up of rural America was born of the same forces that started major multipurpose projects. The first real electric co-op came into being under TVA. Today about 300 of the 1,000 REA's receive all or part of their power supply from Federal power projects. Truly, rural families have a tremendous stake in future resource policies, not only because of potential power supply but because of the great impact of TVA and Bonneville on the rates of private power companies.

When Bonneville and TVA were started, it was like dropping a pebble into a pond of high-power-company rates. The effect of an abundant, low-cost power supply was immediate and far-reaching. The public-power yardstick was felt in ever-widening circles, forcing down the padded rates in adjacent areas.

For 20 years, the United States Government promoted a program to make the rivers of America the servants of the people. I use the term advisedly. I live in a State where only 27 percent of our farms had electricity in 1933. By 1952, this figure had soared to 98 percent. It is practically impossible to measure this gain other than in terms of increased creature comforts, greater purchasing power, a higher standard of living. These are the only proper measurements.

Mrs. Neuberger's mother, Ethel Keltly Brown, is one of the farm women who had no electricity until the programs were begun which symbolize the work of the National Rural Electric Cooperative Association. Mother Brown has told me what it was like to live on a farm without power. It meant no refrigeration for the food which was cooked. It meant doing that cooking on a wood stove, with the women splitting kindling while the men were at their chores. It meant hand-washing farm clothes—which get excruciatingly dirty—on a corrugated washboard. It meant carrying a Coleman lantern from room to room at night when children were sick.

POWER CHANGES FARM LIFE

Electricity on the farm has changed all this. The vast majority of the farms of our country have power today because of the Federal power program, because of the Rural Electric Administration, because of the watchful vigilance and persistent crusading of groups like the National Electric Cooperative Association. And all this benefit has occurred without diminishing the natural resources of America. The late J. D. Ross, first administrator of Bonneville, used to call that dam "an oil well which will never run dry, a coal mine that will never thin out. . . ."

Although I am only (sic) 42 years old, I come before you today as a man who has seen the public power program revolve in a full cycle in my region, the Pacific Northwest.

I witnessed the program begin a little more than 20 years ago. It was a bipartisan program—a program advanced by far-sighted men in both major political parties. By every possible standard, it was a success. As you know, electricity was brought to the farms, and at rates which the farmer could afford. Industrial payrolls came next, and this meant a steady market in town for the farmer's crops. Although the Pacific Northwest has historically lagged behind the rest of the Nation in manufacturing, its expansion led the land during the first decade that Bonneville power was available. Between 1939 and 1948, the national increase in manufacturing employment was 284 percent but in the States of Oregon and Washington it was 329 percent. Furthermore, this program has been generously paying for itself. Indeed, the annual reports of the Interior Department actually admit that the Columbia River power program is far ahead of the amortization schedule in repayments to the Government.

And auxiliary benefits of incalculable value were occurring simultaneously. In 1933, the year Bonneville Dam was started, a mere 85,000 tons of cargo moved upstream into the reaches of the upper Columbia River. In 1953, the tonnage was 1,375,000. This was merely a bonus from the power program. And what are we to say of the thousands of irrigated homesteads now being wrested from the arid upland desert near Grand Coulee, homesteads where ex-GI's and

their families are making a new start in life?

I stress these benefits that have taken place in my own part of the country because I can be a little more poignant, a little more dramatic, a little more specific about it. These things I have seen with my own eyes. I was at Grand Coulee when the world's biggest dam was started. I saw the first water gurgling through canals amidst the sagebrush and tumbleweed. I saw the first transmission lines stretching out across the wasteland like a steel-legged centipede.

CALCULATED SCHEME STOPS PROGRAM

This was a program dedicated to the welfare of the United States, yet you of the NRECA know what has happened to that program. In 1953, the present national administration stopped it—deliberately, calculatingly, grimly.

The onslaught has occurred on many fronts:

1. Appropriations have been reduced for agencies devoted to the wider use of low-cost power.

2. Key waterpower sites, like Hells Canyon, have been pledged by the administration to private power companies for piecemeal, high-cost development.

3. New Federal starts have been choked off.

4. So-called wheeling agreements with utility corporations have given them control of the power supply in many areas.

5. Attacks upon the public-power preference clause have imperiled the electric supply of rural electric co-ops and other non-profit systems.

6. A nationwide barrage of propaganda, some of it stemming from the White House and executive departments, has sought to indict such undertakings as the Tennessee Valley Authority and Bonneville as "creeping socialism."

7. A so-called partnership with private utilities has been proposed, whereby these companies would monopolize the revenue and energy at Federal power projects.

I emphasize the partnership because it represents today the spearhead of the current attack upon public power. The word "partnership" peppers the President's budget message. It is an appealing word. Yet what kind of a partnership is it? It is a partnership in which the Government relinquishes to private monopolies the powerhouses at Federal dams, while the Government continues to finance the nonreimbursable features, such as fish ladders, floodgates, and navigation locks.

THE MONOPOLY PARTNERSHIP

We had a partnership in operation. It wasn't this kind of partnership. It was a legitimate partnership between the Government and its citizens. Clyde T. Ellis, your executive manager, described this partnership in a masterful address which he delivered a year ago last month at your 1954 convention in Miami. Mr. Ellis referred numerous times to the Federal-local partnership, under which kilowatts were being sold at low cost to whatever distributing agency the residents of a particular area preferred.

It might be a municipal system as in Seattle. It might be a private power company as in Portland. It might be a public utility district as in Clark County, Wash. It might be a rural electric co-op as in Benton and Lincoln Counties, Oreg. These various methods of distribution represented the democratically chosen preference of the men and women living in that part of our Nation. They made the choice without interference by politicians in either the State capital or the National Capital, and then the Federal power system made available energy from the dams constructed on key river networks.

This was a bona fide partnership, as Clyde Ellis made clear. But what is proposed today as partnership is no partnership at all. It is monopoly and special privilege. For at least 50 years, a private stranglehold will be

given legal sanctity at a great power site, and there will be nothing that the men and women in that area can do about it, through half a century of time.

We are told the abandonment of public power is necessary in the name of Americanism. Yet the preference clause, which safeguards the power supply of our rural electric co-ops, goes all the way back to the administration of Theodore Roosevelt and the Reclamation Act of 1906. I refuse to believe that the man who led the Rough Riders up San Juan Hill was a creeping Socialist. The inclusion of the preference clause in the Bonneville Act was principally the work of Senator Charles L. McNary, of Oregon. Does the present administration want to accuse of socialism the man who was Republican minority floor leader in the United States Senate for well over a decade?

In the barrage of propaganda being fired at the people over the Hells Canyon question, these overtones of patriotism again appear. Is it patriotic to abandon the greatest hydroelectric site left on our continent to the absentee-dominated corporation, which will tap only a segment of the available kilowatts?

PLAYBACK OF HISTORY

Historians tell us that no issues are really new. They all have arisen before—perhaps in different guise and other settings. Yet almost half a century ago, Theodore Roosevelt and his illustrious Chief Forester, Gifford Pinchot, confronted a Hells Canyon problem of their own.

Utility companies were grabbing off power sites on the mountain rivers of the West. Although the Nation had recently set aside the forest reserves, no legislation existed for the specific protection of these hydroelectric power sites. Let Pinchot describe what happened, in his autobiography *Breaking New Ground*:

"A certain number of forest-ranger stations were applied for which were needed less for rangers than to give the Government a temporary hold on some power site and prevent the power octopus from sucking it in. . . . Some of these ranger stations were deliberately located on water power sites, in order to insure some form of government control. . . ."

Contrast this action by Teddy Roosevelt and Gifford Pinchot with the shameful relinquishment of Hells Canyon by the present masters of the American Government. Roosevelt and Pinchot contrived extra-legal machinery to save these power resources for future generations. They relied upon a subterfuge. This national administration refuses to use the machinery long ago created for the purpose—it seeks to hasten the abandonment of Hells Canyon, John Day, Green Peter, and other sites.

Nor can this be called in any sense of the word a partisan issue. Theodore Roosevelt and Pinchot were lifelong Republicans. The program which this administration has jettisoned was, in many of its concepts, a program originated by Republicans of the past—Roosevelt, Pinchot, Hiram Johnson, Norris, Borah, McNary, and many others. In my own State, I am a Democrat, but thousands of Republicans, on farms and in the cities, assured me that they were loyal to a publicly motivated program of resource development that had its roots within their own party.

Under this administration, engineering and scientific knowledge have been bent to political whims. The 308 report of the United States Army Corps of Engineers is the master plan for development of the Columbia River Basin. Surely if the Army ever errs, it is on the conservative and cautious side. But the 308 report recommends without reservation the erection of a high multipurpose Federal dam in Hells Canyon.

Yet this national administration assures us that the 308 report is wrong at Hells Canyon. Of course, the 308 report, according to the administration, is right at Libby Dam up along the Canadian border, where the prospects for construction are so clouded by international disputes that no private power company covets the site. So, here, the administration is willing to promote a Federal dam. How can the same engineers, with the same transits and the same diamond drills, be wrong on the Snake River and right on the Kootenai River? It is as if a patient told his doctor that the doctor was right about one lung, but wrong about the other.

INTERIOR POLICIES THREATEN REA'S

One of the serious blows suffered by REA's under the new policies was abrogation of 40-year contracts between the Interior Department and cooperatives in the southwest. As a result, the REA's were threatened with the bankruptcy or high rates, or loss of their independence. As you know, the original destruction of the continuing fund vital to these contracts was put through by a former Senator from Oregon. I assure you the new Senator from Oregon will do everything in his power to undo the damage.

Other corrective measures are also necessary, especially against the conspiracy to rewrite the formula for allocating power costs to make the price of Federal power as high as private power.

I cite these things to indicate how politics and greed are intruding into programs which, until the last year or so, were decided by the needs of the American people and not by the selfish desires of 1 or 2 utility corporations.

ATTACK BY STEALTH

As you are well aware, REA funds have been cut but not abolished by Congress. You have been successful in maintaining reasonably adequate loan funds and services during the past 2 years. But this was to be expected. It was forecast at your first annual convention by the late George W. Norris. He said: "The attack upon REA will not be an open assault. The attack will be by stealth and treachery because REA is too popular to be attacked openly."

I don't own a crystal ball, but occult powers are not needed to predict that the Hoover Commission will probably recommend that REA—as you now know it—be abolished. Out of respect for your political potency, they will try to put forth some plausible substitute like a Federal REA corporation forced to borrow money from bankers at high-interest rates, and run by a board of directors and not by the Congress, which is now REA's board of directors.

THAT FEDERAL POWER MONOPOLY

For nearly 2 years, the administration has defended its abandonment of the Federal power program by contending that the Nation was in dire peril of being suffocated by a Federal power monopoly.

Secretary McKay has uttered this warning on many occasions. At McNary Dam on September 23, 1954, the President himself warned against Federal operation of "a gigantic, overwhelming nationwide power monopoly."

On November 4, 1954, Budget Director Rowland H. Hughes warned against committing the country to "a policy of establishing a nationwide power monopoly."

Yet this entire argument was refuted by the President in his State of the Union message of January 6, 1955, when he flatly declared to the Congress that "Federal hydroelectric developments supply but a small fraction of the Nation's power needs."

On this occasion, the President definitely asserted the true facts. Only about 13 percent of the energy used in the Nation is gen-

erated by the Federal Government. Approximately 6 percent spins off the turbines of municipal systems, and the remaining 81 percent from private utility corporations.

What is monopoly—13 percent, or 81 percent?

Yet for months the American people were told solemnly by their highest government officials that they couldn't have any more dams like Grand Coulee, Shasta, and Bonneville because of the imminent dangers of a Federal power monopoly.

Wasn't it Bernard M. Baruch who said that every man had a right to be wrong as to his opinions but that no man had a right to be wrong as to his facts?

SUBSIDIZED POWER: ANOTHER MYTH

Ever since the present national administration went into office, a conscious and deliberate effort has taken place to convince the people of America that the energy generated at Federal hydroelectric projects does not pay for itself. These projects are portrayed as vast drains on our national Treasury.

For example, Secretary of the Interior McKay appeared on the CBS Capitol Cloak Room TV program October 23, 1953. This colloquy took place between him and Mr. Bill Costello, one of the CBS panel:

MR. COSTELLO. "Well, it's your philosophy, then, that the citizen generally should not pay the cost of keeping power rates low but that the individual consumer should pay the actual cost of producing that power."

SECRETARY MCKAY. "That's right. I don't think it's right to subsidize power out in my country—for instance in Oregon, Washington, Idaho, and that country. We shouldn't ask for power to be subsidized by the people in New England."

Now if anyone should realize that this is a plain and outright misrepresentation, it should be Secretary McKay. In the first place, his own annual report for 1953 declares (at p. 326) that "the repayment (on Bonneville) is substantially in excess of scheduled requirements." As a former Governor of Oregon and as a resident of the Northwest, the Secretary ought to know that the great Government power projects on the Columbia River are returning to the Treasury not only the original investment in hydroelectric facilities, but also interest and operating costs.

Consider the repayment record on the Bonneville Dam project alone. The Government has invested \$128,549,822 in construction costs and operating expenses for Bonneville Dam. Although its full span of generators have been in operation only 11 years, the project has put \$48,825,959 into Federal coffers from sale of power. In fact, the whole Bonneville system—marketing the output of all Federal dams on the Columbia—has collected gross income of \$340,565,589 through the sale of kilowatts.

Yet these fiscal facts are not known today throughout the Nation. The other day I engaged in a brief and friendly debate on the floor of the Senate with Senator NORRIS CORRON, a fine Republican Senator from New Hampshire. He was of the opinion that our dams in the Northwest are a drain on the taxpayers of his State. In other words, the propaganda put out by Mr. McKay and others has taken root. Senator CORRON does not realize that the Columbia River projects actually, in the long run, will be an ultimate source of financial profit to the Federal Government. And I know he is not aware of the innumerable products manufactured in New England—products like alarm clocks, ice boxes, stoves, washing machines, and shoes—which have been purchased because thousands of rural folks in the Northwest have a higher standard of living and increased purchasing power through the abundant and

low-cost electricity made available to them on their farms.

THE BETRAYAL AT HELLS CANYON

The adage that history repeats itself was never more dramatically brought home to me than when I was asked a year ago to review a book detailing the fight to build Grand Coulee Dam, called *Hell Columbia*. This book, written by George Sundborg, a former Northwest newspaperman, impressed me with the deadly parallel between the fight for Grand Coulee and our present day struggle for Hells Canyon Dam.

Mr. Sundborg could not have had the Hells Canyon case in mind when he wrote the book because he started the work before the Hells Canyon struggle commenced.

But the situations are such close parallels they might have been poured from the same mold—like the Gold Dust twins that used to adorn the soap flake boxes.

Kettle Falls was a place on the Columbia River about 117 miles upstream from the proposed Grand Coulee damsite. In March of 1921—just after the appropriation had been secured to core-drill the Coulee site—the Washington Water Power Company began to show interest in Kettle Falls as a site for development. On June 20, 1921, a contract for exploratory drilling on the Grand Coulee site was awarded. Ten days later, Washington Water Power filed an application with the Federal Power Commission to construct a dam at Kettle Falls. The Kettle Falls dam, located in the proposed Coulee reservoir pool, would have lopped off a hundred feet from the height of Grand Coulee—horsepower in the big dam's power output, with consequent reduction of a million.

A long public debate ensued in which spokesmen for a number of Federal and State agencies were enlisted to support the power company. The pattern included such official statements as that of the then secretary of the Federal Power Commission. This gentleman said a dam at Grand Coulee—and I quote—"would involve an excessive initial investment", which, he said, it was "extremely doubtful could be secured for the purpose from any resource." This official went on to say of Grand Coulee that the PPC license to the power company would be granted only for a period of 50 years. "If at the end of that time or even before, it should become evident that the high dam would be a desirable step, the net investment of the Kettle Falls development could readily be absorbed by the Grand Coulee development." And, he added, "further investigation of this plan does not seem to be necessary."

It was not until June 23, 1936, that the FPC issued an order formally denying the Kettle Falls dam permit—nearly 14 years after Washington Water Power made its first move to block Grand Coulee construction.

I detail this background only for purposes of comparing some of the developments in the Grand Coulee and Hells Canyon fights. On June 9, 1947, the Army Corps of Engineers announced a public hearing would be held on plans for development of the Middle Snake River. These plans included Hells Canyon Dam, which was a key part of its famous 308 Report on Columbia River development. Thirteen days later, the Idaho Power Co. applied to the Federal Power Commission for a preliminary permit for a new run-of-the-river dam at Oxbow site, some 35 miles upstream from the Hells Canyon site. Granting of the Oxbow license would forever bar construction of Hells Canyon Dam, but would preserve the barony which the Idaho Power Co. holds in Idaho.

Since the Oxbow application was filed, the battle has raged on. We have seen spokesmen for Government agencies and company-front groups pressured to back the company scheme, just as in the days of Grand Coulee. Hells Canyon Dam and the whole plan for full development of the Columbia Basin was hit hardest by action of Secretary

of the Interior Douglas McKay in withdrawing his Department's opposition to the Oxbow license.

As recently as last spring we, in Oregon, heard the Secretary repeat that the Federal budget was too precarious to start new dams. He was especially insistent about expenditures for Hells Canyon Dam, although when campaigning in the Colorado River Basin he never mentioned this fiscal situation. In Oregon, it was like listening to a hollow echo from the corridors of history—shades of that former FPC secretary who said Grand Coulee involved "excessive initial investment."

McKay never mentioned that, although Grand Coulee has had its full quota of generators in operation only since 1951, it has paid into the Federal Treasury over \$51 million toward retiring an eventual power debt of \$221 million.

POWER-COMPANY SLOGANS REVIVED

The parallel between Hells Canyon and Grand Coulee is significant. It shows that the situations and the arguments are not new. The ideas espoused by the Interior Secretary on Hells Canyon were merely revived from the Grand Coulee fight. It would appear that the public-opinion formers thumbed back through their book of tricks and slogans to pick out the present-day arguments.

But what if the arguments used by McKay and other administration spokesmen had prevailed in the embryo days of Grand Coulee? What would have happened to the energy which activated the Hanford works and made plutonium available for our knock-out punch in World War II? Where would the power have come from for the aluminum to make 50,000 planes a year for our Nation's defense? How would we have started to wrest from the desert 15,000 farmsteads for ex-GI's and others in the Coulee region?

Fortunately, the views of those who ridiculed Grand Coulee as a "white elephant" did not prevail. As a result, America has been a better and more secure place in which to live. There were men of vision, integrity, and courage—men like George Norris, of Nebraska, and Tim O'Sullivan, from the plateau of eastern Washington—who were willing to carry on in the face of ridicule, deception, and pressure. To prevent the warmed-over arguments of the 1920's from being used against the public-power program today, we must keep alive their traditions of battle. They knew not the meaning of surrender, nor did they compromise when faced with discouragement.

Many of you may feel that the picture of the moment is bleak. But you should feel optimistic and proud. You have been in the front lines, blunting the attack. You have been hurt in some areas but not beyond recovery.

It is a far road from a damsite on a tributary to the Columbia where Norris stood that day long ago, with the fine spray drifting into his face. The prophecy and admonition which Norris gave applies today, as it did then. He said: "We will come some day, perhaps within our lifetime, to the great electric age. . . . Since Adam and Eve were driven from the Garden of Eden, there has never been discovered an element in nature with so many possibilities of usefulness and pleasure as electricity. We ought to guard with jealous care the concentration of water-power in the hands of any combination of men."

This is Norris' challenge to us. He is gone. We are here. Can we fail this man—and the hosts like him—who fought for public power when it was considered a lost cause, when the movement was in infancy? The illustrious Jefferson said, "Each generation must make its own fight for liberty." Because Norris and his contemporaries won their battle, we cannot rest content. Our own Armageddon lies ahead.

The outcome is in our own hands.

Lincoln, Eisenhower, and a Republican Philosophy for Our Times

EXTENSION OF REMARKS OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Lincoln Day address which I delivered last Saturday night at Glastonbury, Conn.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LINCOLN, EISENHOWER, AND A REPUBLICAN PHILOSOPHY FOR OUR TIMES

(By United States Senator Prescott Bush)

In every public speaker's life there come two reactions after he receives an invitation to address a meeting such as this. First, there is the warm, happy glow when the invitation arrives, and he feels that after all this time someone is still interested in what he has to say. Later, unhappily, comes the descent to the depths, as the time by which he must prepare his remarks inexorably approaches, and he wonders what new message he can bring his audience.

In this latter mood, back in Washington a few days ago, and thinking of Abraham Lincoln, whom we honor tonight, 90 years after his death, my eyes fell on a newspaper clipping I keep below the glass on my desk. It's a prayer which James Reston of the New York Times reprinted in his column some months ago. Let me read it to you:

"God give us men! A time like this demands Strong minds, great heart, true faith, and ready hands;

Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions and a will;
Men who have honor; men who will not lie;
Men who can stand before a demagogue
And damn his treacherous flatteries without winking;

Tall men, sun-crowned, who live above the fog

In public duty and in private thinking.
God, give us men. Amen."

As I read those lines again one night last week, they gave me one part of the message I want to bring to you tonight:

The Republican Party can be eternally proud that in two times of crisis in the history of our Nation it gave America two Presidents of the stature of Abraham Lincoln and Dwight D. Eisenhower.

Both men, in truth, of "strong minds, great hearts, true faith, and ready hands." Both above the fog in public duty and in private thinking.

There have been other great Republican Presidents. The name of Teddy Roosevelt, to mention only one, comes automatically to mind. But between Lincoln and none of our other great Presidents, including the Oyster Bay Roosevelt, have there been such similarities as exist between the Great Emancipator and Dwight Eisenhower.

Many parallels between Lincoln and Eisenhower could be pointed out. I will mention but a few.

First, most obviously, are the times of national crises in which each bore the burdens of office. Lincoln, in his day, was confronted with a nation half slave and half free; Eisenhower, today, struggles with the many grave problems created by a world half slave and half free.

Outstanding, next, are their similar great qualities as spiritual leaders of the American people, leaders with a reverent faith in God

and in the Divine inspiration which gives life to the great documents of our history, the Declaration of Independence, the Constitution and the Bill of Rights. Both men came at times in our history when there was need for the flame of that faith to burn brighter.

And then there is their leadership in stating the philosophy of the Republican Party to which we give our allegiance.

Political conditions in our times, as in Lincoln's day, envelop the political battle in a thick smog. Differences between our major parties are blurred. Factions mark splits within each party. Slogans and labels today are used much as they were in Lincoln's time to create differences where none exist, or to cover up the real differences which honest reason and discussion would expose.

Facing similar conditions in his time, Lincoln did something about them which we are only now beginning to understand. He cut beneath the party battle to eternal truths. He stated principles, defined differences, and clarified issues. No one can read the famous Lincoln-Douglas debates or the Lincoln campaign speeches without being impressed with his patient determination to draw the line between the emerging Republican Party and his Democratic opponents.

The same thing is being done today by President Eisenhower. A careful reader of his state papers and public utterances will find within them a growing body of political philosophy, a philosophy suited for our times and the Nation's manifold problems of the day.

As modern Republicans, we believe with Lincoln that "the dogmas of the quiet past are inadequate to the stormy present. And, as our case is new, so must we think and act anew."

And President Eisenhower, while holding fast to the fundamentals of our American system of government which our opponents sometimes forget and still forget, is thinking and acting anew as we come to grips with the sometimes bewilderingly complex problems we face.

It is significant that our President has so often quoted Lincoln's famous statement on the nature of government:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

And Dwight Eisenhower has added to that statement his own—one which I venture to suggest will one day become as famous:

"In all those things which deal with people, be liberal, be human. In all those things which deal with the people's money or their economy or their form of government, be conservative—and don't be afraid to use the word."

Together, those statements form the central core of the philosophy of our modern Republican Party—a party which is alive and sympathetic to the human needs of the people, and a party which, unlike our opponents at times, is aware of the dangers to the people's freedom which lie in overly paternalistic, centralized government.

It is a philosophy of progressive moderation, as the President has called it, or of moderate progressiveness as others name it. Whatever it be named, it is a philosophy which strikes a responsive chord in the minds and aspirations of the American people, who find a steady advance along the middle of the road to our future more sensible and more attractive than frenetic zigzagging from left to right and vice versa.

The Republican Party has come a long way in improving its political philosophy since I first voted for Charles Evans Hughes in New Haven in 1918. It has profited by its own mistakes. It has profited by the mis-

takes of its political opponents. And, under the leadership of President Eisenhower, it reflects the best understanding of the real obligations and duties of government that we have yet seen in the history of the United States.

Our philosophy recognizes that in this complex industrial civilization of modern times, the problems of government are more complicated and more comprehensive than they have ever been before.

We recognize that there has grown to be a greater degree of interdependence among our people than ever before.

We recognize that the security and happiness of the American home is the most important basic asset in American economic, political, and social life.

We recognize that the happiness and security of those homes depends upon jobs. It depends upon opportunities and incentives to work.

We recognize that there can be no prosperity in the truest sense unless there are jobs available for all who are willing and able to work.

So, with these basic facts in mind, the Eisenhower administration has undertaken, in the past 2 years, to unleash the forces which will create this indispensable situation. It has adopted a policy of incentives, rather than a punitive attitude, toward labor, capital, and management. It has passed legislation designed to loosen up the savings of the people and put them into constructive job-creating enterprises. It has been unashamed to state the doctrine that just as labor is worthy of its hire, so are the savings of the people.

In matters of taxation, it has adopted an incentive rather than a punitive attitude. And in dealing with private business, it has adopted a helpful and understanding attitude rather than one of punitive vindictiveness. And taken all in all, these attitudes and policies have resulted in more jobs—more jobs than we have ever had before in any peacetime period in American history.

But that is not all. Our policies have created a situation and an environment which gives tremendous confidence for the future. No one could read the President's Economic Report of January 19, 1955, without being inspired with confidence for the future. We recognize our Government's obligation to serve the basic human needs of our people, to encourage and promote personal and family security, and we point the way to accomplishment of those ends by encouragement and stimulation of jobmaking private enterprise.

I have referred to factional splits within the 2 major parties today. I sometimes think that we Republicans worry so much about our own differences of opinion that we blind ourselves to the very serious cleavages which drive apart the Democrats. From observation in the Senate, I can assure you that those cleavages exist, although I must reluctantly confess that the Democrats, perhaps smarter politicians than we, gloss them over as much as possible. And when the chips are down, their party discipline takes command.

Nevertheless, we can't blink the fact that there are divisions in our Republican Party, differences which are particularly apparent in the Senate. There has been encouraging progress in the early days of the 84th Congress towards increasing the unity among Republican Senators. I hope that progress will continue.

And to my Republican friends in Connecticut, I say that we are in need of greater unity—greater unity and a spirit of confidence. The shock and disappointment of losing the Governorship in the most recent election has caused some to doubt and despair. There are some, I regret to say, who fail to realize that in Dwight D. Eisenhower and the record we are making under

his leadership the Republican Party has its greatest asset since the days of Lincoln.

Let us look to the future instead of the past. And our future as a party is bright. I see an overwhelming victory ahead for us in 1956. I see that victory because the record we are making will be unbeatable—the record both in national affairs and in the zealous attention to the interests of Connecticut which is being given by your entire Republican delegation in the Congress.

The President has the trust of the American people. I confidently expect that he will run again. In his messages to the 84th Congress, he has outlined a program and expressed a philosophy which we, as modern Republicans, embrace and in which we can take pride. It is a program and a philosophy for our times, reflecting the hopes and aspirations of a great majority of the American people.

The enactment of the program for the 84th Congress—and I believe most of it will be adopted, although not without heel-dragging and querulous quibbling by our opponents—will add luster to the record made by the 83d.

So look ahead.

Cast off the chains of fear and doubt. Be proud of our party and its great leader who will surely restore it to the hearts and affections of the American people.

Results of McGregor Poll on National Issues

EXTENSION OF REMARKS

OF

HON. J. HARRY MCGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. MCGREGOR. Mr. Speaker, under permission to extend my remarks, I would like to place in the Record the results of a questionnaire I sent to the citizens in the 17th Ohio District. I am proud to represent this district in the Congress of the United States. The questions were concerned with major national and international problems facing Congress today.

I regret I could not send a questionnaire to each of my constituents in the district, but I believe the replies I have received are the opinions of a cross section of those I represent.

Question sheets were sent to almost every occupational group: Republican and Democratic committeemen and women, laborers, attorneys, housewives, public office holders and government employees, salesmen, retired men and women, ministers, college and high-school students, and their instructors. Also included are those working in business and industry, newspaper, radio and professional positions.

Blanks were mailed to individuals and reproductions of the questionnaire were published in nearly all of the 20 daily and weekly newspapers in my district.

A large percent of the completed forms contained comments on the questions which proves to me that the average citizen is interested in the vital issues now before this legislative body and is anxious to express his views on them. I am very pleased so many took the time to write and attach letters and notes to

the questionnaire enlarging upon their answers.

The population in my district is composed of about half rural and half urban residents. Nearly all of the labor and farm organizations are represented as well as large and small business. There are also 2 colleges and 2 universities.

It is not often that a Congressman can obtain a true picture of such an evenly divided district, but through the questionnaire method, I feel I have gained the majority opinion of those I represent.

The questionnaire and the results are as follows:

QUESTIONNAIRE IN AN ENDEAVOR TO LEARN THE VIEWS OF THE FOLKS BACK HOME

	Yes	No
1. Which is your choice on the farm program relative to price support and crop control?		
(a) 100-percent price support and rigid crop control.....	8	92
(b) Flexible price support and medium crop control.....	64	36
(c) No price support and no crop control.....	30	70
2. Should women qualified for social security be eligible for benefits at age 60?	68	32
3. Realizing the need for a strong national defense, which do you prefer?		
(a) Extension of the present draft law.....	57	43
(b) Universal military training.....	42	58
4. Do you believe that our present foreign policy program is proving effective and promoting world peace?	55	45
(If your answer is negative write your own suggestions on the back of this questionnaire.)		
5. Do you favor continuation of:		
(a) Technical assistance to Europe?	75	25
(b) Economic assistance to Europe?	38	62
(c) Military assistance to Europe?	53	47
6. Do you favor continuation of:		
(a) Technical assistance to Asia?	76	24
(b) Economic assistance to Asia?	46	54
(c) Military assistance to Asia?	49	51

Rinaldo Burrus Page, a Man Devoted to
North Carolina

EXTENSION OF REMARKS
OF

HON. SAMUEL J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. ERVIN. Mr. President, I have prepared a brief statement regarding the late Mr. Rinaldo Burrus Page, of Wilmington, N. C., and his valuable contribution to his adopted State. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

RINALDO BURRUS PAGE, A MAN DEVOTED TO
NORTH CAROLINA

On February 2, 1955, death marched into the ranks of North Carolina's most useful citizenry and claimed a distinguished business and civic leader, Mr. Rinaldo Burrus Page, publisher of the Star-News newspapers of Wilmington.

He was the first chairman of the North Carolina State Ports Authority and a Wilmington civic leader for 25 years.

A native of Columbus, Ga., Mr. Page began his newspaper experience on his father's paper, the Columbus Ledger. He attended Emory University and the University of Georgia. After service in France in World War I, he returned to the newspaper business, coming to Wilmington in 1927 as president and publisher of the Wilmington Morning Star, later acquiring the Wilmington News.

Following years of undivided interest in the development of his city and the Cape Fear region, Gov. R. Gregg Cherry named Mr. Page to the chairmanship of the newly created ports commission in 1945. Mr. Page had long been a leading spokesman for the development of better ports in North Carolina, and with the passing of time, my State will realize even more the wisdom and courage that he possessed.

His contribution to his fellowman was not limited to the newspaper and ports fields. He devoted himself to progressive civic duty in many areas.

Once convinced that a cause was just, Mr. Page was never satisfied with anything less than complete success—a clear-cut challenge and priceless heritage for his lineage and associates.

He wrought well and left a lasting impress upon the annals of our generation.

Danger From Mass Asphyxiations From
Smog in Los Angeles

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. KUCHEL. Mr. President, we are now told that there is a continuing and expanding hazard to the people of the city of Los Angeles from mass asphyxiation from smog. "Smog" is a California word which describes air pollution. We are told of the hazard by one qualified to know, Mr. A. F. Merewether, of New York City, president of the American Meteorological Society, and a citizen of the State and city of New York.

Because of the increasing hazard to the health of those who reside not alone in the cities of America, but also in rural towns across the country, the two distinguished Senators from Pennsylvania [Mr. MARTIN and Mr. DUFF], my senior colleague from California [Mr. KNOWLAND], and I were prompted to introduce proposed legislation which would create a Federal Air Pollution Control Act, and which would enlist the scientific resources of the Federal Government in what must be a united effort against the menace of air pollution.

The statement to which I have referred was made in a letter which was written by Mr. Merewether, and which is commented upon in the Los Angeles Times of Wednesday, February 2, 1955. I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SMOG DANGER REAL, SAYS NEW YORKER—
METEOROLOGIST CALLS ATTENTION TO PAST
MASS ASPHYXIATIONS

The president of the American Meteorological Society in a letter turned over yesterday to the board of supervisors remarked that mass asphyxiations from smog in Los Angeles would not surprise him.

The writer was A. F. Merewether, of New York City, who in addition to heading the society is meteorology director for American Airlines at LaGuardia Field.

He wrote the letter to Dr. M. Nelberger, senior meteorologist for the Air Pollution Foundation. The letter was given to the supervisors by Dr. Lauren B. Hitchcock, managing director of the foundation.

DISAGREES WITH THEORY

Merewether disagreed with the Elwell theory that smog is created freakishly by nature. He said smog is man-made and that Los Angeles is more conducive to its concentration than most places.

"The Americans have been pouring sewage and refuse into our streams for years and we are not surprised that neither we nor fish can swim safely in such waters any longer," he wrote.

"Why then try to make it such a mystery when we do the same thing to our atmosphere?"

SMOG NOT NEW

Merewether reminded that smog is not new and mentioned the smog disasters in London, Donora, and the Meuse Valley in France. "I, for one, will not be at all surprised to pick up the paper some morning and read of the same sort of mass asphyxiations (in Los

Angeles) that have struck before in other parts of the world.

"It has been said," he continued, "that 'those who cannot remember the past are condemned to repeat it.' From the viewpoint of an outsider, looking on from a safe and comfortable distance, that seems to be the choice of you folks out in 'sunny California.'"

Ground-Breaking Ceremonies for the Hendersonville, N. C., Plant of the General Electric Co.

EXTENSION OF REMARKS

OF

HON. SAMUEL J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. ERVIN. Mr. President, the General Electric Co. is locating several of its new plants in North Carolina. My coworker, Representative GEORGE A. SHUFORD, and I were privileged to attend the ground-breaking ceremonies of one of these new plants near Hendersonville, N. C., on February 4, 1955, and to hear a magnificent address made by Mr. Philip D. Reed, chairman of the board of directors of General Electric Co., who is one of the industrial statesmen of our day. His address abounds in prophetic insights in respect to the future uses of power, and for this reason merits dissemination and preservation. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It has been aptly said that if your impressions of the Southeast are more than 5 years old, you had better make a recheck.

About 5 years ago the General Electric board of directors made an official visit to Georgia. I remember particularly how we admired the climate, the dogwood, the violets, and spring, which at that moment was bustlin' out all over.

But there was another kind of "spring" in the air too. New plans, new plants, new industries were springing up wherever we went. Strongest of all the impressions I received was the continuing expansion of electric power requirements, and this was not just because the Georgia Power Co. was our more than adequate host.

It is because I know of no better index of a nation's or a region's progress and potential economic growth than a rapidly rising curve of electric power generation. Electricity touches so many other things, and like an economist's fairy tale, whatever it touches becomes transformed.

A Southern writer, James Street, has expressed this in another way: "My Southern emblem," he said, "is the washing machine on the front porch of the little house where the cabin in the cotton used to be. Drive along back roads and you'll see scads of them. Why on the front porch? I don't know. But I know this: a washing machine means electricity, and unless you have lived by lamplight or fired a washpot in the backyards you'll never know what electricity really means."

It has been too long since I visited North Carolina and I am very glad to be back for a recheck. I have received a great many impressions today—of your broad streets lined with oaks and maples and your fine

homes. And if it is a little early for even a southern spring, it is obvious that you are still bustin' out in an epidemic of industrial activity.

The South has changed more in the last 15 years than in the previous 50, and more in the last 5 than the previous 15. Miles and miles of brandnew factories, as modern as day-after-tomorrow, line your countryside. Where all of this may eventually lead I don't think any of us can adequately assess at this moment, but when I remind you that we now have planned or in operation four plants in North Carolina it is obvious that we at General Electric believe that "nothing could be finer than to be in Carolina" for the rest of our corporate life which, because corporations need never die, could be forever.

This belief is based upon a double prognostication: (1) The future of this area, and (2) the future of the electrical industry. That these futures are inextricably interwoven does not diminish either but augments them.

The future of North Carolina is based upon figures that I do not need to cite to this audience: the growth in population at faster than the national average; markets that are growing faster than population; leadership in tobacco, textile, and furniture manufacture, and new diversification in electronics, chemicals, specialties; increased value of farm property and value added by manufacture; rising industrial payroll and farm income; multiplying demand for electric energy.

The future of the electrical industry is based upon the fact that we expect to produce and sell as much electrical equipment in the next 10 years as we have in the entire 75 years of our existence.

I am glad to see a number of friends and colleagues in the business of producing electricity, or of making equipment to generate or use it, here in the audience. It would be interesting to know how each of you happened to get into this business, because, whatever the reasons or motivations, we find ourselves today in the most exciting, challenging and, in my judgment, the most essential undertaking in the length and breadth of America. Energy, electric energy, is literally the cornerstone of our phenomenal national growth and economic preeminence. It is also one of the key requirements for America's continued progress and leadership.

It is even more interesting to note how some of the pioneers of this great industry got into the business. James Buchanan Duke got into it, I have been told, because of a sore toe and a physician who practiced electrical development of his native State along with his medicine. But long before the hydroelectric plants of Duke, there was power in the Piedmont. Hard-working, hard-headed men, with no foreknowledge of the inevitable change in relationship from money and land to money and machinery, mechanically harnessed the water falling in the streams for a variety of tasks and thus attached themselves and their region to change. Doing so long ago, they took the Carolinas into the main stream of modern industrial America.

Then, in 1894, there occurred an event of great historic significance to the South and to the electrical industry: the first application, at Columbia, S. C., of alternating current motors to turn the spindles in a textile mill. This was followed, just 10 years later, by the first hydroelectric plant of what is now the Duke power system.

But I doubt that even Duke envisioned the power of the South of today. During the last 5 years the electric utilities of this State have increased their generating facilities by a million kilowatts. That's growth with a capital G. Carolina Power & Light Co. is

now in the midst of a \$200 million construction program. Duke power is now creating near Belmont a single station with a continuous capability of 1 million kilowatts.

These are some of the fantastic figures of the fantastic growth of electric energy in this country. We can be truly thankful that our job in the years ahead will not be one of protecting the status quo or battling for just a little more business. Rather it will be the difficult but much more satisfying task of keeping abreast, or more accurately, of keeping ahead of the broad sweep of expanding demand for electric energy everywhere in this country.

Seventy-five years ago or less, the only significant use of electricity besides heating a lamp filament to incandescence or consuming the carbon rod in an arc lamp was to operate traction motors in a street railway car. Today, it is hard indeed to think of any human activity that is not associated with the use of electricity.

In 1954, for example, just to do such things as beat up eggs and wash dishes, to mow lawns and freeze foods and heat homes, we manufactured our 100 millionth fractional horsepower motor. Today lamps are used not merely to give light, but to soothe our aches and sprains, decorate our holidays, sterilize and deodorize the atmosphere, take pictures, and give us the epidemic equivalent of a winter vacation. And the fastest growing part of the electrical industry, electronics, is not so much concerned with increasing the amount of energy at man's disposal, as the amount of knowledge.

You, here in Hendersonville, are very close to the center of the new industrial South. I feel we are very fortunate, in the electrical industry, producing electricity or manufacturing the devices to make it or use it, in being so close to the absolute center of things, industrially speaking, and as measured by the potential and leverage for good.

Sir Anthony Eden, when he was here a couple of years ago, was talking one evening about the difference between the totalitarian state, in which one party has absolute political authority and no opposition is brooked; the two-party system, as here and in Britain; and the multiparty system, as in France—with any number of splinter parties and the great difficulty of getting a majority in any party. It seems that a Frenchman and a few associates had decided to get together and form a new party. The difficulty was what to call it. They were sitting around a cafe trying to solve this problem. At last one of the group had an inspiration. "I know what," he said, "we will call it the party of the extreme center."

Perhaps I am prejudiced, but as I have traveled the world and noted the needs and hopes and accomplishments of people everywhere I could not escape the conclusion that the extreme center of the civilization in which we live—social, economic, and political—is power—electric power. Radiating in all directions from that center, its proven worth to mankind is prodigious, and its potential for further good is literally infinite.

I like to think of the electrical industry as constituting a kind of benign circle. We make, as you know, products which generate electric power; other products which transmit and distribute it to the points where it is needed; and still other products, millions of them, which use and are operated by electric power. Now whatever we do well and effectively in one of these three great segments—generation, distribution, or utilization—is reflected favorably in the other two. A new product like television, for example, has added substantially to the electric power load of the country. With growing loads the utility companies use ever larger, ever more efficient generating equipment which accounts, in large part, for electric energy being available today at a lower price

than it was 15 years ago, whereas other prices, on the average, have risen 90 percent in the same period.

The benign circle is completed by very virtue of the fact that the extremely low cost of electric power in turn makes possible the sale, not only of new things like television, but more and more of a numberless variety of power driven products for the homes, factories, schools, hospitals—indeed for every use known to mankind. And as more and more of these products are installed the power load continues to climb and we start again around that benign circle which lightens our burdens and brightens our lives with every turn.

This new plant for which we have broken ground today will make Hendersonville an even more important part of that benign circle. It will mean new citizens for your community, for many of our top managers and specialists will come to make their homes here, and visitors will be drawn from all parts of the world. It will mean new business during construction and new employment and new payrolls when the plant is completed.

But that is not all. The product of this factory will mean more time for many outdoor activities all over the country. It will mean the saving of thousands of lives and millions of dollars from after-dark traffic accidents; it will mean reduced crime. These are some of the contributions that Hendersonville, as the "outdoor lighting center of the world," will make to America.

Just about a hundred miles from here is one of the most modern street-lighting installations in America today. Fluorescent street lights are comparatively new. Yet Statesville has 104 of them—one of the largest single installations in the United States. The outlook down the years is bright and challenging.

I have emphasized the growth of the Southeast in the last 5 or 10 years and with good reason. It is encouraging also to know that each sector of the country has grown during the same period—some a little and some a lot.

With natural and justifiable pride in yourself and in your State, it may be observed that you have done better than the average. You are to be congratulated. At the same time I know you are conscious of the importance of national balance in the midst of dynamic growth and change.

Each sector of our country depends upon the other; the contribution of each is essential to our overall economic well-being. Although there have been substantial changes in the relative contributions of some of the sectors to our national income, the record shows that each grows with the assistance of the other and creates still further opportunities for the growth of the others.

It is just good business to put some of our payrolls into areas where our major markets are, as our competitors are doing. To do so does not give preference to one area over another; it ultimately helps every community in which General Electric has a plant. We cannot continue to grow except with and as a part of the economic development of the Nation as a whole.

I mentioned a moment ago that we now have, or are planning, 4 plants in North Carolina. In addition to plants to Asheboro, Goldsboro, Hendersonville, and Hickory planned or in being, since the war plants have been added at Rome, Ga.; Anniston, Ala.; Memphis, Tenn.; Lexington, Owensboro, and Louisville, Ky.; Jackson, Miss.; and Jonesboro, Ark. These plants, producing a wide variety of products including electronic tubes, transformers, automatic blankets, automatic washers and dryers, dishwashers, ranges, lamps, outdoor lighting equipment, and small motors, are contributing importantly to the diversified economy of the

South. Our investment in new factories, laboratories, and equipment has exceeded \$1,100,000,000 since the war. Of this, \$155 million was for new and improved research and advanced development facilities for improved products and services.

All of this has taken place under a planned program of decentralization. Neither the "new South" nor New England has cause to fear this program. On the contrary. If we plan well, the new plants, like the old ones, will be competitive and continue to grow with new and expanding markets. Some of these new plants, like the one to be erected here, are headquarters for the business in which they are engaged.

We are not leaving one locality in favor of another; rather we are expanding with the Nation's expanding and changing population—into new markets and new areas of development. Before there was a plan for Hendersonville, there was a Lynn plan, which contemplates full and effective use of improved and modernized facilities in that fine city. Our expansion at new locations is expected to be only a small part of our total business.

The Hendersonville plant will manufacture street and flood-lighting equipment, traffic control systems, and military and airport lighting products. Like so many other fields of this various and diverse electrical industry, we expect the demand for these products to double in the next 10 years. To help insure that it does, we have included a research laboratory for continuous research and development of new lighting techniques.

In other words, we are satisfied that tremendous business opportunities lie ahead for all parts and sectors of this country, and most certainly for those engaged in the generation, transmission and distribution of electric energy, and in the manufacture of devices to produce or utilize it.

Ours is still a young, vigorous, and growing country. Its rate of growth will be, in part, a function of the efficiency of our operations, reflected in wide availability and low cost of electric power, and also in part on the ingenuity of ourselves and of others in finding ever new and ever more uses for that power. And if, as I believe, new uses for electric energy will continue to emerge in direct proportion to the manpower and dollars devoted to research, there can be no question that demand for power will broaden and deepen with each passing decade.

I believe that statement to be true in the absolute sense, barring only world war III. That is to say, I am satisfied that the years 1960, 1970, 1980, and so on will witness, each for its own decade, a broader, more extensive use of electricity on the one hand and a deeper, more intensive consumption of it on the other. If anything besides death and taxes is certain in this ever-changing world, that prognostication in my judgment heads the list.

The uncertainty, ladies and gentlemen—and there is uncertainty—lies in the magnitude of the growth of demand during the balance of this century. It is the rate of growth, the slope of the curve, that can vary between wide limits. Assuming, as one must in this gathering, that our industries will have vigorous, intelligent and far-sighted management, the actual course of the curve will depend, for one thing, on developments in the great struggle between the free and Communist countries of the world. It will depend also on the wisdom, or lack of it, of America's foreign policy, economic as well as political. And finally, it will depend heavily on the economic climate or environment which America selects—or, more accurately, elects—for itself in the years ahead.

It is not my purpose to discuss the international scene this evening, except to repeat a prediction I have made before and continue to endorse. Paradoxical as it may

seem, I am prepared to venture the prediction that the pressures, tensions, fears, and sufferings imposed on the world by the Russian and, more recently, Chinese imperialist drive for domination will turn out in the end to have been a blessing in disguise. I say this because I believe, first, that the drive will fail, and second, that in taking the necessary steps to defeat it the free world will have organized itself economically and politically in ways enormously beneficial to the cause of world peace. I visualize that Europe, Latin America, the Middle East, and Southeast Asia will all be benefited by economic and political arrangements made, or to be made, as countermeasures to the Soviet drive for power; arrangements which, in the absence of the deadly Communist threat, would have been quite impossible of accomplishment.

These things will not happen in a hurry, nor will the ultimate victory of the free world derive from any single coup or conference. Rather they will result at long last from the cumulative effect of a very great many separate acts and undertakings embracing the military, economic, and propaganda fields.

The next 10 years will certainly not be dull ones. If we can, in the course of them, cultivate and strengthen this truly wonderful economic system of ours; if we can be wise, patient, and firm, but not inflexible, in our international relations; and if, with God's guidance, we can thus discharge with distinction our recently acquired role of leadership in world affairs, we shall have earned the right to enjoy the full fruits of an age boundless in opportunity both for material and spiritual satisfaction. I am in favor of that—and I suspect you are also.

United Nations Commission on International Commodity Trade

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. MARTIN of Iowa. Mr. President, on February 11 I had the honor of addressing the Executives Club of Chicago. This is an exceptionally fine group, and I was more than pleased to have the opportunity to speak to them. I ask unanimous consent to have printed in the Appendix of the RECORD the remarks I made plus the full documentation of the speech.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Last month a new United Nations Commission, known as the Commission on International Commodity Trade convened in New York. Our Government took a momentous step in December of 1954 when the Honorable Nat King, Acting United States Representative in the United Nations Economic and Social Council released the following statement:

"At the last session of the Council I stated that my delegation hoped to be able to announce at this session whether my Government would participate in the Commission on International Commodity Trade. In this connection I am now authorized to make the following statement:

"The United States Government is not now prepared to participate in the work of the Commission on International Commod-

ity Trade. It wishes for the present to keep in close contact with the Commission's work as it develops in the hope that it might be able to be of possible assistance. The United States Government will be prepared to re-examine the question of its eventual participation after the Commission's terms of reference and its scope of activities have been defined."

I wish to commend the Secretary of State and his associates for this action. I regard it as the first step in reversing some of the unfortunate economic trends within the United Nations which were originally promoted by our own Government.

Our present able delegation to the Economic and Social Council, headed by the Honorable Preston Hotchkiss, has had to devote a great deal of its efforts to combat proposals which originated in our own State Department many years ago. This is unfortunate as the Iron Curtain countries are presented with an opportunity to sow dissension among the free nations when it becomes necessary for us to cast votes in opposition to proposals sponsored by friendly countries in the United Nations. Yet, if we are to remain true to our own economic philosophy, we can take no other course. Our sins of the past have now returned to haunt us.

This Commission on International Commodity Trade is 1 of 2 groups established by the Economic and Social Council whose activities can have a very profound effect upon our economy. The other is the Ad Hoc Committee on Restrictive Business Practices. I now intend to trace the establishment of these groups to concepts originally formulated by our own Government.

Our State Department published a document entitled "Proposals for Expansion of World Trade and Employment" in November of 1945. The forword to this publication read as follows:

"Developed by a technical staff within the Government of the United States in preparation for an International Conference on Trade and Employment and presented for consideration by the peoples of the world."

The thesis of this document was that international trade was kept small by four factors:

- (1) Restrictions imposed by Governments, i. e., tariffs and quotas.
- (2) Excessive price fluctuations in the markets for primary commodities.
- (3) Restrictions imposed by private combines and cartels.
- (4) Irregularity and the fear of irregularity in production and employment.

This State Department document proposed the formation of an International Trade Organization to make recommendations for the removal of the impediments to expanding world trade enumerated previously and to implement such recommendations.

The Economic and Social Council of the United Nations, at its first session early in 1946, adopted a resolution to call an International Conference on Trade and Employment as suggested in the United States proposals. The council also established a preparatory committee to prepare an agenda and a draft charter for consideration by the conference. This preparatory committee held its first meeting in London in the fall of 1946. Subsequent meetings were held in New York and Geneva.

The international conference, to consider the charter, convened at Habana, Cuba, on November 21, 1947, and remained in session until March 24, 1948. The document which emerged from these deliberations is now familiarly known as the Habana Charter. It was submitted to the Congress in April 1949, and was strongly supported by President Truman and the then Secretary of State, Dean Acheson.

The House Committee on Foreign Affairs conducted extensive hearings on this agree-

ment in April and May 1950. No report was ever made by the committee. The State Department announced in December of 1950 that it would not ask the 82d Congress, which convened in 1951, to again consider agreeing to United States membership in the proposed International Trade Organization.

Although the basic concepts for the charter had originated in our own Government, it is quite clear that the Congress never accepted the document which emerged from this series of meetings under United Nations auspices. In fact, the State Department, by its announcement in December of 1950, clearly showed that it realized the futility of asking the Congress to consider this subject again.

I shall now show how the four restrictive factors enumerated in the United States proposals were incorporated into the charter.

The first obstacle to the expansion of world trade outlined in the State Department's proposals was the restriction on trade imposed by governments, including tariffs, quotas, and exchange controls. Chapter IV of the Habana Charter entitled "Commercial Policy" dealt with procedures to reduce tariffs and to extend the most-favored-nation treatment in trade agreements. It also covered quantitative restrictions and currency controls.

Chapter VI of the Habana Charter was entitled "Intergovernmental Commodity Agreements." This chapter recommended the use of such agreements to eliminate excessive price fluctuations in the markets for primary commodities and implemented the State Department proposal dealing with this subject. The preamble to this chapter stated, and I quote:

"The members recognize that the conditions under which some primary commodities are produced, exchanged and consumed are such that international trade in these commodities may be affected by special difficulties such as the tendency toward persistent disequilibrium between production and consumption, the accumulation of burdensome stocks and pronounced fluctuations in prices. These special difficulties may have serious adverse effects on the interests of producers and consumers, as well as widespread repercussions jeopardizing the general policy of economic expansion. The members recognize that such difficulties may, at times, necessitate special treatment of the international trade in such commodities through intergovernmental agreement."

Chapter V of the Habana Charter was entitled "Restrictive Business Practices." It provided for procedures to eliminate the restrictions imposed by private combines and cartels in the original United States proposals. In effect it proposed an international antitrust law.

Chapter II of the Habana Charter was entitled "Employment and Economic Activities." This chapter dealt with the irregularity and the fear of irregularity in production and employment and, again implemented the State Department's proposals dealing with this subject.

The proponents of these proposals did not wait for the nations of the world to ratify the charter for the International Trade Organization. Steps were taken during the third session of the Preparatory Committee for the Habana Conference which met in Geneva in the spring of 1947 to implement some of these proposals.

This Preparatory Committee sponsored negotiations for the reduction of tariffs and conducted discussions which led to the General Agreement on Tariffs and Trade familiarly known as GATT. Although these tariff negotiations were sponsored by the Preparatory Committee for the Habana Conference to implement one chapter of the

proposed charter and were finally incorporated in the General Agreement on Tariffs and Trade, the countries concerned established a separate organization, which is not an operating unit of the United Nations, to carry on this work. Other succeeding sessions were conducted at Annecy, France, and Torquay, England.

The GATT organization differs from the other groups which trace their origin to the original State Department proposals. In the first place, of the Iron Curtain countries, only Czechoslovakia which became a signatory to the GATT before she went behind the Iron Curtain is a member. The activities of GATT, by its very nature, are directed at the removal of trade barriers and not to the imposition of new controls and restrictions.

There was much criticism in the Congress of the GATT because many of us felt that no authority had been granted by the Congress through the Trade Agreements Act to enter into any such negotiations. The Eisenhower administration has scrupulously followed the practice of submitting agreements to the Congress so that the Congress and the executive can work together as independent and coordinate branches of our Government.

The provisions of the General Agreement on Tariffs and Trade currently are being renegotiated at Geneva. The President has assured us that they will be submitted to the Congress for our consideration. For the first time an opportunity will be afforded for this agreement to receive consideration on its merits by the Senate of the United States.

I am confident that the Congress and the President working together in this way can come up with a workable solution to expanding our foreign trade which is the objective that we are all seeking.

The Economic and Social Council proceeded to implement another of the United States proposals without even waiting for the convening of the Habana Conference. This was the proposal which dealt with excessive price fluctuations in the markets for primary commodities.

This United Nations group, at its fourth session, recommended, and I quote from the resolution:

"That, pending the establishment of the International Trade Organization, members of the United Nations adopt as a general guide in intergovernmental consultation or action with respect to commodity problems the principles laid down in chapter VI as a whole, i. e., the chapter on intergovernmental commodity arrangements * * * ; and

"Requests the Secretary-General to appoint an Interim Coordinating Committee for International Commodity Arrangements to keep informed of and to facilitate by appropriate means such intergovernmental consultation or action with respect to commodity problems."

The Interim Coordinating Committee for International Commodity Arrangements was not sanctioned by the Congress. The interim referred to in the title for this organization was presumably the time interval between the formation of this group and the ratification of the charter for the International Trade Organization. The interim has continued through 1954, although the United States decision not to join the ITO was made known in 1950. This organization which was established at Geneva, has now been supplanted by this permanent new Commission on International Commodity Trade, which met in New York last month. While some may feel that this action is unimportant, as we were not bound by any decisions made by this interim committee, in the opinion of the President's Materials Policy Commission, popularly known as the Paley Commission, this is not the case. Page 87, volume I, of its report, which was issued in 1952, contained the following statement:

"The United States has not ratified the treaty, but under a resolution the United Nations Economic and Social Council is bound with other nations to recognize chapter VI as a general guide."

This clearly indicates that, even though Congress refused to give its assent to United States participation in the International Trade Organization, the Paley Commission believed we were bound to accept these concepts. I shall now read from page 90 of the Paley report:

"By resolution of the United Nations Economic and Social Council, a review of chapter VI of the Habana Charter is called for some time in 1952. This code serves as a general guide for efforts of the free nations to stabilize materials markets."

Now let us review together the developments which took place starting in the General Assembly late in 1952 which culminated in our decision not to participate in this new Commission on International Commodity Trade.

In November of 1952 the Argentine Government presented a resolution of far-reaching significance to the seventh session of the General Assembly, which was then meeting in New York. This resolution was a new implementation of the original proposals of our State Department which had been embodied in chapter VI of the rejected Habana Charter. I shall now read the operative part of this draft resolution. It provided that the General Assembly should recommend to member states—and I quote—that—

"(a) Whenever governments adopt measures affecting the prices of primary commodities entering international trade, they should duly consider the effect of such measures on the terms of trade of countries in the process of development, in order to ensure that the prices of primary commodities remain in an adequate, just and equitable relation to the prices of capital goods and other manufactured articles so as to permit the more satisfactory formation of domestic savings in the countries in the process of development and to facilitate the establishment of just wage levels for the working population of these countries with a view to reducing the existing disparity between their standards of living and those in the highly industrialized countries;

"(b) Their governments should refrain, unless unavoidably required by national security in times of war and without prejudice to technological research and progress, from encouraging the production of any synthetic or substitute materials that unnecessarily affect the international demand for natural primary commodities;

"(c) Their governments should intensify their efforts to reduce restrictions on imports of primary commodities."

It is quite obvious, from what I have just read that the purpose of this resolution was to establish fixed, rigid international parity prices for all of the world's materials which could only be supported by heavy outlays on the part of the United States. It is also apparent that this resolution was aimed at discouraging the development of synthetic products, particularly synthetic rubber and synthetic fibers within the United States. This provision directly affects our national security. I know that none of us wish to again struggle with the problem of providing rubber from distant sources which confronted us in World War II.

Representatives from Australia, Belgium, Canada, China, France, the Union of South Africa, and the United Kingdom opposed this resolution as too general in scope and open to dangerous interpretations. The 1952 yearbook of the United Nations summarized the objections voiced by these countries. Among them were:

"(1) That a system of international parity prices such as that implied in the draft could not be instituted unless foreign trade

were controlled by the state; (2) that such a system would make the economic structure more rigid and would not be conducive to increased productivity; (3) that there were no objective criteria for determining an adequate, just, and equitable relationship between prices of primary commodities and those of capital and other manufactured goods; and (4) that it would be better to deal with the problem through individual commodity agreements as the need arose.

"They also objected to the recommendation that governments should not encourage the manufacture of synthetic or substitute materials. Such action, they held, would harm the interests of both underdeveloped and industrialized countries; it would also stand in the way of progress, from which all, in the long run, would benefit. The latter point was also made by the representatives of Cuba, Ecuador, and Peru."

After considerable debate within the General Assembly and the adoption of several amendments, the Argentine resolution was put to a vote. It was approved on November 29, 1952, with 29 countries voting in favor of it, 16 opposing it, and 9 abstaining. I am happy to say that our Government was among the 16 countries opposed to the adoption of this resolution. The amended resolution contained the following provision which was not a part of the original Argentine draft resolution:

"Recommends that governments should cooperate in establishing multilateral international arrangements relating to primary commodities for the purpose of—

"(a) Insuring the stability of the prices of the said commodities in keeping with a reasonable, fair, and equitable relationship between these prices and those of capital goods and other manufactured articles; and

"(b) Safeguarding the continuity of the economic and social progress of all countries, those producing as well as those consuming such raw materials."

You will note that this provision again urges the member governments to establish multilateral commodity agreements.

The amended resolution further provided that the Secretary General was to appoint a group of experts to study the entire problem and make recommendations for further action to the Economic and Social Council of the United Nations. Pursuant to this resolution, the Secretary General appointed five economists whose recommendations were transmitted to the Economic and Social Council in a report released in November of 1953. This report is entitled "Commodity Trade and Economic Development."

The report suggested the establishment of world buffer stocks and a new international currency which would be based upon the monetization of these stocks. It also proposed the negotiation of multilateral commodity agreements to cover a group of commodities rather than a single commodity. There were many other strange proposals which were totally incompatible with American free-enterprise economic concepts. The most important recommendation of the committee of experts was that a new trade Stabilization Commission be established. Now I shall read exactly what the experts proposed in this connection. They said:

"It seems to us that there is at present no effective international procedure for discussing and proposing action on the general problem of stabilization—a matter which transcends the problems of particular commodities. The present organization is directed toward piecemeal action, commodity by commodity. We do not think that this is sufficient; a general and simultaneous approach to the problem of stability in its many aspects is required. It is possible that a gap in international organization has here arisen unintentionally, through the absence of an

international trade organization as envisaged in the Habana charter."

This so-called gap in international organization to which the experts refer, had not arisen unintentionally insofar as the Congress of the United States was concerned. I shall continue reading from the recommendations of the experts:

"We therefore propose that the Economic and Social Council should establish an inter-governmental commission, which we will refer to as the Trade Stabilization Commission. In order to provide permanent representation for the most important trading countries and an adequate rotation of representation for others, it would probably be necessary to have eight or nine member governments."

"The work of the Commission would involve exchanges of views between governments on possible types of action to which they may not wish to appear publicly committed; and there is a very real risk that premature knowledge of the Commission's deliberations would produce harmful effects in the commodity markets. We therefore recommend that, contrary to usual United Nations practice, the Commission should meet in closed session except when it decides otherwise. We would expect that, in addition to the formal meetings, occasions would be required for informal exchanges of view among the representatives of the member governments, meeting in private."

Our Government should not establish an international organization in which governments would make proposals to which they may not wish to appear publicly committed. I subscribe to President Woodrow Wilson's doctrine of open covenants openly arrived at. I am opposed to private meetings to "rig" commodity markets. This is essentially what the experts propose. We must all realize, in discussing these proposals that representatives of the Iron Curtain countries would be eligible to participate in this Commission.

The report of the experts and its recommendation for this new commission was placed on the agenda of the meeting of the Economic and Social Council which convened in New York in April 1954, and a resolution was introduced by the Argentine Government to establish this new commission. The comments of our representative to the Economic and Social Council, Mr. Preston Hotchkiss, are most illuminating. I shall now read his statement regarding these proposals:

"The problem of marked price instability in primary commodity markets is, therefore, one with which my Government and all governments of the free world must be greatly concerned. As to the desirability of reducing this instability, there can be no disagreement. The problem to be faced is how this can be safely accomplished. Devices that serve temporarily to reduce price fluctuations must be judged by their potentialities for contributing to healthy economic growth. They may retard rather than promote such growth if they interfere with long-term price trends and introduce rigidities and restraints that impair the elasticity of economic adjustment which is fundamental to economic progress."

"This is a danger which must be faced in the consideration of proposals for governmental commodity arrangements. This danger and the great practical difficulties involved in reaching accord on the details of any contemplated arrangement largely explain why so few international agreements involving consuming as well as producing countries have hitherto been reached. The experts recognize this situation and see little prospect of any substantial increase in the number of agreements. My delegation shares this view."

"The experts also believe, however, that commodity agreements, if properly drawn

and operated, may be an effective means for preventing excessive price fluctuation. This they hope might be obtained if the attempt were made to cover several commodities in a single agreement instead of relying on the inevitably slow and uncertain increase in single-commodity agreements."

"I must confess, Mr. President, that I find no ground to justify this hope. The difficulties experienced in negotiations relating to a single commodity would in my judgment be greatly multiplied if we attempted to deal with many commodities at the same time. Moreover, any agreement covering many commodities would involve widespread interference with the workings of a free-world economy. It would magnify the danger of diverting production, consumption and trade patterns from the channels they would be likely to assume under a more healthy, competitive and free-enterprise system. The net result of such arrangements, even if it were practicable to conclude them, would, I firmly believe, be detrimental and not beneficial to economic development."

"The experts extend their proposals for comprehensive commodity stabilization arrangements by recommending for further study a 'commodity reserve currency scheme.' If this were an academic seminar we might, Mr. President, find some interest in discussing the complexities of this by no means novel proposal. This, however, is not an exercise in which I would care to engage in this forum. I see no likelihood whatever that my Government would be disposed to give this scheme any serious consideration in the foreseeable future. I feel sure that other delegations will share my view that the scheme is impractical. I hope therefore that the Council will not devote time and energy which might well be spent in more useful activities to detailed examination of a proposal that would seem to have no chance whatever of acceptance by governments."

"The experts recommend—and this is their most specific proposal—the establishment by the Council of a Trade Stabilization Commission. This commission would be concerned with proposals for dealing with the problem of stabilization generally. It would leave undisturbed the existing international machinery, such as the Interim Coordinating Committee for International Commodity Arrangements and its associated study groups, which provide mainly for action, on commodity by commodity."

"My delegation is unable to support this recommendation. The proposed commission would inevitably exercise the same general responsibilities as the old Economic and Employment Commission of the Council and might be expected to suffer from the same defects. The establishment of a commission charged with responsibility for considering broad questions of economic policy would simply invite duplication of discussion, since these are questions which the Council itself must necessarily debate."

The resolution introduced by the Argentine Government established the terms of reference for this proposed new Commission. I shall now quote from the resolution:

"The main task of the Commission shall be to examine measures designed to avoid excessive fluctuations in the prices of and the volume of trade in primary commodities, including measures aiming at the maintenance of a just and equitable relationship between the prices of primary commodities and the prices of manufactured goods in international trade. * * *

This resolution is designed to establish a system of international parity prices which is totally incompatible with our approach to foreign economic relations."

This resolution was adopted on April 30, on a rollcall vote of the 18 nations comprising the Economic and Social Council. The United States was joined in opposing the

establishment of this new Commission by Belgium, Norway, France, and the United Kingdom. The Australian delegation abstained from voting. The resolution was supported by 12 countries, the Argentine, Free China, Cuba, Czechoslovakia, Ecuador, Egypt, India, Pakistan, Turkey, U. S. S. R., Venezuela, and Yugoslavia.

The formation of the Commission had the support of Soviet Russia and Czechoslovakia whose concepts of stabilizing commodity markets would certainly be quite different from our own. The resolution as adopted deferred the actual organization of the Commission until the 18th session of the Economic and Social Council which convened at Geneva in June of 1954. Our delegation at Geneva continued its opposition to the formation of this Commission and indicated that even if we were elected, we might not be willing to participate. In spite of United States opposition, the Council voted to proceed with the organization of the Commission with the first session scheduled for January 1955.

The United Kingdom and France voted with the United States to delay the organization of the Commission. However, following the vote in the Economic and Social Council both these countries announced that they would participate in spite of their opposition. The resolution adopted at Geneva transferred most of the functions of the Interim Coordinating Committee for International Commodity Arrangements to the new Commission on International Commodity Trade. The Interim Committee, which was only to be in existence until the Habana Charter was ratified, thus has now become a permanent United Nations organ under a new name.

The announcement of our Government in which we declined to participate at the first session of this new Commission included this statement: "The United States Government will be prepared to reexamine the question of its eventual participation after the Commission's terms of reference and its scope of activities have been defined." I am glad that this is the case as we have no desire to minimize the seriousness of the problems of price instability. Our Government is opposed to the present terms of reference which imply Government action to stabilize prices through international agreements and international parity prices. I can see many possibilities for useful work by this Commission in compiling statistics and studying market problems, thus making it possible for the free markets of the world to operate more effectively. My interpretation of the statement by our representative is that we will always be prepared to assist in such activities that do not compromise free enterprise economic principles.

The history I have related follows the progress of this concept from 1945 to 1955, a 10-year period. Our State Department deserves great credit for having successfully extricated the United States from a creature of its own creation which has untold potentialities of causing economic chaos. The New York Times of January 11, in reporting the forthcoming meeting of this new Commission made the following significant comment:

"The United States will pass up a delegate's seat, but will send an observer to the first session of the newly established Commission on International Commodity Trade. The Commission will open its meetings here next Monday.

"Although United States opposition to the Commission is nothing new, this is the first time that Washington has given a diplomatic cold shoulder to a United Nations organ."

It has always seemed to be a paradox that those who advocate free trade and the removal of Government restrictions on our economy should, at the same time, have been

fostering commodity agreements. There is probably no more restrictive device than such an agreement as it interjects Government controls throughout the production and marketing process.

During previous administrations, our State Department was apparently most sympathetic to the commodity agreement concept. I am happy to see that this is no longer so.

The Randall Commission, in both its majority and minority reports condemned such agreements as restrictive devices. Following the release of the report by the Randall Commission, our Government declined to participate in the International Tin Agreement. We have also resisted efforts to establish commodity stabilization groups within the Western Hemisphere at the Rio Conference. Let me again compliment the Secretary of State and his colleagues who have credibly performed a very difficult task in reversing this trend toward Government controls over the world's economy.

Unfortunately, all our problems are not behind us. The original State Department proposals of 1945, included measures to deal with restrictions imposed by private combines and cartels. As I have already indicated, chapter V of the Habana Charter was drafted to implement these particular proposals.

This chapter, dealing with restrictive practices by private business, was in sharp conflict with the philosophy of chapter VI which fostered Government price-fixing and cartel operations. Many apparently believe that actions taken by governments in concert with other governments or in cooperation with certain industries should escape the condemnation imposed by chapter V of the charter. In a sense chapter VI was really a modification or loophole in chapter V.

Professors Stocking and Watkins in their book *Cartels or Competition* define a cartel as " . . . an arrangement among, or on behalf of, producers engaged in the same line of business, with the design or effect of limiting or eliminating competition among them. . . ."

They also say "rival business enterprises may set up cartels by direct negotiation and mutual commitments, or governments may establish them by treaty."

The commodity agreements provided in chapter VI are, of course, cartels established through government negotiation and commitment. The evils of cartels were dramatically shown during the Hitler and Mussolini regimes in Germany and Italy where private cartels were taken over by these governments to strengthen their economies for war. The entire Habana Charter concept, as embodied in chapter V, was to curb private international cartels but to tolerate the government cartels provided in chapter VI. In retrospect, let me remind you of the extraordinary economic power developed by the Nazi Government through intergovernmental commodity agreements after it came to power in Germany.

Prof. Edward S. Mason, of Harvard University, was deputy to the Assistant Secretary of State in charge of Economic Affairs in 1945. Presumably, he was quite familiar with the proposals issued by our State Department at that time.

He published a book under the sponsorship of the Committee for Economic Development entitled "Controlling World Trade" in June of 1946. I shall now read two paragraphs from the introduction of this book:

"This divergence between American and other experience with cartels and commodity agreements must be borne in mind in the ensuing discussion. There is a school of thought in the United States that abhors cartels as private treaties restrictive of trade but embraces commodity agreements as intergovernmental arrangements inevitably serving the public interest. Cartels may, and

usually do, restrict trade but so do commodity agreements—and much more effectively. Nor is the range of interests served necessarily very different.

"The general line of policy defended in this report is that, when international controls relating to a commodity or industry are demonstrably necessary, they should be intergovernmental in character. It does not follow that intergovernmental commodity agreements should be numerous or easily justifiable on grounds of public interest. If the agreement, moreover, lies outside the field of agriculture, it is likely to involve a type of governmental relation to industry with which the United States has as yet had little experience."

Mr. Mason concluded his 265-page treatise with this statement:

"To enable the machinery to function, it will be necessary to reshape not only commercial policy but policies hitherto considered as belonging to the field of domestic regulation, and such action as is proposed can only be taken with the cooperation of other governments and with due regard for their interests."

We are now confronted with exactly the situation portrayed by Professor Mason if the report of the so-called Ad Hoc Committee on Restrictive Business Practices is adopted by the Economic and Social Council.

The United States delegation at Havana was opposed to restrictive business practices per se. This is consistent with all of our economic concepts. In reviewing the Havana Conference I find that there were three points of view which were compromised in the final draft of chapter V. As I have already indicated, our point of view was that cartels were bad per se. Some believed that cartels were useful devices and that action was required only to cope with flagrant abuses. The Luxembourg delegation took this position. Others took a middle ground. The United Kingdom delegation took such a point of view. There was actually very little support for the stringent action recommended by the United States.

Chapter V of the Habana Charter dealt only with restrictive business practices when, and I quote: "Such practices have harmful effects." The definition of harmful effects was to be left to the new international agency to determine. No sanctions for failure to comply with the Charter were imposed. This philosophy is also incorporated in the new United Nations proposals.

I shall now trace the steps since the rejection of the Habana Charter by the Congress of the United States which have resulted in this report of the United Nations ad hoc committee on Restrictive Business Practices presently on the agenda of the Economic and Social Council.

Our antitrust laws are of the utmost importance in promoting a free-enterprise economy. The Sherman Act was adopted in 1890 during the administration of President Harrison, a Republican President. The Clayton Act and the Federal Trade Commission Acts were adopted during the administration of President Wilson, a Democratic President. The spirit of our antitrust laws is truly bipartisan and they have a vital role in maintaining a competitive economy in this country. I believe in them and I am in favor of strengthening these laws if such action is shown to be necessary and in a vigorous enforcement of the laws now on the statute books. I am opposed to all cartels. There are no good cartels as far as I am concerned.

Unfortunately, our antitrust laws have sometimes been used to harass legitimate business by those whose paramount interest has not been the preservation of free enterprise. I am afraid they may have been deliberately used to bring it into disrepute and to lay the groundwork for a socialist economy within the United States. Those who con-

ceived such improper uses of the antitrust laws are, I am sure, no longer on our Government payroll.

It seems strange that almost immediately after the rejection of the Havana Charter by the 81st Congress, and the decision by the State Department not to resubmit it to the 82d Congress, the United States Government took the lead in attempting to implement chapter V through the United Nations.

In 1951, the United States delegation submitted a resolution to the Economic and Social Council asking that the question of restrictive business practices should be placed on the agenda of the 13th session of the Council. The United States draft resolution recommended the establishment of an ad hoc Committee on Restrictive Business Practices charged with formulating and submitting to the Council, proposals on appropriate methods to be adopted by international agreement to deal with harmful restrictive business practices.

Perhaps, the purpose of establishing this international machinery was to be able to proceed against American companies doing business abroad because of our inability to apply United States statutes in the jurisdiction of other sovereign nations. We must remember that these same companies were bound to conduct their activities so as to comply with the laws of the country in which they were operating. Since our antitrust laws are free-enterprise laws, I see no way that an international body, including Communist and Socialist states, could establish appropriate methods to deal with antitrust violations on a universal basis. It would seem to me that treaties by the United States and other countries with the same type of economy and with similar judicial procedures might be more fruitful. The United Nations approach can only lead to chaos.

The United States proposal was debated at length during the 13th session of the Economic and Social Council held in the summer of 1951 at Geneva. The Yearbook of the United Nations for 1951, reports this debate and I am particularly interested in the comments which appear in this official document on the attitude of other countries who have no concept of our antitrust laws. I shall now quote from the United Nations Yearbook:

"The representatives of Belgium, France, Peru, Sweden, and Uruguay, while agreeing as to the harmful effects of many restrictive business practices and believing that far-reaching private agreements constituted a political danger, felt nevertheless that international producers' agreements were not always to be condemned and that in certain cases they met urgent needs connected with economic progress.

"The representative of Peru stated that, in South America, public commercial enterprises were operated in the interests of the State and of the community, many of them being accompanied by measures to protect the individual's social rights. These enterprises, he said, should not be confused with private monopolies.

"The representatives of Chile, Mexico, and Uruguay also emphasized the important part played by public commercial enterprises in their national development. The Chilean and Mexican representatives stated that they would abstain from voting on the joint draft resolution. Representatives supporting the resolution believed, however, that studies and investigations were necessary to distinguish between good and bad restrictive practices.

"The representative of the International Cooperative Alliance referred to a recent survey by his organization which had revealed the widespread use and the harmful effect of restrictive business practices. He described the manner in which his organization had been fighting such practices and

urged the Council to undertake an authoritative investigation in this field.

"In the view of the representatives of Czechoslovakia, Poland, and the U. S. S. R., the United States proposal was designed to camouflage the real objective of United States monopolies. Figures were cited in order to show that these monopolies controlled the United States foreign trade and investments. These monopolies, those representatives said, in their struggle to gain domination of world markets, engaged in extensive restrictive business practices to remove any competition; they earned immense profits in underdeveloped countries, and were powerful enough to obtain a stranglehold on European trusts, secure markets for their excess production in Europe, and influence the political life of other countries through economic control. United States exports were being used as instruments of discriminatory policies applied against the peoples' democracies. American big business, those representatives maintained, fostered the creation of monopolies which it could dominate, but opposed the creation of those over which it had no control."

After extensive debate and the adoption of amendments the United States resolution was approved and the Ad Hoc Committee on Restrictive Business Practices was appointed. It consisted of Belgium, Canada, France, India, Mexico, Pakistan, Sweden, the United Kingdom, United States, and Uruguay.

The terms of reference of the ad hoc committee provided that, and I quote: "The Economic and Social Council of the United Nations recommend that the measures adopted in the cases and the purposes stated in the preceding paragraphs shall be based on the principles set forth in chapter V of the Havana Charter concerning restrictive business practices."

Thus, entirely at the initiative of the United States Government this ad hoc committee was established under the Economic and Social Council of the United Nations to implement chapter V of the rejected Havana Charter.

The United States representative on this committee was Corwin Edwards, the former chief economist of the Federal Trade Commission. The secretary of the ad hoc committee itself was Sigmund Timberg, formerly with the Antitrust Division in the United States Department of Justice. The committee assembled in January of 1952 and presented its report in March of 1953. During this period, the committee held 77 meetings, a great majority of which were closed to the public. The report of the committee was filed with the United Nations Secretary-General in March of 1953.

It was considered briefly at two sessions of the Economic and Social Council who requested the Secretary-General of the United Nations to refer this report and the analysis by the Secretariat to the member states and to specialized agencies for examination and comment. The Council also decided that consideration of the report would be resumed not later than at its 19th session which will convene at United Nations headquarters in New York at the end of March of this year.

It is important that the people of the United States be familiar with this report and the pitfalls into which we can be led should it be adopted. An article by Samuel K. C. Kopper which appeared in the Virginia Law Review of December 1954 gives a complete analysis of this report. This article is a revision and expansion of a paper originally presented by Mr. Kopper to the Fourth International Congress of Comparative Law at the Faculte de Droit, University of Paris, on August 6, 1954.

Mr. Kopper has an unusual background which uniquely qualifies him to review the

report of this Committee. After graduating from Princeton University in 1937, he obtained his law degree at the University of Virginia in 1940. Subsequently, he studied at the Academie de Droit, International de la Haye. From 1946 to 1949 he was an adviser to the United States delegations to the United Nations Security Council and to its General Assembly. He was a special consultant to the Assistant Secretary of State during 1952-53. He has also been the officer in charge of North African Affairs, the Deputy and Acting Director of the Office of Near East Affairs, and is presently counsel for the Arabian-American Oil Co. in New York City. He is also the chairman of the Near East Committee, Section of International and Comparative Law of the American Bar Association.

I shall now read the relevant sections of Mr. Kopper's article.

"EXCERPTS FROM THE INTERNATIONAL REGULATION OF CARTELS—CURRENT PROPOSALS

"(By Samuel K. C. Kopper)

"A. The draft articles

"The report of the ad hoc committee contained draft articles of agreement,¹ which were based largely on chapter V of the Havana Charter. The draft articles of agreement call for the establishment of a United Nations organization composed of all United Nations members, the basic objective of which is to coordinate national and international action to prevent and eliminate restrictive business practices whenever such practices have harmful effects on the expansion of production or trade.² It is provided that there will be a 'representative body' composed of all members of the United Nations, and an 'executive board' which is to carry out the functions and duties of the representative body and exercise its powers. Membership on the executive board will be determined by the extent to which a nation participates in international trade, and by a geographical balance.

"The draft articles of agreement contain a preamble, 20 articles, and an appendix which describes the share in world trade of individual countries. The preamble states that national and international action is required to attain: (1) A reduction of governmental and private trade barriers and the promotion on equitable terms of access to markets, products, and productive facilities; (2) encouragement of industrial and agricultural development, particularly in underdeveloped areas; (3) balance and expansion of the world economy through greater and more efficient production, increased income and greater consumption, and the elimination of discriminatory treatment in international trade; and (4) the promotion of mutual understanding and cooperation to solve problems arising in all aspects of international trade. The preamble concludes with a recognition that national and international action in the field of restrictive business practices can contribute substantially to the attainment of such overall objectives.

"Article 1 sets forth the general policy toward restrictive business practices. Each member of the Organization shall take measures and cooperate with other members to prevent restrictive business practices that have harmful effects on the expansion of production or trade. The Organization is empowered to determine whether a particular practice is restrictive and has harmful effects whenever: (1) It receives a complaint; (2) the practice is engaged in or made effective by one or more private or public commercial enterprises; and (3) such enterprises possess effective trade control among a number of countries in one or more products.

"Restrictive business practices are defined as (1) Fixing of prices, or of terms or condi-

¹Footnotes at end of speech.

tions to be observed in the purchase, sale, or lease of any product; (2) exclusion of enterprises from, or allocation or division of, any territorial market or field of business activity, or allocation of customers, or fixing of sale or purchase quotas; (3) discrimination against particular enterprises; (4) production limitations or quotas; (5) prevention of development or application of technology or invention, whether patented or not, or withholding of same with the result of monopolizing an industrial or commercial field; (6) illegal extension of rights under patents, trade-marks, or copyrights; and (7) any similar practices which the Organization may declare, by a majority of two-thirds of the members present and voting, to be restrictive business practices.

"The breadth of this article can be fully appreciated only by a careful study of its precise language. It clearly appears at a glance, however, that the article is not only broad but vague. Furthermore, it is questionable whether the criteria set forth are adequate for an international organization to determine whether specific practices are restrictive or not. Perhaps the most fundamental question raised by this article is whether its basic philosophy is generally accepted in the family of nations. It presumably represents the philosophy of the United States, but in the United States there is no clear agreement as to just what this philosophy really is.

"The confusion about the application of American antitrust laws in foreign commerce could hardly be greater.² Not only is there confusion about the application of these laws but there is also little agreement about the meaning of some of the terms used in article 1. The Attorney General of the United States has established a committee to re-examine our antitrust laws.³ Particular attention is to be paid to their extraterritorial application. Pending the completion of this study, it is doubtful whether other nations will be eager to accept the terminology and philosophy of this article. Certainly an international organization composed of nations having widely differing concepts of law would have an exceedingly difficult time implementing or interpreting it.

"Article 2 provides that any member may consult directly, or ask the Organization to arrange a consultation, with other members in any instance in which the member thinks it has been affected within the meaning of article 1. If the Organization considers action justified, it will arrange for and assist in such consultation. This article gives the Organization very broad authority without any checks. It could open the door to frivolous cases which might very well be considered by the Organization for political reasons.

"Article 3 concerns investigative procedure. It provides for the presentation of written complaints to the Organization which must contain minimal information (prescribed by the Organization) as to the nature of the practice complained of. The Organization determines whether the complaint is justified. If, however, the Organization is satisfied that the practice in question was specifically required by governmental measures in existence prior to the complaint, no further investigation shall be undertaken, provided that any practice found to exist in more than one country may be further investigated in the Organization's discretion, if such practice is not specifically required in all countries in which it is found to exist.

"Reasonable opportunities for being heard shall be afforded the complainant and the commercial enterprise alleged to have engaged in the practice complained of. All members are to be informed of the complaint. Any member can be asked for information on the complaint. The Organiza-

tion shall decide whether there has been a violation, and shall inform all members of its decision and reasons therefor. If there is a violation, the Organization has the power to request the members concerned to take remedial action in accordance with their respective laws and procedures.⁴ The remainder of the article deals with reports which the Organization shall make on the matter.

"This article clearly indicates that there is discrimination in favor of public enterprises and against private enterprises. The ad hoc committee frankly admitted that 'special difficulties arose, however, in connection with restrictive business practices which were sanctioned by governmental statutes or regulations.'⁵

"This is a fundamental defect in the whole plan. A further defect which appears in this article is the provision that members will be requested⁶ to take remedial measures in accordance with their respective laws and procedures. Nations like the United States, which has rigid and enforced laws, will be placed at an obvious disadvantage vis-a-vis countries with less rigid and frequently unenforced laws. If this disadvantage were temporary it might be tolerated. It is perfectly clear, however, that it might last for years, or decades, and hence would be unacceptable. It is obvious that laws and procedures vary widely in the various countries of the United Nations.⁷ When, if ever, they will come to resemble those of the United States is uncertain.

"A final observation about article 3 should be made. The investigation, trial, and adjudication of cases involving restrictive business practices are extremely intricate and complicated tasks. The patient and painstaking efforts of trained people are always required to bring about a fair and just settlement of such cases. The proposed United Nations plan does not spell out how these difficult tasks will be performed. Will there be an investigatory staff, or is the advisory staff provided for in articles 13 and 15 to conduct investigations? What information will be used? Can judicial proceedings and committee investigations in this country be used? What power and authority will an investigatory staff have? Or if the investigations are left entirely to the individual member nations, what assurance can there be that investigative procedures will be reasonably similar? The answer to the last question clearly seems to be that there can be no assurance because of the wide differences in approach to this whole subject among the member nations of the United Nations. It should be noted in conclusion that it would be possible under article 3 for the Organization to publish reports on charges even though the latter had been proved false.

"Article 4 authorizes the Organization to make studies of all aspects of restrictive business practices. It may request members to supply information in connection with these studies. Thus, the burden may fall on nations with a great deal of commerce to receive recommendations from countries whose basic motives are political.

"Article 5 provides that each member shall take all possible measures to insure that within its jurisdiction private and public commercial enterprises do not engage in restrictive practices as previously defined. Members are to comply promptly with requests from the Organization for information regarding complaints. They are to take action in accordance with their constitutions or systems of law and economic organization. Nothing in the agreement shall be construed, however, as requiring a member to give information contrary to its essential security interests.

"The obligations imposed on the members contain no safeguards against frivolous complaints. The criteria upon which the Organization will base its decision as to whether a complaint is justified are unclear. The burden may frequently be on the defending country to prove that it is innocent under its own laws. Furthermore, the paragraph requiring members to take action under the constitution or system of law and economic organization is meaningless in view of the wide diversity of such systems. There is no equitable basis for international conduct or action.

"In article 8 it is recognized that certain services, e. g., transportation and telecommunications, are substantial elements of international trade, and that any restrictive business practices by them may have harmful effects. If any member thinks that such harmful restrictive business practices exist, it may submit a written statement on the situation to those whose private or public enterprises are involved, and sympathetic consideration shall be given to effecting a satisfactory adjustment. If no adjustment is made and the matter is referred to the Organization, it shall be transferred to the intergovernmental body concerned if one exists. If there is no such body, the Organization may make recommendations.

"Article 9 contains four paragraphs which empower the Organization to bring to the attention of members measures taken by other members or intergovernmental bodies or agencies regarding business practices; to make arrangements with other intergovernmental bodies or agencies which will provide for effective cooperation with respect to restrictive business practices; and to make suitable arrangements for consultation and cooperation with nongovernmental organizations.

"If it is anticipated that the Organization will do these things, as well as all of the other things provided for in preceding articles, on a worldwide basis, it will have to maintain an astonishingly large staff of highly trained personnel.

"Article 10 provides that the representative body is to consist of all members of the agency. Each is to have one vote. Decisions are to be made by the majority of the members unless otherwise provided in the agreement. The representative body is to meet regularly and can be convoked by the executive board or by one-third of the members of the representative body. It is to establish its own rules of procedure, and final authority to determine the policies of the agency shall be vested in it.

"This article underscores what has been pointed out in comments on previous articles—the policies with regard to restrictive business practices might very well be determined by a group of nations having only a small percentage of world commerce, and whose motivations might stem from political, ideological, or other reasons to the detriment of more highly commercial nations. The proposed program is, to say the least, a novel one. The procedure for adjudication is nonjudicial, and might easily become political or partisan. Yet various articles of the proposal refer to what the Organization may decide, or to decisions of the Organization.⁸ Are these decisions to take on the aura of judicial decisions? With no applicable law and no agreement about basic principles, confusion unbounded might easily reign.

"Article 11 concerns the executive board. The executive board is to carry on the functions of the representative body. Its size and composition are to be determined by the body. The selection of members is to be made with due regard to 'the objectives of including members from the differ-

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

ent types of economies and degrees of economic development to be found among members of the agency, from the broad geographical areas to which the members belong, and from countries of chief economic importance, for which last criterion particular regard shall be paid to members' shares in international trade."

"On the basis of previous experience in the United Nations, one could anticipate a Board composed roughly of 25 percent from Latin America, 25 percent from Europe, 25 percent from Asia, and the remainder from the United States, the Iron Curtain countries (if they should join the Organization), and the British Commonwealth. In the absence of a clearer definition of the powers and limitations of the Organization, the countries having rigid laws on restrictive business practices would be placed in a disadvantageous position in dealing with nations having looser or unenforced laws.

"Article 13 provides that the chief advisory officer of the agency, who is appointed by the representative body, shall be the director of the advisory staff. He is to select the staff. The advisory staff shall exercise its functions with complete independence in the general interest of all members, and shall neither solicit nor accept instructions from any government. Article 15 assigns to the advisory staff almost entire responsibility for evaluating the substance of each complaint. The staff is to arrange for the analysis of the information, and to prepare the report. It can call for additional information, and do whatever is necessary to obtain information to prepare the report of the representative body.

"Articles 13 and 15 make it obvious that the position of the director of the advisory staff is important. Likewise, the staff will have considerable latitude in light of its 'complete independence.' The director has a substantial amount of power. His position should not be underestimated. He is in effect both prosecutor and judge. This, coupled with the fact that there are no rules of law to guide him or within which he should operate, produces a unsatisfactory and unacceptable system.

"Article 16 provides that the representative body 'shall take full account of reports of the advisory staff.' This emphasizes the importance of the work of the advisory staff.

"Articles 17, 18, 19, and 20 make provisions for the content of reports; entry into force of the agreement; and amendment, withdrawal, termination, interpretation, and definition of the agreement. The agreement is to come into force on the 60th day after—

"(a) The number of governments which have deposited instruments of acceptance shall reach 20 or more and shall cover 65 percent or more of the total value of world imports and exports, as set forth in appendix A; [or]

"(b) The number of governments which have deposited instruments of acceptance shall have reached 20 or more and shall cover 65 percent or more of the total value of world imports and exports as set forth in appendix A, and shall include six countries which individually have 3 percent or more of such total value."

"Amendment of the agreement can be effected by a two-thirds majority of the members of the Organization. Any member may withdraw at any time. Withdrawal is to become effective 6 months after receipt of the written notice by the executive secretary. The agreement can be terminated by a three-fourths vote of the members.

"The provisions for the coming into force of the agreement are sound. They do prevent it from becoming effective without the concurrence of most of the important commercial countries.

"The appendix of the agreement points up the fact that only seven countries in the world have trade over 3 percent of the world total. These are:

	Percent
"(1) United Kingdom and dependencies.....	17.57
"(2) United States and dependencies.....	17.22
"(3) France and dependencies.....	8.04
"(4) Canada.....	5.15
"(5) Germany (Federal Republic).....	4.47
"(6) Netherlands and dependencies.....	3.91
"(7) Belgium-Luxembourg and dependencies.....	3.77

"The total of these 7 countries is 60.13 percent. There are 57 countries each with trade under 3 percent of the world total.

"B. International Reaction to the Draft Articles

"In light of the foregoing objections to the ad hoc committee's report, it seems remarkable that none of the delegations or the nongovernmental organizations pointed out the defects of the plan." Furthermore there has been no indication yet that these difficulties will be taken into account. One is forced to conclude that the fear of being branded a 'procartelist' has muted the voices of organizations and individuals. This is a regrettable situation, since we are not concerned with the merits or demerits of cartels and restrictive business practices, but only with the wisdom and validity of plans to handle them.

"The Belgian representative to ECOSOC did observe that cartels were not necessarily evils in themselves. Their evil springs from the general economic situation that calls them into being. Turkey questioned whether there was any point in the Council's discussing only one part of the ITO Charter. The French representative felt that the proposals might well be expanded so that there would be a comprehensive coverage of all restrictive practices. The United States and the United Kingdom were non-committal."

"The other members of ECOSOC and the nongovernmental representatives seemed for the most part to be favorably disposed toward the committee's report. The Soviet Union, which is the largest and most ominous cartel in history, abstained after making some snide remarks about the same American industry which had contributed so much to Russian success against nazism. The Russian representative and Mr. Boson, the representative of the International Cooperative Alliance, referred to the antitrust suit of 1952 against a number of American oil companies. Boson hardly paid a tribute to the American system of law when he stated:

"In the United States of America, the grand jury investigating the international petroleum cartel had failed to establish a prima facie case. There was no doubt that an investigation by an international body would have been more successful."

"This conclusion is as unjustified as it is revealing of exactly what the International Cooperative Alliance really wants.

"C. General Considerations

"Aside from the specific objections to the Ad Hoc Committee plan outlined in earlier paragraphs, there are a number of general observations which ought to be taken into account:

"(1) Chapter V of the Habana Chapter, upon which the ad hoc committee plan is based, was only one part of an overall proposal to deal with barriers to the free flow of trade. To attempt to implement only a part of the plan would be a mistake;

"(2) The committee's plan does not rest on a sound basis of agreement as to what is or is not an objectionable business practice;

"(3) The language employed in the plan is not sufficiently precise, but is vague and ambiguous;

"(4) The plan purports to deal with matters normally handled by the courts in the various countries covered by it, yet there are no provisions which would insure the use of judicial processes by the Organization. On the contrary, it would appear that there is no guaranty of due process of law, and that enforcement would be obtained by indictment;

"(5) Members of the Organization would be such on different bases inasmuch as the laws of the participating nations all differ in some respects;

"(6) There is no reference to the important question of the right of each sovereign nation to handle restrictive business practices in its own territory in accordance with its own laws and ideologies." The committee recognized the difficulty, but stated that 'the issue [of overlapping jurisdictions and conflicts of laws] has, however, far-reaching implications which raise serious difficulties of substance; moreover, the question arose whether the matter came properly within the committee's competence. For these reasons, and having regard to the limited time available to the committee, most members felt it would not be profitable to pursue the matter."

"III. Domestic laws and conditions in the nations concerned

"Any consideration of proposals for the international regulation of cartels must take into account national legislation on the subject. With world trade and business activity expanding, the private-law aspects of international industrial combinations become of increasing interest to the student of conflict of laws. The ad hoc committee made an analysis of the constitutional provisions and laws of a number of countries on the subject of restrictive business practices. The conclusions of the committee are of interest.

"The documents have confirmed in the minds of the committee three broad propositions which underlie Resolution 375. These are:

"1. That opinions differ from country to country about restrictive business practices and about governmental policies towards them;

"2. That restrictive business practices affecting international trade may in some circumstances have harmful effects on the fulfillment of widely acceptable objectives of international economic policy;

"3. That it may be difficult in such cases for appropriate action to be undertaken solely by governments acting individually."

"Paragraph 1 of the preceding quotation is, if anything, an understatement of the present situation. In a number of European countries cartels have been quite acceptable to governments." In the United States, Congress passed the Webb-Pomerene Act,¹ authorizing exporters to combine to form export corporations so they could match their foreign competitors. The question has been raised whether the European Coal and Steel Community might end in a superinternational cartel. Whether it does or not, the plan proposed to the United Nations simply does not cover arrangements like these.

"The ad hoc committee plan takes no appreciable account of the problems which confront private enterprise seeking to do business abroad under laws which are all too frequently different from those at home. The risks involved in such ventures are often enormous. At the present time, the petroleum industry is in the forefront of American investors abroad. The industry is concerned about the implications of the extension of American antitrust laws to operations being conducted within the sovereign territory of another State." There must be a clarification of the national laws before any international action based on national law can be undertaken.

Footnotes at end of speech.

Footnotes at end of speech.

"In the United States there is a confusing lack of clarity as to where the Attorney General's jurisdiction should logically end, and where that of the Secretary of State should begin. While it is very true that the Sherman and Clayton Acts have been strong links in the chain of the free enterprise system,¹⁸ efforts to extend their application extraterritorially to foreign operations of American concerns may in certain instances work a positive disservice to national security interests of the United States. In nations unaccustomed to American antitrust law, reactions to antitrust proceedings against American companies frequently range from surprise and incredulity to suspicion and hostility—particularly where criminal proceedings are instituted.

"Space does not permit a detailed analysis of all governmental measures which have been taken relating to restrictive business practices. The recent reports of the United Nations ad hoc committee and of the United States Department of State to a Senate Subcommittee on Monopoly¹⁹ contain a review of constitutional provisions and legislation in a number of countries. There are certain significant deductions which can be drawn from these reports when a comparison of the various laws is made.

"We have noted that the ad hoc committee found that opinions differ from country to country about restrictive business practices.²⁰ The Department of State report comes to the same conclusion:

"As might be expected, the type of statutes as well as the degree of effectiveness of their provisions and of their administration has varied greatly from country to country. These factors are a function of a number of complex considerations, such as the type of government in the particular country at the period in which legislation was adopted; its economic, social, and political aims; and the fundamental philosophy of the government and the people of a country toward the part the business community should play in the economic and political structure of the country. It is accordingly difficult to reach any generalizations as to the trend of development in the group of countries as a whole."²¹

"Comments from the State Department report on selected countries are also of interest:

"The Austrian economy is characterized by an absence of free competition, caused in large part by the concentration of economic power. This concentration results from such factors as (a) the dominant influence of a few firms in the principal areas of private industry; (b) the dominant position of the larger banks; (c) a complex network of interlocking directorates by means of which a few leading groups control a large part of the private industrial economy; and (d) the nationalization of a major sector of industry.²²

"Industrial federations form the principal basis of the strong ties that exist among individual Belgian firms. . . .

"Existing Belgian legislation is favorable to the formation of cartels and imposes but few limits on their operation.²³

"There are in France few large industrial firms in a monopoly or nonmonopoly position. There has, however, been a trend to the uniting of business firms in cooperative agreements or associations. The comptoir system of doing business often involves restrictions on the right of the individual firm to take independent action as to prices, quantity and type of production, and areas of sale.

"At the present time, there is no legislation in existence in France directly relating to restrictive business practices which can be effectively employed to control or eliminate such practices.²⁴

"Germany's industrial development has been characterized by a high degree of economic concentration during the entire period of the existence of the country as a modern industrial state.

"In general, the economic structure of Germany has been characterized by industrial combinations based on financial and legal interrelationships such as trusts and combines, and by cartels.²⁵

"The political and business climate in Western Germany is generally unfavorable to a program for the elimination of restrictive business practices.²⁶

"Swiss industry is highly organized into trade associations which regulate the terms of sale and prices in practically all sectors of the economy.²⁷

"There are no laws in Denmark which actually prohibit business enterprises from organizing cartels or engaging in other arrangements designed to restrain competition.²⁸

"The selected comments quoted above clearly indicate the wide variety of ideas and concepts on how to deal with restrictive business practices. It should be noted that both the Department of State Report and the United Nations Ad Hoc Committee's Report discuss only a relatively small number of countries. Important though these countries may be, there is still a large group of countries which have virtually no interest in the whole subject.²⁹

"Conclusion

"It is true that there has been much interest manifested in some countries, particularly in Western Europe, about the problem of restrictive business practices. However, it would seem abundantly clear that even the proponents of United Nations action in the field recognize the great variations in national approaches to the problem.³⁰ Furthermore, while constitutional and statutory provisions may exist in many countries, whether they are really enforced is quite another matter.³¹

"This brings us to the conclusion that no matter how strongly one may feel about restrictive business agreements, action in the international sphere which is predicated on national law is questionable policy. There can be little doubt that the Ad Hoc Committee was confronted with a most difficult task.³² Valiant though its efforts were, the great differences of opinion were an exceedingly difficult problem to overcome.

"It can only be concluded, therefore, that the answer to the question raised by Prof. Corwin Edwards as to whether the United Nations proposals "afford a useful basis for a beginning of multilateral action"³³ is that they regrettably do not appear to be satisfactory in their present form. Whether any plan can be developed in the absence of uniformity in national laws is extremely doubtful. In the meantime, based on his experience attending United Nations sessions in official and semiofficial capacities, the writer believes that it would be a positive disservice to the United Nations organization to attempt to give it a somewhat nebulous responsibility based on an ambiguous plan to attain a hazy objective in the field of restrictive business practices. On the other hand, a heavy responsibility rests on governments and business to see that business practices are not harmful or disruptive of the free flow of international trade, and to make any constructive suggestions toward this end which the United Nations and its members might consider."

The principal conclusion I derive from what I have just read is that it is impossible for an administrative body established within the United Nations to act as a court and determine violations of restrictive business practices. The laws of the sovereign nations

differ so widely concerning this subject that it is impossible to frame an agreement predicated on national law which would be meaningful. Without a uniformity in national laws which, in turn, presupposes some common agreement on the type of economy under which the different countries shall operate, it is impossible to conceive of any useful purpose resulting from the implementation of chapter V through a new United Nations organ.

The resolution establishing this ad hoc committee, which was adopted in September of 1951, also provided—and I am quoting from the resolution:

"Determines further that the committee shall:

"(a) Obtain information from governments, specialized agencies and other sources, on restrictive business practices, whether based on cartel agreements or not, that affect international trade and international economic cooperation generally, and on legislation adopted and measures taken by individual member States in connection with restrictive business practices and with the object of restoring the freedom of competition; and

"(b) Present to the council analyses of this information together with the proposals mentioned in paragraph 4. . . ."

Pursuant to this resolution, two United Nations documents were issued, known as supplements 11A and 11B to the official records of the 16th session of the Economic and Social Council. These documents analyze governmental measures relating to restrictive business practices. While these documents clearly show that there is no uniformity in the approach to restrictive business practices by the nations of the world, they also raise another problem which has disturbed me. They review our antitrust laws and refer to criminal proceedings which are meaningful to those familiar with American jurisprudence, but place American free enterprise in an unfavorable light in a forum such as the United Nations with its Iron Curtain members who do not adhere to our judicial concepts.

Our Government has just recently furnished another report to the United Nations pursuant to this resolution. This report assumes a complete understanding of the philosophy underlying our antitrust laws by the reader of a United Nations document. Unfortunately, few foreign readers possess such understanding. It proceeds to describe various antitrust cases which have been initiated in the United States and cites the complaints in detail. Many of these cases have not been brought to trial, and I am sure that those who wish to impugn the motives and philosophy of American business enterprise will have a field day with this document. I wish to read just one page from this report, which clearly shows the unfavorable light in which American enterprise is placed. I shall now read from page 3 of the document:

"3. ADMINISTRATIVE DEVELOPMENTS

"During the course of the period since January 1, 1953, the Antitrust Division of the Department of Justice had brought through July 1954, a total of 55 new cases, of which 29 have been criminal proceedings, and the remaining 26, civil cases. These cases cover a broad variety of industries as well as of types of restraints. A majority of them have been directed at traditional violations of the antitrust statutes such as price-fixing, allocation of customers or territories, and boycotts. As an example, a criminal case and a separate civil action were filed against four pencil manufacturers charging a price-fixing conspiracy, including collusive bidding on Government contracts.³⁴ In another instance, four distributors of toilet

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

goods, perfumes, and cosmetics were charged, in a separate action filed against each company, with attempting to restrain trade, through misuse of the United States trademark laws, by preventing goods produced by their foreign affiliates from being imported and sold in this country through competitors.²⁸

"Several important cases having international as well as domestic significance have been brought against monopoly or monopolistic practices of dominant companies in their respective fields. One of these, filed on October 9, 1953, charges the American Smelting & Refining Co. and St. Joseph Lead Co., with a conspiracy to monopolize and restrain trade in primary lead.²⁹ The case charges the companies with collaborating to preempt supply sources of raw material, to limit the marketing opportunities of competitors and to restrict overall domestic production of lead ore. On April 21, 1953, a complaint was filed against five leading United States oil companies charging unlawful agreement to secure and exercise control over foreign production and supplies of petroleum and its products, to regulate imports into the United States in order to maintain an agreed level of domestic world prices, and to divide foreign producing and marketing territories.³⁰ The complaint charged further that some thirty jointly owned companies were created to give effect to these arrangements."

You will note the reference to a price-fixing conspiracy, collusion, and the statement that a criminal case was instituted. I am sure that the representatives from the Soviet Union will be happy to have this official report of our Government to use for propaganda purposes.

This report also recites actions recently instituted under the 1950 amendments of section 7 of the Clayton Act. This statement is meaningful to those of us who are familiar with this legislation, but in the form in which the report is presented, it has no meaning whatsoever to other countries who will receive it through the United Nations Economic and Social Council.

Our present able delegation to the Council has sufficient difficulty in presenting the merits of the American free-enterprise system without having to be confronted with a report placing American business enterprise in a most unfavorable light in such a forum.

On October 21, 1953, I testified before the Subcommittee on Minerals, Materials, and Fuels Economics of the Committee on Interior and Insular Affairs, of which the distinguished senior Senator from Nevada was the chairman, and reviewed the steps which led to the convening of the conference at Habana. After outlining the State Department's 1945 proposals, I said that they represented a bold move in the direction of world government and threatened the measures of security in which I have been particularly interested throughout my entire adult lifetime.

The report of this ad hoc Committee on Restrictive Business Practices, which will be before the Economic and Social Council this spring, included this statement which confirms the fears I expressed at that time:

"Governments have long since come realistically to accept the concept that different types of trade barriers must be dealt with at a different pace and through different organizational arrangements. For example, the International Monetary Fund, which is charged with the problem of dealing with exchange restrictions, was established several years before any organization had been set up to deal with the problem of import restrictions, the close companion of exchange restrictions; and the General Agreement on Trade and Tariffs was established

without any parallel organization with respect to restrictive business practices. Both the International Monetary Fund and the General Agreement, in turn, were created at a time when no formal arrangements had been developed for continuous consideration of commodity agreements and commodity allocations, problems which are intimately related to trade-barrier problems. In each of these fields, notwithstanding their interrelationships, machinery for international action was developed at its own pace and in its own form. The problems of liaison and consistency of pace have proved far less difficult in actuality than in the abstract. A common core of membership in these groups, supplemented by the enterprise of the secretariats, by arrangements similar to those provided in article 9 of the draft agreement, and by a few formal ties, have created a reasonably workable system."

I am confident that the steps which have already been taken by the Eisenhower administration to repudiate chapter VI of the Habana Charter through our nonparticipation in the Trade Stabilization Commission will be repeated at the forthcoming session of the Economic and Social Council when, I sincerely hope, we will withdraw from any further participation in this group designed to implement chapter V of the rejected Habana Charter.

¹ Report of the Ad Hoc Committee on Restrictive Business Practices E/2380, E/AC.37/3 (U. N. Economic and Social Council Official Records, 16th Sess., Supp. 11) 12 et seq. (March 30, 1953).

² The ad hoc committee was not specifically instructed to prepare the draft articles. It appears clear, however, that the Committee considered this the most satisfactory way to implement ECOSOC's recommendation. The Secretary-General of the United Nations had been instructed to obtain information on the type of organization which could implement the Committee proposals. See note 26, supra.

However, he explained in a note to ECOSOC that this could not be done by July 1953, because one of the most important of the inter-governmental bodies, the Contracting Parties to GATT, had had no regular meeting. Note by the Secretary-General concerning the report requested under Council resolution 375 (XIII) E/2443 (1953).

³ See Searls, Trade and Commerce Among the Several States or With Foreign Nations, proceedings at annual meeting, section of antitrust law, American Bar Association 58 (Aug. 26, 27, 1953). See also Hale and Hale, Monopoly Abroad: The Antitrust Laws and Commerce in Foreign Areas, 31 Texas L. Rev. 493 (1953); see note, Foreign Subsidiaries in Antitrust Law, 4 Stan. L. Rev. 559 (1952).

⁴ See 21 U. S. L. Week 2651 (June 30, 1953). ⁵ Report of the Ad Hoc Committee on Restrictive Business Practices E/2380, E/AC.37/3 (U. N. Economic and Social Council Official Records, 16th Sess., Supp. 11) 4, par. 22 (March 30, 1953).

⁶ The Organization's power is limited to "requesting" members to take remedial action and "recommending" possible remedial measures.

⁷ This conclusion is based on the findings in Analysis of Government Measures Relating to Restrictive Business Practices E/2379 and E/2379/Add.1, E/AC.37/2 and E/AC.37/2/Add.1 (U. N. Economic and Social Council Official Records, 16th Sess., Supp. 11A), (April 29, 1953), and Foreign Legislation Concerning Monopoly and Cartel Practices (report of Department of State to Subcommittee on Monopoly, Senate Select Committee on Small Business, subcommittee print No. 5, 82d Cong., 2d Sess.) (1952).

⁸ E. g., art. 2, pars. 3, 5, 8; art. 5, par. 4.

⁹ The International Chamber of Commerce has subsequently indicated its opposition to the plan. Resolution adopted by council of

International Chamber of Commerce, Doc. 225/23, Rome, Italy, April 13, 1954. Likewise, the National Association of Manufacturers has indicated its lack of agreement. See Restrictive Business Practices, Comments * * * E/2612 (U. N. Economic and Social Council Document) (May 28, 1954). But there has not been any analytical survey of the implications of the plan.

¹⁰ The summary of attitudes is taken from Official Records (U. N. Econ. & Social Council, 16th Sess.) 742d meeting E/SR.742, p. 239 et seq. (July 30, 1953), 744th meeting E/SR.744, p. 257 et seq. (July 31, 1953).

¹¹ Id. at 244. The views of other nongovernmental organizations like the ICFTU seemed to spring from a genuine apprehension of restrictive business arrangements. Unfortunately, they do not seem to have recognized the dangers of an unworkable plan. Possibly time will permit a more thorough examination of the proposals.

¹² See Haight, International Law and Extraterritorial Application of the Antitrust Laws, 63 Yale L. J. 639 (1954); Whitney, Sources of Conflict Between International Law and the Antitrust Laws, 63 Yale L. J. 655 (1954). The conflict of laws could not be more clearly illustrated than in the recent cases of *United States v. Imperial Chemical Industries, Ltd.* (105 F. Supp. 215 (S. D. N. Y. 1952)), and *British Nylon Spinners, Ltd. v. Imperial Chemical Industries, Ltd.* ((1953) 1 Ch. 19).

A Model for United States Propaganda

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, February 18, 1955

Mr. NEUBERGER. Mr. President, the battle for men's minds is often as crucial as the struggle for geographic territory. Very few ideas ever have been crushed by bombs, swords, wild beasts, or even atomic bombs. We could win or lose the cold war against communism in the hearts and souls of the men and women of Asia.

One avenue by which the United States can win the allegiance of these people is through our magazines, our books, our newspapers, and our other literary and journalistic products.

I ask to have included in the Appendix of the RECORD an informative and illuminating article, entitled "A Model for United States Propaganda," written by Peggy Durdin and published in the New York Times magazine of February 6, 1955,

describing the strikingly effective job done in Burma by the Library of the United States Information Service in the city of Rangoon.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MODEL FOR UNITED STATES PROPAGANDA

(By Peggy Durdin)

RANGOON.—Aside from her gold-domed pagodas and Buddhist temples, the most popular place in all Burma is a simple American library which might have been whisked overnight on a magic carpet to Asia from any town or city between Maine and California. A huge, light-filled, book-lined room on the ground floor of a British bank in Rangoon, it radiates friendliness, informality and cheerful service in the best American tradition. Without fuss or fanfare, it has made thousands of friends for the United States in a part of the world where people automatically suspect and distrust the motives of the West and where the Communists' chief propaganda line is anti-Americanism.

Regarded by Washington as the most successful library the United States Information Agency has established anywhere abroad, it exemplifies the kind of aid which Asian countries really welcome. It benefits the community and is a part of it—and so is not an obvious device to sell a bill of goods.

Every American who pays taxes for foreign aid can be proud of the way this United States institution has helped the young Government of Burma—Independent only since 1948—cope with Communist insurrection and build a stable country, probably the most hopeful one in Southeast Asia today. Since Burma's own Communists are in armed rebellion, since it shares a long border with a resurgent China which has historically been aggressive westward and since a Peking-directed embassy in Rangoon actively conspires among the local Chinese community, Burmese leaders have not needed forced feeding of propaganda from Americans to understand and fight communism. What they have desperately needed—and what the American library has consistently supplied—is information and help in setting up an administration and service so effective that the people would not become discontented and readily swallow the lies and promises of the Communists.

The library reaches not only officials but private citizens of all ages in every part of Burma. More than 1,300 Burmese come every day to this busy establishment. Men and women in gay sarongs pore over the racks of magazines, take notes from technical volumes, browse through the biography and fiction or, if they cannot read English, look at the brightly illustrated books in the children's annex. Pretty Burmese attendants decked with bits of glittering jewelry break with Asian custom by giving rich and poor, ragged and elegant, the same courteous attention. The patrons range from dirty little barefoot urchins, who sleep on the sidewalk at night, to dignified Buddhist monks and the highest officials of the Burmese Government.

The library's books travel by river boat, by plane, and on the backs of human porters through and into Communist-held territory, across thousands of miles of jungle and mountains. Burmese read them eagerly in an umbrella cooperative in Bassein, a school in Mandalay, a prisoner's reading room in Myitkyina, an army officers' club in Akyab and a youth league in Moulmein. A doctor who has to perform a complicated new operation, a merchant who wants to make "sparklers" and a landowner who plans to set up a model village on his property turn for help to the American library.

The father of a Communist university student borrowed a standard economics text-

book, studied it and passed it on to his son. They discussed it together. When he returned the book the man said, "This book gave my son the true facts. He is no longer a Communist."

A teacher in a remote Burmese village wrote the librarian, "We owe you thousands of thanks. Long live America and democracy." Another reader offered to teach Burmese to the library's American staff members free of charge in token of his gratitude.

The Burmese, official and civilian, appreciate the library because they so desperately needed it. Before the war, when Burma was a British colony, libraries were regarded as special preserves for scholars—small, gloomy places where books were hidden in a back closet or, at best, locked behind glass panes where no one could finger them.

During the 4-year period of Japanese occupation and the Pacific war, fighting and Allied bombing destroyed most of the libraries and very few books were printed or imported. At the war's end, bookstores were virtually empty and many schools had not a single textbook. Cut off from contact with the rest of the world for so long, lacking the magazines, newspapers, radio, television, and newsreels that Americans take for granted, Burmese of every age in thousands of little villages were book-hungry.

Then, before the country was rehabilitated, Burma got her independence. Almost immediately the country's future was jeopardized by large-scale armed rebellion, both Communist and non-Communist (and not yet wiped out completely though no longer strong enough to wreck the state). At the same time, the Burmese were faced with the tremendous tasks of rebuilding their badly damaged cities, roads and railways and setting up the entire machinery of government: central and local administrations, tax and education systems, public health, public works, police and defense forces. In the capital city of Rangoon and all over the rest of Burma, patriotic young people, full of enthusiasm and hope, started new jobs without much technical know-how or administrative experience to guide them.

It was at this critical stage of Burma's development, when many of its friends wondered whether it would disintegrate into chaos, that the United States Information Agency appointed Zelma Graham to transform the little American reading room in Rangoon into a real library. A friendly, level-headed Pennsylvanian in her early forties, unmistakably and even typically American, the widow of a Baptist missionary in Burma, she had joined Dr. Seagrave's famous medical unit after Pearl Harbor and was evacuated to India just ahead of the Japanese.

Then she worked for the American Army and Government in India, North Burma, West China, and Thailand. When she got the Rangoon job, she took a quick librarian's course at Columbia University and arrived in Burma when the country, like all newly independent, ex-colonial Asian nations, was full of suspicions and resentments of the West.

Mrs. Graham immediately inaugurated a lending service and began to harass Washington for books. She got them; she always gets them. She set up a few simple lines of policy as American as pumpkin pie. First of all, she produced the first physically attractive library in all Burmese history; it has gay curtain, spacious tables, comfortable chairs, and lots of space and light. The next great innovation was that books were placed on open shelves and everyone was encouraged to enjoy the hitherto unheard-of luxury of browsing through them.

Then she trained her staff of Americans, Burmese, Indians, Chinese, and Pakistanis to disregard the demands of "face" and treat a shy, threadbare little clerk and the Chief Justice of Burma with exactly the same

smiling courtesy. She made a rule, quickly recognized all over Burma, that the library would never refuse a single reasonable request for help. Her own little office is open to everyone; if the book or information wanted is not available, she gets it from Washington, by cable if the need is urgent.

Perhaps most important of all, the library was and is designed, in solid American tradition, to be of service to the community and country, not as a propaganda device. When the sensitive and suspicious Burmese realized that propaganda was not going to be rammed down their throats, they began to throng to the American library.

Over and over again Burmese officials, faced with new and knotty problems, have come to the library for guidance. Frequently they ask for "everything the United States is doing in this field."

They want help on public water supply, low-cost housing, the architectural design of schools and gymnasiums for hot climates, census-taking, improved farming techniques, character education for children, 4-H clubs, traffic control in civil aviation, tax systems and the training of naval cadets. The police use American books on prison reform, the FBI juvenile delinquency, police training and methods. (One officer asked for "the American way to catch a spy.")

When a young government official from Burma's far northeast wrote in: "I am a public relations officer for this state but I don't know what it is. Can you tell me?" Mrs. Graham sent him the appropriate book.

The importance of adequate transportation and communications in good administration—and in fighting rebellion—is obvious. Officials of the Government-owned Burma railways say they could not have operated without the library. Their own technical collection destroyed during the war, rebuilt and destroyed a second time by insurgents, they draft their training material from American texts. The chief engineer circulates a history of American railroads among his staff "to give my men a vision of what we can accomplish."

Material from the American library helped the Burmese Parliament decide to support the U. N. action on Korea in 1950. The Government constantly asks for information on the United Nations, American foreign policy, and democracy. The commission entrusted with the vital task of writing school texts for Burma has been using American schoolbooks for reference.

Thousands of individuals write or come in for specific information unavailable anywhere else in the country. "What is the Pentagon?" "Where can I locate world freight rates?" "Where can one get artificial limbs for children?"

Special loan collections of books go all over Burma to schools, to reading rooms of the Armed Forces and Government, to youth hostels and all kinds of student organizations, to a Buddhist training school for monks and to the influential Buddhist monasteries.

The books are read in little family clubs of 20 or 30 members and in community reading centers. Sometimes all the members of one of these village reading rooms pile into buses to visit the Rangoon library; several hundred Burmese—including babies slung across their mothers' hips and white-haired old grandfathers—will then spend a fascinated hour touring the library much as Americans tour the Louvre in Paris.

A member of parliament from the far Chin Hills in western Burma always takes books back with him by air when he returns to his constituency. Porters meet his plane and carry the boxes of reading material on their backs for 5 days to the various little schools in his area.

One day four stately, saffron-robed Buddhist monks walked into the library to "look

at this place we have been hearing about." They explained that some of the pupils in their monastery school had told the unlikely story that everyone, even children, could come in and sit and read or take out books, and they wanted to know whether this could actually be true. After looking around the main library and the children's annex, one of the monks said to a Burmese attendant, "America must feel really friendly to the Burmese, to give them such a good library anyone can use without paying anything."

Zelma Graham opened the children's section—the first public library for young people in Burma's history—in early 1949, when the only equipment in many Rangoon schools was broken slate and chalk, and the few children's books available in Burma were printed on cheap, flimsy paper without any illustrations or pictures.

After the first few days, not one of the several hundred volumes ever touched the library shelves; at least six children waited for every book returned by a borrower. In those first few months, some books were recovered half a dozen times. Today there are thousands of books for the 14,000 members of the children's annex.

An important virtue of the library is that it helps to break down the barriers of nationality, religion, and economic standing that separate Burmese children in their school and play. Rich or poor, Hindu, Christian, or Buddhist, they all come together in the American library. Gathered around the librarian will be a 12-year-old boy in a faded, threadbare sarong, carrying a fat Burma cheroot; a dainty little Indian belle with black painted eyes and diamonds in her nose; a 10-year-old child with a baby slung over one slender hip; a rich little Burmese with gold earrings and buttons and flowers in her hair and escorted by an "ayah"; a little Chinese Boy Scout in khaki; a Sikh youngster with a magnificent turban.

At the low tables, together with the youngsters, are a scattering of young men in their late 'teens or early 20's who are just learning English. Frequently 1 or 2 big Buddhist monks who can't read English at all sit among the children, their shaven heads bent intently over colored illustrations of great cities, strange animals, foreign countries, farms, trains, and airplanes.

There is always an orderly queue of children waiting to take out books. Burmese boys and girls are not used to standing in line for things, particularly if they have money and social standing. The librarians explained to them that this was the custom in the United States. Now the children themselves tell new members, "You must stand in line. This is the way we do it in the American library."

"My son tells me he has to wait in line to get books in your library," a Government official said with a frown one day to Mrs. Graham.

"Yes," he does. "Everyone does," she said. "He tells me he has to stand in the same line with the servants' children."

"Yes," she answered. "It's the same line for everyone."

"Well," she said finally, with a grin, "my son seems to like it. So I guess it must be all right."

The children greatly enjoy other activities of the library which are seldom included in their school curriculum: a weekly newspaper (the only one for young people in all Burma); exhibits of things they make themselves, like model boats and houses; singing, story-telling, and play with blocks, clay, and crayons.

When Mrs. Graham tried to cut the music period from twice to once a week, a committee of Burmese about 2 feet high presented themselves before her desk and said, politely but firmly, in their best English: "We demand music, please. We demand not stop music class."

Though most of them are Buddhists, the children love to sing carols and start asking for them months before Christmas. Only once did a slight hitch arise in the music hour; the singing of Scotland's Burning—Fire! Fire! Fire! Fire!—had to be discontinued because of the old Burmese superstition that the prophecies of children and fools come true.

One important way in which the whole library contributes to Burmese-American friendship and indirectly counters Communist propaganda is that it gives the ordinary Burmese a chance to get acquainted, on his own initiative, with the real United States. Burmese ideas of America come chiefly from Communist literature and the poorer Hollywood movies.

As a result, they tend to think of the United States as a nation of selfish, wealthy, moneygrubbers who cannot possibly understand or sympathize with the simple people and the problems of an underdeveloped Asian country. From the library's special exhibits, books, and weekly educational films the Burmese build for themselves a much more accurate picture, one they accept because it has not been forced on them.

After watching movies on American life, people ask such questions as, "Why don't Americans 'lose face' when they do their own housework, carry their own packages, and drive their own cars?" "How do communities finance all these things that Americans seem to get free?" and "What causes the high standard of living in your country?"

In addition to helping interpret America, the library itself has become a model for similar Burmese institutions; it gives short training courses to Burmese librarians and has aided the University of Rangoon and other key organizations in building up and organizing their own book collections.

No one will ever be able to measure finally the help this library has given Government and individuals in Burma, the understanding of America it has spread, or the good will it has created by giving good and friendly service in a simple, unassuming fashion. Selling democracy over the world is perhaps, after all, not so different from selling a car to an American. Doubtless the salesman's patter is important. But what matters in the long run—and what this American library gives—is performance.

Address by Gov. Theodore R. McKeldin,
of Maryland

EXTENSION OF REMARKS
OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Friday, February 18, 1955

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Gov. Theodore R. McKeldin, of Maryland, before the Rotary Club of New York, on February 17, 1955. This address is most interesting and thought-provoking, and I commend it to the attention of the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I can understand it if some of you felt inclined to raise your eyebrows when you learned that a speaker was to address you on such a subject as *An American Looks Abroad*. You may feel inclined to believe that too many Americans have already done too much

looking abroad, and especially too much talking about it, to the grave embarrassment of the officials charged with the conduct of our foreign relations.

It is unfortunately true, but I assure you that you will not hear from me any suggestion of any specific action that should or should not be taken by any official of the United States. Under our constitutional system the President through the agency of the Secretary of State conducts foreign relations except in cases involving treaties, when he acts by and with the consent and advice of the Senate. That is the supreme law of the land, binding upon every one of us; but if it were not so, still I have enough confidence in the integrity and intelligence of the Secretary, the Senate, and the President to be content to leave the application of our foreign policy in their hands and to offer them nothing but my loyal and unwavering support in their most difficult task.

But the foreign policy itself is not identical with the ways and means of carrying it into effect. The foreign policy is not the creation of the President, the Secretary and the Senate; it is the will of the American people in their relations with other nations, and the success of the 3 agencies is to be measured by their success in understanding that will, and making it effective. Foreign policy, as distinguished from the conduct of foreign relations, is very much the business of every citizen and the man who has not formed some kind of opinion on the subject has not fulfilled his civic duty.

The vast majority of Americans, I feel sure, have formed an opinion, but I am equally sure that they have not made that opinion clear to the rest of the world and I cherish some doubt that they have made it altogether clear to themselves. This is no cause for wonder since the attitude we hold is the outgrowth of our experience, not something we have sat down and studied out as a chess player studies out a problem before making his next move. American foreign policy, as I conceive it, is not the attitude we have chosen to assume, but the attitude that we are bound to assume toward the rest of the world, given our political philosophy plus our historical experience.

Both our philosophy and our experience are unique in important respects, so it inevitably follows that our attitude is, if not unique, at least exceptional; which means that there is a high probability that others will misunderstand and misinterpret it. It is my belief that the greater part of our present strains and stresses are attributable to this misunderstanding and misinterpretation; but I am not prepared to maintain that this is altogether the fault of other nations. The American attitude, which seems simple and inevitable to us, may very well be perplexing, indeed downright incredible to people of different traditions and experience.

For one thing, as among the haves and the have-nots, the United States is very definitely a have Nation; but among the haves, it is the only one that acquired its wealth by a struggle that was directed almost exclusively against the forces of nature, rather than against rival nations. We have fought many wars, but only one, that against Mexico in 1846, was highly profitable; and it is precisely the Mexican war that we have always regarded with least national pride. From the economic standpoint, California was well worth the struggle, but we have never been satisfied that any economic profit justifies a war.

This doubt is now shared by all highly developed nations, but only because economic profit cannot result from full-scale war. There is no region on earth so fabulously rich that its possession would repay the costs of a struggle with Russia; and on the other side, invasion and conquest of the United States would not repay Russia the costs of a struggle with us, simply be-

cause the economic value of this country would be largely obliterated by the process of invasion and conquest.

But this is true only because of the fabulous cost of modern war. For centuries it was possible for the Czar to extend his realm very profitably by conquest. So it was with all the other great empires of history; it is only recently that war has become so costly that it is almost as ruinous to the victor as to the vanquished. For that reason this country alone among the great powers has no tradition of war as a profit-making enterprise. Our Indian wars do not furnish an exception, for at the time they were fought they were regarded as police actions to establish law and order rather than as aggressions against another nation.

But because our experience has been so different from that of the rest of the world, it is hard for the rest of the world to understand our attitude; and we, for our part, find it difficult to understand why others cannot understand us. There has been no meeting of minds, and this, I believe, accounts for more of our difficulties than all the schemes of wicked men.

I do not claim for a moment that the United States is a nation of philosophers. Like other countries we have our quota of greedy men, unscrupulous men, short-sighted men, and a great variety of fanatics; but these constitute what Theodore Roosevelt called the lunatic fringe and may be disregarded. I think the great mass of the American people are committed heart and soul to these four propositions:

First, that we do not covet either the territory or the authority of any other nation;

Second, that we do not regard war as a legitimate means of extending either our power or our prosperity;

Third, that neither Divine Providence nor manifest destiny calls upon us to impose our form of government on any people against their will.

Fourth, that we do have an obligation to lend our support to any movement with a reasonable promise of extending equal justice under law to all nations.

Obviously, if 3 out of 4 Americans believe that these 4 principles should constitute the basis of our foreign policy, we do not, as a Nation, constitute a threat to any other country. On the contrary, our military and economic power, controlled by these principles, should be a reassurance to all men of good will.

Nevertheless, he is an optimist indeed who can persuade himself that the rest of the world does so regard it. There is only too much evidence that we are widely feared and fear, of course, generates hatred. This is open to one explanation only, which is that a large part of the world does not believe that we really adhere to the principles we profess.

It follows that the application of American foreign policy is essentially a process of convincing the world of American good faith. Opposing it are certain powerful outside forces with an interest, a real or fancied, in preventing this outcome. Dealing with these outside forces is the business of the President and the Secretary of State, and intervention in that business by private citizens is both unlawful and highly inexpedient.

But it does not follow that the private citizen has no responsibility at all in the situation. On the contrary, his is the final responsibility in a democracy in which public opinion determines foreign policy. He can discharge it, however, not by positive but only by negative action. His part is not to oppose the forces of evil directly, but to refrain from giving them aid and comfort by any injudicious act or word.

After all, 3 of the 4 principles stated a few minutes ago are negative—we do not covet the possessions of others, we do not

regard war as a lawful instrument of national policy, we do not look upon ourselves as a master race. Our primary duty, then is not to give the lie to our own pretensions by conduct which our enemies can turn to the uses of their manufacturers of propaganda.

Yet the private citizen's duty does include one positive phase. It is his duty to make every reasonable effort to understand the attitude of others, including that of our bitterest opponents. I grant that in theory it is no less their duty to understand us; but we can do nothing about that, and I am speaking from the standpoint of an American.

At this moment our heritage of freedom of speech and freedom of inquiry takes on multiplied value; in fact, under existing circumstances the right becomes a duty. I cannot understand the thinking of those Americans who would blindfold our eyes and stop up our ears lest we become contaminated by learning exactly what it is with which we must contend. The ideology—I refuse to call it a philosophy—of communism seems to be as viciously false as any error that has cursed the human mind in history; but I consider it the duty of an American to learn all that he can about it; just as it is the duty of a surgeon to learn all that he can about cancer. Communism, like cancer, has demonstrated a hideous ability to spread, and until we understand its ways of spreading we shall never know how to control it.

There are Americans, some of them undoubtedly as sincere as I am, who are horrified by the idea of a calm, careful study of communism, or of fascism, or of any other idea repugnant to our American system. But while they are sincere, they are also defeatists. You cannot handle infection, they argue, without becoming infected. But you can. It is precisely because you can that science has made such progress in the battle against infection. It is a matter of antiseptics, and in the realm of ideas the most powerful antiseptic in the world is freedom—freedom of speech, freedom of thought, freedom of inquiry.

It is for this reason that I regard those men who would curb and restrict the freedom of the American mind as no less dangerously misled than men who would remove its disinfectants from a hospital. It is a curious and discouraging fact that our enemies sometimes seem to have a keener appreciation of the real nature of freedom than we have. The masters of Soviet Russia are, from their standpoint, quite right in going to any extreme to stamp out freedom of the mind. They are far more concerned to abolish freedom of speech and thought than they are to abolish freedom of the body, and with good reason. Their system is entirely consistent with considerable freedom of movement among their subjects, but it cannot exist in the presence of even a relatively slight degree of freedom of the mind.

Our system, on the other hand, cannot exist without it; yet some earnest souls among us look with complacency on removal of our one defense against infection by error of the most virulent type. This tendency I regard as the most dangerous threat to our foreign policy; for while the success of that policy depends in the first instance on the skill and energy of our diplomats, in the final analysis it depends upon the preservation, the extension, and the strengthening of American freedom.

This is a task that cannot be performed by any official, elective or appointive. It can be performed only by a great body of private citizens who are freemen and propose to remain free; and it is the most important duty that lies upon any man up to and including the President of the United States.

So when an American looks abroad in the year 1955 he will see, if he looks intelligently, a stern warning against indolence and drowsiness in defending his own liberty at

home. The foreign policy of any free, self-governing people is not a threat to any other free people; but the world must have no doubt whatever that we are in fact free and self-governing before it can feel confident that our prodigious strength exists for the defense and not the destruction of liberty.

A single instance of oppression or flagrant injustice in America shocks the world more than appalling repressions in Russia. We sometimes grow querulous over that. It seems to us unjust that there should be a greater outcry when a single American is sent to jail on perjured testimony, or harried and harassed for expressing unpopular opinions, than there is when thousands are consigned to Siberian labor camps.

Perhaps it is unjust, but it is also a tremendous compliment. It is evidence that the world is half convinced that we really are what we profess to be and is correspondingly disturbed by the smallest evidence that it is not so. Looking abroad we can see the importance of preventing the appearance of such evidence. To some extent we are realizing it; we have managed to get through more than 3 years without a lynching in all the continental expanse of the United States. One reason that we have developed a tender conscience as regards that crime, is, I am persuaded, realization that a mob murder in this country has repercussions in the ends of the earth and is hailed with glee by all the powers of darkness.

So has any other denial of the rights of man. Slaves are not much criticized for acting slavishly, but he who professes to be a freeman must be free, or become the scandal of the world. The American who looks abroad may see his own image reflected in the minds of foreign peoples; and if that image shocks him a bit, so much the better for him if it impels him to straighten up and become something closer to the ideal that his professions have created in the minds of others.

I am enough of an idealist—a romantic, if you choose to call it so—to believe that a great destiny is within the grasp of my country. But when I look abroad I realize that it will never be achieved by military might, or economic power. It will be achieved only by being, rather than by doing, by character rather than by deeds, by a constantly closer approach to the ideal that the founders of the Republic had in mind when they set up a nation that by cherishing and extending human liberty within its own borders would, they believed, become a beacon to mankind.

Report of Foreign Shipyards

EXTENSION OF REMARKS OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES
Friday, February 18, 1955

Mr. BRICKER. Mr. President, there was appointed last year a subcommittee on Interstate and Foreign Commerce for the purpose of making an inspection in many countries of Europe concerning shipping, shipyards, and others matters of concern to the Committee on Interstate and Foreign Commerce. The Senator from Maryland [Mr. BUTLER] and the Senator from Connecticut [Mr. PURTELL] were appointed on the subcommittee, and accompanying them was the subcommittee counsel, Mr. Webster.

They made a report to me as chairman of the committee at that time,

which I think contains very valuable information for the Members of the Senate. I ask unanimous consent that the report be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
COMMITTEE ON INTERSTATE AND
FOREIGN COMMERCE,
December 30, 1954.

HON. JOHN W. BRICKER,

Chairman, Committee on Interstate
and Foreign Commerce, United
States Senate, Washington, D. C.

DEAR SENATOR BRICKER: You will recall that by letter dated July 29, 1954, you authorized Senator WILLIAM A. PURTELL, our subcommittee counsel, Mr. Webster, and me to visit various European countries for the purpose of inspecting certain foreign shipyards and investigating other matters of concern to this committee. Accordingly, I am writing you in behalf of our group to report on our European trip.

On August 20, 1954, we sailed from New York aboard the S. S. *United States*.

We arrived in LeHavre on August 25 and proceeded directly to Paris. As you know, Senator PURTELL had a previous commitment to meet various United States Senators and Congressmen in Vienna on August 27 for the purpose of representing our country at the interparliamentary conference held in that city until September 2. As a result, we parted that evening after a final conference in Paris, Senator PURTELL taking the train to Vienna and Mr. Webster and I taking another train to Bremen.

However, before we parted we mapped out our itinerary. Since I had to be back in the States by no later than September 8, 1954, we decided I should spend my entire time in Germany: at Bremen, Hamburg, and Bonn. We also agreed that when I left Germany on or about September 1, 1954, Mr. Webster would go on to Rome in order to meet Senator PURTELL when he arrived from Vienna on or about September 3, 1954. On leaving Rome they planned to visit Genoa, Italy; Rotterdam, Holland; London, England; Clyde, Scotland; and Dublin, Ireland. If all went well—as in fact it did—they intended to return aboard the *United States* when it sailed from Southampton on September 23, 1954.

Of course, I am very sorry that previous commitments would not permit me to revisit the splendid shipyards in Holland and Italy, or to see for the first time the world-famous yards on the Clyde or in Belfast. However, in view of the scope and importance of German shipbuilding, I am not sorry that I refrained from trying to visit yards in other countries. To the contrary, my only regret is that I did not have more time to spend in Germany.

It seems to me that it would be burdensome to weigh down the body of this letter with a multitude of statistical information. Therefore, while now and then I will allude to a statistic or two worth noting, I will include most of that type of material in various accompanying enclosures.

This is not to say that I consider the enclosures routine or meaningless. Indeed, I have reason to believe that some of them, especially those dealing with current costs of building ships in various European yards, may prove to be of value to the Maritime Administration, the General Accounting Office, and the Appropriations Committees. While I am not so naive as to believe that Senator PURTELL and I, in the limited time at our disposal, were able to turn up complete answers to any or all of the intensely complex questions involved in the determination of construction differential subsidies, I am sure that some of the material we gathered

has not been made available to our Government before.

After you have finished examining the enclosures, with your permission I will invite the Maritime Administrator, the Comptroller General, and the House and Senate Appropriations Committees to review and make appropriate use of them. In view of the fact that much of this information was supplied to us with the understanding that it would not be used in any way which might embarrass the supplier, I will request those who are permitted to use it to do so discreetly.

On August 26, Mr. Webster and I arrived in Bremen, where we were met by Consul General Edward D. McLaughlin. That afternoon we conferred at his home with him and the following people: Mr. Hermann Helms, Jr., director of Hansa Line; Mr. Manfred von Ohelmb Hauenschild, director of Norddeutsche Bank A. G.; Dr. Gustav Adolf Theel, head of Bremen Institute for Shipping Research; Mr. Fred Riddle, Lykes Lines representative; Mr. William Amoss, Jr., Lykes Lines representative.

Among the subjects we discussed in addition to Germany's shipping and shipbuilding industries were various experiences which American companies such as Lykes have had in serving Bremen. We also had an opportunity to invite the views of these leading Bremen shipping authorities on the so-called 50-50 or cargo-preference bill (Public Law 604). Dr. Theel, in particular, is a noted authority in such matters and authored the Bremen World Shipping Yearbook 1952-53.

Because Public Law 604 was so new—in fact it was not signed by the President until August 26, 1954—it was to be expected that there would be a certain amount of misunderstanding concerning its provisions. However, I was gratified to note that these gentlemen recognized that the United States as a sovereign Nation cannot afford to rely on foreign shipping to meet its ocean transportation needs; and further, that our country must maintain a healthy, privately owned, and operated merchant marine. It was also gratifying to discover that they recognize that in order for us to maintain an adequate privately owned merchant marine we must to some extent subsidize it directly, or indirectly, in order for us to be somewhere near par with our low-labor-cost foreign competitors. Nor did they take exception to the premise that it is only reasonable for a nation which must subsidize its merchant marine to a substantial extent to require that at least 50 percent of the ocean cargoes owned or financed by the government of that country be carried in merchant vessels flying its flag.

Here, as in certain other places visited by Senator PURTELL and Mr. Webster, we found that the main concern which our foreign competitors have about the cargo-preference bill is based on a misunderstanding, i. e., that the bill requires that at least 50 percent of all United States exports and imports be carried on United States-flag ships. Of course it does not, applying as it does only to cargoes in which our Government has an interest as owner, financier, or guarantor. It affects in no way those transactions which are commercial rather than governmental in nature.

As in other countries, we here observed a certain amount of anxiety that we would extend the cargo preference principle to cover commercial, as well as Government-owned or financed cargoes. We did our best to dispel these fears and I feel that in large measure we succeeded.

We also observed a certain amount of concern lest other countries use our cargo-preference bill to justify them in discriminating against the ships of other nations by giving their own vessels a monopoly of all exports and imports. We pointed out that the fact that other nations might selfishly misinterpret our bill was not sufficient reason for

us to repeal it; and on this score we heard no persuasive rebuttal.

That afternoon (August 26) we visited the A. G. Weser yard (Aktiengesellschaft Weser). There we were cordially received by Mr. H. W. Schliephake, vice president, who escorted us on a tour of the yard. Before mentioning a few of our observations I believe it might be helpful if I set forth some general information concerning the A. G. Weser Co. and its yards in Bremen and Bremerhaven:

Prior to 1945, the A. G. Weser Co., with shipyards in Bremen and Bremerhaven, was one of Germany's largest shipbuilding companies. However, it suffered a severe setback as a result of the war. The Bremen yard was almost completely dismantled and delivered to the Soviet Union as reparations. However, buildings and foundations of shipways, which had not been destroyed by bombing, were left intact so that an astonishingly quick reconstruction was possible after the company obtained permission to resume shipbuilding in the Bremen plant in April 1951. The Bremerhaven shipyards were not dismantled and could resume shipbuilding in 1947.

Today the company again is 1 of the 4 largest shipyards in Western Germany. In shipbuilding capacity it probably ranks third or fourth (after Deutsche Werft, Hamburg; Howaldtswerke, Hamburg; and probably also behind Howaldtswerke, Kiel); in number of employees it may rank second or even first. Employment as of June 30, 1954: Bremen yards, total, 6,000, 2,600 thereof in shipbuilding; Bremerhaven yard, total, 3,230, 2,970 thereof in shipbuilding.

The relatively high number of employees as compared with shipbuilding capacity is explained by the fact that a considerable percentage of labor force is engaged in machine construction work (turbines, diesel engines, oil tanks and containers, coupling gear, etc.).

Germany's largest and fastest prewar passenger liner, the *SS Bremen*, was built in A. G. Weser's Bremen shipyards.

The Bremerhaven shipyards, known as A. G. Weser, Werk Seebeck, specialize in fishing and whaling vessels, but they also construct passenger and freight vessels up to 16,000 deadweight tons. There are 2 shipways in Bremerhaven.

Due to the fact that shipyards and machine construction plants in Bremen had to be rebuilt completely after dismantling, the Bremen shipyards today are reportedly equipped with the most up-to-date installations. A large new shipway with travelling cranes has recently been completed. It has a length of 175 meters, width of 35 meters, and a height of 52 meters. The other four shipways in Bremen are equipped with large luffing and slewing cranes. A large hall has been erected for welding sections.

The shipbuilding capacity of the company is reported to be back to the prewar level, although only two-thirds of the former space is occupied due to more efficient production methods and layout. The company owns several floating drydocks for repair work. The largest has a lifting capacity of 16,000 tons; two smaller ones located in the Bremen free-trade zone have lifting capacities of 1,500 to 2,000 tons. The construction of the fourth floating drydock of 12,000 tons lifting capacity is nearing completion. The present equipment enables the company to construct vessels of the largest known size, including tankers, up to 60,000 (d. w. t.). The only limitation will be set by the depth of water at the shipway which is 38 feet in Bremen. The output of the Bremen yard in 1954 was 6 vessels totaling 39,200 (gr. t.), the Bremerhaven yard produced 16 units with a total of 24,800 (gr. t.).

During our visit to the A. G. Weser Bremen yard we found it very busy. In relation to the state of physical condition it must have

been in at the end of the war, the yard seems now to be in excellent shape. Many new buildings already exist and others are under construction. These new structures facilitate the building or prefabrication of many ship components which would otherwise have to be constructed in the open, perhaps on board ship and subject to the impediments of weather.

Large tanker construction, for the account of various American owners and others, seemed to be the cause of much construction activity.

I was pleased to see that in spite of all the war damage, and in spite of the intensity of effort to rebuild and improve their yard, the German workers have not lost their sense of humor. For example, all that remains of one building in the yard is a large smokestack. On it is painted the German equivalent of "no smoking."

We also visited the offices of Captain Daehne, Director of the Bremen Port Authority. He showed us a magnificent mechanized model of the port. From our discussions with him and our personal observations of the port itself it was plainly apparent that Bremen has not only reconstructed many of its facilities which were damaged or destroyed during the war, but it is well on its way to making it a better and busier port than ever before. In fact their facilities for loading and unloading grain are as fine as any I have ever seen.

Of course in speaking or thinking of the port of Bremen, it would be improper to leave the impression that Bremen stands separate and apart from Bremerhaven. Indeed the ports of Bremen are a series of 5 ports, running from Bremerhaven (where the Weser River joins the North Sea) up the Weser, past Bremen-Farge, Bremen-Blumenthal, Bremen-Vegesack to Bremen. The sister towns of Bremen and Bremerhaven make up what some refer to as the "Free Hanseatic Town of Bremen."

On August 27, 1954, Mr. Webster and I left Bremen and traveled to Hamburg where we were met by representatives of the United States consulate in that city. Shortly after arrival we conferred with Dr. Roerhrike, local representative of the Germany Shipowners Association. Thus we had an opportunity to discuss with him and members of the consulate staff the cargo-preference bill. Our impressions were very much the same as those we had received from similar discussions in Bremen.

During our altogether too short weekend stay in Hamburg we made an extensive tour of the harbor in the company of Mr. Widenmann, chief of the Harbor Construction Office. We went into the areas of the port covered by the following shipyards:

1. Deutsche Werft Aktiengesellschaft: This yard has an annual output capacity of about 65,000 (gr. t.). It specializes in the construction of motor and turbine tanker vessels, motor cargo vessels, and refrigerated ships.

2. Howaldtswerke Aktiengesellschaft: This yard has an annual output capacity of approximately 50,000 (gr. t.) and builds all types of vessels. As in Bremen, we noticed a great deal of ocean-going tonnage, mainly of the tanker variety, under construction. Especially memorable was the 47,000 (dw. t.) tanker, *Ibn Saud*, being built by Howaldtswerke Aktiengesellschaft for the Greek shipbuilding magnate, Onassis.

In Hamburg, too, we were shown an excellent model of the port. Dr. Scholvin, of the Federal Ministry of Transportation, shipping section, discussed with us the task of rebuilding the port after the war and how it has progressed.

Here, too, as in Bremen, it seems to me that this port is rapidly becoming better and busier than ever before. In particular, I was impressed with the extensive number of new dockside cargo cranes. Whereas in

Bremen the semiportal type of crane has been used for many years, Hamburg, in reconstructing its port, decided to employ the full-portal type. I was informed that because of the traffic handled through Hamburg, the port organization was compelled to extend the rail-track system on the water side of the sheds which line the wharves; and that this modification entailed an alteration to the crane system. If semiportal cranes had been installed they would have had to have much larger spans than the full-portal variety. I concluded that Hamburg seems to be proceeding on the premise that it can expedite turn-around time of ships by installing more lower-priced cranes rather than fewer of the more expensive type.

Of course the strict competitive rivalry between Bremen and Hamburg is as intense as ever. Indeed it is understandable that the German officials, with whom we discussed maritime matters in both ports, radiated pride in their respective cities.

On Monday morning, August 30, 1954, Mr. Webster and I left Hamburg and arrived in Bonn that afternoon. We were met by Mr. Emerson M. Brown (Chief of the Transportation Section of the Office of Economic Affairs, HICOG) and spent the remainder of that day and evening consulting with Mr. Brown, Mr. John W. Tuthill (Acting Director, OEA, HICOG), Mr. Wier Brown (Chief of the Finance and Program Division, OEA, HICOG, and U. S. Treasury representative), and Mrs. Charles H. Breecher (Acting Chief, Industrial Services Division, OEA, HICOG). That evening we also had the honor of dining and conversing with not only these gentlemen but also with Dr. Westrick, State Secretary of the Federal Ministry of Economics; and Dr. Bergmann, State Secretary of the Federal Ministry for Transportation. I was extremely pleased to have this opportunity to talk with Drs. Westrick and Bergmann for, as you probably know, the positions which they hold are similar to positions held by members of our President's Cabinet. I understand that Dr. Westrick plans to be in the United States in the near future and I am looking forward to the honor of a visit from him.

On August 31, Mr. Webster and I conferred with Drs. Hubner and Schmid of the Shipbuilding Office of the Federal Ministry of Economics. Although we had discussed elsewhere in our trip throughout Germany the cost of vessel construction, I was especially gratified by our conference with these eminent German officials.

That afternoon we had the honor of lunching with Ambassador and Mrs. Conant at their home. Indeed, among the most pleasant and profitable experiences I had abroad was the time I spent that afternoon with the Conants. In view of the fact that EDC had just been defeated in the French Assembly, it is understandable, I believe, that our discussion was not limited to maritime matters. Naturally, I was pessimistic and skeptical about the EDC developments. However, after talking with Ambassador Conant, I felt I had a much better understanding of certain key issues and alternatives. I came away from this meeting with immense confidence in the Ambassador's judgment.

That evening Mr. Webster departed for Genoa, Italy, for the purpose of making arrangements for various conferences and meetings to be held in that city by Senator PURCELL and him when they returned from Rome. The next morning I boarded the Ruhr-Paris express for Paris, and after less than a day in that beautiful city, I left for Cherbourg which I boarded the *SS. Queen Mary*. As you know, there were no American-flag vessels whose schedules would have permitted me to stay in Germany as long as I did and still be back in the United States by September 8, 1954.

In reflecting upon our altogether too short visit to Germany, I believe that certain maritime matters are worthy of additional mention. I have not tried to set them forth in any particular order, but just as they come to mind. They are as follows:

1. In 1953 the German shipyards constructed 66 vessels for foreign account. I was informed that this was 41 percent of their total construction and amounted to 239,500 (gr. t.).

2. The German merchant fleet, as of December 31, 1953, was made up of 2,111 vessels with a total tonnage of 1,930,215 (gr. t.), an increase of 95 vessels of 411,815 (gr. t.) over the level at the close of 1952.

3. The German fleet at the close of 1953 was a little less than one-half of its prewar size of 4 million (gr. t.).

4. The *Gripsholm's* sailing on February 2, 1954, from Bremen to New York under the colors of Norddeutscher Lloyd, and the inclusion of that line in the reorganized Continental North Atlantic Westbound Freight Conference are matters of international interest and significance.

5. The total volume of cargo carried by the German fleet (including cargo carried between foreign ports) in 1953 amounted to 34,200,000 tons as compared to 28,100,000 tons in 1952, an increase of about 22 percent.

6. Passenger traffic carried by the German merchant fleet in 1953 was negligible. German freighter-passenger accommodations were limited to between 6 and 12 passengers. However, German shipowners have started to construct a new type of combined passenger/cargo vessel capable of carrying approximately 86 passengers.

7. German shipbuilding costs increased in 1953, due primarily to higher prices for steel plates and higher wages for German shipyard workers.

8. The main form of national subsidy or aid extended by Germany to encourage merchant vessel construction in that country is found in section 7D of the German income-tax law. This section has enabled German shipowners to accelerate the depreciation of their vessels. More than that, it has authorized German taxpayers receiving excess income to deduct from their taxable income, as operational expenses or business promotion costs, sums of money which they have granted or loaned without interest for the promotion of shipbuilding.

Although this income-tax provision has apparently done much to revive and promote German shipbuilding, I was informed that such tax privileges probably would be abolished effective January 1, 1955. A speech to that effect was delivered to the Bundestag on March 11, 1954, by Dr. Fritz Schaeffer, Federal Finance Minister.

After conferring with Counsel General Cloyce K. Huston, and his assistant, Mr. Alfred Dennis in Genoa, and after making arrangements for Senator PURTELL to confer with local shipping authorities, Mr. Webster joined the Senator as the latter came through Florence bound for Rome. Upon arrival in Rome, Senator PURTELL and Mr. Webster were met by representatives from the American Embassy. They were disappointed to learn that Ambassador Luce would not be in Rome during their visit. However, they had the benefit of conferring with her immediate assistant, Minister Counselor Elbridge Durbrow.

In Rome they conferred with Mr. John M. Kennedy (the Embassy's commercial attaché), Mr. Thomas A. Lane (the Embassy's labor attaché and chief of the MSA Labor Division), Captain Ralph S. McDowell (Bureau of Ship's representative in charge of offshore procurement) and Mr. Harry H. Phelan (the Embassy's minerals attaché). Their discussions covered matters such as offshore procurement, the labor situation, unemployment, costs, etc., relative to shipbuilding and ship repair.

On September 9, 1954, Senator PURTELL and Mr. Webster arrived in Genoa. That morning they visited the Ansaldo Shipyards in Genoa, where they conferred with Mr. Federico Lombardi, general manager of the entire Ansaldo Co., and Mr. Giuseppe Carnivale, general manager of Ansaldo's Genoa yard. They learned that this yard has 8 shipways, 2 of which are masonry and 6 of which are movable. The yard's construction capacity was reported to be between 8 and 10 merchant ships of 9,000-10,000 d. w. t. While this yard has employed approximately 6,000 workers, it was employing approximately 4,300 on September 1, 1954. Ansaldo is rightfully proud of the fact that it constructed Italy's newest luxury liner, the *Cristoforo Colombo*, in its Genoa yard.

That afternoon Senator PURTELL and Mr. Webster attended a luncheon given by the Genoa Propeller Club. In addition to having an opportunity thus to meet most of the Genoa shipping fraternity—particularly the representatives of American shipping concerns—Senator PURTELL took this occasion to express our committee's most sincere and intense interest in merchant marine matters of all sorts and kinds, wherever they arise or exist. As we had in other places throughout Europe, he invited questions concerning the part our Government plays in merchant marine affairs; and generally held himself open to answer any questions concerning our maritime policies. He emphasized the fact that we as a nation are not interested in having the largest merchant marine in the world. He stressed, however, that we intended to maintain a healthy privately owned merchant fleet of adequate size and strength to prevent a recurrence of the disastrous state of unpreparedness in which we found ourselves at the beginning of World Wars I and II.

After lunch a prearranged meeting was held where he and Mr. Webster conferred at length in the American Consulate with the following people present: Mr. Basil A. McLean, local representative of American Bureau of Shipping; Mr. Harold Vinick, local representative of Stevenson Lines; Mr. Max J. Wolfson, local representative of Lykes Lines; Mr. Alphonse Sasseville, local representative of American Export Lines; Mr. William Sharon, local representative of American President Lines; Vice Consul John H. Barber; Consul General Cloyce K. Huston.

This was a lengthy, rather comprehensive conference during which the representatives of American shipping aired freely many problems which they knew would be of interest to Senator PURTELL. This meeting was revealing and most worthwhile.

The next morning, Senator PURTELL and Mr. Webster went to the main office of the Ansaldo Co. where they conferred with Dr. Giuseppe Rosini, managing director of the entire Ansaldo Co., and Mr. Federico Lombardi, whom they had met at the shipyard the day before. After their conference, they visited the office of the Industrialists Association of the Province of Genoa. There they conferred with Mr. Alessandro Dufour, prominent Italian industrialist and Mr. Antonio Cerruti, head of OARN, one of Genoa's finest ship repair yards. During these meetings shipbuilding and ship repair problems were discussed.

On Friday, Senator PURTELL and Mr. Webster went to the home of Prof. Antonio Giordano for the purpose of discussing with him his views on our recent cargo-preference bill. He was recuperating from a recent illness. Members of the United States Consulate staff had brought to their attention the fact that Professor Giordano was in charge of the Genoa office of a well-known and influential economic and financial newspaper published in Milan known as "24 Ore." He had recently written for that paper an article critical of our cargo-preference bill. Since "24 Ore" is highly regarded and carefully read by many

thousands of Italians, it was Senator PURTELL's desire to obtain a better understanding of the professor's point of view and so afford him an opportunity to better appreciate our point of view.

Because Professor Giordano had not received a copy of the Commerce Department's Maritime Subsidy Report, they left with him 1 of the 2 copies which they then had in their possession. In addition, they assured him that should he at any time desire additional information about our maritime program, we would give him what we had available. They observed, as we had in Germany, that the main concern our foreign competitors have about the cargo-preference bill stems from some misunderstanding of its provisions and a lack of information as to the size merchant fleet which our Government believes we must necessarily maintain. Here, too, they found a certain amount of concern that other nations would use the cargo-preference bill as an excuse to enact discriminatory maritime legislation.

To summarize certain of the more important conclusions reached by Senator PURTELL as a result of his various meetings and discussions in Italy, the following:

1. As of September 1, 1954, generally speaking, the Italian shipyards were facing a serious crisis due to lack of work. They were working at approximately 30 percent of full capacity. The major shipbuilder, Ansaldo, is government-owned and controlled.

It is apparently true that material cost in Italy is higher than in any other European country. Some sources estimate that a Liberty ship could be built in Great Britain for approximately 30 to 35 percent less than in Italy. However, other sources estimate that this difference is less, between 10 to 27 percent, leaving aside subsidies in effect and the new Italian law hereinafter discussed. Some sources estimate that at least one-half of this difference is due to Italy's higher material cost, with the remainder attributable to higher labor cost.

2. One of the most disturbing things brought to the attention of Senator PURTELL and Mr. Webster was the large number of Communist labor leaders employed in Italian shipyards. The Communists apparently had received little discouragement from management. Evidently it was the thought of some segments of Italian management that this hands-off policy would insure labor peace.

Without elaborating in this report, suffice to say that the domination of labor unions by Communists in shipyards where offshore procurement orders have been placed did not pass unnoticed.

3. On July 17, 1954, an Italian subsidy law, known as the Tambroni law became effective. It is designed to encourage the building of oceangoing tonnage in Italian yards. Its benefits are extended to people of other countries, as well as to Italian nationals. Because of its recent enactment, there is considerable doubt as to the details of how it will operate. Nonetheless, it is expected that the Tambroni law will encourage many people who would have built ships in other countries to place their orders in Italy.

The Italian Government seems to believe that in the next 10 years Italy can modernize her merchant fleet, while at the same time raising her gross tonnage from the present figure of 3.7 million tons to 5 million tons. This would be an increase of 1.5 million tons over that which she possessed before World War II. This would require constructing 2.3 million tons of shipbuilding for Italian account in the next 10 years, or approximately 230,000 tons per year. At present the capacity of all Italian shipyards is rated at 300,000 tons per year.

Mr. Tambroni, the present Minister of Merchant Marine, apparently hopes to attract a substantial amount of foreign contracts in order to keep the Italian yards at the necessary level of business activity. In

considering his approach to the problem, it should be noted that the Italian Government controls 80 percent of Italy's shipbuilding industry and is saddled with 12 billion lire per annum carrying and other charges. With this background, one can better understand why Italy enacted the Tambroni subsidy law (No. 522 of July 17, 1954). The Government seems to have calculated that at 66 percent of capacity Italian yards can revise their cost factors toward a set of lower unit return figures which will not only make the yards competitive with their foreign counterparts but will also absorb the Government's burden.

The Tambroni law is designed to stimulate orders for ship construction and ship-repair work within a specific period of time. Shipowners will be granted exemptions from custom's duties on imported raw materials and finished and semifinished products used in building and repairing ships. Exemption from the Italian general sales tax on internal business transaction will be granted. As a spur to speedy utilization of this program, the subsidy will be decreased 10 percent each year.

Under the Tambroni law the subsidies will be given directly to the shipyards, not to the shipowners. The law states that there is no limit to the amount of repair or building contracts which will be aided by its provisions. Any unused subsidy funds set aside by the Government in any particular year may be carried forward to succeeding years.

4. The effect of the McCarran Act upon seamen and therefore upon the Italian merchant marine was the subject of frequent discussions held by Senator PURTELL and Mr. Webster while they were in Italy. Generally speaking, there appears to be a great deal of resentment by the Italians concerning this law. I am attaching as enclosure H copies of 2 articles which appeared in Italian publications in July and August 1954 dealing with the McCarran Act's seamen visa provisions.

Senator PURTELL and Mr. Webster left Genoa Friday evening, September 10, for Paris. Sunday morning they boarded the North Star Express and arrived at The Hague late that afternoon. They were met by Mr. Andrea G. Ronhovde (the Embassy's Deputy Chief of Mission), Mr. Howard R. Cottam (the Embassy's Counsel for Economic Affairs), Mr. Thomas McCrairie (maritime attaché for the American Embassy in London), and Mr. Peter Abeille (maritime attaché for the American Embassy in London).

That evening during and after dinner at the Cottam residence, they received a general briefing on the Dutch shipbuilding picture from Mr. Elvin Sibert (United States consul general, Amsterdam), and Mr. Paul J. Reveley (United States consul general, Rotterdam).

On September 13, Senator PURTELL and Mr. Webster, accompanied by Consul General Reveley, Mr. McCrairie, and Mr. Abeille, visited the Rotterdam Drydock Co. (the Rotterdamsche Droogdok Mij). In 1953, 593 vessels of 2,315,000 gross tons underwent repairs in this yard. The flagship of the Holland-Amerika Lijn, the *Nieuw Amsterdam*, was constructed in this yard, which is hoping to construct a new passenger vessel for the Holland-Amerika Lijn at a cost roughly estimated to be approximately 100 million guilders. This yard is presently operating at close to full employment, 5,000 workers being on the job.

In their tour of the Rotterdam Drydock Co.'s magnificent yard they were accompanied by its director, Mr. Knappe. Senator PURTELL's broad background in American heavy industry and in the allied fields of metallurgy and machine tooling was remarked on several times by Dutch officials. More than once they volunteered their appreciation of his understanding of their production processes and problems.

That afternoon, Senator PURTELL and Mr. Webster visited the C. Van der Giessen & Sons yard near Rotterdam. This yard has 5 building berths capable of handling up to 32,000 deadweight tons. Its activities are limited to new construction, although occasionally it has done some reconditioning work. Since World War II some 30 vessels have been delivered and another 15 are in the course of construction or on order. The bulk of the yard's output consists of medium-sized cargo and passenger vessels. As with many of the other Dutch yards, it has constructed vessels for owners in other countries, including Argentina, Finland, France, Norway, Switzerland, and the United States.

That evening at the home of Ambassador H. Freeman Matthews, Senator PURTELL and Mr. Webster met the following people, many of whom hold positions of great influence in Dutch maritime affairs:

Dr. D. G. W. Spitzen (Secretary-General, Ministry of Transport and Waterways).

Dr. J. Q. Bas Backer (Director, Western Hemisphere Department, Ministry of Foreign Affairs).

Mr. W. L. de Vries (Director-General of Shipping, Directorate General of Shipping).

Mr. E. A. Plate (Chief, Directorate Industry and Wholesale Ministry of Economic Affairs).

Mr. Th. van der Graaf (Secretary of Directorate for Shipbuilding and Repairs).

Mr. J. W. Hupkes (director of the Kon. Mij "De Schelde" N. V.).

Comdr. J. W. A. Langenberg (Kon. Mij "De Schelde" N. V.).

Dr. P. van der Toorn (director, Holland-America Line).

Mr. S. van West (managing director, Dock & Shipyard Co., "Wilton-Fijenoord").

Mr. E. A. Vreede (secretary to Netherlands Shipowners' Association).

Mr. F. E. Straatemeier (United States Lines).

Mr. Peter van der Giessen (director N. V. C. v. d. Giessen & Zonen's Shipyards).

Mr. A. Knappe (director of the Rotterdam Drydock Co.).

Dr. D. A. Delprat (director Shipping Co. "Nederland").

Mr. J. van Tilburg (deputy to Rotterdam burgomaster).

Mr. Frank C. Grismer (Director FOA Mission).

Mr. Andreas G. Ronhovde (Deputy Chief of Mission).

Mr. Howard R. Cottam (Counselor for Economic Affairs).

Mr. Elvin Sibert (consul general, Amsterdam).

Mr. Paul J. Reveley (consul general, Rotterdam).

Mr. Harold H. Rhodes (first secretary).

Mr. Thomas McCrairie (maritime attaché, American Embassy, London).

Mr. Peter Abeille (maritime attaché, American Embassy, London).

Mr. Robert A. Brand (second secretary).

Mr. Robert Donhauser (Public Affairs Office).

Commander M. B. Davis (assistant naval attaché).

Mr. Oliver M. Marcy (second secretary).

This reception provided Senator PURTELL and Mr. Webster an excellent opportunity to discuss with these leaders in Dutch shipping our cargo preference bill, their ship construction costs, their maritime labor situation, and other shipping problems. We understand that this was the first Embassy gathering at which so many major Dutch shipping interests were in attendance.

As a result of their visit to Holland, brief as it was, Senator PURTELL and Mr. Webster concluded:

1. From a competitive point of view, the shipyards of Holland appear to be ready, willing, and able to compete on at least an equal basis with the yards in any other European country. However, it should

be noted that Holland has lost some business to Germany and appears to consider that country its strongest European shipbuilding rival. In view of the fact that the Tambroni law is so new, it is conceivable that Italy might well establish itself as a strong competitor for the position of shipbuilding supremacy presently held by Holland.

2. The labor situation in Holland, in relation to that in other European countries, is very good. Labor strife is relatively rare; the labor force apparently is receptive to improved productive processes; and Holland's quantity of skilled and experienced shipbuilding labor is large. In this connection, it should be noted that Dutch shipbuilders are somewhat concerned about the difficulty of obtaining apprentices or trainees. Their labor problem appears to be one of shortage rather than surplus.

The stability of the Dutch labor situation is evidenced by the fact that apparently some yards are willing to enter into fixed-price contracts if they can be completed within 18 months.

3. In addition to vessel construction and repair, most of Holland's shipyards are extensively engaged in performing work for other industries. Thus, these yards which are reported to be the best equipped in Europe, are apparently using their ingenuity and initiative in order to obtain maximum utilization of plant and facilities.

On Tuesday, September 14, Senator PURTELL and Mr. Webster sailed from Holland for England. They arrived in London that evening. The next day they conferred with Rear Adm. A. L. P. Mark-Wardlaw, R. N. (retired), (president of the executive committee, International Cargo Handling Coordination Association), Mr. Rex B. Sheppard, C. B. E. (director, the Shipbuilding Conference), Mr. Winthrop G. Brown (deputy to the Minister for Economic Affairs, American Embassy) and Mr. Thomas McCrairie. Among the matters they discussed were the International Cargo Handling Coordination Association Conference recently held in Naples, Italy; the McCarran Act's seamen visa provisions; the cargo preference bill; and the state of shipbuilding in the United Kingdom. Rear Admiral Mark-Wardlaw gave Senator PURTELL various publications relating to the Naples Conference. * * * I call your attention in particular to the following articles which appear in the attached copy of the Journal of Commerce, International Cargo Handling Conference number, published June 25, 1954:

1. Some Impressions of the Naples Conference, by Charles Birchall.

2. A Stevedore's Point of View, by G. Sirtaine.

3. Some Problems of Administration (of the Ideal Port), by B. Nagorski.

4. New Cargo Cranes at Hamburg, by Dr. Hans Neumann.

That evening, Senator PURTELL and Mr. Webster left London and arrived in Glasgow the next morning. There they visited two of the United Kingdom's finest and best-known shipyards, the Fairfield Shipbuilding & Engineering Co., Ltd., and John Brown & Co., Ltd.

At the Fairfield yard they conferred at some length with the managing director, Vice Adm. A. W. Longley-Cook, C. B., C. B. E., D. S. O., managing director, Fairfield Shipbuilding & Engineering Co., Ltd. At the John Brown yard that afternoon they met and conferred with the following gentlemen: Mr. J. W. Begg, financial director; Mr. John Rennie, shipyard director; Mr. J. H. Johnston, general manager, engine works; Mr. A. N. Benson, secretary; Mr. J. B. Bucher, head of gas turbine department.

Unfortunately, Sir James M. McNeill, K. C. V. O., managing director of the John Brown yard whom they had hoped to meet, was absent.

The Fairfield Shipbuilding & Engineering Co., Ltd., has six berths. It is capable of constructing vessels up to 1,000 feet in length. Over the years, it has excelled in the production of warships, passenger and cargo vessels, tankers and ore carriers. John Brown & Co., Ltd.'s yard has seven berths and is capable of constructing vessels exceeding 1,000 feet in length. Its annual output capacity is approximately 90,000 tons. Some of Britain's finest passenger vessels have been constructed in this yard, as well as high-grade refrigerated cargo vessels, tankers, cross-channel steamers, and train ferries.

On Friday, September 17, Senator PURTELL and Mr. Webster left Glasgow for Dublin. They arrived in the latter city Saturday morning. That afternoon during lunch with Ambassador and Mrs. William Taft they not only discussed various maritime matters, but also many others in which the two countries have mutual interests. The seamen visa provisions of the McCarran Act and our cargo-preference bill were, of course, the subject of extensive discussions between Senator PURTELL, Ambassador Taft, and members of the Ambassador's staff.

While Senator PURTELL was in Dublin he met and conferred with various high-ranking members of the Irish Government, some of whom he had worked with at the Interparliamentary Conference in Vienna.

I am attaching as enclosure K certain material gathered by Senator PURTELL concerning shipping and shipbuilding in Ireland. It is, indeed, worthy of note that the Harland & Wolf yard in Belfast, the largest shipyard in Ireland, has recently constructed the *Southern Cross*, a beautiful 20,000-ton liner. You might recall that this fine vessel was built for the Shaw Savill Line and was launched by the Queen last August. This vessel is somewhat unique among passenger vessels in that her boilers and engines are installed aft. She is designed to carry 1,200 passengers in tourist-class accommodations. She will carry no cargo on her four voyages around the world each year. It is planned that she will link Britain with South Africa, Australia, and New Zealand.

Senator PURTELL and Mr. Webster returned to London on September 21. While there they conferred with Ambassador Aldrich. They also held a brief conference with Mr. J. Hancock, London representative for the South Pacific Steamship Lines.

Later that afternoon, accompanied by Mr. Thomas McCrae, they visited the offices of the Chamber of Shipping of the United Kingdom. There they conferred at length with its president, Mr. J. C. Denholm, C. B. E.; its vice president, Mr. A. I. Anderson (chairman, Orient Steam Navigation Co.); its general manager, Mr. H. E. Gorick, C. B. E.; and its assistant manager, Mr. R. G. Malloch Brown. These gentlemen were deeply concerned about our cargo-preference bill. Senator PURTELL and Mr. Webster tried to answer all of the questions raised by these gentlemen. However, they were unable to answer to their own satisfaction one or two of the matters raised by the representatives of the Chamber of Shipping and gave assurances that the Department of Commerce would be asked to supply the information desired. Steps have been taken to secure this information and upon its receipt it will be forwarded to Mr. Denholm.

As Senator PURTELL discovered when he was in Genoa discussing the matter with Professor Giordano, the representatives of the Chamber of Shipping had not been furnished copies of the Commerce Department's Maritime Subsidy Policy Report. Copies of this important document have been forwarded to Mr. Denholm.

Senator PURTELL reports that after visiting the British Isles he reached the following conclusions, among others:

1. Shipbuilding costs are now about 4 times as high in 1939 and approximately twice as high as in 1945-46. There are no signs of a reduction or even of stabilization; and increases in shipyard wages and steel prices further aggravate this problem. Britain's budget in 1954 made some concessions to shipowners as to other industrialists by the introduction of the 20-percent investment allowance.

However, as in this country, the accrued tax-free depreciation goes but a little way toward meeting replacement costs, and the balance must come from borrowing or from profits, if any. British shipowners seem agreed that the solution to their problem is to revise the existing system of taxation, and particularly the system of assessing depreciation allowances on the basis of original cost without referring to higher replacement cost.

2. Britain's merchant fleet, while not as obsolete as this country's, is nonetheless composed of many vessels of 20 years of age.

3. In an article appearing in the September 13 issue of the *Times*, the following statements seem pertinent and authoritative:

"Although British shipowners are having to meet increasing competition from foreign flags, including those of countries with 'artificial fleets' either State-subsidized or financed by foreign nationals, and although British shipbuilders now face severe competition from foreign shipyards—particularly in Germany—some significant comparisons may be made from the figures set forth in Lloyd's Register shipbuilding returns. In respect of the amounts of work under construction in the United Kingdom and abroad at the end of June (the most recent date for which figures are available) it can be seen that the British figure of 2,195,000 tons gross represented 38 per cent of the world total—an increase of 3 per cent over June last year. Germany was still the leading foreign competitor, with 12 percent of the total, followed by the Netherlands, Sweden, France, the United States, Japan, and Italy, in that order.

"Tonnage under construction overseas showed a substantial fall of 260,000 tons from the previous midsummer, compared with a rise of 72,000 in the United Kingdom during the same period. This divergence may be attributed to the fact that the worldwide decline in the placing of new orders has had a more immediate effect on foreign yards, particularly those in Western Europe, since they have a higher productive tempo—largely due to three-shift working—and a smaller backlog of orders than most British yards . . .

"While foreign shipyards are now bidding more keenly for new orders than at any time since the end of the war, some of them are helped substantially by various economic devices. In France and Italy there are direct State subsidies, while in Western Germany there are taxation reliefs and low rates of interest on loans. In some of the Scandinavian countries and in the Netherlands there are long-term credit provisions backed by the State or by municipalities. British shipbuilders enjoy no such artificial aids and their existence elsewhere makes competitive pressure all the stronger. The shipbuilding conference has stated on behalf of the industry as a whole that while it has never sought direct State assistance it looks to the Government of the day to create conditions in which private enterprise can flourish.

"Since the war British shipbuilders have spent heavily on the modernization and re-equipment of their yards. Some of them are now as well-armed for the competitive struggle as their foreign rivals. But on the labor side of the industry the situation is somewhat different. On the continent longer hours, lower real wages and piece-work rates, shift working round the clock,

and an absence of strict demarcation between various jobs are the general rule; and foreign shipbuilding employers can therefore make the fullest possible use of their physical equipment."

In closing, let me express for Senator PURTELL, Mr. Webster, and myself our appreciation of the opportunity afforded us to visit the various countries we did and participate in the many interesting events which I have discussed in this letter. We feel that as a result of our trip we have a much better understanding of the views of our friends in the various European countries we visited. In addition, we believe that those with whom we discussed America's maritime policies have a better and more sympathetic appreciation of the many serious problems we face in this field.

Sincerely yours,
JOHN MARSHALL BUTLER,
Chairman, Senate Water Transportation Subcommittee.

Big Business

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 16, 1955

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following very interesting article by Solomon Barkin, director of research, Textile Workers Union of America, which appeared in the *Commercial and Financial Chronicle*, Thursday, December 30, 1954:

A CRITIQUE OF BIG BUSINESS

(EDITOR'S NOTE.—Trade union economists, claiming we in this country are relaxing vigilance against "economic giants," cautions against toleration of big business. Says trade unions recognize big business as a threat against well-being of the mass of Americans, but denies that "big unions," themselves are monopolies or a hindrance to public welfare. Holds executives of big business not only control our economic life, but exercise extraordinary powers over our political institutions.)

The Government's success in promoting high employment and stimulating national and personal advances should not become a justification for glorifying big business or relaxing our determination to dissolve these aggregations of economic power. Individual well-being and confidence, realized through a 20-year battle against monolithic business bureaucrats, are in danger as a result of their success in regaining public prestige, prominence and political power. Apologetics may temporarily divert men as they appraise the soundness of the defenses. But on analysis, these arguments melt away, as inadequate. Citizens' organizations for united action such as labor unions are no justification for vast concentrations of economic power. The countervailing forces are limited in scope and not equal to the challenge of balancing corporate power.

We are relaxing our vigilance against the economic giants at a time when other countries, such as Great Britain and Canada, are adopting the philosophy and techniques of our antitrust movement. Others, like Japan and Germany, are restraining their monopolies or cartels at our Government's insistence. This Nation was profoundly convinced that big business organizations aided and abetted the totalitarian aggressors. In other countries they had established a tight grip

upon the economy which inhibited expansion. This country has a long history of public suspicion of big business. But we are now urged to tolerate the institution and relax our inadequate restrictions because our national economy has, for a short time, operated at full or high employment levels.

The American trade unionist cannot accept this position. He recognizes in big business a formidable threat to the well-being of the mass of Americans. Despite the temptation for the trade-union movement to retire from this battle, to collect the special fruits of negotiations with big concerns, or to discourage the diversionary, baseless political counteroffensive against big unionism, its national leadership, almost alone among the organized interest groups, has continued steadfastly to support curbs on big business. No real trade unionist can give credence to professions that unions are capable of matching the corporation's power, even in the area of industrial relations.

The recent efforts to popularize big business have set at rest one issue. Its existence is now acknowledged. We are in agreement that it is a major force in our economy. Instead of denying its power and protesting the prevalence of a competitive society, we now hear broad claims of the indispensability of big corporations. They are the cornerstone of America's wealth and progress. The former evils, it is claimed, have either disappeared or been submerged by the constructive results of their operations.

One technical issue still persists. The apologists argue that industrial concentration is not as great as it was at the beginning of the century. It has grown absolutely, but has not kept pace with the growth of our economy. However, statistical measures, better attuned to measure economic domination in our age, can readily establish that its relative position has not dwindled and has possibly grown.

CONTRIBUTIONS OF BIG BUSINESS MUST BE QUESTIONED

The principal new defense of big business is its alleged capacity for developing, financing and installing industrial change. The big corporations are better able to maintain research facilities, finance the experimental and pilot operations, and market the new products. America's industrial progressiveness is equated with big business. Without the experience coming from the operations of the giant corporation, we would not have been able to operate our war economy.

This defense sounds quite contrived, coming at a time when Dr. Lawrence R. Hafstad, formerly director of reactor development of the Atomic Energy Commission, bluntly informs management that it has neglected the utilization of atomic energy for peaceful uses. Postwar industrial research was largely financed by the Government, although much of the work itself was done by corporations on contract with the Government. The development of consulting research institutions as well as the facilities in universities ready to accept contracts from private industry and Government should help explode the myth of any special research competence on the part of the big corporation. The real complaint is that industry's concentration on practical problems has retarded our progress in the pure sciences.

Big corporations have, in the past, been associated with restrictive practices and cartels. The investigations of the Temporary National Economic Committee had much to reveal of the repressive effect of large aggregates of power on new innovations.

In other countries, where the competitive tradition is less strongly established and the Government is less vigilant, we can ascribe part of the prevailing economic stagnancy to the lack of venturesomeness of the large, established corporations.

Must we not, therefore, look to factors other than large-scale business for the pe-

culiar stimulants to the progressiveness of our economy? May it not be that the very contributions by big corporations were encouraged by special privileges and the competitive advantages granted them by the Government? They were primarily responsible for obtaining for business at the beginning of World War II, the privilege of accelerated depreciation, as the price for conversion to military production. They obtained a disproportionate share of the procurement contracts, certificates of necessity for new construction, Government plants and equipment, and management contracts to operate Government properties and research. These financial privileges permitted them to grow, to become enriched and to master the art of large-scale management of production.

The failure of small business, the special small business agencies within the Government and the congressional committees to get a reasonable share of government work for small business speaks eloquently of the vast economic power of the large corporations and their successful liaison with the procurement and military authorities. Frequently, the latter were recruited from these very large businesses on a dollar-a-year basis.

Our past experience supports the conclusion that the rate of industrial change would be stimulated by the existence of a greater multiplicity of enterprises. The new industrial era makes research indispensable to the life of a business, quite independent of its size. The fact that large corporations contrived, with Government assistance, to get an early start, is no basis for believing that they alone are equipped for this job. The existence of numbers of small concerns marketing new products attests to this conclusion. But they are no competitive match for the corporate giants.

The increasing availability of competent research men permits of their use by a broader range of concerns. The multiplication of research agencies for special fields reaffirms our conviction that business, the Government, and the universities can develop new research organizations to serve an industry or process users, without being dependent upon a specific large corporation. Fundamental research may have to continue even more broadly than at present to be a public function.

The spokesmen for big business are not on strong ground when they contend that big business tends necessarily to be more efficient. The current recession has provided an abundant array of names of large companies in financial and competitive difficulties because managerial ineptness had left them unprepared for current problems. Many mergers and purchases of corporations are inspired for reasons of tax advantage, financial manipulation and personal self-interest, rather than the attainment of the optimum size of enterprise. Evidence is abundant that the desirable size of production units is much smaller than those of the very large corporations. The economies of centralized management can be attained in smaller than current large units, as witnessed by the drive for decentralization of corporate activities.

Top management is unable to direct operations in big business enterprises on the basis of intimate knowledge. No one can argue that the wide diversity of products of the giant corporations are essential for their efficiency. They serve primarily to perpetuate current property owners through use of monies which would otherwise have to be paid as taxes. A study of the history of these large firms shows that their position was gained through earlier mergers rather than any special record of efficiency.

ABUSES AND DANGERS OF BIG BUSINESS

If support for big business cannot be convincingly developed on the basis of its particular capacity for innovation and efficiency, the abundant evidence of dangers and abuses and the problems big business presents to our democratic society are truly

alarming. Big business has eliminated the traditional types of competition. Prices are now set by deliberate choice; production schedules are designed for specific business objectives, including maximum profits; innovations are introduced when older products or processes become a business drawback or when industrial prestige dictates. Whatever the decision, it is deliberately reached on review of benefits, rather than forced through competitive pressures. National efficiency is no necessary byproduct. The major decision-making authorities are highly centralized in corporations, and the costs of ineptness and bad judgment are huge. Many of us would argue, with considerable documentary support, that big business policies on prices, wages, and investments were the critical factors in precipitating our great disaster of 1929.

Their economic influence extends far beyond the reaches of their own corporate confines. The large corporations are governed by men with wide interests and influences in other enterprises. Cases have been paraded of interlocking officers and directors helping decide the course of business relations and the prices and volumes of related enterprises. Understandings and concurrence of policy and action are further promoted by the use of common service agencies, such as banks, tax experts, lawyers, engineers, labor relations men, and other consultants. But beyond these direct influences, we must recognize the vast empires of suppliers, dealers and purchasers dependent upon these business giants and subservient to their interests.

The large corporation is usually administered by a small group, whose voice dictates and dominates policy and action. Their financial interest is usually small, but their rewards are generous through their own controls. Members of boards of directors often find their greatest rewards in guiding business to their own financial affiliates. Stockholders appear to be more like people invited by management to supply money rather than men who hire the management. They are kept satisfied with regular and occasional extra dividends. The voting machine is controlled by the "inside" management. Even in battles between conflicting financial groups, arising at a time of crisis, the stockholder is given the choice of surrendering his judgment to one or the other group, as the appeals are never buttressed by platforms or programs. The charters give the stockholders few powers to initiate or review. Even in this era of advanced stockholder relations, he is treated as an outsider to whom select decisions are referred as they are released to the public.

The large corporation is truly an institution endowed with public interest, usually privately controlled by a small clique, affiliated with others in the "management class." Most of the limits on the managers' powers are vague and not truly restrictive. They have little to answer for as long as the enterprise is profitable and dividends are regularly paid.

The executives not only control our economic life through these corporations, but exercise extraordinary powers on political institutions. True, under the New Deal, they lost out in significant areas of our National Government, and the reaction to the depression swept them out of dominant positions in many State and local governments. But persistent effort and generous financial assistance and gratuities have reestablished their influence at the local and State levels sufficiently to endear the principle of State's rights. After an arduous campaign to recapture the Federal Administration, starting in 1938 with the Liberty League, big business rode in with the Eisenhower administration. Its objectives are to reduce governmental activities and supervision, free big business of restraints, and transfer decisions from Government to its provinces,

Public relations programs, lobbying expenditures, and special efforts to influence legislators and administrators reflect the tremendous resources at their command to secure favors. The results have justified the effort. Government contracts, grants for research, certificates of necessity, financing facilities, plant structures, windfall profits, and accelerated depreciation privileges have more than balanced the costs. Direct appeals to the legislatures have brought special tax gains for the large corporations, with resulting more liberal depreciation allowances and other tax benefits.

Vexed by the prevailing, historic disapproval of bigness in the United States these men have embarked on a campaign to restore their prestige and influence in our cultural and communal life. The law has given them ample resources, since tax exemptions enable the corporate officials to spend public funds for educational or civic purposes so as to build up recognition and power. Their own payrolls carry many skilled persons prepared to sell the public on the big corporation. The multiplicity of recent books, including those providing no personal advantage to the writers, speak of the scope of current efforts at promoting public approval. The crest of this campaign was reached when President Eisenhower pronounced in his annual message that "size alone does not preclude effective competition." Others have served big business with rationalization for their high prices stressing the need for self-financing of expansion, or with polemics for LIFO methods of valuing inventory and price adjustments on assets.

Their efforts to win public approval would not warrant criticism if business enterprises were public relations institutions. They are, however, chartered for production and sales for specific business ventures and not as educational, political, or propaganda agencies, organized to direct our political and social thought. The Corrupt Practices Act prohibits contributions to political campaigns. Are not these other uses of tax-exempt funds and corporation income, most often without stockholder approval, equally unjustified or irrelevant to the functions of the business enterprise?

ARE COMPETITION AND COUNTERVAILING FORCES ENOUGH TO BALANCE BIG BUSINESS IN THE UNITED STATES?

The above developments have raised serious doubts as to the wisdom of the decisions and the use made of the concentrated economic power held by the managers of big business. In our political life, we have the means with which to counterbalance their influence and ambitions for domination. True, the struggle for real political democracy is not an equal one because of their financial resources, influence over the press and channels of communication. In fact, we know only too well the devious techniques used to infiltrate both parties, though predominantly the Republican.

Individual freedom and our traditions of free speech and thought have served to protect us in our cultural and communal affairs. But even in that area, the extensive employment or endowment of professional groups by big business has distorted the perspective of many members of such groups. The battle to preserve individual independence is a continuous one.

What have we to rely upon in our economic society? Competition among producers or sellers has been severely restricted as a restraining and controlling influence. A vast number of our markets, defined according to one's own tests, are dominated by a few producers or sellers. Moreover, the Government has had to restrict the operation of competitive forces in some areas, because they were so destructive of labor standards or terms of trade. Of course, some business-

men, including some most vocal on the need for competition, have obtained governmental protection for price fixing, as in the case of the resale price maintenance laws.

With competition widely recognized by the consumer as no longer dominant, the economist came along to document the conclusion with fact and theory. This onslaught on big business prestige brought few immediate defenses, since the 1929 depression had already reduced its stature. But, at the beginning of the forties, new responses became available, heralded by J. M. Clark's essay on *Workable Competition*. Since then we have heard a number of defenses of bigness.

The superior rate of innovation resulting from large business organization, it is claimed, provides an adequate substitution for older types of competition. The loss in economic efficiency and the temporary high price created by administered price levels are offset by the subsequent lower price level of the successor items. Competition has been broadened from bargaining among producers trying to sell the same item to producers selling competitive and alternative products or services. The battle for the consumer's dollar has become a real economic force with the increase in the volume and importance of discretionary buying, driving down prices and stimulating efficiency. While advertising and other nonprice appeals are the principal leverages, the long-run effects on price are favorable.

The results of economic activity, rather than the form of business organization, must be the test by which to judge business performance. "Workable competition" must substitute for "pure competition." But the theorists have not supplied us with adequate tests of "workable competition" or means of measuring the degree of decentralization of power. Too often in the past, formalistic criteria, such as uniform prices obtained in a competitive market, are employed to justify monopolistic behavior, without looking behind the economic effects of the corporation's and industry's entire behavior.

John Kenneth Galbraith focuses on another force in the economy to assure us that we can live with bigness. Countervailing powers counteract and balance the primary concentration of power. They are nurtured in the same environment, among the actual or potential victims, to curb the abuses and the misuse of power employed against them. In a most optimistic mood, he conceives it as being a self-generating force which can keep our private economy in balance and make government intervention unnecessary.

Neither approach to the vital challenge of big business in a democratic society is reassuring. The first suggestion, that we test our economy not in terms of size of units or structure, but by results, continually fails us. The data for testing the conclusion are inadequate and the apologists have not even enrolled big business into their camp to provide them with the sinews of defense. Pragmatic tests are few. They tend to be satisfied with proof of absence of collusion or complete monopolistic domination. Otherwise, the case rests upon assigning credit to big business for the postwar prosperity and obligingly forgetting the collapse of 1929 and the failures of the '30's.

Big corporations are not pressed to reduce prices to real cost levels. The influences affecting decisions are many, including the desire for maximum or reasonable profits—whichever phrase is most pleasing—both over long and short periods, and other factors of policy, such as substitutes, public reaction, and prevailing industrial codes. These are limiting factors on, and not determinants of, prices. The decision is management's. The selected lever of returns depends completely on the reconciliation it chooses. As for the consumer's freedom to

react, it is limited by the allegiances he has developed, as a result of advertising and social pressures, to particular goods and specific brands.

The overall decisions are not conducive to the best economic efficiency. At times, the efficient will forego business, such as Government contracts for tanks, or will maintain high prices to prevent his small competitors from going out of business, lest he incur the public's wrath and to assuage public resentment against monopoly. Results are not sufficient to test an institution; motives are equally important.

Just as prices are determined by a combination of motives involving profit and industrial position, so are other decisions on innovation, volume of production, and competitive behavior. Many are the abuses of economic power when the latitude is so wide and the limits of discretion so broad.

Limitations on investment are common when the market is producing profits; discouragement of new entrants is strong when the public eye is not focused on an industry. Yet the same corporations are quite ready to encourage favorable opinion when criticism is gathering on the horizon, by leasing their know-how to other firms, as Du Pont has done in the case of both nylon and cellophane production. If suspicions of avarice are becoming too widespread, they are quite prepared to mitigate them with generous contributions to public purposes of tax exempt funds.

The theory that each oligopolist begets his own counterpoise is a reassuring thesis. But the author himself has many misgivings about its reliability. There are vast areas where such countervailing forces do not exist. Unfortunately, in the field from which he gets his clearest inspiration—labor—there are many zones of concentrated power, including chemicals and textiles, in which there are no pervasive union organizations. The big corporations employing white collar persons have not been counterbalanced by corresponding labor organization to assure equality of bargaining in this area.

The new countervailing institutions require a "minimum of opportunity and a capacity for organization." They are often lacking or weak, particularly when the Government is controlled by the oligopolists themselves, intent upon preventing new countervailing groups from arising and destroying those which exist. The present employer-oriented National Labor Relations Board provides little encouragement for the appearance of independent labor organization.

If government is necessary to bring into being and to nurture the countervailing forces, as Galbraith observes, might we not first concern ourselves with the problem of maintaining an administration favorable to such operations?

Furthermore, there are industries where such countervailing organizations are unlikely to appear because of the predominance of the giants. To the automobile industries, thus safe from countervailing forces in the manufacture and selling, we would add tobacco, film producers, liquor, household appliances, and other durable goods manufacturers. Even the retailers, engaged in the new forms of large-scale retailing, who have reduced marketing costs through greater efficiencies, have not really reduced the manufacturer's prices except by intruding in his field.

The faith in this alternative becomes even less firm when we are told that countervailing forces are effective only in periods of recession, deflation, or depression. But our tolerance of big business developed in the postwar years, when inflationary tendencies, if not outright inflation, prevailed. Our suspicions of big business grew strongest and criticisms harshest when countervailing forces are allegedly most operative. It was

in the thirties that the big corporations most ardently pursued restrictive production, investment, and high price policies. This combination of views is hardly tenable.

Galbraith declares that his countervailing forces, where they exist, will not give "an ideal distribution and employment of resources." They will only operate in the "right direction," which is, presumably, countervailing pressure against abuse of private power. We cannot be even assured that where they exist they will offset the primary power in every area of its decision making. The trade union will, at best, only balance in the area of relations with workers, the farmer on his purchases, etc. What is to be done to insure complete coverage where the self-generating forces nurtured by government do not produce the adequate countervailing force for some areas? Can this position relieve us of our anxiety about the power of big business even in the economic area, where we must constantly search out or create new institutions and find substitutes for countervailing forces where they do not arise?

BIG UNIONISM

A major diversionary move, designed to sidetrack attacks on big business and to curb organized labor, takes the form of a demand to bring unions within the jurisdiction of the antitrust laws. Secretary of Commerce Sinclair Weeks is the most recent protagonist of this position, carrying it from the point where the National Association of Manufacturers left it during the debates on the Taft-Hartley Act.

The fundamental fact is that trade unions bargain with management on terms of employment and not on the price of goods and services. The law has long recognized that human labor is not a commodity.

The results are not determined by workers, but are agreements of two really opposing parties. If management's decisions are influenced by its monopolistic or dominant position in the market and its confidence in its ability, as price leader, to pass on the cost of improvements to labor, then the issue is no different than any other management decision in our era of big business. We should curb its power and not the workers' organization, a major countervailing force in our society. If any correction is to be made, it should be to increase the protection provided workers organizing in areas where big business is now able to suppress such organization with the aid of the Taft-Hartley Act and the present National Labor Relations Board.

The existence of a national labor organization does not in itself establish national bargaining. Many national unions in localized industries depend completely on autonomous local negotiations. As a matter of fact, little industrywide bargaining exists in the United States. Pattern bargaining predominates. The industry usually waits for the conclusion of labor agreements with its leader or pattern-setter for guidance on its settlements with other companies. This practice of following the leader on labor standards antedates collective bargaining and originates in many industries with the determination to resist labor organization. Union agreements with satellite companies are often on less favorable terms to the workers than those with the leader.

The cry of "big unionism" is a smoke-screen to hide the determination to destroy effective unionism.

The major problem of big, as well as small unions and other membership institutions, is that of assuring a proper voice and safeguard for the individual's freedom therein, without atomizing the organization itself and reducing its bargaining power. Many promising developments have been instituted in this area.

CONCLUSION

Big business is a challenge to the American people. Its power and dominance must

be kept under constant surveillance. The new prestige cultivated in the postwar years has served it well in gathering new privileges and incentives and in extending its authority. Its influence in our political, social, and cultural life has deepened greatly. Under the stimulus of national emergencies and an expanding economy, together with special benefits and incentives, big business grew and subordinated many restrictive practices and inclinations. But this does not mean that they have been eliminated. It requires a strong trade union movement, a high level of taxes, and a Federal administration responsive to many equalitarian and diverse interests, to maintain some economic balance.

Many of these essentials for countervailing pressures have waned, particularly with the new national administration's alliance with big business. We have no systematic procedures nor do we possess adequate countervailing forces to pressure big business to act constantly in the public interest, promote national efficiency, assure adequate utilization of resources, provide the lowest possible prices for services and goods, and help maintain and expand a full employment economy. These forces in our democratic machinery are lacking.

Many doubts have been voiced concerning the adequacy of our enforcement of the antitrust laws. The courts have not been too helpful and the Department of Justice has not always been sufficiently vigilant. Nevertheless, these laws and court decisions have inhibited big business in cartelizing its powers. A simpler procedure for enforcement would be helpful. But above all else, we need more specific legislative definitions of undesirable practice, restrictions on bigness, and more powers for regulation.

Big corporations must be incorporated by the Federal Government and subject to an identical system of limitations. The Federal agency should be furnished with regular reports on policy, performance, and results and should be entitled, on its own motions or on public complaint, to survey individual corporations for behavior in conflict with the public interest. Criteria should be developed to define the types of big corporations and businesses which should be dissolved, as were the public utility holding corporations in the thirties.

The beneficiaries of public privileges and financial incentives should be particularly responsible for meeting tests of constructive business practice, progressive management, reasonable price levels, and constructive collective bargaining. Where the market itself cannot effectively operate to pressure prices and production to efficiency levels, we must substitute public review. The present Corrupt Practices Act prohibits corporations from intruding into our political life. A code is necessary for limiting the use of tax exempt funds and corporate payrolls to influence our social, cultural, and communal institutions.

Big corporations are public institutions dominated and governed by private interests. Those who abuse their power should be dissolved. The others should be subject to constant public scrutiny.

Aircraft Carrier Potential

EXTENSION OF REMARKS

OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 18, 1955

Mr. LATHAM. Mr. Speaker, for the benefit of my colleagues, I wish to set forth in the Record a most significant

and enlightening article by James H. Smith, Jr., Assistant Secretary of the Navy (Air), which appeared in the February 1955 issue of United States Naval Institute Proceedings:

MOBILE SEA BASE SYSTEMS IN NUCLEAR WARFARE

It is increasingly evident that nuclear warfare is refocusing attention upon the need for a military force based on the high seas. Rather than diminishing the future value and need of a Navy, the advent of the atom, like that of the airplane, has reemphasized the importance of seapower.

In modern warfare the offense has taken a commanding lead over the defense. This lead is a product of the nuclear weapon and its sharply increased lethal radius. Even so, a reasonable defense against nuclear explosives might be devised, were it not for the tremendous increase in the speed of the vehicle delivering the explosive. The speed of these vehicles—whether they are today's supersonic jet bombers or tomorrow's long-range missiles—reduces the warning period before an attack and, consequently, the time in which we can bring our defense to bear. The destruction of the attacker is therefore up to defenses that are already in place.

A handful of men operating offensive, nuclear weapons today can do more damage than an entire army in the past, and they can do it at a distance of thousands of miles from their home base and within hours (ultimately, minutes) of the decision to attack. Even against a 90 percent effective defense—an almost incredible effectiveness level—they could probably achieve a rate of destruction critical to the defender.

It would be hard to estimate what percent of effectiveness could be achieved by the defense against an enemy jet bomber attack. It is known that against future missiles of the improved V-2 type there is no practicable defense. Against those prospective missiles the only solution—and against today's weapons a more effective solution—is to destroy the bases from which they might be launched.

These facts lead to several conclusions which appear valid for the medium-term future:

First: The offensive can inflict devastating results despite any foreseeable defensive effort.

Second: The best defense is an overwhelming counteroffense, directed primarily at the bases and sources of the enemy striking forces.

Third: National security, unless one can be sure of striking first, lies in convincing an enemy that even if he strikes the first blow, he cannot prevent an overwhelming and possibly fatal counterattack against his airpower and other nuclear weapons potentials.
